Mr. O'SULLIVAN. Mr. Speaker, I believe that at this time it is quite opportune for the Members of Congress, and the people of the United States generally, to give serious consideration to the following matter:

Ever since the fifth day of creation when God according to chapter 1, verse 25, of Genesis, made the cattle and creeping things, and the beasts of the earth according to their kinds we have been either blessed or cursed with ele-

phants. Also I rather fancy, that from the twilight years of antiquity up to the very present, elephants have been front page news for the most enlightened brains, as well as for the most befuddled and benighted of the back street, and the back roads, minds. Most all of those possessing inquiring intellects have, I dare say, wondered perhaps what the elephant really was, and what he stood for, what he was thinking about, and most of all, what he was about to do presently, and thusly they have wondered, and they have wondered, and still their wonder has grown.

Many yesteryears ago, in Omaha, Nebr., there resided a veritable old ponderous hulk of an Irishman, who laid off from his packinghouse work, one bright summer's day, to go for his very first time to see the Barnum and Bailey circus, and while roaming through the menagerie, he chanced to come upon old Jumbo the biggest elephant in all of the world—at least in captivity. As these two peers, in their respective created classes, met and stood gazing, intently and wonderingly, at each other, Mr. Egan shook his head sadly and said "Youse is nather a harse nor a cow, as you stand there throwin' hay in your face wit' your tail. You're a big rubber bull." In those far-off days it was considered a great zoological joke on Mr. Egan, but maybe Mr. Egan, in the light of this year's happenings, in this same Omaha, Nebr., unconsciously but certainly expressed a great present-day truth.

The perplexities increase as we read fables, stories, poems, and even the more factual things concerning the elephant. He is now, and was always I dare say, the enigma of all of the known enigmas, political or otherwise. He is enigmatism personified.

In order to convince you and in order that I may in passing lay some small claim to being smatteringly literary, and also in order to help to throw light and not heat upon the various elephant problems of today, I wish to furnish you for mental browsings only, the following poem by John G. Saxe, entitled "The Blind Men and the Elephant," the original thought having been derived from a very old, old fable:

THE BLIND MEN AND THE ELEPHANT

(By John G. Saxe)

It was six men of Indostan
  To learning much inclined,
Who went to see the elephant
  (Though all of them were blind),
That each by observation
  Might satisfy his mind.

The first approached the elephant,
  And happening to fall
Against his broad and sturdy side,
  At once began to bawl,
"God bless me! but the elephant
  Is very like a wall!"

The second, feeling of the tusk,
  Cried, "Ho! what have we here
So very round and smooth and sharp?
  To me 'tis might clear
This wonder of an elephant
  Is very like a spear"

The third approached the animal,
  And happening to take
The squirming trunk within his hands,
  Thus boldly up up and spake,
"I see," quoth he, "the elephant
  Is very like a snake!"

The fourth reached out his eager hand,
  And felt about the knee.
"What most this wondrous beast is like
  Is mighty plain," quoth he;
"'Tis clear enough the elephant
  Is very like a tree!"

The fifth, who chanced to touch the ear
  Said, "E'en the blindest man
Can tell what this resembles most;
  Deny the fact who can,
This marvel of an elephant
  Is very like a fan!"

The Sixth no sooner had begun
  About the beast to grope,
Then, seizing on the swinging tail
  That fell within his scope,
"I see," quoth he, "the elephant
  Is very like a rope!"

And so these men of Indostan
  Disputed loud and long,
Each in his own opinion
  Exceeding stiff and strong,
Though each was partly in the right,
  And all were in the wrong!

(Copied from Anthology of Children's Literature, Johnson & Scott.)

They say that history ever repeats itself, and perhaps in Omaha, Nebr., when the Republican Party met recently in solemn conclave on elephant business, who knows but that some of the lineal descendants of those same six wise men of Indostan were there in goodly force, or perhaps it might have been a family reunion of the blood lines of those same six wise men from staid old Indostan.

I understand that at the Omaha conclave, they, too, debated loud and long about how the little, big man, of the strong adjectives and nouns fame, was not throwing the bull but was throwing elephants on last election day and thusly demonstrated to the world that Paul Revere could ride again—

And spread the alarm
  Through every Middlesex village and farm,
For the country folks to be up and to arm.

And that political gladiators have not been bred out entirely, in the United States of America, as far as the Democratic Party is concerned, because of the fact that we have been living in a soft, decadent Republic on a supersoft national manna.

But getting back to Omaha, that great city of the plains, where the reception which is given to a President of the Republic is numberless, yawning, gaunt, empty seats, cometh the elephant, and the best mahouts of the legions of wealth to discover all of the rest of the numberless whys and the wherefores concerning the smarting question of the hour, as to why the elephant comes so politically empty, too, back to the town of the empty seats, with such a vast horde—according to the versions of many—of political empty heads. And, oh, yes, so that the refrigeration would be perfect to preserve the status quo, Nature also sent the Nebraska infantries of snow and the cold and the sleet, and the ice, and the cavalry of the wild blasts to harass and to scatter and whip about the Republicans and the other remaining real withered leaves, to bear these great wayfarers from hither and yon, near and far, sweet company.

From the foregoing you may well glean that when one finally gets down to brass tacks, as one always eventually must, the whole thing was a wet, cold, windy and empty affair in the town of the empty seats.

Some of the more hopeful were of the decided opinion that the elephant was not dead, and that the head mahout was not at fault, while others contended that the sweeping kicks of the elephant, which Captain Harry had rendered hors de combat, were not signs of life at all, but a purely natural phenomenon called reflex action following rigor mortis. Of course neither the Omaha wake, nor the Omaha autopsy, disclosed anything, except that the leaders, even in "that great party of the better minds, and the better people" of the United States of America, all too humanly, yes, too humanly, also—

Love to anticipate, squander, and dissipate, all that old busy pate hoarded with care.

even if old busy pate was symbolized as an elephant.

But anyhow finally might triumphed again and right trekked home snivelling once more.

Since the Omaha fiasco much has been said publicly and privately about how to rejuvenate the elephant, and out of the political gloom came, a Bethlehem-like gleaming intellectual ray, from none other that the peerless editorial writer of the Omaha World-Herald, democracy's strong friend and ardent supporter of bygone days, the Honorable Harvey Newbranch, who contributed to journalism and to the political gladiators, and the vestal virgins and the populace, that masterpiece "God Hates a Coward" which is now to be found in the Appendix of the RECORD at page A986, having been inserted by the Honorable JOSEPH P. O'HARA, of Minnesota, on the 21st day of February 1949, and which editorial because of its previous, wide publication in many newspapers throughout the land as well as the CONGRESSIONAL RECORD need not be repeated again here.

If there is anything that Omaha has more in profusion than empty auditorium seats for a Democratic President, it is good newspaper men, and among them verbal cuffings are the order of the day—a real pastime.

In Omaha, both sides of almost every question is presented in some way or another, even if sometimes we Democrats might have to go to Council Bluffs, Iowa, to do it.

I now wish to present for your consideration the following editorial from the February 3d issue of the Farmer-Labor Press, written by my dear and true Democratic friend, the Honorable George Woodward, Sr., of Omaha, Nebr., and presently, and for some past months the editor of the aforementioned newspaper:

A MASTERPIECE

Everybody likes to read an editorial with plenty of pepper, spice, and high-priced words dropped with precision in their proper place, even though the writer chooses for his subject the resurrection of an organic group as dead as the dodo bird.

The leading editorial in the Omaha World-Herald January 26, written by Harvey Newbranch, was a masterpiece. It was a wonderful display of literary ability, and unless he went back 16 years and thumbed through the files for data when the World-Herald was a forceful Democratic organ

under its founder and publisher, the late Gilbert M. Hitchcock, and it was his (Harvey's) job to lambast the Republican Party from hell to breakfast in every issue, his article God Hates a Coward proves that age has not affected his mental faculties but has really improved his emotional impulse and keen wit.

One thing we can say for Harvey Newbranch: He has always been on the side that needed his help. His valiant assistance in the Democratic Party in its effort and final success in pulling the farmers out of the Hoover mudhole, and his long, fearless, and tireless battle to rescue labor and the common people from the cruel, merciless heel of despotism of the Republican Party under the supervision of the all-powerful trusts and monopolies is highly appreciated and will never be forgotten.

Of course, the able and talented support of Harvey Newbranch is not now needed in the Democratic Party. But we were, and are, sorry to lose him—sorry for his own sake that he abandoned the party just at the time, with his noble and courageous help, the Democratic Party wrenched the Government from the hands of organized wealth and gave it back to the people. Just after big business had swallowed up all the national resources and beginning to devour each other, and, on bended knees at the feet of the deliverer, the new President, Franklin D. Roosevelt, begged him with real, humble tears of agony to save them from themselves and preserve human dignity; to save the Nation. What an immense share in the glory of liberating the millions of starving people Harvey could claim had he remained with the party to enjoy it. What a pity it is to lose such a brilliant mind to speak for humanity. But the loss is not to the Democratic Party, or gain to the Republican Party. The loss is to Harvey Newbranch himself and to himself alone. The new trail laid for him to follow led him into political exile, and may God (who hates a coward) have mercy on this political outcast.

If the Democratic Party had swung so wide from the traditions he so highly respected, instead of leaving the ship, why did not Harvey Newbranch use his great influence in piloting it back to its moor? Either he was an imposter in, or traitor to, the Democratic Party all the years he served as editor in chief on the World-Herald under Hitchcock, or his efforts now to keep his place and earn his way is well and cleverly concealed hypocrisy. I should rather believe the latter is true. Read the fourth paragraph of his article:

"But the Republican Party has lacked the courage to say what its rank and file believe. Out of hunger for the fleshpots it has lacked the patriotism, the loyalty, to stand up for the free Republic of the founding fathers and to fight for it. Due to that lack of moral courage, of loyalty to the American creed, the United States, almost the sole remaining bulwark against the advancing tide, finds itself without a spokesman, without a champion to proclaim and battle for its traditional, glorious creed. And it finds the once-so-firm foundations of its temple crumbling."

No one but with the soul of Harvey Newbranch could have written that paragraph, and no one but a knave would risk his readers' contempt by trying to hide the significance of the advocacy of adherence to tradition, and its long-attended misery, in the bowels of a well-written paragraph.

After all, what is the American creed? What is the traditional, glorious creed for which Mr. Newbranch can find no champion in his newly adopted Republican Party? I've been plodding along, following the tradition of doing as I please, most of the time (the only American tradition that really appeals to me) and doing the things I am told to do, some of the time (following the American tradition most repulsive to me), for as many years or not quite, or more, than Harvey Newbranch, and, I confess, I do not know what the glorious American creed is. If there be a glorious American creed, to me it means all the blessed sacred creeds working for God and the brotherhood of man rolled into one and not the single creed of a political party to build an insurmountable wall betwixt the rich and the poor and designating the rich as the true representative of the dignity of man.

The great advancement in science and industrial progress was not required to follow any precedent or tradition, while Harvey's Republican Party is always throwing sprags in the wheels of Government progress by demanding that we follow the traditions of George Washington, Thomas Jefferson and Andrew Jackson, and none of those illustrious dead men were better equipped to cope with the complicated affairs of government in this day than would a modern school teacher.

Under democratic supremacy the United States Government has advanced further in catching up with industry in the past 16 years than in all the previous years of its history, and still it has some catching up to do.

Another paragraph in the splendidly written article by the Republican convert, Harvey Newbranch, follows:

"Americans do not respond to any such appeal. They, too, hate a coward. They despise hypocrisy. They hunger for a leadership of good faith. They will accept a brave and fighting leadership tainted even with Pendergastism and absolutism rather than a leadership that crawls—and trails its flag."

If allusion to Pendergastism is an intended insult to our President, it is also a boomerang to any and all the aspirants to the Presidency on the Republican ticket. The election of Harry Truman proves, conclusively that the people, by long experience, have learned that any President elected on the Republican ticket is obligated and hogtied to big business and answerable to the dictates of big business as they always have been. It proves that, having renovated the atmosphere from the corruption and stench accumulated by Harding, Coolidge and Hoover, the people are going to keep it that way.

Be not alarmed, Harvey. Whatever ism that frightened you into writing that article for the benefit of the Republican pow-wow in Omaha last week, the Democrats will not drag you into totalitarianism. Freedom of the press to accept the direction of its policies by big advertisers will not be disturbed.

Representatives of the Republican Party, for the past 16 years, have done nothing in Washington, in peace and war, but obstruct proposed constructive legislation. They voted against lifting of the arms embargo; against lend lease; against rationing, and against every war measure introduced. Their antilabor, antifarmer, antieverything attitude against everything but capital and big industry since the Republicans slid into control of the House and Senate 2 years ago is an outstanding example of their favoritism to the giant corporations at the expense of the farmers, small business, and labor. Fortunately, the demonstration was made in time for the voters to frustrate their intention to turn back the clock to the time of the late President William Howard Taft, and the Democrats elected the President and regained control of the House and Senate.

The Republican Party is all washed up. It cannot find a substitute for the Democratic program agreeable to the voters. There is none. As a political organ to govern at Washington the Republican Party has played its last tune.

I think you will find that proverb, "God hates a coward," originated at the gambling table, and is not supported by gospel truth.

One-Way Trade Won't Work, an Article by Sol Bloom

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article by our late colleague, Hon. Sol Bloom, who at the time of his passing was chairman of the House Committee on Foreign Affairs. The article, entitled "One-Way Trade Won't Work" appeared in This Week, a magazine section of the Washington Sunday Star published March 13, 1949, a few days after Mr. Bloom's untimely death. It is no doubt the last of many other contributions on public affairs made by the distinguished statesman during a long life of service to his country. The article follows:

ONE-WAY TRADE WON'T WORK
(By Sol Bloom, chairman, House Foreign Affairs Committee)

The world outside of the United States is running out of dollars. And unless we do something about it we are going to be running out of prosperity.

What it simmers down to is that we are enjoying the biggest business boom in our history because we have the largest foreign market we have ever had. If we let ourselves get mouse-trapped into losing that foreign market, it's going to be the 1930 depression all over again.

In 1947 we sold $14,000,000,000 worth of goods to the world, but we only bought $6,000,000,000 from the outside. At that rate, in spite of the Marshall plan, whatever dollars there are in the world must inevitably come home to roost in the United States. When that happens, other nations will have nothing left with which to buy our goods—and that will mean unemployment and depression. One-way trade just won't work.

The only way we can keep what we have now is by making sure that other nations can sell to us so they can get the money to buy what we have.

If it means a sacrifice here and there along the line, we are going to have to make it, because, bluntly, we can't live in heaven while the rest of the world is living in hell.

THE GOLDEN EGG

The last Congress, by limiting our reciprocal trade agreements to 1 year and setting up a complicated tariff commission, did a fine job of whetting the ax to kill the goose that is laying the golden egg.

The big job the Eighty-first Congress is going to face is amending that legislation so that we can do something about it before it's too late.

Tariff is a funny word. Most people imagine it is something concerned solely with high finance and the importing and exporting business. Forget it. Tariff concerns every man, woman, and child in the United States. Tariff is a wall; foreign goods climb it by paying a tax.

In countries where industrialization is in a primitive state, tariffs are necessary to give the home team enough of an advantage to let it stay in business.

In industrial countries like the United States, where mechanical advantages offset cheap foreign labor, high tariffs are red-hot dangers. If foreign goods can't sell here, foreign nations won't have the money to buy what we sell.

One of my constituents is a clothing manufacturer. He makes 100 suits a day, which provides a reasonable return on his investment. Seventy-five percent of these he sells here in the United States; the rest go abroad. If Europe can't buy those other 25 suits, his factory is going to shut down in part. And to continue to make a profit, he is going to have to add part of the cost of the 25 suits he doesn't make to the 75 he does. Result: the price of suits goes up.

The trouble with tariff is that we have too much politics in it and not enough statesmanship.

That mistake is caused by the writing of a tariff bill from the floor of the House on the basis of "you vote for me and I'll vote for you."

Australia is the world's biggest wool producer. We are the biggest wool consumers. We don't grow enough for our needs, yet we have a restrictive tariff on wool that keeps Australia's crop out of our market or lets it in at such a cost to the Australians that they can't buy our goods. A special interest in the United States has been served and the rest of the country has had to suffer.

FAR-REACHING RESULTS

In 1930, when the Smoot-Hawley tariff went into effect, it made us the most heavily protected country in the world. You know the result. A stock-market crash that might have been a localized depression swept the world and finally helped produce a war from which we haven't recovered.

Since 1934 we have been whittling at that tariff by reciprocal trade agreements. These say, "If you let my goods in your country, I'll let your goods in mine." Over a period of years we managed to get some sort of sense into foreign trade.

Then last year when the tariffs came up for renewal, the Gearhardt bill passed, stipulating that instead of making agreements for 3 years with other countries, as we had been doing, the agreements were made for only 1 year.

World businessmen, no matter how badly they needed dollars, were scared off. They had lost the guaranty of a stable business. European manufacturing for export went into a slump. Some of the protariff people have tried to throw a smoke screen around the question by saying that labor is dead set against tariff reductions because cheap foreign labor can produce products we can't undersell.

The best way to answer that is to tell the story told me by a labor leader about the factory that one of the automobile manufacturers built in India to get cheap labor. The labor was cheap enough, all right. But after they had added and subtracted and done a few other things they found it cost more to produce a car in India than it did in Detroit. The reason is that we have become so skilled in mass production that no matter how cheap the labor we compete against, we can still show a profit.

We may have needed protection back in the days when our infant industries were just getting started, but today we have grown to such a stature that protection of that sort is about as much use to us as a pair of white duck pants at the North Pole.

NO DOLLARS, NO BUSINESS

The dollar situation is the crux of the matter. The dollar is now the international medium of exchange. If you have dollars you are in business; without them you must resort to barter.

If Bolivia has an item like tin, which we need, and they need American goods and have no dollars, let us make it as simple as possible for them to exchange their tin for our goods.

Russia, of course, is in the barter business. Some of the nations now in the Russian orbit would very much like to do business with us. If they could I am sure that they would not remain in the Russian sphere of influence very long. But we must make it attractive to them to trade with us. We can't do it if we have a tariff wall they cannot climb.

Right now, Canada is our best customer. They have 13,000,000 people and we have about 11 times as many, yet we have a tariff wall that is supposed to protect us from them. Somehow I don't see it. I don't see little Canada taking any important slice of world trade away from us. But because of last year's tariff revision, Canada had to cut down on her imports of American goods, the trouble being, of course, no dollars.

ALL TOGETHER

We have an unprecedented prosperity now, but that doesn't mean it's going to continue indefinitely. We have prosperity because of world trade. The only way we can keep it is by making our tariff laws work the greatest good for the greatest number. Special interests must be subordinated and their privileges curtailed. The world is going to get well all together or not at all.

A lot of people don't seem to see that. The other day a man came into my office. "Look," he said, "that tariff cut is going to cut the national income about $1,000,000 a year."

"Yes," I said, "that is true. Since we have 147,000,000 people here, your share is a little less than a penny. However, I'll make up the difference. Here's a penny." I handed it to him. And do you know, he took it.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include therein a resolution passed by the General Shields Council, Knights of Columbus, Ottumwa, Iowa, on the Federal aid to education bill:

IOWA STATE COUNCIL,
KNIGHTS OF COLUMBUS,
Ottumwa, Iowa, March 14, 1949.

Hon. KARL LECOMPTE,
House of Representatives,
Washington, D. C.

DEAR SIR: I am attaching resolution passed by our council representing our 600 members at a recent meeting.

I feel that we are entitled to expect the same consideration for our Catholic children regardless of whether they attend public or parochial school. We will appreciate favorable action on your part when the Thomas bill (S. 246) comes up for consideration by the Eighty-first Congress.

Yours very truly,
KNIGHTS OF COLUMBUS,
A. F. BLAKE,
Grand Knight.

RESOLUTION

OTTUMWA, IOWA.

At a recent meeting of our council, General Shields Council, Knights of Columbus, a discussion of the Federal aid to education bill came up. It was the understanding of the members that at least the safety and health benefits for the school children are not sectarian and only indirectly educational. It is true that they can best be administered through the school system but if this method of administration excludes any children because of color, creed, etc., then some medium other than the school system ought to be found so that all our American children can benefit equally.

With this thought in mind our council drew up the following resolution:

"*Resolved*, That the Federal aid to education bill be formulated so as to include the well-being of all our children, regardless of race, color, or creed; that the Federal aid include, as a basic requirement, health and safety benefits for nonpublic school children; that this aid be administered without discrimination as is the National School Lunch Act of 1946."

Rev. T. C. DONOHUE,
H. H. KAMERICK,
J. D. VAUGHAN,
A. J. SCHWARTZ,
Committee.

General Pulaski Memorial Day

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. HESELTON. Mr. Speaker, in accordance with instructions of the Republican delegation in the House of Representatives from Massachusetts to insert in the Appendix of the RECORD copies of resolutions, petitions, and memorials, which may be sent to the entire membership of that delegation, and, under leave granted me to extend my remarks in the RECORD, I now insert a resolution of the City Council of the City of Worcester, Mass., petitioning the Congress of the United States to pass the General Pulaski's Memorial Day resolution:

Resolution memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in United States of America: Now, therefore, be it

Resolved by the City Council of the City of Worcester and State of Massachusetts:

SECTION 1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

SEC. 2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, and each of the United States Senators and Representatives from Massachusetts.

Approved March 10, 1949.

CHARLES F. JEFF SULLIVAN,
Mayor.

Pensions for Elder People

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Ways and Means Committee:

Mr. Chairman, as one who has always expressed strong feeling in favor of increased benefits to our elder people, I am glad to appear before your committee to testify in favor of H. R. 2135 and H. R. 2136.

It is my hope that such a measure will be soon reported to the whole House in order that I may have the opportunity of voting for legislation I promised to fight unceasingly for when I first come to Congress in November 1939.

During these past 10 years, the subject of adequate pensions for the aged has become so prominent, I dare say it is now the foremost issue before the country and the Congress.

A decade ago, I can well recall, this subject was considered in hush-hush tones. It was taboo. Today, our citizens in all walks of life openly clamor for its early acceptance by Congress and more than that, look upon us to make it a reality.

In my opinion, citizens who reach the age of 60 are as much entitled to the benefits of our Constitution as those not as old. The right to life, liberty, and the pursuit of happiness must not end at any fixed point in life, so long as life sustains.

Unfortunately 9 out of 10 persons find themselves without sufficient means to survive when they reach their later years. Often they cannot find employment, and are bereft of all income.

This presents a most forlorn picture and one which clearly points out how much the senior citizens of this great land are deprived of our Constitution's privileges, supposedly guaranteed to all the people.

Of course, the argument is immediately raised whenever a voice speaks out for pensions, that our social-security system is gradually being perfected and will take care of the retired.

To be perfectly frank, I do not feel that social security will ever be adequate the way it is now conceived. In the first place, only a segment of the people is covered. True, much progress has been made in blanketing more and more under it. But we are moving too slowly.

Referring back to the Bill of Rights, all our people should be able to expect equal basic treatment. The pursuit of happiness ought to be fair for all. You cannot limit fundamental American rights to a group here and there. Respectable retirement ought to be a fundamental privilege and it ought to be available to all.

A universal old-age pension plan geared to the basic economy is what the citizens of the United States should be able to look forward to.

Why should John L. Lewis crack the whip and gain $100 a month for a handful of coal miners when millions of the rest of us are left out in the cold?

Why should a comparative few who happen to be fortunate enough to work for Federal and State Governments enjoy comfortable retirement while the great masses have no income after they leave productive employment?

Why should other pressure groups descend upon Washington, calling vociferously for their followers to benefit from piecemeal pension programs while there are still a majority left unaided after their schemes are approved by Congress?

There is only one answer to all these questions. We owe it to America to devise a plan which assures every citizen the same opportunity to participate in a basic old-age pension plan.

Since the gross income tax proposed in H. R. 2135 and H. R. 2136 would gear the benefits to our basic national economy, and since it would provide the beneficiaries with an income level which in times like the present would approximate the level that the new studies of the minimum wage have clearly shown to be necessary for decent living by individuals throughout this Nation, therefore, I believe these bills embody just such a plan. I am urging the adoption of this proposal.

Excise Taxes on Transportation

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint memorial of the Legislature of the State of Oregon:

Senate Joint Memorial 12

To the Honorable Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Senate and House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas the Congress of the United States, during the recent wartime emergency, imposed an excise tax on transportation in the amounts of 15 percent of carrier charges for transporting persons and 3 percent of carrier charges for transporting property; and

Whereas such taxes were added to the regular tariff charges of the carriers and collected from passengers and shippers, thereby increasing their transportation costs by the amounts of such taxes; and

Whereas such excise taxes, based as they are upon flat percentages of transportation charges, impose an unfair burden on long-distance shippers and long-distance travelers; and

Whereas this unequal burden places Oregon producers at a disadvantage in competing with others located closer to consuming centers of the East; and

Whereas the emergency which caused the imposition of such excise taxes has passed and there is now no good reason for continuing this unequal and discriminatory burden upon the people of the West: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the house of representatives jointly concurring therein), That the Congress of the United States be, and it hereby is, memorialized to repeal the acts imposing such excise taxes; be it further

Resolved, That the secretary of state of the State of Oregon be, and he hereby is, directed to send copies of this memorial to the President of the United States, to the President and the Chief Clerk of the United States Senate, to the Speaker and the Chief Clerk of the House of Representatives of the United States, and to each of the Senators and Representatives in the Congress from the State of Oregon.

Adopted by senate, March 5, 1949.

WILLIAM E. WALSH,
President of the Senate.

Concurred in by house, March 11, 1949.

FRANK J. VAN DYKE,
Speaker of House.

Spain and the Mediterranean Pact

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I insert the following excellent explanation of the testimony of wartime American Ambassador to Spain, Hon. Carlton J. H. Hayes, now restored to his post as Seth Low professor of history in Columbia University, New York City. This exposition, worthy of deep consideration, has been prepared by one of my valued friends, a Catholic priest who for five successive years has given the invocation in the House of Representatives on Pan American Day, April 14. I refer to Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, who received from the Catholic University of Chile, a pontifical institution, the only honorary doctor of divinity degree ever bestowed by that university upon a citizen of the United States of America. Having in mind the national interest of our country, the statement of this outstanding scholar and educator may be recommended for study to every Member of the Congress.

STATEMENT OF DR. JOSEPH F. THORNING

One of the ablest correspondents of the New York Times, Mr. Raymond Daniell, in his piece for the Sunday, March 6, edition, wrote as follows:

"To omit Spain from a Mediterranean pact, in the view of military and naval men, is to leave as dangerous a hole in it as the absence of Eire leaves in the Atlantic Pact. Yet the last war was won by the Allies without any aid from Eire or Spain and, so far as the latter is concerned, with ill-concealed hostility."

How much time, if any, Mr. Daniell spent in Spain during World War II, I do not know. I am aware, however, that a trained historian, Mr. Carlton J. H. Hayes, was an eyewitness of the events which are alluded to in the above paragraph. Moreover, he was appointed by the late President Franklin D.

Roosevelt United States Ambassador to Spain, not to promote the best interests of that country, except where they coincided with our own, but in order to provide for our own security and welfare in a war with a dangerous, treacherous foe. Unless I am mistaken, the factual reports of this scholar, who was on the spot, merit at least equal consideration with those of a correspondent who now asserts that Spain acted toward us, with ill-concealed hostility.

May I suggest that Mr. Daniell's version of history be compared, chapter and verse, with the most recent rehearsal of fact by wartime Ambassador Hayes? This important document is now available, thanks to the initiative of Senator JAMES E. MURRAY, in the CONGRESSIONAL RECORD for February 21, 1949. Although the entire report is newsworthy, it may be sufficient to quote one paragraph, a masterpiece of historical condensation. This reads as follows:

"Under Spain's Foreign Minister (now Ambassador at Large Don José Félix de Lequerica in the United States), as well as under his predecessor, Count Francisco Jordana, the Spanish Foreign Office, with the obvious approval of the head of the Spanish state, granted us more favor than did any other neutral government, whether Sweden, Turkey, Switzerland, or Portugal. Not only did the Spanish Government pledge itself not to interfere in any way with our fateful landings and campaign in North Africa. Not only did it assure us as early as February 1943 that it would join us in war if the Axis should attempt an invasion of Spain. Not only did it permit us to use Spain as the base for invaluable espionage of Axis activities in France and the Mediterranean, it also accorded us important positive favors. It allowed us to get over 1,200 American airmen safely across the peninsula, without any internment. It permitted the transit and exit of over 25,000 members of the French resistance movement as reinforcements for the Allied armies in North Africa. It choked off export of strategic war materials to Germany before any other neutral had done so. Spain, too, was the first country to conclude a permanent air agreement with us, and one whereby we were enabled to obtain landing rights for military as well as civilian planes. In the light of all such facts, it is simply hypocritical to countenance the notion that Spain has been hostile to us and should therefore be treated as a pariah among the nations. It certainly belies the solemn assurances which President Roosevelt gave to the head of the Spanish state in writing in November 1942."

It is very unfortunate, as Senator MURRAY has helped to emphasize, that propaganda of the Soviet Union, and its conscious or unconscious apologists and appeasers in this country, has served, especially during the last 3 years, to conceal from the American people the signal services which Spain rendered us in the critical war years of 1942 to 1945, and to induce our Government to adopt toward Spain a policy which can only be regarded as contrary to American interests and derogatory of American honor.

The good counsel of Dr. Hayes, now restored to his post as Seth Low professor of history in Columbia University, may be taken to heart by all commentators, columnists, and newspeople, including the usually accurate Mr. Daniell. The exact words of Professor Hayes read as follows:

"Our fellow-citizens should be enlightened, not deceived, about the actual facts in the situation."

Finally, I should like to make clear that neither former Ambassador Hayes nor I myself, who have always been uncompromising foes of racial or religious bigotry, would say a single word to favor alliances with openly Fascist states. And I am confident that my friend, Carlton Hayes, would agree that any distortion of the record, with respect to the role of Spain in World War II, "plays into the hands of Soviet propaganda."

Additional Comments on Proposed Uniform Military Justice Code

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1949

Mr. REED of New York. Mr. Speaker, on Tuesday, March 8, 1949, I inserted in the RECORD, under unanimous consent, a newspaper clipping relating to the military-justice code.

I am now, under unanimous consent heretofore granted, inserting some additional comments on this subject written by Paul S. Davis, major, JAGD Reserve:

ADDITIONAL COMMENTS ON PROPOSED UNIFORM MILITARY JUSTICE CODE (H. R. 2498) (SUPPLEMENTING COMMENTS IN LETTER TO WASHINGTON STAR OF FEBRUARY 22, 1949)

(7) The statute of limitations would cease to run on the receipt of charges by any officer exercising summary court martial jurisdiction (proposed article 43 (b)). Under the present law the statute ceases to run only upon arraignment, unless the accused, by reason of escape or otherwise, is not amenable to military justice. This provision would be susceptible of grave abuses, since the accused would have no means of knowing when the statute stopped running. Charges might be back-dated or filed in desk drawers to be used if desired many years later. The purpose of the statute of limitations is to lay ancient charges at rest and provide protection for an accused from a trial on stale charges. Enactment of this proposed provision would substantially impair the salutary purposes of a statute of limitations.

(8) Notwithstanding the announced purpose of the bill to create uniformity between the services, the proposed law in article 17 (b) would create potential conflicts and frictions not now existing where a common or joint trial occurred involving personnel from more than one branch of service, who may in some circumstances be tried together under present law. For example, marines when detached for service with the Army may now be tried by an Army court martial (AW 2 (c)). As the law now stands, records of such trials, when held by the Army, are reviewed in the same manner as other Army court-martial records. Under the proposed bill, such records, if involving trials of both Army and Marine Corps personnel, for example, would have to be given two separate departmental reviews by each branch of service. It would seem that if it is desired that one service exercise broader jurisdiction to try personnel of another service, such result could be much more simply attained by brief amendments to the existing Articles of War and Articles for the Government of the Navy, providing that personnel of any branch of the service under the command of an officer of another branch would be subject to the court-martial jurisdiction of the latter branch.

(9) The definitions of the punitive offenses have in many cases been unnecessarily complicated. The present Articles of War have worked well in not attempting specific definitions but rather relying on the well-established rules of the common law; the elements of each offense are summarized to the extent deemed appropriate in the Manual for Courts Martial. There would seem little justification for the attempt to set forth at length in the statute the elements of common-law offenses, and doing so not only leads to confusion but involves risk of misstating the law. For example, the proposed article 119 on manslaughter covers only cases of killing "without a design to effect death." This would seem to limit the offense to involuntary manslaughter, although the reference in the same section to the "heat of sudden passion," and the commentary of the draftsmen, apparently indicate that they contemplated including also the offense of voluntary manslaughter notwithstanding the express language to the contrary. Conversely the definition of larceny is so broad that it would even cover any temporary taking or borrowing of property without permission, such as automobile "joy riding." The latter offense certainly should not be treated as larceny, since soldiers guilty of such an offense should not necessarily be placed in the same category with and branded as common-law criminals.

(10) The review provisions (arts. 66 and 67) are too complicated for complete treatment here. These seem undesirable on several grounds. First, the extent of review is dependent in large part upon the asiduity of defense counsel in prosecuting appeals, a scheme unlike the present Army system where each case having the same type of punishment secures equal review irrespective of whether the accused is able to employ counsel in a position to prosecute his case before higher authorities. Another grave defect of the proposed system is that those having final reviewing powers (both the proposed boards of review and the Judicial Council) might be civilians wholly without experience in military or naval justice. They are not, however, in the position of Federal judges, since their tenure is indefinite and they are subject to removal at any time. Thus, they have neither the military background required of present members of the Army Judicial Council nor the judicial or independent background of members of the Federal judiciary. In addition, the independence of the board of review would be reduced since the Judge Advocate General, if not satisfied with the decision of one board, could refer it to another one (art. 66 (e)).

(11) The requirement that the trial judge advocate and defense counsel in every case be attorneys (arts. 27, 38) would appear to be impracticable because of the limited number of available legally trained personnel. While lawyers are now and should be used as counsel in the more difficult and complicated cases, an attempt to require them in every routine case would probably so burden available legal personnel as to result in unnecessary delays before cases could be brought to trial.

(12) The scope of rehearings would be unduly limited. They could no longer be authorized where findings are disapproved for lack of sufficient evidence in the record, even though there might be other evidence which had not been introduced at all (art. 63). This might frequently result in miscarriages of justice.

(13) Where a bad-conduct discharge is adjudged the proposed code would eliminate the review now required to be made by the officer exercising general court-martial jurisdiction (art. 65). This would take away the protection now afforded by the review of the trained staff judge advocate, who if he finds the record insufficient will now recommend disapproval of the bad-conduct discharge in the field and thereby obviate the delay and expense of further review by higher authority.

(14) The prohibition against peacetime trials within the United States for murder or rape, now contained in AW 92, is eliminated in the proposed code (arts. 118–120). The present provision has worked well both in maintaining the functions of the civil authorities and in assuring jury trials in these two capital cases for essentially civilian crimes, and there would seem to be no occasion for changing them.

(15) The proposed code (art. 140) gives the President extremely broad powers of delegation and subdelegation, which might conceivably be construed to authorize delegation by the President, to any lower commanders, of his important power to make rules of evidence and of his confirming power over death sentences.

What You Owe Your Country

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. COLE of New York. Mr. Speaker, one of the most important articles coming to my attention in a long, long time is the one by our Chief of Staff, Gen. Omar N. Bradley, entitled "What You Owe Your Country," appearing in Collier's magazine on February 26, 1949. It is to be commended to the thoughtful reading of every American citizen and, for that purpose, it is my pleasure to include it in the CONGRESSIONAL RECORD:

WHAT YOU OWE YOUR COUNTRY

(By Gen. Omar N. Bradley, Chief of Staff, U. S. Army)

Even in June the Channel waters were icy as I splashed through the life-belt-littered surf and scrambled aboard the landing craft. Its Diesels shuddered as the helmsman—a stocky, frowning youngster in wet-weather gear—coaxed his clumsy boat from the beach and headed toward the line of ships offshore.

By noon on this second day on Omaha Beach, we had cracked the German crust and were pushing into the hedgerows. Now, with a marked map under my arm, I was hitching a ride back to headquarters. Offshore in deep water a thin-skinned PT boat waited to carry me out to the cruiser *Augusta*.

On the wet open bottom of our tiny craft a dozen litters had been loaded. And on those litters a dozen wounded youngsters lay wrapped in blankets already soggy from the spray. All of them in their raw twenties, they lay quiet, uncomplaining, awaiting transfer to a hospital ship.

Ten years before, when the German guns that had torn their bodies were being heralded by the booming mobs of Munich, those 12 youngsters were in knee pants, wandering through a depression toward their rendezvous on Omaha Beach. And while their parents struggled uncomprehendingly through the fear and uncertainty of that economic storm, their generation was being rudely hustled from adolescence into a war.

There I remember, in the pitching bottom of that nameless craft lay the fragments of a generation rashly condemned for having been corrupted by the ease of democracy and debased by the luxury of freedom. But those 12 men had learned on D-day—as hideously as man can learn—that freedom is not free, that democracy can exact stern repayment from those who share in its bounty.

In time of war, the competitive struggle that powers a free society such as ours is enveloped by common danger. Just as life is held most dear by the man who faces death, so are the institutions of a free nation cherished most jealously when they are threatened by aggression. Confronted by war, the American people scamper hastily home to the fundamental realization that it shall profit a man nothing to gain possessions, knowledge, and power if he loses the freedom in which they are rooted.

But when danger has passed and our enemies at last lie crushed, the individual once more asserts his priority claim to self-interest. The right to profit, the right to get more, obscures the war-born realization that an individual's welfare is plainly tied to the welfare of his nation. We quickly forget that if freedom is to produce security as well as the bountiful life, then its roots must be continuously nourished by sacrifice, devotion, and service.

Because of the exaggerated emphasis we have attached to the omnipotence of the dollar, too many of us have already accepted the dangerous illusion that we can buy off our responsibilities as citizens in the payment of taxes.

A nation's strength is not to be found in its treasury statements. It lies instead in the national character of its people, in their willingness to sacrifice leisure, comfort, and a share of their talents for the welfare of the nation of which they are part.

Self-government is not a luxury on which men may grow fat and indulgent. Rather it is an instrument by which men can—if they have the wisdom—safeguard their individual freedom and employ that freedom in pursuit of happiness and fair reward for their ingenuity, labor, and intellect. Because self-government is an instrument which demands unceasingly the services, the energies, the participation of those who would benefit by it, self-government is weighted as heavily with obligation as it is with privilege.

Our democracy is much like a tall stand of timber. We cannot cut from it more than we plant in it without periling its survival. And forests—like gardens—cannot be bought. They must be cultivated by toil and nourished by the sweat of those who would keep them.

If we dare look on our Government simply as a legacy left to us for our benefit, enrichment, and ease—then we shall someday awaken to find that our Nation has rotted as quickly as our character has decayed. Democratic self-government tries its people with a sterner challenge than any other system in the world. Scorning the brutal coercion of totalitarian states, it asks generosity and brotherhood of its people. It asks that they cooperate willingly and voluntarily for their common welfare in order that each may benefit equitably according to his merits.

And while the imperfections of our democratic government—like all man-made institutions—have brought injustices to some, advantages to others, it nevertheless has helped us to achieve greater personal dignity and more material wealth than any nation in the world.

At a time when peoples throughout the world are being courted by an aggressive stateism that would have them abdicate their personal share in government and entrust their welfare to rule by clique, the American people must put their faith in not less, but more, personal responsibility in the affairs of their community and Nation.

Because personal freedom does not grant to the individual, license to trespass upon the rights of others, a democracy must protect by regulation the common welfare of its people against transgressions by special interests. And as our American economy matures, we have found it necessary to insure greater equality of opportunity by the wise intervention of Government into the enterprise of individuals. The depth of this invasion into the freedom of the individual, however, must be limited by compromise. For in our effort to provide equality of opportunity through sufficient government, we cannot abuse this power lest we stunt initiative through too much government.

While in the Veterans' Administration immediately after the war, I was several times chided by hard-shelled friends for justifying the enormous social desirability of the GI bill. To same mossbacks who had plunged profitably into the production tasks of the war, even our readjustment program was viewed suspiciously—and secretly with alarm. I am reminded of one entrepreneur who made a wartime fortune in wheat. Although he conceded the need for some Government aid to veterans on their return, he still blandly contended that I was spending money on just another Washington handout to make Government wards of these kids.

Few Tories went that far. But even while they enthusiastically accepted the GI bill and most of the social advances made in the last two decades, many men of good will today admit to a fear that our wartime generation has become too dependent upon government, that initiative has waned, and that too many of us are inclined to see Washington as the source of the bountiful life.

Apart from its economic implications, this habit of turning to Washington with our troubles conceals a political danger as well. For, once we make a crutch of government, we are on the way to becoming political cripples.

If we look to government purely for its benefits and deny it our obligations, then we shall be poorly prepared to assert the superiority of democratic government over the absolute powers of statism. Overdependency on government is the road to enslavement.

When men become so addicted to the benefits of government that they lose sight of their responsibilities, then that government is in danger of being seized by any leader or minority group that can promise greater benefits to the people in return for abandonment of their rights. Or when men become so intent upon selfish exploitation of their rights that our majority interests are sidetracked in favor of a greedy minority, then also is our freedom threatened. For only so long as freedom remains a force for the welfare of all our people will men cherish it in their hearts and defend it with their lives.

Our earlier insistence on opportunity for enterprise has given way to a demand for economic security. And ruefully though the older generation may view this cautious shift in interest, it has no one to blame but itself. For it was the freebooting business anarchy of my generation that brought on the great depression. And it was largely that depression which stimulated this passion for security we find among young men today. During the early 1930's, when the Nation showed its fear, the mark of that panic was stamped upon the memory of our World War II generation. First, during the depression, and, afterward, in the war, they were steadily the victims of error and default on the part of their parents.

On the other hand, the youthful postwar soldier—his average age is 22—is clearly a product of prosperity. A youngster of 12 when war broke out, he romped through adolescence during the frenzied period of war production with considerably more money and less parental supervision than his brother before him. He came of age in an era of full employment when employers were bargaining for men. Frequently he was the child of itinerant parents, raised on time-and-a-half overtime wages in the shadows of shipyards and aircraft plants.

Like his depression predecessor—he too, is the product of his times. But what vastly different times they were.

While exploring a human-relations program for the training of these recruits, we in the Veterans' Administration went first to an eminent psychologist to learn what manner of man was coming into our ranks. The scholar's verdict was a harsh one—harsher perhaps than these youngsters deserve.

"The postwar soldier," he said, summarizing his observations, "is younger than his

wartime brother, healthier, better schooled, and more adept at learning."

But with an estimate that alerted us to the size of our job, the professor added, "He is also plainly undisciplined, jealously aware of his rights but not of his responsibilities. Moreover, he is mercenary and antagonistic to authority in almost any form."

The conclusion we drew was an inevitable one.

Not only was the Army challenged to make soldiers of these men, but it was also faced with the task of first making them better citizens, making them aware of the responsibilities that accrued to them as adult Americans.

For most of them, service in the Army is an initial payment on the privileges they have already enjoyed in growing up, privileges they shall have to balance with obligations the rest of their lives.

At Fort Myer, where I have my home, I sometimes slip down to the tiny post movie. Dressed in a tacky prewar civilian suit I am treated to soldier talk, especially when the lights are out. One evening, several months ago, an 18-year-old youngster, who let it be known he was a 1-year volunteer, complained to his companion that he had put his neck in the noose when he came willingly into the Army.

"What's it going to get me?" he asked. "Not even the GI bill. My old man was in the First World War—and what did he get out of it?"

By some standards, the young man was a realist. He was simply asking the question it is the fashion to ask today:

"What's in it for me? How do I come out?"

It is time we provided the answer for that youngster and thousands like him, time we reminded him—as well as ourselves—that freedom is not a prize to be given a man for his distinguished achievement in having been born an American.

If we are delinquent in the business of being good citizens—and there are many who contend that we are—then we must learn why it is we believe democracy has become a free ride without the need for earning our way.

Probably the greatest single cause for delinquency in citizenship can be traced to our declining sense of responsibility in the home, the church, the school, and the community in which we live.

While most delinquents turned remorseful suddenly feel the need for doing more for democracy and turn their eyes toward the mountainous issues that crowd our national scene, few have the humility to start down where citizenship counts.

Because the family is the basic unit of our society, it is there that responsibility begins. Unless the young man of this new generation can feel that the security, the well-being and happiness of his family is in part a responsibility of his, there is no hope in tutoring him later on his broader obligations. For citizenship is a progressive education that starts in the home and works its way toward the dizzying heights of national and world responsibility.

Much as we welcome the leisurely comforts of indoor plumbing, oil heat, electric lights, and the family car, we nevertheless lost a primary lesson in good citizenship when the twentieth century city convenience rendered the tradition of chores old-fashioned. The necessity for doing one's daily round of little jobs made a youngster of earlier generations feel part of the household and planted in his young mind the seed of responsibility to someone other than himself.

Back home in the flat farmlands of Missouri, life on a schoolmaster's wages was not calculated to make one rich or idle. But however busy his modest life might be, still my father had time to take me through crisp cornfields hunting coveys of quail when I was a youngster of 7. And by the time I had grown to 12, he had given me a shotgun of my own.

Even at that time our life was an itinerant one. My father rambled from schoolhouse to schoolhouse, first in the soft-coal fields of Randolph County, then in the rich farm lands of Fayette. At the end of each short 6-month term, he took an interim job. Sometimes we lived on a farm, sometimes in town, where Dad ran the mutual telephone exchange.

For a period of several years we farmed 200 bottom-land acres. During the school year, Dad would set off each Sunday afternoon and walk 8 miles to the family with whom he boarded nearest the schoolhouse. And each Friday afternoon when school was out, with a book under his arm, he would walk 8 miles back to our farm to work on the week end with mother and me.

My chores were neither painful nor unpleasant. Each morning I filled the woodbox with chips and kindling for the big kitchen stove. I kept the buckets filled with water from the deep well out in back. When there were cows in the barn, I helped with the milking. And during the years we kept 200 chickens, I helped mother feed them, kept the hen house clean, and counted new records in fresh white eggs. Once a week we went together to town carrying a great tin bucket of those gleaming eggs. They fetched 10 cents a dozen.

At the end of each summer I sharpened my knife and ran through the woods in search of bee trees. Whenever I found a busy beehive concealed in a hollow tree I would mark it carefully in my mind and run off to the farmhouse to ask permission to cut the tree down.

If the farmer agreed—and they always did—I would scamper happily back to the tree and scar its bark with a great gashing cross. That was my sign of a claim and there the tree stood safe from other bee seekers until we returned to cut it down. One August I put down, in the great earthen crocks mother gave me, 200 pounds of that wild bee honey.

Throughout the time I was growing up, I knew that if there was no wood by the stove, no water in the kitchen, there would be no breakfast of home-cured ham, warm milk, and bright yellow-yolked eggs. If I didn't find the bee trees, there would be no honey-bread after school. And if I didn't help mother clean the lamps, there would be no light for the evening.

The advent of apartment dwelling and the modernization of our living habits has made too many of today's youngsters look upon their home as a shelter, a meal ticket, a refuge during their period of adolescence. A family is no longer a group whose members depend on one another for companionship and association. Their leisure time is divided. In cities neighborliness has all but disappeared, a relic of the suburbs and the country.

Even the integrity of the family has been damaged in the rising rate of divorce. The urge of each individual in the family to pamper his own wants, to seek leisure-time companions of his own choice, but put the emphasis on selfishness and suffocated the instincts of good citizenship at the very source.

The church, too, has suffered in our automobile age. No longer is it the civic and social center of the community. Today it must compete with a score of diversions within range of our driving. The impermanence of transient family groups has denied to millions a family church in which they can take a share of responsibility in its activities and problems.

A friend only recently told me of the small congregation to which he belongs. During the depression, when the church was hard pressed by mortgage payments and too poor to keep a janitor, each member of the vestry devoted one Saturday each month to cleaning and scrubbing the building for the Sunday service. Because the church required sacrifice those who loved it best worked the hardest and loved it all the more.

Today that church is fully paid for, the mortgage burned, and a janitor paid to keep it clean. The congregation contributes far more liberally than it did before because now it can afford to. But the devotion of its members has faded with a waning of their obligations. Two dollars in the Sunday offering has replaced those Saturday afternoons. And another of the compelling obligations which produces a sense of responsibility in that community is gone.

Like many another speaker who is called upon too often, it is difficult for me to avoid occasional comment on education. When I recall the political illiteracy of our young troops at the start of the war, I am moved to charge education with gross dereliction in its responsibility to teach knowledge of the human values at issue in the world.

When the Army struggled through the summer of 1941 with rebellious and unhappy soldiers who muttered constantly of their raw deal, it became apparent that the fault lay not with the Army but with the failure of the American people to grasp the significance of the Second World War.

PUBLIC APATHY IS TO BLAME

Unlike too many critics of education, however, I cannot lay the blame on the doorstep of education alone. Rather it must be shared with the people as a whole. Their shocking apathy to the condition of their schools and the sterility of their curricula is responsible even today for the political immaturity, the economic ignorance, the philosophical indifference, and the spiritual insolvency of so many young men.

Throughout Europe, wherever our armies were stationed, the people were bewildered by Americans who appeared indifferent to the political and philosophical origins and nature of the most powerful and progressive nation in the world.

Unhappily, when driven into a corner intellectually, our soldiers were forced to fall back on our wage scales, our automobiles, our refrigerators—and eventually and triumphantly to the American bathroom—for their defense. Here is an indictment not only of American education but of the irresponsible indifference of citizens who have permitted this vacuum to remain.

Recently when I charged education with these derelictions my audience of first citizens nodded comfortably and agreed. I turned on them.

"How many of you," I asked, "are members of a school board?"

Of the more than 60 men in the room, not one raised his hand.

"How many of you," I continued, "know the name of your child's teacher?"

There was a showing of a scant half dozen hands.

"How many of you," I pressed, "have ever asked your child's teacher home to dinner to measure her worth for yourself?"

Not a single hand went up.

Here then was an audience of successful business and professional men, too busy each in his own daily affairs to determine for himself the character and quality of education furnished his sons and daughters.

Victims of the check-book habit, each was quite content to let it go simply by paying the bills.

This is citizenship by the dollar sign; it cannot and will not work.

UNDER PSYCHOLOGIC HANDICAP

Until the American people shake themselves out of this appalling lethargy and make their schools—together with the selection, the welfare, and rewards of their teachers—a matter of their personal and intimate concern, we shall go forth to do battle psychologically with the aggressive legions of stateism woefully trained and poorly equipped, handicapped from the outset.

To those military-minded men who are militarists by instinct rather than profession and who say that our weaknesses result from a failure of discipline in our young men, I must reply with this vigorous denial.

Men cannot be impressed into good citizenship. If they are to cherish the freedoms that come to them under democratic self-government, they cannot be disciplined into devotion. Instead they must be taught to value the great spiritual possessions to which they are born, by assuming from childhood a share of responsibility for safeguarding those possessions. Good citizenship springs from an appreciation of the great values of our institutions from active participation in them.

It is immoral for us to claim freedom of the ballot unless we are ready to share that freedom with every other American. It is ungodly for us to claim freedom of religion, unless we are prepared to be tolerant of all beliefs that differ from ours. It is hypocritical to insist upon freedom of opinion unless we grant equal freedom to those who oppose us. And it is fraudulent to insist upon freedom of the press if we deny that right to others.

Democratic institutions will continue to prosper and flourish only so long as they are fed on freedom for all, not on abridgment for some.

We are engaged in a contest today over the integrity of the individual versus the integrity of the state. It is a contest as startlingly dramatic as the air lift into Berlin, as obscurely insignificant as the attitudes of a single man. It is a contest in which ideas are as important as the atom bomb. It is a contest that can conceivably last to the end of our lifetime.

Theoretically the odds lie with us.

For where the state is an instrument of government employed by individuals for their common welfare, the progress of the state is propelled by the progress of the individual. And there can be no doubt in our minds that a free people—unfettered by fears, threats, and terror—will advance farther and faster in spiritual truths, social improvement, and material reward than any slave people, irrespective of the lash under which they labor.

WHEN THE STATE IS SUPREME

The state is an invention of men. It has neither intellect, nor conscience, nor morals. It is an inanimate machine. And where the machine is master of the man it is simply fueled by his obedience, his fatigue, and his terror. Its laws are the creature of dogma rather than the letters of justice. Its philosophy is spurious because it lives not on the spirit but on the oppression of its people.

A democracy such as ours cannot be defeated in this struggle; it can only lose by default.

It can only lose if our people deny through indifference and neglect their personal responsibilities for its security and growth.

Our danger lies not so much in a fifth column whose enmity is avowed. It lies in a first column of well-meaning American citizens. A first column of unconscionable men who are 100 percent Americans in their daily protestations and 10 percent citizens in their daily routine of neglect.

Automobiles for Disabled Veterans

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I wish to call attention of the Members of the Congress to a proposal that I have today introduced to authorize payments by the Administrator of Veterans' Affairs on the purchase of automobiles or other conveyances by certain disabled veterans, and for other purposes. Under present law, the Veterans' Administration cannot pay in excess of $1,600 for an automobile or other conveyance, including the special equipment found necessary by the Administrator.

My bill would allow the Administrator to pay in addition to $1,600 the amount of tax which the Government collected on the sale of the auto by the manufacturer. For example, if Federal tax of $100 was imposed upon the manufacturer on sale of the car, the Veterans' Administration could, under this bill, pay up to $1,700 for the car. In other words, the Government providing the car to the eligible veteran, would also, in effect, provide the vehicle tax-free.

There is no retroactivity attached to the proposal but I do not see a single reason why the physically handicapped World War II veteran should not be entitled to this much-deserved appropriation. The proposed bill submitted today is as follows:

A bill to authorize payments by the Administrator of Veterans' Affairs on the purchase of automobiles or other conveyances by certain disabled veterans, and for other purposes.

Be it enacted, etc., That, subject to the conditions hereinafter set forth, the Administrator of Veterans' Affairs is authorized and directed to provide or assist in providing an automobile or other conveyance, by paying the amount allowed under section 2 on the purchase price of such automobile or other conveyance, including equipment with such special attachments and devices as the Administrator may deem necessary, for each veteran of World War II who is entitled to compensation under the laws administered by the Veterans' Administration for any of the following:

(a) Loss or permanent loss of use of one or both feet.

(b) Loss or permanent loss of use of one or both hands.

(c) Permanent impairment of vision of both eyes of the following status: Central visual acuity of 20/200 or less in the better eye, with corrective glasses, or central visual acuity of more than 20/200 if there is a field defect in which the peripheral field has contracted to such an extent that the widest diameter of visual field subtends an angular distance no greater than 20 degrees in the better eye.

SEC. 2. The benefits provided by section 1 shall be accomplished through the payment by the Administrator, under regulations prescribed by him, to the seller from whom the veteran is purchasing the automobile or other conveyance, of so much of the total purchase price of the automobile or other conveyance (including special equipment deemed necessary by the Administrator) as does not exceed the sum of $1,600 plus the amount of the tax which was imposed under section 3403 (a) or (b) of the Internal Revenue Code upon such automobile or other conveyance when it was sold by the manufacturer, producer, or importer.

SEC. 3. The benefits of section 1 shall be granted under the following conditions:

(a) The United States shall not be liable for the repair, maintenance, or replacement of any automobile or other conveyance provided under the provisions of the first section of this act and shall not be liable to any person by reason of any damage caused by the use of such automobile or other conveyance.

(b) No veteran shall be entitled to receive more than one automobile or other conveyance under the provisions of this act; and no veteran who has received or may receive an automobile or other conveyance under the provisions of the paragraph under the heading "Veterans' Administration" in the First Supplemental Appropriation Act, 1947, shall be entitled to receive an automobile or other conveyance under the provisions of this act.

(c) The benefits provided in this act shall not be available to any veteran who has not made application for such benefits to the Administrator within 3 years after the effective date of this act, or within 3 years after the date of the veteran's discharge from the armed forces if the veteran shall not be discharged until on or after said effective date.

Resolutions Memorializing the President and Congress Relative to the National Guard of the United States and of the Several States

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. HESELTON. Mr. Speaker, in accordance with instructions of the Republican delegation in the House of Representatives from Massachusetts to insert in the Appendix of the RECORD copies of resolutions, petitions, and memorials, which may be sent to the entire membership of that delegation, and, under leave granted me to extend my remarks in the RECORD, I now insert resolutions of the General Court of Massachusetts memorializing Congress relative to the National Guard of the United States and of the several States:

Resolutions memorializing the President and the Congress of the United States relative to the National Guard of the United States and of the several States

Whereas the Congress of the United States is now considering proposed legislation which profoundly affects the civilian components of the armed forces and, particularly, the National Guards of the several States and the National Guard of the United States; and

Whereas much of this proposed legislation is based upon the so-called Gray board report issued recently by the Committee on

Civilian Components of the Secretary of Defense, or is based upon other similar recommendations of the Regular Military Establishment; and

Whereas this proposed legislation is largely directed toward the disestablishment of the National Guards of the several States, beginning with the Air National Guard, in favor of Reserve forces wholly under Federal control, thereby contravening the language, spirit, and intent of the Constitution of the United States; and

Whereas many noble traditions of this Commonwealth, together with her sister States, spring from the military services our militia and National Guard have rendered in the cause of liberty from the beginnings of our country down through the years; and

Whereas the national economy cannot sustain a Reserve force program, estimated to cost $33,000,000,000 during the next 20 years, which cost would be additional to the $15,000,000,000 now annually budgeted for defense purposes; and

Whereas it is unthinkable that the excellent reserve forces now in existence, the National Guards of the several States, which sent 18 well trained and equipped National Guard Divisions into the field during World War II and provided 12 combat groups to the Air Force, should be absorbed by another component: Therefore be it

Resolved, That it is the sense of the General Court of Massachusetts that our present dual system of Federal-State organization and jurisdiction for the National Guard is a tested and proven instrument of military policy which has demonstrated historically the foresight and wisdom of those who framed our Constitution, and that the President and Congress of the United States should, therefore, disapprove legislation which would in any degree vitiate this system of National Guard organization and jurisdiction or would adversely affect the rights, privileges, or emoluments of National Guard members; and be it further

Resolved, That the President of the United States direct the National Military Establishment to provide more effective cooperation and support for the National Guards of the several States and of the United States, in order to provide properly balanced, trained, and equipped National Guard forces for service in time of emergency, either local or national; and be it further

Resolved, That copies of these resolutions be sent forthwith by the State secretary to the President of the United States, to the Presiding Officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In house of representatives, adopted March 7, 1949.

LAWRENCE R. GROVE,
Clerk.

In senate adopted, in concurrence, March 8, 1949.

IRVING N. HAYDEN,
Clerk.

Senator Irving M. Ives

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my remarks, I include the following report by Thomas DeYulia which appeared in the Postal Record regarding Senator IRVING M. IVES:

At our last meeting I was mandated to pay tribute to Senator IRVING M. IVES in this magazine for his interest in the postal workers throughout the country.

It is a pleasure for me to comply with this request, not only because Senator IVES has been with us on past legislation but he is wholeheartedly now in favor of a $650 raise and 26 days' vacation and 15 days' sick leave for us.

We met with the Senator recently on the occasion of Syracuse University's graduating exercises. He delivered the commencement address and received an honorary degree of doctor of laws. He told us at that time we were deserving of more money and a better vacation and sick leave.

Last October, when we held a dinner in his honor for voting in favor of the pay raise and the retirement bill, we were impressed with his sincerity and concern relative to our problems. He convinced us then that he had a warm spot in his heart for all postal employees.

Recognized by his colleagues in Congress as an authority on labor legislation, Senator IVES has an enviable record in public service. As a member of the New York State Assembly, he coauthored the famous Ives-Quinn bill which saw our State take the lead in fighting employment discrimination. Since then New Jersey, Connecticut, and Massachusetts have adopted similar legislation.

Prior to his election to the United States Senate, he set up the School of Industrial Relations at Cornell University and became the first dean. A comparatively young man, Senator IVES is a public servant of high caliber and seems destined for a brilliant future in Washington. We in Syracuse know we have a good friend in Congress in Senator IVES. We'd like the half million postal employees across the country to know it, too.

THOMAS DEYULIA.

Slum Clearance and Low-Cost Housing

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. HESELTON. Mr. Speaker, in accordance with instructions of the Republican delegation in the House of Representatives from Massachusetts to insert in the appendix of the RECORD copies of resolutions, petitions, and memorials which may be sent to the entire membership of that delegation, and, under leave granted me to extend my remarks in the RECORD, I now insert resolutions of the General Court of Massachusetts memorializing Congress to pass legislation providing for greater allocation of funds for slum clearance and low-cost housing projects:

Resolutions memorializing Congress to provide for slum clearance and low-cost housing projects.

Resolved, That the General Court of Massachusetts hereby memorializes the Congress of the United States to pass legislation providing for greater allocation of funds for slum clearance and low-cost housing projects; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the commonwealth to the President of the United States, to the presiding officer of each branch of Congress and to the members thereof from this commonwealth.

In house of representatives, adopted, March 8, 1949.

LAWRENCE R. GROVE, *Clerk.*

In senate, adopted, in concurrence, March 14, 1949.

IRVING N. HAYDEN, *Clerk.*

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Honor to Whom Honor Is Due

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 10, 1949

Mr. CANNON. Mr. Speaker, under leave granted me to extend remarks in the RECORD, I include an article carried in this week's issue of Alabama, news magazine of the deep South, commenting on the life and work of a man known to every Member of the Congress, one of the best-loved men in the Nation.

Ed O'Neal has probably contributed more to the progressive development of American agriculture and to the stabilization of an adequate farm income, as well as to the welfare of the average farm family than any other one man in the history of the industry.

I take pleasure in submitting for the RECORD the article on Alabama's famous son appearing in the February 18, 1949, issue of Alabama, as follows:

A FAMOUS SON

Edward Asbury O'Neal III, one of the most influential figures ever produced by Alabama, top man for American organized agriculture for 17 years, confidant of five United States Presidents, is enjoying retirement in his native Florence by keeping up with national affairs and watching the benefits of his long service to the farmer materialize.

When Ed O'Neal graduated in law from Washington and Lee in 1898 his Alabama friends expected him to enter politics. His grandfather, Edward Asbury O'Neal I, had been Governor of Alabama from 1882 to 1886; his uncle, Emmet O'Neal, was a politician who became Governor in 1911. Edward II had died shortly after his son's birth in 1875, and Alabamians naturally looked to Edward III to carry on the family's political tradition.

But young Ed's interest in public affairs did not encompass the holding of office. Instead, he became in time a veritable power behind the throne, undisputed spokesman for the American farmer in poltical and legislative matters. During his long years as president of the American Farm Bureau Federation, Washington news observers often referred to him as the Capital's most potent lobbyist.

Under the O'Neal leadership, agriculture enjoyed its golden years, legislatively speaking. The long fight for equality of treatment and parity in the prices paid for his products was won by the American farmer. All sorts of safeguards were set up to lessen the farmer's financial risks. Through the

extension services and various other aids carried on by the Department of Agriculture, there grew up in the United States the world's greatest agricultural educational system. Ed O'Neal had always felt the farmer's back was already strong enough; that what he needed was more brains. By the time his job was finished, farmers everywhere were getting the benefits of scientific agricultural knowledge.

IDEAL FOR THE JOB

Ed O'Neal was the perfect representative for the farmer because of two factors: his persuasive personality and his passion for his cause. He was equipped with all the attributes of the traditional southern gentleman: well educated and articulate, distinguished in appearance and friendly in manner, logical in his viewpoints, resourceful, persistent without being offensively obstinate.

He was intensely practical in his approach to political-legislative problems. He now recalls: "When we had to make out a case before a certain committee, and we needed the vote of a certain member of that committee, and that member came from Texas, let us say—well, we would bring up a key farmer from Texas and let him testify. The committeeman usually was impressed." It has also been said that he knew how and to whom to serve a drink. (The late Senator Norris once told the Nebraska Legislature, after having visited Muscle Shoals with a number of other Congressmen and been entertained by the O'Neals: "The liquid and solid refreshment given me on Ed O'Neal's farm was the birth of TVA.")

Ed O'Neal knew the farmer's problems—and potentialities—intimately because he himself had been a farmer, and a good one. For a quarter of a century, from 1898 to 1923, he operated the big plantation near Florence, which he inherited from his mother. He kept constantly on the lookout for improved farming methods. As early as 1912 he attended a short course at Auburn and learned how to use limestone and phosphate as fertilizer for alfalfa. Soon he was growing such lush crops of alfalfa that farmers came from 100 miles around to study his methods. He is still proud of wheat crops that ran as high as 55 bushels to the acre, and his corn which sometimes reached 100 bushels per acre.

HIS WATCHWORD—UNITY

Early in the twenties he went to Illinois to study the work of the Farm Bureau. Observing the close cooperation there between the bureau and the University of Illinois, he returned with an intensified belief in the value of organization and extension education for farmers.

In 1923 Mr. O'Neal became president of the Alabama Farm Bureau Federation, which had been organized just 2 years earlier. The Florence master farmer headed the State bureau for 8 years. In the meantime (in 1924) he was made a vice president of the national bureau and became increasingly active in its work.

Because he had engineered a progressive program for the Alabama bureau, and because he held a truly national viewpoint on agricultural problems and had already done outstanding work in promoting Federal legislation, Ed O'Neal was elected president of the American Farm Bureau Federation in 1931.

In this job he strove for unity among all American farmers in their struggle for economic equality. By overcoming sectionalism and putting steadily increasing power into the farmer's voice in national affairs, he soon began getting results. Consequently, until his retirement in 1948, he never had opposition to reelection as bureau president. During his long tenure membership rose from 276,000 to 1,260,000, and the bureau's cash balance from $40,000 to $1,250,000.

CONFIDENCE IN CONGRESS

Ed O'Neal appeared before numerous congressional committees, made many speeches at farm gatherings, otherwise was continually busy on farm matters either in Washington or at the national bureau's office in Chicago. It is no wonder, then, that he trod on some toes in those hectic New Dealing years.

Although keenly aware of the Federal Government's role in raising the economic level of the people, Mr. O'Neal was never a defender of the bureaucrat. In 1942 he told the annual convention of the national farm bureau:

"I feel that Congress is the hope of the people. I have confidence that Congress can be relied upon to curb bureaucracy when it runs wild."

Though retired, and bearing the burden of 74 years, Mr. O'Neal is still making an occasional speech. Last month he visited several Tennessee county farm bureaus and addressed each of them. One of the speeches he loves to make to organizations in the Tennessee Valley traces the history of Muscle Shoals from the days of the Indians right up to TVA. The swift power-laden currents of the mighty Tennessee flowed within sight of Ed O'Neal's farm, and he felt a keen early interest in developing the shoals, not for its hydroelectric power alone but for its potential as a fertilizer producer.

When President Wilson in 1917 sent four Cabinet members to look at the shoals as a site for a munitions-fertilizer plant it was Ed O'Neal who met them. One member of the group was Secretary of War Newton D. Baker, who had been O'Neal's fellow student at Washington and Lee; he was entertained in the O'Neal home. From this visit grew Wilson Dam and its nitrate plants.

Again in 1921 Mr. O'Neal sought to put the shoals to work. The farm bureau was strongly in favor of the Government's leasing the dam and plants to Henry Ford. When Mr. and Mrs. Henry Ford, Mr. and Mrs. Thomas A. Edison, and Mr. and Mrs. Edsel Ford came to Florence to look over the shoals it again was Ed O'Neal who entertained them.

President Hoover appointed Mr. O'Neal to his Muscle Shoals Commission, but its recommendations for turning the nitrate plant over to a farm cooperative for the manufacture of fertilizer were turned down. When Roosevelt became President Mr. O'Neal and other farm leaders visited him in Albany and strongly urged development of the shoals. A few months later, TVA was created.

HE STAYS INFORMED

Now Edward Asbury O'Neal III looks back on all this from the dignified comfort of his Florence home (his mother's house, built in the 1830's, now restored and redecorated). He still owns his nearby 800-acre farm, but has little to do with its operation. He reads a lot—newspapers, national magazines, the CONGRESSIONAL RECORD. Once or twice a week he calls in a stenographer to whom he dictates letters or memoranda for his occasional speeches. Old friends—men who still are among the Nation's leaders—keep in touch with him. And every so often, especially during the tourist season, an auto from Iowa, or perhaps from California or Pennsylvania, will stop in front of the stately old home, bearing acquaintances from farm bureau days who want to say hello again to the grand old man of American agriculture.

Five Presidents sought—and got—advice from Ed O'Neal on farm matters (Harding, Coolidge, Hoover, Roosevelt, Truman). Shortly after Mr. Truman succeeded to the Presidency in 1945 he asked Mr. O'Neal to bring a group of farm leaders to the White House for a conference. As the meeting broke up the President called the American Farm Bureau Federation chief aside and said: "Ed, you've been around a long time; you've watched a lot of Presidents; you've watched me work in the Senate. Now, what advice would you give to a man who wants to be a good President?" As a press photographer came up and took a picture, Ed O'Neal was saying: "Mr. President, you've got the ability; what you need to develop is the guts."

After Mr. Truman's election last November, Ed O'Neal wrote to him: "Your campaign showed you've developed the necessary guts."

Address of Hon. T. Vincent Quinn

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. CLEMENTE. Mr. Speaker, under unanimous consent to extend my remarks, I include the following address of Congressman T. VINCENT QUINN made at the twelfth annual communion breakfast of the Pasteur Guild of the Department of Hospitals at the Hotel Commodore, New York, on Sunday, March 20, 1949:

THE HERITAGE THAT IS OURS

We in America are indeed fortunate that we live in a country that still can be called the land of the free and the home of the brave.

In America we believe that the individual is supreme and that the State exists for the individual. The Communist believes that the state is supreme and that the individual exists for the state.

We believe that the individual was created by God—to love Him and to love our neighbor because we see in our neighbor the image of Almighty God.

Let us contrast this philosophy with the philosophy of Anatole Lunacharsky, former Commissar of Education in Soviet Russia.

"We hate Christianity and Christians," this Communist proclaimed in 1935. "Even the best of them must be considered our worst enemies. They preach love of one's neighbor and mercy, which is contrary to our principles. Christian love is an obstacle to the development of the revolution. Down with love of our neighbor! What we want is hatred. We must know how to hate. Only thus will we conquer the universe." (Quoted in Izvestia.)

Another man like Lunacharsky, once wrote of hate: "Look at these young men and boys!" wrote Hitler in his Mein Kampf. "What material! I shall eradicate the thousands of years of human domestication. Brutal youth—that is what I am after—I want to see once more in its eyes the gleam—of the beast of prey. With these I can make a new world—and create a new order."

What Hitler plainly meant was that the Christian concept of the dignity of man, made, as he is, in the image and likeness of God, must be forever banished. For love of God he would substitute the material. For love of God and the love of man for his neighbor, he would substitute the gospel of hate.

What Hitler knew—and Stalin knows—but which far too many good people do not yet

realize, is that if there is no morality, there can be no law other than that of force.

The Communists find no ethical contradiction when, for example, they extend a friendly hand to religion one year and the next year persecute it; or when they ally themselves with democracy at one time, and the next time seek to overthrow it; or when they sign a treaty with nazism and then fight against it. When conditions change, new techniques must be developed, but all are equally true and moral to the Communist as long as they further the revolution. But is there any limit to chicanery, duplicity and deviltry? Absolutely none.

As Lenin said: "It is necessary to use any ruse, cunning, unlawful method, evasion, concealment of the truth."

Stalin added approvingly: "Dictatorship means nothing more nor less than the power which directly rests on violence, which is not limited by any laws or restricted by any absolute rules."

How can any individual who believes in the existence of God agree with the Marxian theory that religion is "the opium of the people."

Marx argues that man has been alienated from himself in two ways: by religion and by private property. Religion alienates a man from himself by subordinating man to God; private property alienates a man from himself by subordinating man to an employer. It therefore follows that if a man is ever to be restored to himself, both religion and private property must be destroyed. But though communism denies our God, it affirms another god—the Communist collective before which men must prostrate themselves, to whose new shrines, the factories, they must make their pilgrimage; to whose will, expressed by the dictator, they must make complete abandonment of self; before whose secret police, as the new priesthood with unholy orders, they must take their brew of propaganda, and though they have not an empty tomb of the risen God to give them hope, they still have the cadaver of Lenin, periodically injected with embalming fluids, to give the appearance of life where there is only death and decay.

Man, according to Communist philosophy, has a value only, because he is a member of the revolutionary group; when he ceases to be a member, he ceases to have value. Liquidation, transfer of populations into Siberia, the denial of suffrage, concentration camps and all the other paraphernalia of communism follow in the train of this degraded concept of man. That is why communism speaks of the proletariat, but never the poor; the proletariat serves the revolution; the poor serve nobody, they stand in need of service. A Christian will help a Communist in need and there are many Christians who have; but no Communist would help a Christian in need, unless he promised to aid the party. As Molotov said: "Bread is a political weapon"; which means that only those who think his way may eat.

In America man has rights which are God-given. To repeat the words of our founding fathers:

"We hold these truths to be self-evident:

That all men are created equal;

That they are endowed by their Creator with certain unalienable rights;

That among these are life, liberty, and the pursuit of happiness;

That, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed;

That, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundation on such principles, organizing its power in such form, as to them shall seem most likely to effect their safety and happiness."

Finally, to repeat the words the men who founded this Republic used in closing the Declaration of Independence:

"And for the support of this Declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

These men dared everything to win the God-given heritage which is ours today. Let us always keep in mind that a man is more precious than the universe, that the universe exists for man, that society can use some human functions, but never at the cost of absorption, and that even in his evil moments man is worth addressing in the second person singular, as Our Lord did the thief in that beautiful affirmation of democracy on the cross:

"This day thou shalt be with Me in paradise."

England's Free Health Service

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. MULTER. Mr. Speaker, we will very soon be concerning ourselves on the floor of this House with a national health insurance plan. Much will be said about it with reference to the operation of a similar plan in Britain. The Brooklyn Eagle has been running a series of articles giving all of the facts with reference to the British plan. I think they will prove of considerable interest to the Members of this House. The following is the first of the series:

FORTY-ONE AND ONE-HALF MILLION ENROLLED IN ENGLAND'S FREE HEALTH SERVICE—COSTS AT RATE OF ALMOST A BILLION A YEAR

By E. J. Delaney

(First of a series)

LONDON, March 17.—England's free National Health Service providing everybody in this country, even casual visitors, with anything and everything they may need for their physical and mental welfare definitely is here to stay. That is, if the national and local public treasuries can carry the heavy financial burdens that result.

The plan has been in effect for 9 months now, and 41,500,000 people are enrolled in it. That's 93 percent of the population. The cost so far, to the National Government, has been at an annual rate of $988,000,000. That would mean in the United States an annual Federal cost of $3,145,000,000, if the same kind of service, at similar rates, should be provided for the same percentage of the population.

The general popularity of the National Health Service best is measured by the high praise the political parties pour upon it. They all are for it and all claim it as their own brain child. The Conservatives announce in the House of Commons, regularly, that if and when they return to control of the Government they will not abandon the health service.

Even guarded criticism of the management of the plan or charges that much waste is obvious in its operation bring retributions. It is believed by much of the public, as well as by well-informed political observers, that a complaint by the Conservatives of fiscal mismanagement in health work cost the Conservatives a parliamentary by-election in Hammersmith 3 weeks ago.

That doesn't mean everybody approves of all that is going on. There are many protests over details. The government and medical spokesmen agree there have been abuses both by members of professions and by the people themselves. A drive is on to block exploitation and to cut costs.

The average working man and his wife are delighted. They say they now can secure medical and dental care they couldn't afford in the past. They declare that the factory hand and the mechanic are having their day and they are not concerned about what the professions or the upper economic groups are thinking.

FEAR POOR SERVICE

In the professions and among white-collar groups who study the over-all situation there is great worry. These people wonder just where all this will end. They have a feeling this scheme is leading the way to something undesirable, that eventually they will have poor medical and dental services. They refuse to give unreserved endorsement to the idea.

Actually the chief amazement in the medical and dental profession is the absence, thus far, of domination by bureaucrats. Doctors and dentists admit that their freedoms have been affected hardly at all, but they point out they had to wage a long and hard fight with the Health Ministry to avoid regimentation.

The professions still harbor deep suspicion of the ultimate intention of the Government and there is no relaxation in the vigilance of their leaders and committees formed to protect their positions and their liberties. They foresee an unending struggle against complete nationalization.

WAITING IS THE CUSTOM

Of course there are not enough physicians, dentists, surgeons and hospital facilities to give all the care that an unleashed demand requires. Waiting is the custom of the day. Those actually ill and in need of immediate attention are given priorities, others are served as soon as possible, which may be in 2 weeks or a month or even longer. A varicose veins operation may be delayed a year.

Everyone has to pay something every week toward the cost of the service, but it is a nominal amount. The charge against most workers is 15 cents a week which is deducted from their pay, along with the regular social security, old-age pension and unemployment compensation assessments, which total about 80 cents a week.

The contribution of 15 cents a week gives the people an assurance that they are helping to pay for their health service, even though it is only a small part of the bill. Some, not many, are demanding. Most beneficiaries are entirely reasonable in their approach.

Such great participation by the public has forced most professional men to enroll in the plan. Whether they do or not is optional, but they have found private practice does not produce sufficient income. They are engaged chiefly in the health service and have a little private work in addition. A few, mostly middle-aged or elderly men who have acquired modest fortunes, remain in private medicine because they do not feel able to perform the great volume of tasks that the health service brings into an office, a surgery, they call it here.

Mystery of the Three Dots

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. KING. Mr. Speaker, the President has said that the proposed billion dollar Central Arizona project is not in accord with his program.

This statement of the President was deliberately omitted from the Interior Department report on the Arizona project now before the Congress.

The Interior Department report was sent to the Congress with the approval of the Budget Bureau.

Was it emasculated after it left the Budget Bureau? Was the operation performed on a high administration level? Was it done with the knowledge of the Director of the Budget and the Secretary of the Interior? Was this the work of a single official whose intention it is to deceive and confuse the Congress?

These are questions which should be answered.

Let me quote from the Interior Department report, which is dated March 18, and signed by Acting Secretary Oscar L. Chapman.

The second paragraph of Mr. Chapman's report says, beginning with the third sentence:

> By letter dated February 4, the Director of the Bureau of the Budget advised me that he had been instructed by the President "to advise you . . . that he again recommends that measures be taken to bring about prompt settlement of the water-rights controversy."

Here instructions of the President are being stated. But not all the instructions of the President. What did the President say where the three dots now appear in Mr. Chapman's letter to the Senate?

This is the statement in full:

> The foregoing summary and the project report have been reviewed by the President. He has instructed me to advise you that authorization of the improvement (Central Arizona project) is not in accord with his program at this time and that he again recommends that measures be taken to bring about prompt settlement of the water-rights controversy.

That is what Budget Director Frank Pace, Jr., wrote to the Secretary of the Interior on February 4, 1949. Why were these positive and direct instructions of the President omitted from Mr. Chapman's report now before the Senate committee?

What is this project that the President says is not in accord with his program?

It is one that calls for the expenditure of more than a billion dollars of the taxpayers' money. The highest Government officials have stated it is not feasible, is not practical, and would have to be paid for by people other than the few Arizonians who would benefit.

And another fact which undoubtedly influenced the President in his decision is this:

There is no assured water supply for the proposed project. There is a controversy between California and Arizona over division of the waters of the lower Colorado River.

Secretary of the Interior Krug and Reclamation Commissioner Straus have admitted that without settlement of the Colorado River controversy there can be no assured water supply for the proposed Arizona project. Four times this admission appears in the Reclamation Bureau's complete report on the Arizona project issued last year.

So, President Truman has instructed the Budget Bureau and the Interior Department that the proposed Arizona project is not in accord with his program. And the President has called for a prompt settlement of the water-rights controversy.

Why, and by whose authority, were these clear and unqualified instructions of the President replaced by three little dots in Mr. Chapman's report to the Senate?

Free Mailing Privileges for Wounded War Veterans

EXTENSION OF REMARKS
OF
HON. RICHARD W. HOFFMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. HOFFMAN of Illinois. Mr. Speaker, I was deeply moved by an article written by Mr. Roger Treat, which I read recently in one of Chicago's great daily newspapers, the Chicago Herald-American.

In his article Mr. Treat calls to the attention of the American people that we fail to provide free mailing privileges for our wounded war veterans in our service hospitals. Mr. Treat went on to say that—

> some day perhaps he shall be able to visit a service hospital and not go away with a heart full of explosive rage—some day perhaps I can have some feeling of respect for the men in high Government circles.

All of whom to his way of thinking are partly responsible for filling these hospitals with the broken remnants of fine young men.

Mr. Treat continues, and I quote:

> Remember 5, 6 years ago? Bands playing, Hollywood cuties swarming around, and the windy blasts about our brave boys? Haven't heard it lately, have you? Our brave boys have gone back to civilian life. They go to work, get married, have families, get fired, get drunk, get lucky, just like nothing ever happened. Most of them do—but not the ones at Hines, nor the scores of other service hospitals where thousands of men try to keep smiling despite the certain knowledge that they are dragging through a living death—that they will never leave those lonely wards and rooms alive. Some may go back to partial life on the outside; some may be of such strong faith and glorious courage that they can remodel their lives into something of contentment but think of the days and nights which drag by in the loneliness of despair. You can't beat those fellows. Their Government would just as soon not hear about them any more. They get the bare essentials of existence, medical care within the budget. Sometimes people come out and try to entertain them.

Mr. Treat continuing, and I quote again:

> Listen to this—their Government, which is so eager to send billions to other countries, which orders billions of dollars' worth of new fighting planes, which spends more billions building a stock pile of atom bombs—that Government doesn't care enough about our brave boys to give them free postage any more. Say it again—not even a penny post card to write a message home. Doesn't that make you a little sick? And many of them are broke.

Many of our people who have visited Hines Hospital, which is situated within the boundary lines of the Tenth Congressional District which I have the honor to represent, can testify to the validity of Mr. Treat's remarks.

Let us stop for a moment and think about the thousands of war veterans paying the price today in our veterans' hospitals for the unselfish service they gave to this Nation. What could the people of this country—grateful for that service—do for these men that they would really appreciate. It seems to me that so small a thing as allowing them to use the United States mail without the paying of postage is much more vital to the happiness and well-being of these men, their families, and friends, than many measures which bask in the limelight of newspaper headlines. When they were uniformed during the stirring days of the war, these men were privileged to write home to their loved ones without worrying about paying postage. Is it not ironic that now, as Mr. Treat states, while we are spending today billions, we should overlook those who suffered most as a result of wars?

There is certainly no atonement we can offer that will repay adequately their sacrifices. Many of them will never leave their hospital beds alive. I am told that some of them cannot write to their loved ones and friends simply because they do not have the money. What kind of a payment is this for what they went through and what they are going through now? The franking privilege—which the Members of this Congress enjoy—is a pittance indeed for this comparative handful of our boys in hospitals throughout the land. But small as it is, this is one thing we can do without appropriating millions, setting up administrative agencies and putting additional people on the Government pay roll.

I am today introducing a bill which if enacted by the Congress will rectify this situation. This measure provides for free mailing privileges to veterans in Veterans' Administration hospitals and to servicemen in hospitals maintained by the armed services. This bill affords a wonderful opportunity for our Government to add to the pleasure and comfort of those veterans and servicemen who are helpless in hospitals and too often without funds. With much of our relief to foreign countries dispensed

with a spirit of merely hoping it will be of benefit, here is an opportunity to assist in a practical manner those we know to be deserving and whom we know will be exceedingly grateful to our Government for its generosity. In our endeavors to repay veterans for all that they have done for us, there is one thing on which we are all agreed and that is that nothing is too good for the disabled. Let us show these men that we have not forgotten. That our hearts are moved not only by the cries of help from abroad, but even more by the needs of those here at home.

Congress Reasserts Itself

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an article by the noted columnist, Mr. George Rothwell Brown, which appeared in a recent issue of the Pittsburgh Post-Gazette and which was called to my attention by our esteemed former colleague, the Honorable William J. Crow. I commend Mr. Brown's observations to all those who recognize the issue as now joined between the advocates of state socialism and those who believe that this is a Republic of sovereign States. His article follows:

POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, March 17.—An average American, looking down from a gallery, probably would consider a Senate filibuster to be one lone man with a hoarse voice completely surrounded by 95 vacant chairs.

This would be entirely superficial. The one Senator reading a dull speech to empty benches is merely holding the fort.

The real filibuster is going on in secret meetings to which the visitor has no access, and the existence of which he does not suspect.

Yet to the perplexed and probably disillusioned average American, this particular Senate filibuster is of the most vital importance, for upon the outcome will be determined, 5, or 6, or maybe 10 years hence, whether he is to remain a free American, in a free-enterprise system of a free country, or become the proletarian stooge of a totalitarian socialistic dictatorship.

That's exactly what this particular filibuster means, and you may lay to that.

It is, perhaps, unfortunate that the conservative men who have thrown up this parliamentary road block ahead of the Truman extension of the British Beveridge plan—which itself has been extended from nationalized social security and medicine into the field of nationalized industry—have not frankly informed the country of their true motives.

These men, mostly southern Jeffersonian Democrats, having no relationship whatever with Roosevelt-Truman New Dealism, are looking ahead as much as 10 years.

They are seeking to preserve the constitutional system of checks and balances.

President Truman is backing a program of state socialism which, if adopted, would destroy the whole American concept of local self-government, with a concentration of all government in the hands of a Federal bureaucracy in Washington.

The most effective remaining check upon the steady usurpation of Executive power, which began under Roosevelt, is the Senate. The fight over the rules is the Senate's expression of determination to maintain its check upon the President. That's all there is to it.

The issue unhappily has been presented as a minor squabble over an obscure technicality.

If it had been explained to the people as a fight to prevent the further extension of socialism in the United States the people would have been able to get a better grip upon the fundamental principle involved.

When a Senate committee refused to recommend the confirmation of Mon Wallgren to a vital national security post, notwithstanding he is a former Senator himself, and a pal of the President, it was a conscious and deliberate exercise of the "check and balance" ideal of the Constitution.

But the Senate is not the only check upon the President. The whole of Congress is now in revolt against Trumanism.

The Senate filibuster has reinspired the old American tradition of States' rights all along the line. That's why the House this week rebuked the President on continued Federal rent controls, and returned this power to the States.

This is more than recalcitrancy. It is rebellion by a Congress predominantly New Deal in name only, against a President elected in November on a coalition ticket.

Less than 5 months ago the country was being congratulated upon having chosen a President and a Congress of the same party.

But the President's party in the Senate is at open warfare with him. One hoarse orator, and 95 vacant seats.

We have a Senate in the doldrums, a President in the Gulf Stream, and a House completely at sea. But is this bad for the country?

Not at all.

It is an inspiring sign of a reviving spirit of congressional independence. The good record of this Congress is being written in terms of what it will not do.

Address of Hon. J. F. T. O'Connor

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. POULSON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an address made by Hon. J. F. T. O'Connor, United States district judge for the southern district of California, former Comptroller of the Currency of the United States, and former vice chairman of the Federal Deposit Insurance Corporation, delivered at a testimonial luncheon given by the leaders of southern California to Hon. Fletcher Bowron in Los Angeles at the Biltmore Hotel on September 26, 1944. Many Members of the House came to know Judge O'Connor when he was Comptroller of the Currency, and no doubt will read this address with interest. It follows:

Mr. Chairman, your honor, and friends, I am exceedingly happy the mayor was advised of this meeting. It would have been embarrassing had he been overlooked. While I appreciate the honor the committee on arrangements has done me in asking me to speak, I am conscious of my limitations and inability to do justice to the subject: The mayor of Los Angeles.

In this great gathering there are many more experienced and more eloquent than myself. What I lack in these qualifications, I shall try to overcome in the brevity and sincerity of my remarks.

A city—a beautiful city—of more than a million and three-quarter souls hesitates for an hour to pay its tribute to its chief executive. Such thoughtful expressions of commendation are, unfortunately, generally left until the recipient cannot hear the words of praise, or feel the touch of a living hand. Why must words of cheer and expressions of good will be locked in the heart until, if uttered, they bring no cheer, and become purposeless in the saying?

My presence here is twofold. First, to pay tribute to the chief executive of my city; and, secondly, to approve the inspiration which found its fruition in this magnificent gathering. Some years ago I spent a day in Minneapolis. On the inside of the afternoon paper near the foot of the page, an item attracted my attention. It occupied about 2 inches with a single line reading "W. Bourke Cochran dies." On the front page in large type all across the front: "Pola Negri Jilts Chaplin." Cochran, for over 20 years, had been a Member of Congress of the United States; he left his imprint on every piece of important legislation in his day. He was without a rival in oratorical brilliance, and scholarly attainments. To listen to him, as was my pleasure in my school days, the picture of Calhoun replying to Wayne; Webster pleading for the life of Dartmouth College, and Edmund Burke defending America on the floor of the English House of Commons, flashed like livid realities before my mind; and yet, his accomplishments, his attainments, his contribution to the economic and political thought of his day were not as importart as the fact that Pola Negri jilted Chaplin.

In honoring a man in the midst of his work, who deserves honor, we honor ourselves, but we do more; we encourage others heavily laden with official responsibilities to know their efforts are not unappreciated by their fellowmen. The reward of those who serve in public office is not found in the compensation they receive, but rather in the satisfaction of work well done, and in the warm, sincere, and expressed appreciation of those served. The arrows of criticism are ever pointed toward those in public office; the higher the office, the more deadly the arrows. Did any man ever receive greater and more unjustified criticism than Abraham Lincoln? Yet, where is the man worthy to stand in his shadow?

The Czar of Russia returned to his palace following an attempt on his life, and his valet expressed surprise that he was so calm. "Part of my business," said the Czar, brushing the bullet-torn coat, "is to be shot at." That can be said of every public official.

Rudyard Kipling, the poet laureate, expressed my thought:

If you can keep your head when all about you
  Are losing theirs and blaming it on you;
If you can trust yourself when all men doubt you,
  But make allowance for their doubting too;

If you can wait and not be tired by waiting,
Or, being lied about, don't deal in lies,
Or, being hated, don't give way to hating,
And yet don't look too good nor talk too wise.

If you can talk with crowds and keep your virtue.
Or walk with kings—nor lose the common touch;
If neither foes nor loving friends can hurt you;
If all men count with you, but none too much;

If you can fill the unforgiving minute
With sixty seconds' worth of distance run—
Yours is the earth and everything that's in it,
And—which is more—you'll be a man, my son.

Six years is a long time to stand in the piercing rays of the searchlight of public opinion. Six years of sincere service, of exceptional accomplishment, of faithful devotion to duty, of impartial enforcement of the ordinances, of just treatment of the poor and rich alike, has characterized your administration, and this great gathering, Mr. Mayor, is far more eloquent tribute to your achievements than any words of mine.

Los Angeles is near the top among the great cities of the United States, and the time is not far distant when it will be known not only as the City of the Angels but the queen of all American cities. To govern a city increasing in population as fast as Los Angeles is a challenge never before thrown at the feet of any man. The ordinary civic problems are sufficient to test the administrative ability of any executive; add to these an increase in population in 6 years of 380,000; the building of over 130,000 new homes in city and county; the numberless factories, representing many millions of dollars, and at once comes the problem of electric light, sewerage, water-main extension, new streets, additional police protection, and many other attendant challenges. The war imposed many of these burdens and brought many for which there was no precedent. The black-out—no one ever dreamed the bright lights of our gay city would blink out—no one ever dreamed huge searchlights would glow from our peaceful hills to search the heavens for enemies with messages of death. Under the direction of our mayor and his citizens' committee, the whole city was organized to take care of any emergency. Thank God we were spared the horrors, the death, and destruction of other cities.

To the solution of these problems, Mayor Bowron brought his experience as an outstanding lawyer, the earned reputation of a fair and impartial judge while serving on the superior court, as well as Nature's gift of good, common horse sense. Men of honesty, integrity, capability, and devotion to duty have been appointed to office by our mayor. The civil-service commission has won the confidence and approval of the whole city. Every employee must know that his promotion rests upon his own efficient work and not upon any outside influence. The police department will not suffer in comparison with any city in our country. Chief of Police C. B. Horrall has won for himself a national reputation; a man of courage, experience, and ability directs our police force, which protects our people and our property; he is the nemesis of the gangster and the friend of the underprivileged boy.

The city planning commission appointed by our mayor has done an outstanding piece of work. It has redrafted the entire zoning ordinances, and placed in one instrument the many ordinances scattered in various places. Under its direction, the city and county have agreed on a master plan for the civic center and coordinated the superhighway system with local development, as well as making the shore line a contemplated spot of beauty and a joy for millions in the future. Sevard M. Mott, director of the urban land institute and former director of the Land Planning Division, Federal Housing Administration, after a canvass of all American cities, said Los Angeles led the Nation in home building and in preparation for war emergencies. Mayor Fletcher Bowron's plan for future city building, presented at the national conference of city mayors has attracted the attention and won the admiration of every forward-looking city builder. Our mayor holds a nonpartisan office; were it partisan the ethics of the bench would prevent my presence here today. Men and women of all parties, of all faiths, of all creeds have been called by His Honor to help in the vast program he inaugurated, and deserve much credit for its success. What should be the qualifications for all office holders in our Government, from the highest—I hesitate because there is no lowest office in a truly representative form of government—President Monroe, when he retired as Chief Executive of our Nation, was elected justice of the peace and served until death. His friends were reluctant to present the request; his response was, "Any office under the Constitution and laws of our country is an honor to hold." What should the qualifications be? Each individual has his own blueprint. Would you agree with these? First: Absolute honesty, not only in financial matters, but intellectually. Second, ability to do the work; third, application and devotion to the duties assumed; fourth, impartiality. Without honesty, the greater the ability, the greater the danger to the public. The first is the main qualification; lacking in this respect, the others need not be considered. Our mayor possesses all these qualifications. It is not possible to give credit or mention the work of the many other boards and committees—the work of the city council must be left for another day and abler hands.

Provincialism has never narrowed the vision of Mayor Bowron—he has visited the islands of the Pacific, Asia, the Republic of Mexico, and other South American Republics. He has fostered the good-neighbor policy with our sister republic south of the Rio Grande. He realizes that our city has world influence. In being well known all over the world, Los Angeles ranks with New York, London, and Paris. Like ribbons of light, the motion pictures made here go into every city, town, hamlet, and crevice in the world.

This is the city, Mr. Mayor, you have presided over as chief executive for 6 years. Into its growing body you have infused new life and, better still, a new spirit. Your foresight will be better appreciated by the unborn generations—your honesty and fairness an example to the mayors throughout our land; your unselfish service finds its approval in this outstanding gathering.

Los Angeles, your sons and daughters, native and adopted, have gathered to honor your chief executive. He has brought no blush of shame to your cheeks, nor caused your proud head to bow in sorrow. New York is justly proud of her famous bronze statue, the gift of another nation, which greets the incoming and bids farewell to the departing boats—but here we have a living, dynamic queen, her background the high Sierras, her feet marking the last American frontier, her head high, her fingertips on the outstretched arms touching the stars, her brow cooled by the gentle zephyrs of the Pacific, her untarnished robes gently flowing in the breeze, her heart so filled with love there is no room for hate—and this is your Los Angeles and my Los Angeles.

Excerpts From the Report of James E. Curry, General Counsel of the Congress of American Indians

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. POULSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following excerpts from the report of James E. Curry, general counsel of the National Congress of American Indians, to the convention of the congress at Denver on December 12, 1948:

Whoever witnesses individual acts of bravery, strength, or merit shares with the one who performs them the exaltation that such acts evoke. To see a Lindbergh fly the ocean or a David fight a Goliath or even to witness a farmer plowing a furrow well or a good fiddler playing a pretty tune thrills the spectator as well as the performer. Our admiration of accomplishment is increased if the deed performed is one of moral merit or self-sacrifice, as when a soldier fights or dies for his country or for his principles.

However, for me, there is an occasion that heightens the emotions even more. Nothing calls forth greater admiration in the spectator than a group of weak men and women banding together to make themselves strong and performing acts of self-sacrifice and devotion for the benefit of their community or their children. It matters not against whom their contest may be waged. The heart of the world is touched by their effort.

A few years ago that heart was touched by a group of indomitable friends of freedom in Ireland known as Sinn Feiners. Sinn Fein took the British lion by the tail and refused to let go until the rights of Ireland were recognized. In the less distant past all nations looked in awe at the brave struggle of the Finns against the Russian armies of conquest. At this very moment we are cheering the fight of the Jews in Israel to create and protect a homeland for themselves. Coming closer to home, everyone recalls the struggle of working people in their unions during the great depression, and the farmers in the West, through their cooperatives and unions, have carried on similar struggles and have gained public sympathy.

The glory that accrues from these struggles attaches to every member of the group. The eyes of the world are on the Finns, the Irish, and the Jews, and so the eyes of America today are beginning to turn upon the formerly despised minority of American Indians.

The individual Indian has always been admired—sometimes feared—for physical feats of valor. But this admiration is, and will be, intensified by the organized action that is now in progress. Everybody admires every member of any community of people that goes out and gets things done. During the last year the Indians of the United States through their organization, the National Congress of American Indians, have gone out and gotten things done—things that are important for the Indians and for their children. In this report I will tell you about some of the work accomplished during the past year in which I have been honored to participate.

At this convention the Indians will again demonstrate their ability to organize, to agitate, to press and to fight for what they think is due to them and to their children. Now, there may be people of Indian ancestry who would prefer to have it left unmentioned. I am confident that their number has diminished during the past year—their pride in their race has increased as a result of the group action taken by this organization. The number of those ashamed to admit their Indian blood will become even fewer in the years to come. In the very near future we will see Indianhood become a universal badge of honor.

THE ALASKA NATIVE BROTHERHOOD CONVENTION

I have just experienced an example of the sort of spirit that will win this war for Indian rights, the spirit that has already won its initial battles. I have just returned from the beautiful little city of Sitka, Alaska, where I attended the 6-day annual convention of your affiliated organization—the Alaska Native Brotherhood and the Alaska Native Sisterhood. I am sure you would be delighted by the fraternal affection and cordial good will that these far-off brothers and sisters of yours have expressed for you.

The National Congress of American Indians can take a leaf from the book of the Alaska brotherhood. From some 17 poverty-stricken villages, a total of 93 enthusiastic delegates attended the meeting. It lasted for 6 days, including sessions that continued to all hours of the morning. Most of the delegates were housed and fed at the homes of Indians in Sitka. Many of the delegates gave up opportunities to earn at fishing the money their families badly need, in order to come to the convention and help families of other Indians. The deliberations were dignified and energetic. The resolutions were well considered and carefully drafted. The program for the coming year is an aggressive and solid one. It will involve heavy sacrifices of time, money, and effort not merely from officers but from all members of the brotherhood. In referring to the Alaska Native Brotherhood, I have no desire to belittle the accomplishments of the national congress. To the contrary, I can add my personal appreciation to the deep gratitude of the brotherhood for the work of the national congress. The brotherhood is grateful especially for that part of the work which is for the direct benefit of the Indians of Alaska.

THE ALASKA LAND-TITLE PROBLEM

I am in an especially advantageous position to speak on this subject because I have worked on it in three different capacities—as attorney for the Indian towns, as senior attorney for the Alaska Native Brotherhood, and as attorney for this National Congress of American Indians. This arrangement gives me an opportunity to speak in Washington with a force that I, as an individual, would not possess. It gives me the ears of people who would not listen to me alone. The Territorial Delegate from Alaska to the Congress of the United States, BOB BARTLETT, stated to the Alaska Native Brotherhood convention that the council fires of Sitka are clearly visible, thousands of miles away at Capitol Hill in the city of Washington, D. C.

This remark of his made me think of the time, a couple of years ago, before Mrs. Ruth Bronson, your secretary, made her first visit to the Territory. Then very little consideration was given to the views of Alaskan Indians even by those administrative officers who were supposed to represent their interests. One of the reasons why those views are now respected, why those council fires are seen where they never were seen before, is that men of political influence in the National Congress of American Indians have helped clear the air in Washington on the subject of Indian rights.

More than 2 years ago, after due public hearings and investigations the Interior Department defined the area of land that the Tlingit and Haida Indians and their ancestors have occupied since time immemorial and of which they are now the lawful owners. But the Forest Service and other Federal agencies and even the Interior Department itself disregarded this official finding and obtained passage of the Tongass Timber Act authorizing sale of the land and of timber on it without the Indians' consent. This law was admitted by its very sponsors to be unconstitutional. Yet, under it the Forest Service is now attempting to sell the Indians' timber, without their consent, to giant corporations engaged in the production of newspaper pulp.

The Secretary of the Interior is supposed to represent the Indians' interests. But for years he has delayed using his power under the Wheeler-Howard Act, as amended, to make a final settlement of the Indians' rights.

Last year there was great pressure on him to make a settlement by creating reservations under complete control of the Indians. Congressmen expressed impatience with his delay and a bill was introduced to repeal his authority under the Wheeler-Howard law. He said he was squeamish about creating reservations while that bill was pending. We fought the repeal bill for months. We did it because Secretary Krug allowed us and the committees of Congress to understand that if he were free to act under existing laws (i. e. the Wheeler-Howard Act) he could settle the Indian land question quickly.

This attempt by representatives of large-business interests to destroy the only law under which Indian rights in Alaska might be protected, was one of the dirtiest fights that the Halls of Congress have ever witnessed.

I told you last year how the four delegates, Senator Frank Peratrovich, of Klawock, Representative Andrew Hope, of Sitka, Representative Frank Johnson, of Kake, and Mr. Fred Grant, of Hydaburg, came from Alaska to Washington. I told you how they were followed by cabled threats of persecution from white political leaders in the Territory. This was in 1947, when the Tongass timber bill was before Congress. The tactics of personal character assassination were continued throughout 1948.

At last, after lengthy hearings, the bill to destroy the reservation power was reported out. The committee reported that it should pass. The bill was defeated. But the battle was not yet won. In spite of the promises he had made, the Secretary did not proceed promptly to settle the Indians' rights. First, he said, he had to send teams of bureaucrats to Alaska to make surveys. The teams went. Months later the teams returned. Still no action.

In my opinion the time has come when Julius Krug should do one of two things—either sign the Alaska-reservation proclamations that lie upon his desk or else admit that he has less regard for his suffering Indian wards and their interests than he has for the interests of the pulp operators and Forest Service bureaucrats.

But the Secretary has no such frank approach to his obligations. Instead of that, private information leads us to believe that a new, more artful, more effective subterfuge is being invented. Unless Krug is dissuaded, the public will soon be told that he still cannot act unless he gets new legislation. He will say that he needs to have confirmed, reiterated, implemented, or corroborated by Congress the power granted to him in 1936. This statement will be made in the face of his Department's statement to Congress in 1948 that the legal power then existing was adequate.

I hope that no friends of the Indians and no Indian will permit himself to be fooled by this poppycock. I hope he will not permit it to divert his attention or energies. We should spurn any suggestion that we join Krug and his subordinates in a campaign for new legislation. Such legislation is unnecessary and such a campaign would only provide Krug with a plausible excuse for not doing his duty under present law.

This newly invented excuse may be very attractive to those people who would like to befriend the Indians and other minorities but who want to avoid doing anything substantial for their benefit or anything that might injure or offend powerful interests.

We shoud insist that Secretary Krug quit stalling and sign the reservation orders that are on his desk. We should make it entirely clear that we will treat as an evasion any statement that further laws are needed. This is a matter of considerable urgency, and is being discussed at this very moment with Governor Gruening, of Alaska.

Alaska fish-trap abolition: There is another phase of the Alaskan Indian struggle, the fight against fish traps. Most of the people of Alaska make their living in the fishing industry. For every 5 or 6 breadwinners in each village, one is the owner of a small boat, used by him and his neighbors for seining.

This is a hard way to earn a living. There is an easier way to catch fish, by the use of fish traps, which catch lots of fish cheap but which, if improperly regulated, result in ruthless destruction of the fish supply.

There are only a few places in Alaska where such fish traps may be anchored and these sites are controlled by the Fish and Wildlife Service, also under Secretary Krug's direction. Since the Service is supposed to conserve the food supply, one would expect them to limit or eliminate traps. Since they are supposed to represent all the people, one would expect them at least to make this easy method of catching fish available to local people or to communities of fishermen. But to the contrary, their policy over the years has generally put these sites at the exclusive disposal of the great corporations of Seattle and Chicago, allied with the monopolized food industry of the United States. These corporations use the cheap fish caught in the traps to beat down the price paid to fishermen, and they overuse the traps to such an extent that the supply of fish in the waters of Alaska is nearing exhaustion.

So the Indians and the white people of Alaska have learned to hate fish traps as a menace to their source of livelihood. A movement has been on foot for years to abolish fish traps by law. By hook or by crook, by various forms of bribery, these efforts have been thwarted.

But last year's session of the Territorial legislature was incorruptible. For one thing, it included two representatives and one senator who are Indian members of this organization. Under the sponsorship of one of these Indian leaders, Frank Peratrovich, of Klawock, a bill was passed submitting to a referendum of the people the question whether the fish trap should be abolished.

This frightened the financial interests. They ran in frenzy to their friends in high places, and a bill was introduced to grant 15-year permits to the companies for the use of the fish-trap sites, in place of their previous 1-year permits. This action would have been a death blow to the movement to abolish fish traps. For constitutional reasons, the 15-year leases would have given the companies a valuable property right. Any attempt to take this right away without compensation would have been unconstitutional. The bill proposed also would have amounted to an outright gift from the Public Treasury of millions of dollars of public property.

There followed a fight in Congress that can best be described in the words of Tris Coffin, a radio commentator, who told the story

over a Nation-wide hook-up. He said in part:

"This is a rough story of adventure and conflict in a pioneer land. All through the story is the raw smell of scandal like wild onions in a flower garden. It was a tug of power, of men unused to the niceties of Washington lobbying. This was plain on their faces, in the long looks of contempt and anger they gave each other. Those men in the several rows of straight folding chairs were not the bored polite gentlemen of Washington. Instead they had an independent cut about them—big men with a rough grace, a straight look in the eyes, broad shoulders, a hearty friendliness, but the two sides watched each other with a cool, steady anger. Time had worn away the bright fire of hate.

"Those men were from Alaska. They were involved in an untamed fist-swinging, money-passing battle that has been going on for 30 years. It is a struggle of city slickers with money and political power against country jakes, a fight between an efficient monopoly and small operators. A battle between the rugged outdoor men who pioneered Alaska, and the great fishing companies that exploit its resources—the prize, the silver, shining salmon.

"Five big fishing companies with headquarters in the State of Washington in effect control the Alaskan salmon fishing. They monopolize the traps dropped into the water to catch the fish as it plunges through the streams. Now, with Alaska reaching for statehood and control of its own waters, with Alaska holding a popular referendum on abolishing traps altogether, the Department of the Interior suddenly asks Congress to pass a law giving the monopoly a 15-year lease on traps. Why?"

Mr. Coffin goes on from that point to describe what was done by Miss Lopinsky and my staff in behalf of the National Congress of American Indians. About our statement to Congress, Coffin said:

"There was nothing wishy-washy about it. It came right out and said bribery, corruption of Federal fishery officials leading to the gift of millions of dollars worth of salmon fishing grounds to favored corporations. The charges were: first, the Interior Department suppressed the secret FBI report revealing wide-scale bribery and corruption of responsible officials. Second, lobbyists for the big companies paid $250 and $200 a day, wrote the bill submitted by the Department of the Interior. Third, if the leasing act went into effect, the monopoly would raise the price of salmon."

The result of this battle, in which we fought alongside with white fishermen's organizations, was that the bill could not be forced through Congress. The referendum was held and the people voted 8 to 1 to abolish fishtraps.

But this fight is not finished either. The fish companies challenged the power of the Legislature to abolish traps regardless of the wishes of the people. And if the Legislature lacks the power, it may be very difficult to get a bill through Congress for that purpose. On the other hand the Secretary of the Interior has it within his present power to abolish them by administrative action. By signing appropriate regulations he could put the will of the people of Alaska into effect tomorrow. But, as in the case of reservations, he will probably hedge and delay and try his utmost to avoid doing his duty. At the very moment that I am making this statement, Miss Lopinsky is filing a brief before the Fish and Wildlife Service urging gradual abolition of the traps by the Secretary of the Interior. It is an uphill fight, but we never give up hope. We are sure that, in the end, we will win this, like all of our other battles, in behalf of Indian rights.

THE INDIAN VOTING CASES

I have mentioned the Alaska work first because it has happened that the first line of defense of Indian rights is in Alaska. But that does not mean that we have neglected our members in the various States. Our greatest victory this year was achieved not in Congress but in the courts of law.

As reported at last year's convention, the Indians of Arizona and New Mexico have always been excluded from the ballot. In Arizona they were refused the right to vote on the ground they are "persons under guardianship." In New Mexico the State constitution forbade the vote to "Indians not taxed."

Our office made a careful study of these State constitutions. We came to the conclusion that the Indians were not properly defined as "persons under guardianship" at all. It is only their property that is under such guardianship, in the legal sense. To say that the Indians were persons under guardianship would be the same as to classify them with little children or insane people.

We also studied the New Mexico law, and decided that the Indians should be permitted to vote for two reasons. First, they are not "Indians not taxed," as that word is used in the New Mexico Constitution. They do pay taxes on their income and on their purchases and many other taxes. They are exempted only from taxes on their trust lands. We also felt that even if the Indians were "not taxed" the provision against their voting should be set aside as a violation of the Federal constitutional provision against racial discrimination.

Our plan was to file suits in both States in the Federal courts. I made a trip to the two States for purposes of this litigation. All the necessary papers were prepared in my office and corresponding attorneys were contacted in both States.

At about this time another friend of the Indians intervened in the State of Arizona. This friend was former Congressman Harless, who filed his own case in the State court. We didn't expect this case to succeed because the State supreme court had already given a decision against the Indians in a previous case. So, after consulting with Mr. Harless, we filed another suit in Federal court in the name of other Indians.

So we had, as you might say, two strings to our bow, one in the Federal court and one in the State court. The case was lost in the lower court of the State and appealed to the supreme court. With the consent of Mr. Harless we appeared in his case and filed a lengthy brief.

The supreme court surprised us all by overruling itself and issuing a very strong opinion supporting the right of the Indians to vote. This made it unnecessary for us to continue with our case in the Federal court.

We then went over to the State of New Mexico, and within a month we had a suit filed in the Federal district court. The attorney for the Association on American Indian Affairs had previously filed a suit in the local court, where it was decided against the Indian and was on appeal. In our case, a special three-judge court was appointed which gave a prompt decision in favor of the Indians' right to vote.

SOCIAL SECURITY FOR INDIANS

Another battle that is now in progress is the battle to get social-security benefits for the Indians of New Mexico and Arizona. The Indians who are present from those two States will remember that your secretary, Mrs. Bronson, was the first to start working on this problem. In cooperation with Federal social-security officers, she compiled the information upon which complaints by the Federal agency, or by the subordinates of that agency, were made against the discriminary practices of the two States.

A lawsuit has been filed in the name of Indians of New Mexico and Arizona and of a number of tribes that have authorized me to represent them. We allege in our complaint the custom and usage of the officials refusing to consider payment of any application made by any Indian living on a reservation of the social-security benefits payable under the statutes to dependent children, or needy aged or blind persons, regardless of need and regardless of the satisfying by such applicants of all conditions imposed upon white persons; that this has been the cause of much suffering and more than 82 deaths from starvation or malnutrition among the Indians of these two States. We allege that officials of the Social Security Board (the subordinates to whom I have referred) have announced that continued discrimination would necessitate withholding of Federal-aid grants amounting to more than $10,000,000 per annum. We allege that the defendants Interior Secretary Krug and Security Administrator Ewing agreed and conspired to prevent the Board from issuing a notice to the States of New Mexico and Arizona, instructing the Social Security Board to postpone its promised hearing. We state that the means employed in this said conspiracy include misrepresentation, misappropriations or threats of misappropriations of public funds, and interference with the normal administrative procedures of the Social Security Board. This lawsuit is now pending in the District Court of the District of Columbia and will be up for argument in a few days. It would be improper for me to comment at length on it. We will report to you after we get a decision.

LEGISLATION IN GENERAL

Our score on legislation this year was much better than it was the year before, when we suffered a major defeat in the passage of the Tongass Timber Act. At the request of members of NCAI, my office has analyzed and kept members generally informed as to the effect and status of all bills affecting Indians, including the false emancipation bill, which was H. R. 1113; the bill numbered H. R. 4725, which would have placed all laws and orders on Indian reservations in the control of the States without reference to the wishes of the Indians concerned, and, of course, House Joint Resolution 162, which would have robbed the Alaskan natives of the last vestiges of their rights.

Miss Lopinsky in the course of her work discovered that the Indian Claims Commission Act was in danger of being repealed. She gave the information wide circulation and demanded that an NCAI witness be heard by the committee which was about to report the bill favorably. The right to be heard was granted, but the hearing was never held and the repeal bill died in committee. This I believe, was a direct result of our action, especially of the series of protests sent at our request by members of the NCAI.

INDIAN LIQUOR LAWS

There is one important job that we have hardly started. That is the invalidation or repeal of the discriminatory Federal Indian Liquor Laws.

These laws were condemned almost 3 years ago by your convention and your President prepared a bill to repeal them. The bill has not moved forward because we have been engaged in a desperate defensive battle in the city of Washington. We have not had the time, resources, or money to attempt more new gains.

We have the support of important people in all walks of life. Father Clementine Wattle of the Catholic Indian Center in Gallup recently said, in a statement to the New Mexico papers, that the liquor laws should be repealed. He said: "Give them a chance to drink normally as other people do and there will be no trouble. Then it will be the State bureau of revenue that is responsible to enforce regulations on bartenders which require them to refuse drinks to anyone approaching intoxication. This would be a much better situation than is the present one where the Indians are the victims of unscrupulous bootleggers."

I have a letter from the Bureau of Legal Medicine and Legislation of the American Medical Association, J. W. Holloway, director, in which he quotes a report of a special committee which reads in part as follows:

"The excessive use of alcohol is a menace to both physical and moral health and a serious obstacle to progress. Temptation to illegal use of liquor and difficulties in procuring it act as incentives to its use. The laws prohibiting sale of alcoholic beverages to Indians are so easy of circumvention that they are worthless and it would be much better to abolish them."

I am not permitted at this time to quote him directly, but I can say that I have talked this matter over with one of the principal leaders of the Protestant clergy in this country and feel assured that he will take a position at least as strong as that of Father Wattle.

This year the national congress filed its second brief, in the Supreme Court of the United States. The first, you will remember was when we filed as a friend of the court on the side of the Quileut Indians in the Alcea case. The Quileuts won the case, and all Indian tribes whose aboriginal land claims had not been settled were put on firmer legal ground. In the present brief, involving the right of Alaskan natives to enjoy exclusive fishing privileges, the NCAI joins the Alaska Native Brotherhood and the American Civil Liberties Union in filing a brief as a friend of the court on behalf of the natives of Karluk, Alaska. If the Supreme Court rejects the arguments of the big salmon-canning interests and upholds the order of the Secretary of the Interior, setting apart certain waters as part of the Karluk reservation, natives all over the Territory of Alaska will benefit.

CONCLUSION

It has been a real pleasure and privilege to work with all of you during the past year and during this convention. I want to express most emphatically and especially my gratitude to Mrs. Bronson for the inspirations she has furnished to me and Miss Lopinsky. I hope the coming year will be even more productive of good things for the Indian people. I am sometimes asked why I, a non-Indian, devote so much time to the work of helping Indians with their legal problems. As I told you in the beginning the whole world admires and wants to help an underprivileged group that keeps fighting against heavy odds and in spite of discouraging set-backs.

I think the National Congress of American Indians is fighting the good fight under trying circumstances and against heavy opposition, and that it is fighting energetically and well. I know it is going to win that fight. I hope to be invited to the celebration of victory when it is won. And however far off that victory may sometimes seem, however hard may be the path we must traverse to reach it, I want you all to know that I will be with you and will help to the limit of my strength, ability, and resources.

By working and fighting together as we now are, you can give your sons and daughters the right to say with pride "my mother, my father, my grandparents, great grandparents, were Indians."

At last year's convention, I asked one of your leaders a question "I wonder," I said, "what will be the social status of the American Indian a hundred years from now. Will there be any traces left of the days when he was a despised pariah, a segregated second-class citizen? Will he ever achieve the equality to which he is entitled?"

This Indian leader who is in the audience now, answered that he thought all this could be accomplished in another generation or so. "But," I asked him then, "what will happen to this organization of yours—the National Congress of American Indians? It is set up now to fight for the rights of Indians. What will it do when the Indians get those rights?"

His answer was that the organization that is now fighting the Indian cause will continue in existence after that cause is won, as an expression of its members' pride in the ability of their fathers, and mothers, and grandfathers, to win the good fight in which we are now engaged. He said that the congress, a hundred years from now, would be comparable to what the Daughters of the American Revolution are today.

These groups now say proudly, "My forefather fought in 1776." Perhaps they say it too proudly. In the year 2048 I hope that the then members of the National Congress of American Indians will say with the deepest pride "My father, my grandfather was an Indian. My father took part in the struggle that saved the Indians' lands. My father helped us to get the right to vote. My father saved for me the proud position of respect and honor that I as an Indian now enjoy."

Wisconsin Firsts

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22 (legislative day of Friday, March 18), 1949

Mr. WILEY. Mr. President, on May 29, 1948, the State of Wisconsin celebrated the one hundredth anniversary of its statehood. Recently a great newspaper, the Milwaukee Journal, published in its March 19 issue a reprint of a significant statement from the Badger History Magazine. This reprint listed a series of dates of Wisconsin "firsts"—dates of tremendous meaning in the history of the Badger State, and in many instances of the Nation. I believe that this reprint will be of deep interest not only to Wisconsinites but to folks throughout the Nation. I therefore ask unanimous consent that its text be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN FIRSTS

STATE PLAYED A PATHFINDING ROLE IN INVENTION, EDUCATION, GOVERNMENT, AND OTHER FIELDS, A LISTING OF NOTABLE DATES INDICATES

(From Badger History magazine)

First kindergarten in America established at Watertown, by Mrs. Carl Schurz, 1856.

First practical commercial typewriter invented by C. L. Sholes, Carlos Glidden, and Samuel Soule, Milwaukee, 1868.

First State to ratify the nineteenth amendment to the United States Constitution, so women could vote.

First Christian Science church (in world) built at Oconto, 1886.

First kodak patented by David H. Houston, Cambria. He later sold patent to George Eastman.

First official library and bill-drafting bureau in the United States organized by Charles McCarthy. It helps legislators.

First American flag to appear over a building in Wisconsin raised by Gen. William Clark over Fort Shelby, 1814.

First American flag seen in Wisconsin, brought by Lt. Zebulon Pike from St. Louis, 1805.

First Wisconsin capital building was near Belmont, Lafayette County.

First Madison meeting of the legislature was in the basement of the old American House, November 26, 1838.

First commercial cheese factories built at Ladoga, Fond du Lac County, and near Plymouth, Sheboygan County.

First company to construct a railroad in Wisconsin was the Milwaukee & Waukesha Railroad Co., chartered 1847.

First Federal court session in present Wisconsin held at Prairie du Chien by James D. Doty, May 10, 1824.

First fort in interior Wisconsin built by Daniel Du Luth at the Brule-St. Croix portage in Douglas County, 1683.

First building on the University of Wisconsin campus erected by a grant from the legislature was Ladies' (now Chadbourne) hall, 1871.

First Territorial Governor, Henry Dodge, 1836.

First State Governor, Nelson Dewey, 1848.

First Governor to occupy the present governor's home was Jeremiah Rusk.

First United States Secretary of Agriculture, under President Benjamin Harrison, was Jeremiah Rusk.

First hydroelectric power station in the United States built at the Fox River rapids in Appleton, 1882.

First territorial legislature called to order by Governor Dodge in building near Belmont, October 25, 1836.

First mass in interior Wisconsin on shore of Lake Winnebago near Oshkosh celebrated by Father Allouez, April 20, 1670.

First Wisconsin missionary, Rene Menard, 1661.

First native Wisconsin governor, Robert M. La Follette, January 7, 1901.

First newspaper was the Green Bay Intelligencer, 1833.

First paper mill in Wisconsin built by Ludington and Garland at junction of Milwaukee and Menomonee Rivers in Milwaukee, 1846.

First permanent mining settlements in Wisconsin at New Diggings in Lafayette County and Hardscrapple, now Hazel Green, in Grant County, 1824.

First railroad depot in Wisconsin built at the foot of Second Street, Milwaukee, 1850.

First sawmills on record in Wisconsin built at De Pere on the Fox River, 1809, and another near Green Bay, 1814.

First sawmill in western Wisconsin built by Col. John Shaw on the Black River, 1819.

First sawmill at Chippewa Falls built by Jean Brunet, 1836.

First State to end capital punishment; Leonard J. Farwell was governor.

First steamboat to visit Wisconsin was a small sidewheeler, *Walk-in-the-Water*, which visited Green Bay, 1820 and 1821.

First ship in Wisconsin waters was the *Griffon*, sailed into Green Bay with Robert Chevalier Sieur de la Salle, Henry de Tonty and Father Hennepin, 1679.

First twine binder perfected by John F. Appleby at Beloit, 1877.

First malted milk made by William Horlick at Racine.

First announcement by Dr. Stephen M. Babcock of the discovery of his famous test for butterfat, 1890.

First Wisconsin cheese makers' association organized, 1893.

First attracted Nation-wide attention for a series of progressive legislative measures, many of them the first to be enacted in the United States. Among them were: The primary election law; the income and inheritance tax laws; the workman's compensation measure; creation of the industrial commission; 1905–11.

First Socialist Congressman elected in the United States, Victor L. Berger, 1911.

First State to set up cooperative crop reporting organization jointly with the Federal Government.

First announcement by Dr. Harry Steenbock of the process of adding new vitamins to milk by irradiation, 1927.

First State to pass an unemployment compensation act, 1932.

First State normal school established at Platteville, 1866. Opened in the old academy building, built in 1853.

First fur trader situated at Green Bay, Nicholas Perrot, 1665.

First white men to go over the Fox-Portage-Wisconsin River route were Joliet and Marquette with five Frenchmen, 1673.

First Protestant sermon in Wisconsin preached at Prairie du Chien by Rev. Marshall Mann, 1818.

First steamer to come up the Mississippi to Prairie du Chien was the *Virginia*, 1823.

First successful gasoline automobile in America designed by Gottfried Schloemer and Frank Toepfer, Milwaukee, 1889.

First vocational school in Wisconsin built in Menomonie by James H. Stout, 1895.

First white men's habitation in Wisconsin built by Radisson and Groseilliers near present Ashland.

First white man to mine and smelt lead on a large scale in southwestern Wisconsin was Julien Dubuque.

First white settlers of Madison were Eben Peck and family, April 15, 1837.

St. Lawrence Prospect

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22 (legislative day of Friday, March 18), 1949

Mr. AIKEN. Mr. President, I ask unanimous consent that an editorial entitled "St. Lawrence Prospect," concerning the St. Lawrence development, published in a far-sighted Virginia newspaper, the Alexandria Gazette, of March 18, 1949, may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[Editorial from the Alexandria (Va.) Gazette of March 18, 1949]

ST. LAWRENCE PROSPECT

The opinion seems to be spreading that there is more possibility now of congressional approval for the St. Lawrence seaway proposal than there has been at any other time in the 50 years since it was first envisioned.

There are various reasons for this conclusion. Among them are the general atmosphere now prevailing in Washington, and the possibility that within the foreseeable future the Government will be looking for sound public-construction projects. There are many such to be found, and the seaway is one. A new factor, one which might tip the balance, is the changing viewpoint of some transportation and industrial interests which have traditionally opposed the project. This is largely because it now seems certain that before many years the principal source of high-grade iron ore will shift from the Lake Superior region eastward to Quebec and Labrador, beyond the rapids of the St. Lawrence from the great steel centers of Pittsburgh and the Great Lakes.

Thus there is beginning to be revealed to others now what many wise men saw years ago. This is the fact that the seaway project would benefit the entire country, and so in the end would also benefit most of the individual interests which have thought they would be hurt by it. So it is with most projects to develop natural resources on a large scale; some persons always think they would lose, but in the long run they usually gain by any development which helps the public.

Air Power Enthusiasts Mislead People

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

ZEALOUS ENTHUSIASTS OF AIR POWER SEEN MISLEADING PEOPLE—PROPAGANDA DECLARED ENDANGERING FUTURE OF AMERICAN DEFENSE

(By David Lawrence)

Gen. Omar Bradley, Chief of Staff of the United States Army, and perhaps the greatest military strategist in the world today, has told Congress that a strategic air force and the atomic bomb cannot be relied on to defend the United States.

This simple statement would not have been thought necessary if the American people were not in process of being misled and confused as to the true state of their defenses and the manner in which the next war will be fought if it comes in the immediate future.

A propaganda is being carried on by zealous enthusiasts of air power which is giving millions of people the impression that airplanes, flying from the United States as a base and carrying the atomic bomb, will win the next war in a matter of weeks.

In all fairness, it must be said that nobody high up in the armed services or in any branch of it believes any such thing. But on the fringe of the debate are retired officers and propagandists who honestly think that most of the money usually allocated to ground armies or to the Navy ought to be spent on more planes.

Unfortunately, such thinking does a disservice to the real potentialities of air power and tends to weaken the branches of the armed services which must support aerial warfare or else airpower is itself impotent.

"BUCK ROGERS" PHILOSOPHY

Much of the misunderstanding is due to the fancifulness of the "Buck Rogers" philosophy in relation to future wars. Thus, airplanes can fly across oceans and around the world by refueling, but sustained day-in-and-day-out bombing on that basis is still too expensive in raw materials and manpower to accomplish. It is not feasible to send across the ocean and back 1,000 long-range bombers every 5 or 6 hours every day for weeks and months at a time and to load them with bombs for each mission. Sustained bombing from bases nearer the target and protected by relatively short-range fighter planes is still much less expensive and is far more certain of achieving objectives, whether such planes are launched from fixed or floating bases.

In the first place, while no official information has ever been divulged as to the number of atomic bombs that have actually been manufactured, it is public knowledge that the United States after an expenditure of nearly $2,000,000,000 used less than half a dozen bombs—one for a test in New Mexico, two over Japan, and two at Bikini. If a lot more have been made since the war, this fact has not been revealed, but the amount of money appropriated annually for atomic warfare doesn't indicate that very much is being spent, relatively speaking, for quantity production of atomic bombs, even if this is as yet feasible.

The big point about the atomic-bomb problem is that it costs a good deal of money to make them and that for a long while they will not be so plentiful that squadrons of planes can take off from America, all loaded with atomic bombs, and fly to Europe followed by another and another group of planes doing the same thing every few hours.

PICTURE GIVEN BY ZEALOTS

Yet this is the picture of air power which the American people are being given by zealots who think Congress will not authorize enough money for air power. Congress is air-minded. There is not the remotest chance that air power will be neglected. The Navy has been transformed so that it operates with air power as the spearhead of its plans and operating techniques. The Army works with tactical air power, which is today the eyes of a ground army. Strategic bombing of factories and plants by an air force devoted solely to that purpose is accepted now as an integral and explicit part of our national strategy and is written down in terms that are fully comprehensible.

Problems of how to assign duties to each service have been settled at the top level by the Joint Chiefs of Staff. Some differences of opinion still exist as to whether the Navy should carry on any long-range bombing from the decks of aircraft carriers or whether this method of attack shall be abandoned altogether because the Air Force says it is unnecessary. For the safety of the United States, it is not so important how many blows are struck at the enemy from this or that direction, but that as many blows be struck from as many directions as possible at the same time.

There remains much work to be done in eliminating duplication in buying, in ground facilities, and in transportation, but these are only incidental to problems of logistics and strategy and present no insuperable difficulty. It is on broad strategy that the Nation is being told—and Congress is being urged to believe—that one air force will win a war in 30 days and hence money need not be spent on ships or ground armies. No greater danger to the future of American defense exists than in the propagation of such fantastic doctrine. Small wonder that General Bradley felt compelled to speak out so plainly to Congress.

What Oils Are Used in the Manufacture of Oleo?—Are You Allergic to Lard?

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following official table was prepared by the United States Department of Agriculture:

Oleomargarine: Percentage contributed by principal items to the weight of fats and oils used in manufacture, United States, 1937–48

Item	Average, 1937–41	1942	1943	1944	1945	1946	1947	January–October, 1948
	Pct.	Pct.	Pct.	Pct.	Pct.	Pct.	Pct.	Pct.
Cottonseed oil	47	48	51	45	51	48	53	60
Soybean oil	21	38	40	44	41	43	38	35
Other domestic vegetable	1	1	3	5	4	4	4	3
Total, domestic vegetable	69	87	94	94	96	95	95	98
Oleo oil	5	7	3	3	2	1	1	1
Oleostearine and oleo stock	2	2	1	1	1	1	1	(1)
Neutral lard	1	2	2	2	1	(1)	(1)	(1)
Total, domestic animal	8	11	6	6	4	2	2	1
Coconut oil	18	1	------	------	------	3	3	1
Other foreign	5	1	------	------	(1)	------	------	------
Total foreign	23	2	------	------	------	3	3	1
All fats and oils	100	100	100	100	100	100	100	100

[1] Less than ½ of 1 percent.

Source: Bureau of Agricultural Economics. Computed from reports of the Bureau of Internal Revenue.

You will note that before the war 23 percent of the imitation butter was made from foreign oils. You will note that by 1948, 60 percent of the imitation butter was made from cottonseed oil and 35 percent was made from soybean oil. And you will note that foreign oil constituted 3 percent of the oil used in imitation butter in 1946 and 1947, but was only 1 percent of the oil used in 1948. Are you allergic to lard?

If the Granger-Andresen bill is passed, each State will decide on the kind of oil to be used. If the Rivers bill is passed, the use of coconut oil may or may not be increased. Who knows? Is the substitution of domestic oils for foreign oils a permanent change of policy? Or will the foreign oils again become favored once the Rivers bill is passed?

The Late Honorable Sol Bloom

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. ROONEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Gaelic American of March 19, 1949:

[From the Gaelic American of March 19, 1949]

A FRIEND OF IRELAND

Representative Sol Bloom is dead. He was a stalwart American, a Jew, who rose from poverty to greatness. He was a humane man, an understanding individual, a tolerant man, whose life was an eloquent story of America's unlimited horizon of opportunity to men of good will, imagination, patriotism, whose name will forever be etched high on the roll of honor of the United States.

Sol Bloom had 1 hour of actual schooling. His parents were too poor to buy books for him to get an education. Yet, he died a recognized scholar, an authority on the life of George Washington, was the author of several books, and the possessor of a vast fortune which he obtained through hard work. He sat with the mighty of the universe. He headed the Foreign Affairs Committee of the House before and after World War II where he proved himself a brilliant statesman.

Mr. Bloom was a kindly man who hated injustice. A couple of weeks ago, a delegation from the American League for an Undivided Ireland appeared before his committee to protest the further sending of Marshall-plan funds to Britain while that country held captive the six counties of Ireland. He listened intently as the Irish-American delegates presented their arguments. That he was impressed was apparent and reflected in his inquiries for additional information. He was shocked that the money of American taxpayers should be used to partition a friendly nation which has contributed so much to the upbuilding of his beloved America.

As the speakers concluded their presentation of the facts, he said:

"I'm with you 100 percent."

He later added:

"Well, you've convinced me."

Injustice was revolting to this great American. He had long been a friend and admirer of the Irish. Many of his best friends had Irish blood and the idea that the country of their nativity should be the victim of such savage treatment in the hands of a medicant nation that we are supporting on a dole was shocking to him. His untimely death, at this time, was most unfortunate and caused much genuine sorrow among our people. We pray that the noble soul of our friend, Sol Bloom, American statesman extraordinary, shall rest in peace.

Health Insurance

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. HELLER. Mr. Speaker, the American Medical Association's effort to assess all doctors $25 to raise a $3,500,000 lobby fund for fighting President Truman's health-insurance legislation has backfired—backfired so seriously that the net effect may be to help enact the legislation.

Members of Congress, I am sure, have noticed the resentment spreading among doctors throughout the country against this proposal to throw a professional and scientific organization into a political battle. Some of the top doctors have rebelled and two of the AMA's biggest constituent units have refused to levy the assessment. Others have refused to make it compulsory as the AMA originally intended.

The AMA, however, has not given up without a fight—and this fight, too, may contribute to the cause of national health insurance. In Brooklyn, N. Y., the King's County Medical Society twice voted against the assessment—the second time in a secret vote which was the biggest in the association's history.

But not satisfied, the president of that society, probably because of pressure from the AMA, decided to circulate a third ballot and ask the doctors to sign their names. This has created wide resentment among the doctors. I ask unanimous consent to include in the CONGRESSIONAL RECORD a statement issued by Dr. George Cannon, secretary of the Physicians' Forum, a group of doctors supporting health insurance, attacking this third ballot.

Dr. Cannon forecasts that the high-handed tactics of the AMA in raising this so-called educational fund will do more to educate doctors in what this fight for health insurance is really all about than anything else.

STATEMENT BY DR. GEORGE CANNON, SECRETARY OF THE PHYSICIANS' FORUM, ON THE RECENT ACTION OF THE PRESIDENT OF THE KINGS COUNTY MEDICAL SOCIETY IN THE MATTER OF THE AMA'S $25 ASSESSMENT

Morris Fishbein has stated that 85 percent of the doctors are in favor of the AMA's position on health insurance and will pay the assessment to fight against it. In reality, wherever there has been democratic discussion of the matter permitted in the medical societies the doctors of this country have shown themselves nearly 60 percent opposed, not 15 percent, as Fishbein wishfully states.

But Kings County is evidently out to produce a "Ja" vote for Dr. Fishbein, even if the president of the Kings County Medical Society, has to pay for it himself. In two authorized previous votes on this matter the Brooklyn physicians showed themselves 53 percent opposed to the assessment—in New York County last week they were 57 percent opposed—with 1,600 doctors voting. Dr. Siris' decision to take a third vote was not authorized by the society, and hundreds of Brooklyn physicians refused to participate in the poll, which required that their names be signed, in the belief that this was an effort to set up a blacklist. Since Dr. Siris' action was unauthorized and since the results can hardly be considered representative, Dr. Siris is said to have announced his intention of paying the costs of the ballot himself rather than out of the funds of the society.

It is certain that the high-handed tactics of the AMA in this fight have already caused them a good deal of trouble with the rank-and-file doctor, for whom this is a very valuable educational experience. I predict the so-called educational fund the AMA set out to raise in November is going to educate more doctors in what this fight for health insurance is really all about than the AMA ever bargained for.

Freedom for All Ireland

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. KEOGH. Mr. Speaker, we celebrated a feast day that is universally hailed by all the Irish, St. Patrick's Day. I wish to call the attention of the Members of the House to a piece of legislation which I have recently introduced. It is H. R. 3226, a bill to amend the Economic Cooperation Act of 1948 and which has been referred to the Committee on Foreign Affairs.

My purpose in introducing this legislation was to make certain that the administrator of the Economic Cooperation Act should require that any country which participates in the benefits of that act should also uphold the expressed policy and the objectives of that act. In the declaration of policy, the following statement appears in the act: "The restoration or maintenance in European countries of principles of individual liberty, free institutions, and genuine independence rests largely upon the establishment of sound economic conditions, stable international economic relationships, and so forth."

The declaration of policy also states:

It is further declared to be the policy of the people of the United States to sustain and strengthen principles of individual liberty, free institutions, and genuine independence in Europe through assistance to those countries of Europe which participate in a joint recovery program based upon self-help and mutual cooperation.

By the terms of my bill, there would appear in the act immediately following the last-quoted declaration of policy, the following provision:

Provided, That no assistance shall be granted to any participating country so long as it denies to its citizens or to citizens in any dependent area under its jurisdiction, the principles of individual liberty, free institutions, and genuine independence.

The insertion of this language in the act will make it evident that in setting out our policy we are not merely mouthing words, but are eager to bring to other peoples and other nations throughout the world the same liberty, freedom, and independence which we ourselves enjoy.

Unfortunately that freedom is not enjoyed today in the six counties of Northern Ireland, where a government exists subject to the domination and control of Great Britain, and contrary to the expressed wishes of the vast majority of the Irish people. No part of a nation should be allowed to cut itself off from the rest of that nation without the consent of the majority of the people of the entire nation. Even more so, no part of a nation should be cut off from the rest of that nation by reason of the legislative enactment of some foreign government and the force of arms and the military compulsion of that foreign government. Yet that is exactly what was done to the northern section of Ireland when the British Parliament passed the so-called Government of Ireland Act in 1922 whereby six counties were severed from the rest of Ireland, and a British-controlled government established in that area.

Despite the presence of British troops in Northern Ireland, and the complete domination of that section of the country by the six-county Government, through spurious elections and an all-powerful police force, nevertheless the Stormont government admits that it is not even able to control its own followers and supporters, much less provide an appropriate government for the area. This is evidenced in the very recent announcement that there could be held in Londonderry no assemblies or processions on St. Patrick's Day, because there would be "apprehension of grave disorders" if they were allowed. Yet, if there were to be grave disorders, disturbances, or riots they would not be caused by those attending the assemblies or marching in the parades, but by the nonparticipants, who are the known supporters of the six-county Government. It is a sad commentary on the efficiency of the six-county Government that a peaceful assembly cannot be held nor a St. Patrick's Day parade enjoyed without the danger of grave disorders.

This lack of ability to control their own supporters is indicative of the fact that this six-county Government is not a representative government of the people of that area, nor is it a popular government, freely chosen by the people in democratic elections. Instead, it is a government that has been forced upon the people of those six counties and is maintained by British subsidies and British force of arms. It is the purpose of my amendment to end this betrayal of liberty in the six counties and to bring about a reunification of these counties with the rest of Ireland, where they belong.

So long as Great Britain can afford to spend money in financing the six-county Government in Northern Ireland and can afford to maintain a large body of troops there, then to that extent at least, she can afford to do without additional aid on our part. Certainly we should not be helping, through the Marshall plan, to continue this violation of the very policy which we have set forth in establishing that plan. Moreover, Great Britain continues to impair her own economic recovery and to retard her own financial stability so long as she continues to expend her funds or employs her commodities or services in maintaining and subsidizing an uneconomic dependent area in this fashion. The recovery of Great Britain will be faster and will rest on more sound foundations if she were to sever her relations with Northern Ireland and permit this area to return to the community of the Irish Republic, where it naturally belongs.

My bill makes provisions for this situation by directing the administrator of the act to withhold funds, where a participating country is impairing its economic recovery in this fashion. By the enactment of my bill the economic position of Great Britain would be materially improved, the undemocratic regime in the six counties would be eliminated and the policy of the act would be carried out through the establishment in all of Ireland "the principles of individual liberty, free institutions, and genuine independence." Moreover, a new era of friendship and good will would be created between Great Britain and Ireland, whereby "sound economic conditions" and "stable international economic relationships" would be established, which would tend greatly to promote the well-being of these countries and the peace of all Europe.

Hitler Touch in New Rash of Soviet "Peace" Rallies

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, which appeared in the New York Post on March 21, 1949:

HITLER TOUCH IN NEW RASH OF SOVIET PEACE RALLIES

(By George Fielding Eliot)

Have you heard about the World Peace Congress?

Probably not. There hasn't been much in the papers about it so far. But there will be quite a little from now on. It's due to be called sometime in April.

It's the latest Soviet propaganda stunt. It will develop from the various congresses and councils which have been held here and there during the past few months, such as the World Congress of Intellectuals, held in Wroclaw, Poland, in August of last year, and the International Democratic Federation of Women, which met at Budapest, Hungary, early this year.

Another example of this type of preliminary gathering is the so-called Cultural and Scientific Conference for World Peace, to be held here in New York on March 25–27, which is to be attended by a Soviet delegation including the composer, Dmitri Shostakovich, and Alexander Fadeyev, secretary-general of the Soviet Union of Writers.

Perhaps it will be more useful to you in forming your opinion of this whole affair if I let the authors of the coming World Peace Congress, for which the above-mentioned gatherings are to prepare the way, speak for themselves. So I quote Comrade Melnikov, the well-known Soviet radio commentator, speaking over Radio Moscow on the Soviet Home Service network, at 11 a. m., March 12.

"The movement for calling the congress of supporters of peace is growing in all countries of the world from day to day.

"Workers of the Soviet Union, fully supporting the democratic and peace-loving policy of the Soviet Government, warmly welcome the appeal for a congress of the supporters of peace. The Soviet Union,

which heads the democratic and anti-imperialist camp, is the most consistent and determined defender of peace, the mightiest and most reliable supporter of the movement for peace.

"Loud was the voice of Soviet writers giving their unanimous support to the appeal for the congress of supporters of peace. * * * Soviet scientists, too, unanimously support the appeal.

"This great movement assumes particular importance at present while the aggressive intrigues of the Anglo-United States instigators of a new war, pressing for world domination, are being intensified. It is to achieve their aggressive aims that American and British monopolists are forming the aggressive North Atlantic bloc, are waging the so-called cold war against the Soviet Union, are organizing the armaments race and fostering the atomic frenzy.

"The session of the Eighty-first Congress of the United States is being held in an atmosphere of militaristic and war preparations. The main bills submitted to Congress concern further militarization of all aspects of life in America. War hysteria is likewise a characteristic of all countries of western Europe. * * *

"The supporters of peace—the ordinary people, women workers, housewives, and representatives of culture—must cause the warmongers to retreat."

Boil all this down, cut out the double-talk, and what do you get? A concerted movement to disarm the United States and the other western states, to break up the North Atlantic Pact, to leave the western world defenseless and disunited before the Soviet power, by mobilizing a lot of people to talk about the beauties of peace without thinking too much about how to establish a really secure peace and to maintain it.

Of course all this propaganda won't really produce these results. It may weaken and delay the security measures which the western powers are taking, by undermining some sections of public opinion in this and other countries. If that were the only Soviet purpose, perhaps the net result wouldn't be worth all the effort. But the fact that the drums of propaganda are being beaten so loudly for this peace congress on the Soviet home radio (every day, in one form or another) suggest quite strongly that the main Kremlin idea is to convince the Russian people that their government is struggling manfully for peace in a world in which it is surrounded by enemies.

This is a dangerous symptom. It has a tinge of desperation about it. It is what Hitler used to do when he wanted the German people to go along with him in some new military adventure. The flames of hysteria are being fanned. We have been burned by such flames before.

Industrial Ingenuity

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the news column of the Chelsea Evening Record of Chelsea, Mass., in reference to one of the outstanding industries located in that city. It is interesting to know that this concern is keeping abreast of the times and is carrying on remarkably in spite of the keen competition in the watch and clock industry.

INDUSTRIAL INGENUITY

The story about the Chelsea Clock Co. equipping the new Pan-American stratoliners with their new ships' clocks, is an example of what a modern, live and progressive industrial firm can do.

The firm couldn't keep up with the mountains of orders during the war for our Government for clocks. With the ending of the war that market dropped. The firm changed with the times, made other clocks and other lines and is now making special clocks for airplanes.

This is fitting, too, for the planes ar called ships, just as are the ocean liners. So now, Chelsea's famous ships' clocks, which have told the time on the seven seas, are now keeping time in the air for pilots and patrons of the air lines.

Unemployment Situation in Waterbury, Conn., Area

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I submit a statement and a table relating to the unemployment situation in the Waterbury, Conn., area.

Both have been prepared by the Connecticut State Employment Service and point up the necessity for action by the Congress to stem rising unemployment. Social legislation is beneficial and desirable, but the primary concern of our citizens is employment at a suitable wage. If the administration will cease browbeating business and attempt to effect a cure for its ills, the Nation's No. 1 problem will be solved.

The Waterbury labor market letter follows:

MANUFACTURING EMPLOYMENT TAKES DROP IN FEBRUARY

Manufacturing employment dropped by 1,400 workers in mid-February from January totals. Employment has now dropped for five consecutive months and the February total of 40,930 is 4,270 below the 1948 peak of 45,200 reached in September. In addition to lay-offs, there was a general reduction of hours throughout the area. No sizable firms are working over 40 hours a week and many have reduced their workweek below that figure.

BRASS AND CLOCK LAY-OFFS LEAD MACHINES

Heaviest lay-offs in the past month were in the brass and the clock and watch industries. In brass, lay-offs totaled 420 from mid-January to mid-February after employment had held up well for the past year, although hours had been cut during the latter part of 1948. The clock industry continued its lay-offs, which started last September and totaled 430 for February. Employment in this industry is 3,160 as compared with 6,320 last August. Other manufacturing industries showed declines of lesser amount, except for the printing and measuring and controlling instrument groups which reported small increases.

LABOR DEMAND ALSO DECLINES

Following the decline in industrial employment, the demand for additional workers hit a low in February. Job openings on order with the local employment service office, which are indicative of general-worker demand in the area, dropped to 135 at the end of February. Only 19 of these were for jobs in manufacturing industries and these were for selected skills. On January 1 there were 206 manufacturing orders on file. Nonmanufacturing businesses are becoming increasingly important as a source of new jobs.

UNEMPLOYMENT RISES

The number of job seekers in the area rose to 6,300 in mid-February from 4,900 in January and 2,100 a year ago. The increase in the number of women unemployed from January was 800 and men increased by 600, including 300 veterans. Women now comprise 56 percent of the total job seekers as compared with 33 percent a year ago. More than half of the unemployed are factory workers, although a substantial number are construction workers waiting for the seasonal rise expected to start toward the end of March, and trade employees laid off following the Christmas season, a number of whom are expected to be rehired for the pre-Easter seasonal rise in trade.

Private nonagricultural employment—Waterbury area, February 1949

Industry	February 1949	January 1949	Percent change February over January	February 1948
Total	56,920	58,480	−2.7	60,430
Manufacturing	40,930	42,320	−3.3	45,170
Food	1,150	1,260	−8.7	1,380
Textiles and apparel	1,340	1,330	+.8	1,290
Printing	670	680	−1.5	640
Chemicals and rubber	6,710	6,750	−.6	6,330
Brass	15,040	15,460	−2.7	15,360
Foundries	680	710	−4.2	790
Metal fabricating	4,770	4,800	−.6	5,120
Machinery	2,200	2,240	−1.8	2,170
Clocks and watches	3,160	3,590	−12.0	6,440
Measuring and controlling instruments	1,130	1,120	+.9	760
Other manufacturing [1]	4,080	4,380	−6.8	4,890
Nonmanufacturing	15,990	16,160	−1.1	15,260
Construction	1,450	1,500	−3.3	1,410
Transportation (including railroads)	1,500	1,520	−1.3	1,130
Communication and utilities	1,110	1,100	+.9	1,060
Trade	8,400	8,520	−1.4	8,270
Wholesale	(1,480)	(1,490)	−.7	(1,460)
Retail	(6,920)	(7,030)	−1.6	(6,810)
Finance, insurance, and real estate	1,150	1,130	+1.8	1,080
Service	2,380	2,390	−.4	2,310

[1] Other manufacturing includes clothing accessories, plastics, paper, stone, clay, and glass, and other minor groups.

Unemployment in the Waterbury area

Midmonth	Total	Men (all)	Men (veterans)	Women
February 1949	6,300	2,800	1,200	3,500
January 1949	4,900	2,200	800	2,700
December 1948	3,900	1,600	600	2,300
August 1948	2,100	1,200	750	900
February 1948	2,100	1,400	700	700

What You Don't Know About the South

EXTENSION OF REMARKS
OF
HON. BERT H. MILLER
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, March 22 (legislative day of Friday, March 18), 1949

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "What You Don't Know About the South," written by the distinguished junior Senator from Mississippi [Mr. STENNIS] and published in Collier's magazine for March 26, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT YOU DON'T KNOW ABOUT THE SOUTH

(By JOHN C. STENNIS, United States Senator from Mississippi)

SMARTING UNDER SMUG ACCUSATIONS AGAINST THE SOUTH FROM THE REST OF THE COUNTRY, A SOUTHERN SENATOR TALKS BACK AND LAYS SOME OLD MISCONCEPTIONS LOW WITH STARTLING FACTS AND FIGURES

Lack of knowledge among my fellow Senators of the truth about the South was the most startling thing I noted when, 2 years ago, I came to the United States Senate from Mississippi. Such ignorance—a reflection, doubtless, of prevailing northern opinion—seemed to me to have in it more possibilities for evil than for good for all of us, North and South.

To help as best I could to set the record—and perhaps the thinking—straight, I began, more than a year ago, to assemble the facts. Officials of every Southern State and many private organizations eagerly cooperated. Hundreds of individuals, when they heard of my inquiries, sent in facts, figures, and illustrations.

The result is no whitewash. The South, as every intelligent southerner knows, still has a long way to go. But the evidence shows that we are on our way and going as fast as—or, I believe, faster than—other parts of America.

Here, out of the current record, are a few typical facts and illustrations of what's happening in the South, which, if you are no better informed than many United States Senators, you never heard about or imagined.

An Arkansas plantation owner is providing college scholarships for the children of his tenants. To every qualified Negro who applies the State of Mississippi provides an all-expenses-paid medical scholarship. Negro farmers in Georgia, learning from their children through the 4–H Club program, have completed 60,000 home-improvement projects.

In 13 southern States, more children in rural areas are transported by bus to modern, consolidated schools than in all the rest of the country combined. In Florida, due to better living conditions and health education, the mortality rate among Negroes is decreasing four times as fast as among whites. In Alabama, 90 percent of the expectant mothers helped by the prenatal clinics maintained by the State Public Health Service are Negroes.

These are not isolated incidents. They are part of the story of the daily progress of our Southern States as they fight their way back toward the economic equality with the rest of the Nation from which they were barred, almost 90 years ago, by the War Between the States.

They are evidence that the spirit and attitude of the South are no longer chiefly defensive. The best defense is an offense and, for the solution of our age-old problems, we have begun to take the offensive. Generous outside aid will help—as it has helped in the past—to speed up the South's progress. But the South's real job is, as it has always been, an inside job and there is now abundant proof that insiders have the courage and vision to do it.

Progress in any area is measured by many yardsticks—among them per capita income, health and educational status. By all those standards, the South is making great strides. Since it is still essentially a rural area, a major part of our economic effort must be to better the way of life for the farmer. Here, and particularly among those who have had the least to start with, the South's progress has been most notable.

In many areas, agricultural extension work, financed jointly by local, State, and National Governments, has brought a wholly new way of life to our rural areas. The 60,000 home-improvement projects carried out by young Negro members of the 4–H Clubs in Georgia are a large sample of what is happening in every Southern State. In several States, a highly practical, State-run adult education program is annually teaching thousands of rural Negro men and women to read and write. Arkansas has proved, on a State-wide basis, the practicability of ham-and-egg shows in teaching the better production and preparation of basic farm foods.

A Memphis, Tenn., newspaper, the Commercial Appeal, has provided one of the best incentives for living on the farm through its plant-to-prosper competition for farmers. Extension officials in Tennessee tell me that on hundreds of farms, white and Negro, a greatly improved standard of living can be traced directly to the stimulus provided by this contest. I have heard similar reports from other States. More than one farmer who originally entered this competition as a sharecropper is now, as a result of what he learned, a prosperous landowner.

CHALLENGE TO A REPORTER

Frank Wheeler, the Arkansas plantation owner who provides college scholarships for the children of his tenants, tells the story of a big-city writer who called on him for information about the downtrodden tenant farmer. Mr. Wheeler made him this proposition:

"You get in the car with me and we'll take a ride. Every time we come to a tenant house that does not have a radio inside and a car outside, I'll pay you $25, if you'll pay me $5 for every house that does."

The proposition wasn't accepted.

Not many years ago, in Kemper County, Miss., where I was born and raised, hardly an acre of land was owned by Negroes. Today there are sections of that county, some of them 10 to 12 miles square, where every farm is Negro-owned. Nearly every one of them is paid for. And every year, on those farms, there are fewer mules and more tractors.

In the famous Mississippi delta country, Negro farmers have gone beyond the small-farm status and are successful on what might be called the planter scale. Among these is 52-year-old Johnnie Brown, of Issaquena County, Miss. He owned one mule when he bought his first small tract and had to borrow a second mule from a neighbor in order to break the land. Today he owns about 5,000 acres and is partner in the ownership of nearly 2,000 more. He owns a cotton gin and general store. During the past cotton-picking season he bought his first mechanical picker.

When George Hull arrived in Indianola, Miss., he had 60 cents, a wife, and a suitcase. Today, he averages bale-to-the-acre production on his 1,700-acre plantation and has branched out into other successful businesses.

Jesse B. Hearin, a white man, is the president of the Production Credit Corp. of New Orleans, one of the principal sources of farm credit in Louisiana, Mississippi, and Alabama. Reviewing the experience of himself and his company with colored people, Mr. Hearin writes:

"We have loaned money to thousands of Negroes—both tenants and landlords. It may be of interest to you to know that after 15 years' experience, during which time we have loaned money to five or six thousand Negroes each year, we have never lost a dollar to a Negro landowner and have had practically no losses from Negro borrowers generally."

AFTERMATH OF THE CIVIL WAR

The War between the States left virtually the entire South bankrupt. Various factors, running the gamut from one-crop agriculture to discriminatory freight rates to absentee industrial ownership, have worked to keep the region from emerging into a prosperity comparable with the rest of the Nation. And humanitarian enterprises have had to take second place to the all-important struggle for the bare necessities of existence.

Now, however, the tide has begun to turn. The figures on income compiled by the United States Department of Commerce make it clear that no other region of the country has had a greater relative improvement in income position than the South during the period from 1929 to 1947. In that period, the share of the 11 States of the Southeast in the national income rose from 10.5 percent to 13.6. No other area made such an advance. In the same States, during this period, the per capita income rose from 51 to 67 percent of the national average. This, too, was a gain unequaled by any other section.

Impressive as these figures are, they make it clear that there is still a big job ahead of us. Our aim is to reach at least an economic par with the rest of the country. Until we do, the citizens of the South will have to pay a larger share of the tax cost of government services than their neighbors in other sections of the country. But the progress of these recent years is, I think, a heartening portent of even better days ahead.

Our progress is much more than a matter of economics. Public-school programs for both white and Negro children have been expanding in the South on a broader scale and at a faster rate than anywhere else in the country. Virtually every Southern State is today contributing a larger share of its tax income to the support of schools than the national average for all States.

In sparsely settled, tax-poor areas of the South, the school situation has been vastly improved through rural consolidation combined with school bus transportation. The first school bus is believed to have been used in Massachusetts, but the South was the first area to use busses as a means for school consolidation. In my own State of Mississippi, in fact, school wagons were used, long before busses, to transport children to consolidated schools.

When I was a boy in Kemper County, prior to World War I, none of the neighborhood elders considered it a reflection upon the community that the Stennis children had to walk 2 miles to the Kipling-crossroads one-room school. Today there is a general realization throughout the South that consolidated schools are the only feasible means of providing proper education for rural youth.

In Mississippi, as in most Southern States, bus transportation to such schools is now the second largest item in the school budget, ranking only behind teachers' salaries.

During the school year 1945–46, in the 13 States of the South, 2,415,000 boys and girls were furnished free transportation to consolidated schools. This year—1948–49—the total will be well over 3,000,000—more than all the rest of the country combined. The one-room, one-teacher school is fast disappearing from the South and, whatever the sentimental attachments, we are all the gainers by its going.

This progress has included Negroes as well as white—and at all levels of education. Opportunities for college education for Negroes in the South have expanded rapidly during the past generation. More than 100 colleges and universities with an enrollment estimated at approximately 75,000 are now in operation. In 1916 there were 33 institutions with only 1,643 students.

Today's Negro colleges are far better, educationally, than those of a generation ago.

The Southern States are now in the process of ratifying a regional educational compact, developed from the regional education program of the Southern Governors' Conference. This program will establish regional schools for graduate instruction for white and Negro students. Adequate facilities are lacking at present because individual States are unable to finance the projects alone. But I am confident that the regional schools which will be developed under this program will compare favorably, in their particular fields, with any elsewhere in the country.

One of the important recent educational developments in the South is the widespread adoption of the teacher-certification plan. Under this plan, all teachers, white and Negro, are placed on an equal competitive basis for salaries—which are determined by the grades they make on national teacher examinations and on their years of educational preparation and experience. One result of this plan has been that in North Carolina the salaries of Negro teachers average slightly higher than those for whites. This is true because the system has provided incentives for the best qualified Negro instructors to make teaching a lifelong career, gaining seniority and postgraduate degrees through summer training.

Health is another major southern problem. The shortage of physicians that confronts every area of rural America has caused much hardship in the rural South. The situation is acute in Mississippi where there is only one active physician to each 2,500 of our rural population, and with more than half of these rural doctors over 60 years of age.

My State has begun to work actively toward a solution. Under a State law, enacted in 1946, a medical scholarship program was established to finance the medical education of students who could not otherwise afford it. Students are allowed to attend any accredited medical school to which they can gain admission, and they receive the assistance of the medical education board in securing admission in cases where there is difficulty.

In return for this assistance, the medical student signs a contract with the board in which he promises, upon completion of his internship, to practice medicine in some rural area of the State. If the graduate doctor fails to meet the terms of the contract as related to rural practice, he is required to pay back the money advanced, with interest. The program made such a successful start that in 1948, the legislature appropriated $350,000 to expand it.

Ambitious young Negroes have taken excellent advantage of the opportunity thus afforded. Officials of the medical education board report that every qualified Negro who has applied for a scholarship has been accepted.

Disease germs have no respect for race, creed, or color, and public health departments in the South have traditionally offered their services equally to all groups. Evidence of the good result of this work is available in the over-all compilation of southern health statistics by the United States Public Health Service, which reveal that the percentage of increase in expectation of life within the past two decades has been more than twice as large in the Negro as in the white population.

Communicable diseases among Negroes have been so greatly reduced that it is now possible to shift emphasis to preventive work in the organic diseases that now take the greatest tolls among the general population.

MODERN HEALTH SERVICES

Southern States have long been the leaders in organizing efficient, productive public health services. The program in Mississippi has been studied and adapted to meet local conditions by at least a dozen States outside the South. Florida alone has more organized, modern county health departments than all of the Eastern States north of Maryland and east of Ohio combined. There are still many improvements that could be made in the program throughout the South, but in the main these are occasioned solely by the relatively limited tax incomes of the States which support them.

Mississippi was the first State to take advantage of the hospital-building program made possible through the Hill-Burton Act. A 5-year program of hospital construction is under way, designed to add 5,732 beds to the total hospitalization available in the State. This goal will provide for Negroes four beds per thousand population. This ratio is in accordance with accepted national standards for hospitalization.

All these are facts about the South which every American ought to know. They are an encouragement and a challenge to every right-minded southerner. They indicate that the South is moving steadily toward the solution of those primary problems from which have sprung so many attendant controversies that are the symptoms rather than the source of disease.

What southerners now ask from the rest of the Nation is understanding of our problem and adequate recognition of the progressive accomplishments we are in process of achieving. These achievements have been no easy matter in a region still burdened by excessive poverty. But we are confident that when the Nation as a whole understands our real problem and learns what we have already accomplished we will have new and sympathetic cooperation as we go on to remove the remaining obstacles to our progress.

A Black Velvet Curtain

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Boston Sunday Post, March 20, 1949:

Between a proper Bostonian traveling to Florida last week aboard a supertrain out of New York and the publication of the terms of the North Atlantic Pact, there would appear to be no connection.

The Bostonian was going South to be winterized in the tropical air and tropical waters of Florida. The Atlantic Pact was being promulgated so that the world would become aware that henceforth there would be two worlds and those poles apart.

For a considerable time now there have been two such worlds. Yet it was not made official until the courageous Winston Churchill, a stateman who speaks his mind no matter what the personal consequences, in his ringing speech at Fulton, Mo., in 1946, gave mankind the picture in three little words—"The iron curtain."

Yet to Russia it was and is more than a curtain to cut herself off from capitalism, and to serve as a wall if the day ever came when the democracies could stand no more goading.

It was and is likewise a cover to conceal her machinations against nearby countries like Germany, France, Italy, and others she would like to envelop.

It is against that cover—drawn taut, secretive, furtive, and threatening—that the Atlantic Pact was drawn. Against that cover, by that pact, no longer will the olive branch be outstretched. Henceforth there will be handy spears to grasp if the curtain is ever raised and the Red armies dare to overrun the rest of Europe.

None of the countries signing that pact want that kind of a world. But Russia made it so and if today she squirms in mock anger, she is responsible for it.

But what of the man bound for Florida, vacation-bound? He who should be happy about his journey was disturbed. For train-bound he saw another kind of a curtain. To a Boston friend he wrote:

"On the way down here, entering the dining car, I saw a black curtain. It was made of black velvet. Behind it was a dining table. At the dining table sat a colored man and his family, eating.

"Those folks were obviously northerners. They, too, were going South, vacation-bound, perhaps, as I was. The man was fine looking—maybe a lawyer, a businessman, or a scientist. He appeared prosperous.

"I couldn't help thinking. He was evidently born in America and no doubt as much of an America as I was. He may have served his country in the recent war and, for all I know, been wounded in action. What has he done to deserve this?

"There he calmly sat with his wife and children, eating the same food as other passengers, talking about the same things and when the meal was over, paying as much money with the same kind of money as the other people in the dining car.

"The others were not curtained off. They sat in the open because they were white people. Passing through the South, I wondered how many of them reflected and were tempted as I was tempted to tear that curtain down.

"It could have readily happened and I am sorry it didn't. Most of them were northerners who believe in equal rights which the Constitution supposedly guarantees. And, with that black velvet curtain up in the train, incongruously shutting off the colored people, the white people were being served their meals by colored waiters.

"I don't like the iron curtain in Europe. I do not like the velvet curtain in our South. Time has a way and God in the end rights all things. Our velvet curtain, too, will pass."

The date on the letter was important. It was written the same day that die-hard Dixicrats and die-hard GOP conservatives won their famous filibuster victory over President Truman—just 3 days before the Atlantic Pact was announced. The Bostonian ended his letter with the note, "It doesn't make sense." It doesn't.

Rent Control

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 22 (legislative day of Friday, March 18), 1949

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three editorials dealing with rent control. One is entitled "Reasonable Return," published in the Washington Post of March 19, 1949; another is entitled "Getting Ready To Hand Rent Control to States," published in the Philadelphia Inquirer of March 19, 1949; and the third entitled "A Better Rent Bill," published in the New York Herald Tribune of March 18, 1949.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 19, 1949]

REASONABLE RETURN

The Senate Banking and Currency Committee's compromise rent-control bill is probably as workable a plan as can be devised for giving landlords a fair return without removing the lid. A number of progressive-minded Senators struggled with the House version calling for reasonable return on reasonable value and finally concluded that it was administratively unworkable. It would take a battery of experts to determine reasonable returns in each individual circumstance, and Congress now seems wholly unlikely to provide the Housing Expediter with such a staff.

As in most compromises, the Senate plan for two separate 5-percent rent increases spaced 6 months apart will perpetrate some inequities. The blanket raise will confer windfalls on some landlords who have benefited from full occupancy and have experienced no hardship. It may tend to boost living costs slightly when the general trend is toward stabilization. But it will facilitate adjustments for small landlords, many of whom have not gone through the red tape of obtaining hardship increases. The fundamental tenant protections are continued and strengthened, and while the technical duration of the bill is 12 months, actually most safeguards would be extended for 15 months. If this is not the most the administration hoped for, neither is it a major defeat of its program.

The Senate bill avoids one important defect of the measure passed by the House. Whereas the Senate bill permits State legislatures to take over or end controls, the House would confer this power on local governing bodies. In theory, of course, it is the individual's responsibility to protect his own interests. But the practical effect of the House provision would be to subject city councils and county supervisors to all sorts of organized pressure from real estate boards, chambers of commerce, and entrenched property interests which wield local political and economic influence. A measure of what could be expected is the volume of mail inspired by the real estate lobby that has swamped Congress.

The aim of rent control ought to be to facilitate the construction of more housing so that control can be progressively liquidated. Scarcity is particularly acute in low-rent units, and Members of Congress who are anxious to end controls could speed the day by pushing low-cost housing. For Congress to yield to the pressure of local option, however, would merely create more hardships. Local rent boards are already in a position to advise the Housing Expediter of local conditions. If there is to be any national rent control at all, it ought to be according to uniform standards that would prevent gross disparities between areas.

[From the Philadelphia Inquirer of March 19, 1949]

GETTING READY TO HAND RENT CONTROL TO STATES

The version of a rent-control bill produced by the Senate Banking Committee eliminates some of the impracticalities contained in the House proposal, and for that reason is a more desirable measure. Debate on the floor of the Senate will start Monday, and further changes may be made prior to passage.

A very questionable provision of the House bill calls for a reasonable return to landlords on a fair value of their properties. This formula, no matter how attractive it may sound to landlords, would be difficult, if not impossible, to apply.

The Senate, instead, would permit across-the-board rent increases of 5 percent each 6 months of the extended period of rent controls, except in cases where tenants have already agreed to the voluntary 15-percent rise above the rents of June 30, 1947.

Both Senate and House bills, in varying degrees, show a decided congressional tendency to ease off Federal controls of rents. The Senate would establish, after expiration of another year of controls, a 3-month period of grace preliminary to Government withdrawal from the field, during which tenants could negotiate for any rental they desired.

The House would bring home rule into the matter by permitting not only any State, but any political subdivision of it, to throw off all rent regulations.

The Senate committee proposal would avoid the confusion implicit in the House provision by permitting State legislatures to lift Federal controls from all or any part of their jurisdiction and authorizing governors, if and when State controls are ready for substitution, to notify the Housing Expediter to that effect and have the Federal law superseded.

It is becoming increasingly evident that if the individual States want rent controls continued beyond next year they should be prepared to administer them themselves. New York and several other States have stop-gap control laws. Pennsylvania does not.

The governor and the members of the legislature, while the latter body is still in session, should carefully examine the new Federal control law, in the form in which it finally passes, and take whatever protective action is found necessary for Pennsylvania tenants.

[From the New York Herald Tribune of March 18, 1949]

A BETTER RENT BILL

The Senate Banking Subcommittee offered a far better rent-control measure than that passed by the House of Representatives on Tuesday. It provided, for one thing, that the voluntary 15-percent increase permitted last year be applied by easy stages to all tenants. An across-the-board rise uniformly applied seems to us the fair way to meet landlords' claims to a reasonable increase to meet higher costs. The subcommittee proposal called for a 5-percent rise on October 1 next, a second 5-percent rise 6 months later, and still a third in October 1950. Rents for those tenants who already have agreed to the voluntary 15 percent above rents of June 30, 1947, would not be further increased.

The Senate group has rejected the formula adopted on the floor of the House, designed to insure a reasonable return to landlords based on property values. These Senators, wisely, we believe, regard any such formula as too difficult to write, understand, or apply. We like the subcommittee's provision for decontrol of one-family housing accommodations renting for $290 or more a month, that figure to be lowered at the Housing Expediter's discretion in areas where he finds it warranted. This provision is in line with the suggestion made to the committee by Robert W. Dowling, of this city. Mr. Dowling argued that decontrol by rental-unit classifications, beginning with the large luxury apartments and gradually working downward, provides a fairer and more certain means of eventually lifting rent controls than does the current system based primarily on geographic areas. The subcommittee, however, has not accepted the formula in full. We should like to see it given further consideration by the committee or on the Senate floor.

Mr. Dowling made another sound recommendation—that controls be extended for a 2-year period to make possible maintenance of an expert staff and insure continuity of administration. The fact that the Senate proposal gives wide discretion to the Housing Expediter in regulating evictions, for example, enhances the need for expert and stable administration. The subcommittee, however, left it to the full Banking Committee to decide whether to recommend extension controls for 1 year, or for 15 months as provided in the House bill.

The proposed Senate measure rests on generally sounder ground, in our judgment, than does that requested by the administration, which would make no concession to landlords' claims, or than the watered-down House version, which makes dubious concessions.

Overnight Flights Do Not Bring Europe Nearer

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 22 (legislative day of Friday, March 18), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article captioned "Overnight flights do not bring Europe nearer," written by Anne O'Hare McCormick and published in the New York Times of March 21, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OVERNIGHT FLIGHTS DO NOT BRING EUROPE NEARER

(By Anne O'Hare McCormick)

Looking back from here to there, the distance to the other side of the Atlantic is more impressive than the nearness. Europe is not so close to America as an overnight air flight suggests. The wonder of dining one night in New York and lunching next day in Paris actually accentuates the differ-

ences in the cuisine—and all those larger differences that never broke on you so startlingly when the journey was longer. You expect to find the old differences disappearing, now that the two continents are tied together by the Marshall plan, a common-defense plan, and a constant shuttle of advisers, auditors, and diplomats comparing balance sheets and generally minding one another's business.

In some respects they are disappearing. Even without the pact that makes it official, an Atlantic world has developed out of the common interests and fears of the nations living on its northern shores. In all these nations the headline news is the same.

In other respects, however, the contrasts seem sharper than they were. Western Europe is not more like the United States because we are there more pervasively than ever before. An extraordinary number of Europeans complain that we do not use the power of the purse to change traditional customs and methods, particularly in the economic field. Actually industrial techniques and business routines are changing under American influence. Italian agriculture, French couture, British manufacturing, profit by American ideas as well as American dollars. But ways of life and habits of thought, the stubborn characteristics that distinguish the Germans from the French and the French from the British, are almost untouched by ERP. The Atlantic pact will not turn us into one happy family.

CONTRAST STILL STRIKING

Nor is the United States more like Europe because we have established a new and intimate relationship with our trans-Atlantic neighbors. The contrast in background, atmosphere, and mentality is as striking today as it ever was; more so, perhaps, because it persists despite overnight flights to Paris and a common preoccupation with identical problems.

The truth is, of course, that only a tiny minority hops across the ocean. Fewer persons cross any frontier since rapid transit has become a commonplace. Travel and communication were never so restricted as in these postwar years when the world is geared to instant intercourse, physical and intellectual, between nations and individuals.

Today every man is more likely to be an island than a continent. This insularity is in large part the result of the war and the new controls of movement and money that followed. But also it comes from the impulse of a great many people to close their minds to propaganda of all kinds. This year the Voice of America has a much larger audience in Europe than in previous years. It is widely quoted. But the effect first of the Nazi and then of the Soviet radio has been to make people so allergic to Government broadcasts that it takes a long time to restore not only confidence in but recognition of truth.

The Atlantic pact, like the Marshall plan, will run into this new isolationism. The thing that strikes one most in Europe today is that ERP is so spectacularly successful and so little understood by the people it benefits. Political and business leaders know what it's doing, but their knowledge does not percolate to the farmer, the mechanic, or the housewife. Half the effect of the program is lost because it has not been properly publicized.

If Secretary Acheson's clear explanation of the Atlantic treaty could be repeated, not once but many times, in every European country, it would go far to answer elementary questions and counter Soviet misrepresentations. It is all very well for Mr. Bevin and Mr. Schuman to hail the pact as the greatest defensive instrument since 1914, but it cannot be forgotten that the people of Europe live in an atmosphere of suspicion, suspense, and inner turmoil. Our motives and objectives, the philosophy behind the break with our dearest tradition, are perfectly obvious to us, but we have to spell them out in words of one syllable.

TWO ESSENTIALS

The theme Soviet propaganda will harp on in fighting this treaty is already clear. It is a move toward war as opposed to Russia's crusade for peace. This is a grotesque inversion of the facts, but truth has to battle through a fog of lies in the murky climate of Europe. It has to battle the haunting horror of war, and Moscow will exploit the desire for peace to divide Europe as ruthlessly as it exploits the desire for unity to divide the Germans.

To counter this propaganda two things are essential. One is to understand the background and state of mind of the other nations whose dangers and destiny we share. The second is to make ourselves understood. The job of education that has to be done to bridge the mental barriers between the supposedly "like-minded" peoples we are aiming to unite in a community of prosperity and power gives point to the premise laid down by Lester Markel in the opening chapter of a symposium on Public Opinion and Foreign Affairs sponsored by the Council on Foreign Relations. The premise is: "Unless we educate public opinion at home, we shall not be impelled to do the job in foreign policy that needs to be done; unless we make ourselves understood abroad, no matter how good our intentions, we shall fail."

Condition of New York State Voluntary Hospitals

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22 (legislative day of Friday, March 18), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Hospitals in State Warned of Future," the subheading being "Columbia study finds funding, now uncertain, would be precarious in depression," written by Lucy Freeman, and published in the New York Times of March 20, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOSPITALS IN STATE WARNED OF FUTURE—COLUMBIA STUDY FINDS FUNDING, NOW UNCERTAIN, WOULD BE PRECARIOUS IN DEPRESSION

(By Lucy Freeman)

The voluntary hospitals of New York State do not face an immediate emergency but there is great uncertainty as to their financial future and should there be a depression they would be in a precarious financial situation.

This is the conclusion drawn in the interim report of the New York State Hospital Study being made by Columbia University under contract with the State. Its acceptance was reported yesterday by Dr. John T. Bourke, executive director of the New York State joint hospital survey and planning commission, to whom the report was made by the director, Dr. Eli Ginzberg of Columbia University.

UNCERTAINTY OF FINANCIAL BASE

This comprehensive pioneer study is expected to have far-reaching implications in the medical, educational and social welfare fields. Leading health and welfare organizations of the country are cooperating by making available both detailed information and their expert staffs for consultation.

In an interview in his office at Columbia University, where he is associate professor of economics in the school of business, Dr. Ginzsberg elaborated on his findings and particularly on the final statement of the report, which read:

"It should be stressed that the finding of no emergency at this time in no way implies a belief in the soundness of the underlying financial structure of the voluntary hospital. Indeed, the presumption is definitely to the contrary; the data and evaluations submitted to us reflect great uncertainty as to the financial future of the voluntary hospital."

The conclusion that no emergency exists means that conditions in 1948 were not substantially worse than those prevailing in 1947 and that the financial situation is not so pressing as to warrant immediate stopgap governmental assistance, he reported.

ECONOMIC CHANGES SINCE 1940

But he pointed out that if a depression occurred fewer persons might use the hospitals, medical costs could not be reduced, and patients would not only pay their bills more slowly but would also use the cheaper accommodations. At the same time nurses and other personell, who still consider themselves underpaid, would try to maintain at least present salary levels, he added.

Up to 1940, he recalled, most of the hospitals got along on the basis of their endowments, contributions, and payments by private patients and their costs were kept low by underpaying personnel.

Since then, however, three major developments have changed the economic picture, he said, listing them as advances in medicine which have increased the dollar cost per day; increase in personnel salaries, the largest item in any hospital budget, and reduction of the value of the dollar because of inflation, which means that money from gifts and bequests buys less.

The only developments that have saved the lives of the hospitals, he said, have been the expansion of the voluntary insurance plans, which have enabled more persons to use hospitals, and the ability of patients to pay promptly because of general economic prosperity. Increased allowances have also been given by the State and localities to pay for the medically indigent but these still fall short of the actual cost, he added.

As we look to the future, it is the labor costs that loom the largest, Dr. Ginzberg declared. Food costs have begun to level off, but underpaid personnel will continue to ask for higher salaries and shorter hours.

It is unlikely, he said, that to meet costs hospitals can charge private patients any more "without pricing themselves out of the market" and the insurance plans cannot increase rates if they expect to reach more subscribers.

Because of continuing medical advances the daily cost of treating patients will continue to rise, and hospitals face additional financial diffculties in that they have been living off capital and not been able to put aside money for depreciation and modernization, he added.

The final study will contain recommendations as to the proper responsibility of Government, private charity, the voluntary insurance plans, and the individual in financing voluntary hospitals, he said.

It will also consider the obligation of hospitals to all doctors in the community, including those who do not have staff appointments, the more efficient use of diagnostic facilities to patients not needing bed care, the development of less expensive beds for chronic and convalescent patients and greater regional control over expansion of hospitals to prevent overbuilding that would intensify the financial plight in a depression.

Dr. Ginzberg and his staff at Columbia are holding a series of regional meetings to become acquainted with the local hospital problems over the State before formulating final recommendations.

St. Patrick's Day on the Alamo

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein one of the finest articles that I have ever read on the qualities and the spirit of the Irish people and the history of St. Patrick written by Charles H. McGlue, an able and capable attorney and one of the most conscientious students of history and government in Massachusetts. Mr. McGlue has prepared many interesting and excellent writings on matters of public interest and especially has he made considerable research into the history of Ireland and its people. An outstanding leader in the Democratic Party, he has worked untiringly and unceasingly in the interest of the principle of our form of government, and his statements on this subject matter have been most educational. His article appeared in the Lynn Telegram-News, Lynn, Mass., March 20, 1949.

ST. PATRICK'S DAY ON THE ALAMO

(By Charles H. McGlue)

"On the Alamo, where the moon swings low,
In a garden fair where the roses grow;
In all my dreams, there I seem to go,
Where the moon swings low, on the Alamo."

—*Popular American Song.*

CEAD MILE FAILTE, GLENN

And shure it was a great day for the Irish on last St. Patrick's Day on the Alamo. And it was so just because a real, red-blooded Irishman by the name of Glenn McCarthy was doing things in such a big way as to make many of his contemporaries as well as his predecessors really green with envy, and this on St. Patrick's Day.

AND THEREIN LIES A TALE

It's a tale about a fabulous Irishman, and a multimillionaire at that, who is not ashamed of his Irish heritage. God be good to him. The hero of this tale is none other than Glenn McCarthy, who was born 41 years ago at Spindle Top oil field, just outside of Beaumont, Tex. Glenn's grandfather was born in County Cork, Ireland, but came to the good old U. S. A., like so many other courageous Irish prospectors, to seek gold, silver, oil, and other much-sought-for riches.

Glenn's father was an oil driller at Spindle Top oil field when Glenn greeted the world on an Irishman's dream of a birthday, Holy Christmas Day.

LOYALTY AND GRATITUDE

Glenn McCarthy is an Irishman with a mission and a memory. He remembers the struggles of his people for recognition and for a place in the sun. He appreciates the hardships undergone by his grandparents and parents in order to bring riches out of the ground so that he and others may enjoy the comforts and luxuries of life. He possesses the two great attributes in life—loyalty and gratitude.

MONUMENTS TO MEMORY

So on last St. Patrick's Day the loyal and grateful Glenn McCarthy, an independent oil operator with 17 corporations, 16 neighborhood newspapers, and a radio station under his ownership and control, dedicated to the memory of his forebears the biggest, newest, and most luxurious hotel in all the Southwest. It is an 18-story 1,100-room hotel in Houston, Tex., that cost $20,000,000 to build. Rent of rooms starts at $6 a day; and if you are flush, you may rent the lavish penthouses at rates ranging from $500 to $1,000 a month. All modern conveniences are available, including a palm-lined swimming pool 165 feet long and 142 feet wide.

Did Mr. McCarthy give it the usual name that you might expect in this former part of the Mexican Empire, such as Casa Manana, Copacabana, El Capitan, Casino Mexicano, El Hotel Trocadero, and so on. No; he christened it the Hotel Shamrock and wanted it baptized on the day that commemorates the memory of Ireland's patron saint, St. Patrick.

AMONG THOSE PRESENT

Of course as one might expect, the fabulous McCarthy does things up brown, or should we say green. He sent an invitation for the opening of the Hotel Shamrock to President Miguel Aleman of the Mexican Republic and the invitation bearer was Paul Mantz, winner of the Bendix air race, whose plane broke all air records between Houston, Tex., and Mexico City, the home of the Alemans. Mrs. McCarthy, as a consequence received some Mexican-grown orchids of presidential nurture, for the grand opening. Orchids and shamrocks go well together.

A trainload of luminaries from Hollywood, 175 in all, accepted the Irishman's invitation to dedicate the Hotel Shamrock and also to stay over until Friday the 18th, in order to attend the premiere of Glenn McCarthy's first movie (he's a movie producer, as well). And what might you suspect the name of McCarthy's first picture would be? Well it would be difficult for you to guess, but here it is: The Green Promise. Isn't that just perfect?

STARS FROM HOLLYWOOD

In the popular songs of not long ago, the stars that were associated with Old Erin were those that fell from Heaven to make the lakes of Eire, but this week in McCarthy's wonderland, it was a galaxy of stars from Hollywood who graced the occasion in order to make it epoch-making and everlastingly green in every American's memory.

In the caravan of stars were such luminaries as Walter Brennan, Pat O'Brien, James Cagney, Joan Caulfield, Laurel and Hardy, Errol Flynn, Sonja Henie, Dorothy Lamour, Capt. Eddie Rickenbacker, Hedda Hopper, Paul Mantz, Marguerite Chapman, and Robert Paige. The incomparable Bing Crosby dedicated one of his songs on his program to McCarthy's Hotel Shamrock. All in all, it sure was a great day for the Irish and for a great Irishman.

"COME BACK TO ERIN"

So the parade goes on. The haunting melody of Come Back to Erin lingers on. Whether the "Auld Sod" be called "Erin" or "Ireland," or "the Emerald Isle," or "Inis Fail," or "the Island of Destiny," or "Agygia," or "Hibernia," or "the Land of the Saints (and Sinners)," or "Fola," or "Banba," or "Eire"; to all Irishmen all over the world, it means the home of heroes in all ages.

SPIRIT OF THE IRISH

What St. Patrick's Day means to the Irish wherever they are was best stated by the Honorable James A. Farley in a most felicitous address delivered by him at the Hotel Jefferson, St. Louis, Mo., on St. Patrick's Day, March 17, 1944. May I quote?

"The Irish spirit has manifested itself in many ways to the no small gain of all who have come into contact with it. But there has been no more characteristic manifestation of that spirit than a consuming urge to political independence, a fierce and unyielding determination that no man, or group of men, or, indeed, any nation, shall rule others to any greater degree than the moral law requires—in other words, beyond their consent, because the instinct of man always leads him to consent to be ruled as far as the law of his nature makes necessary.

"Nowhere in geography or history will you find another people as blessed as the Irish with this almost miraculous combination of qualities—the instinct for good society, devotion to the Author of society, and hatred of oppression. And there you have the secret of history's greatest paradox. Neither Rome, which held her legions like a whip over Asia, Africa, and most of Europe, nor Britain, whose writ runs with the sun, ever subdued Ireland. Britain, God knows, tried hard enough, and even an Irishman must admit that the Saxon has few peers when it comes to persisting in an effort.

"The Irishman, in other words, knows better than any one else where the rights of rulers begin, and where they end, and why. That is to say, he above all knows what things are Caesar's. And when you try to exact from an Irishman something more than the lawful coin of the tribute, you've got a raging tempest on your hands.

"All that I have said so far has a direct bearing on the record of the Irish in America, and on the salutary influence which the Irish can be and ought to have on American public affairs now and in the future."

SPIRITS OF SPANISH ERA

So while we dwell on the spirit of the Irish, it might be well for us, while we are in the Lone Star State, to think back to those great Irish spirits who fought so valiantly for freedom and liberty in the various Latin-American republics during the Wars of Liberation.

BERNARDO O'HIGGINS

In the chief square of Santiago, capital of Chile, stands a statue of Bernardo O'Higgins, the Liberator of Chile. O'Higgins' second brigade was led by General Mackenna, another fighting-for-freedom Irishman. O'Higgins' good right arm in political matters was another Celt by the name of John McNamara.

His father, Ambrose O'Higgins, was born in County Meath, Ireland, and was appointed viceroy of Chile and Peru by the Spanish king.

In 1814 a movement for the complete independence of Chile was headed by Bernardo O'Higgins, who had been in London some years before, and while there had come under Miranda's influence. Miranda was a Latin-American revolutionist.

In October of 1814, the Chilean insurgent forces were badly defeated, and a portion of them fled with O'Higgins to Mendoza, the capital of Cuyo. Here they were cordially welcomed by Jose San Martin, the ablest commander produced by the struggle for independence in the southern half of the continent.

AID TO SAN MARTIN

San Martin routed the Spanish forces near Chacabuco. A cabildo abierto was held in Santiago, the Chilean capital, and San Martin was unanimously elected governor of the country. His task of independence was not finished and so he declined the office. It was then given to Bernardo O'Higgins, who had been one of the chief officers of the liberating army.

Bernardo O'Higgins was made "supreme director" of Chile in 1818. O'Higgins (Spanish-Irish) with a British education, had had wide experience, could think clearly, and was well aware that the Chileans were not ready for democracy. He felt however that popular rule was an ideal toward which leaders should work. With the special aim of train-

ing for democratic government, he gave much attention to education.

AID TO SIMON BOLIVAR

In the fight for the independence of Colombia, its leader, Simon Bolivar, was greatly aided by Irishmen, one of whom was none other than the son of the great Irish patriot, Daniel O'Connell. Daniel O'Connell's wife presented a tricolor to these Irish expeditionnaires. In fact, Simon Bolivar's own aide-de-camp was named Daniel O'Leary. In the capitol at Bogota a historical painting of him still hangs there for all Colombians to remember the debt they owe to the spirit of the Irish.

GAELS IN THE ARGENTINE

Amiral Brown, born in County Mayo, Ireland, has often been called the savior of Argentina. Messrs. Brown, Morris, Fleming, Gahan, and Shannon were among the many Irishmen who contributed much to the liberation of Argentina.

If one is interested in Irish patronymics, you can find constant outcroppings of Gaelic nomenclature throughout the history of Argentina from the date of its liberation, July 9, 1816, down to the present day.

For example, in 1863, Dalmacio Velez Sarsfield (a fine Irish name) was Minister of Hacienda during the administration of President Bartolome Mitre, one of the strong men of the Argentine.

Juan Martin Pueyrrdon was the first Supreme Director of the Argentine Republic in 1816, and Honorio Pueyrrdon was the Argentine Ambassador to the United States in 1928.

Although Pueyrrdon may not sound Gaelic, nevertheless, when spoken, it sounds almost like Purdon, and, as we well know, some of the Purdons came from County Clare, Ireland, where the River Shannon flows.

TWENTIETH-CENTURY GAEL

Even in very modern times, even as late as 1945, the President of the Argentine Republic was Edelmiro Farrell. Señor Farrell was Vice President under President Pedro Ramirez. Under the leadership of the then Col. Juan Domingo Peron, a political coup which made Farrell President in February 1944 was engineered by the Grupo Oficiales Unions, an army officers' clique. President Farrell thereupon appointed Juan Peron Minister of War, and later he became Vice President. Today Peron is President, undoubtedly the strong man of the Argentine, and the most controversial figure in the public life of all the 21 Latin-American Republics.

PERU AND COLONEL O'CONNOR

Although the Republic of Peru is high, high up in the Andes, and probably contains a higher percentage of Indians in proportion to population than any other South American Republic, nevertheless, it was not so inaccessible or foreign in the days when the fight for Peruvian independence was on but what a Colonel O'Connor could become one of the great Peruvian heroes.

MEXICO AND THE ALAMO

As we leave the history of Chile, Argentina, Colombia, and Peru, and move north toward Mexico and the Alamo, we will find that the very last Viceroy of Mexico to serve in that capacity was named Juan O'Donoju (John O'Donahue in Boston).

Viceroy O'Donoju arrived in Mexico from Spain in 1821, but he was intercepted at Cordova by Agustin de Iturbide, whereupon he signed a treaty of peace. Iturbide, a retired officer of the royal army, had fought against Hidalgo. Upon the signing of the treaty of peace with Viceroy O'Donoju, Iturbide led the revolutionary forces toward the capital, and on September 27, 1821, he entered Mexico City, where he was hailed as the father and liberator of his country.

GREAT MARCHING SONGS

The United States Marines have a stirring marching song which goes like this:

"From the Halls of Montezuma, to the Shores of Tripoli,
We fight Our Country's Battles" etc.

The fighting Gaels of Latin-America could very well paraphrase it by using such words as:

"From the Council of the Indies, to the Act of Chapultepec.
We fought other countries' battles," etc.

And so in memory, we march with the ghosts of the galloping Gaels that fought their way through two continents, in order that all people everywhere might enjoy freedom from oppression and liberty to enjoy life as their Creator intended.

In 1836, they died in the old Spanish mission known as the Alamo near San Antonio. They marched with Gen. Sam Houston against the armies of Mexican President, Santa Anna, and joined in the defeat of the Mexican Army at San Jacinto on April 12, 1836.

They marched with Gen. Stephen Kearney and his Missourians over the Santa Fe Trail in 1846. They marched with Gen. Zachary Taylor through Texas and Mexico as far as Monterey in 1846, and on February 23, 1847, they were in the United States Army that routed the Mexicans at Buena Vista. Under the leadership of Gen. Winfield Scott, they landed at Vera Cruz, Mexico, and on September 14, 1847, they marched victoriously into Mexico City, and thus the States of New Mexico, California, Nevada, Utah, most of Arizona and portions of Colorado and Wyoming became a part of the United States.

MEMORIES THAT BLESS

So today, Senor McCarthy, you epitomize the heroic struggles of your people everywhere. You truly personify those great qualities of heart, mind, and soul that give the Irish spirit its lift and resiliency.

In the grandeur of your magnificent Emerald Room of Hotel Shamrock, you may sink into the soft downy cushions of a luxurious lounge and there dream of the great treasures of Erin: The famous Book of Kells with its exquisitely illuminated and colorful illustrations of the gospel, all the handiwork of Irish monks in the eighth century; St. Patrick's bell which he used to summon people to mass; the famous Moone and Cong Crosses; the Gospels of the Shrine of St. Molaise, the Kavanagh charter horn; the crucifixion slab from St. Cuan's well; or St. Brigid's crosses; or maybe you may dream of banshees, leprechauns, fireflies over the bogs, and one or two of the "little people" that used to meet your ancestors in days of old in Old Erin.

Or possibly because of Spanish surroundings for generations now, your thoughts may roam in a Latin atmosphere. You may see the spirit of the carnival with its traditional farolas to highlight the processions during the festivities. The gaiety of the fiestas in the central plazas may entrance you. Out of the maze of comedy, opera, and balls may come a queen to be crowned for her beauty.

All the patron saints, including your own St. Patrick, may be there to participate in that old Latin custom that the last will and testament of Judas should be read publicly in the Plazas, and if it serves any good purpose, it should be chained in effigy. You will doubtless enjoy the burlesquing in comics and pantomime of all the sinners and the irreligious. May God save them!

CIEN MIL BIENVENIDAS!

As we said in the beginning in Gaelic, "Cead Mile Failte, Glenn McCarthy!" so we in conclusion say in Spanish, "Cien Mil Bienvenidas, Senor Glenn McCarthy!" ("A Hundred Thousand Welcomes to You, Glenn McCarthy!")

In the same Spanish vein may we end with this wish to you: "I Que El Exito De Su Hotel Shamrock Y Su Pelicula, 'La Promesa Verde' " Hagen Crecer Mas Verde, Los Ojos De Los Envidiosos! (May the success of your Hotel Shamrock and your movie, "The Green Promise," make the eyes of the envious grow greener!)

So the top of the morning to you!

Adoption by Town of Ronceverte, W. Va., of a Displaced Latvian Family

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 22 (legislative day of Friday, March 18), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article from the Charleston (W. Va.) Gazette of March 20, 1949, concerning a displaced Latvian family which has been adopted by the town of Ronceverte in West Virginia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LATVIAN FAMILY, DISPLACED BY WAR, DISCOVERS FAITH, HOME, AND OPPORTUNITIES IN NEW LIFE AT RONCEVERTE—SIX OF SKUJINS CLAN AMAZED, GRATEFUL AFTER FRIENDLY RECEPTION HERE; LANGUAGE BARRIER TOPPED

(By Neil P. Boggs)

RONCEVERTE, March 19.—This prosperous Greenbrier County community is helping mold a new life for a displaced Latvian family it has adopted.

After nine nightmarish years, beginning in 1940 when the Russian Army swept over the tiny Baltic state, the family of Romanis Skujins (pronounced exactly as it's spelled) has found peace and a renewed faith in humanity.

The six Skujins—the father, mother, and four young children—arrived in Ronceverte 2 weeks ago, penniless and without any friends or knowledge of the English language.

Their only possessions were six pieces of luggage, an address scrawled on a slip of paper, and the determination to piece together a shattered life.

And already the family has a 20-acre farm, a comfortable six-room home, a job for the father, and a wealth of new friends.

All this came about after a Ronceverte druggist, Charles A. George, and his wife, Sara, noticed an announcement in a church publication 2 years ago.

The Church World Service, Inc., of New York City, was asking for sponsors for displaced European families which had lost everything in World War II.

The couple wrote the church organization, but it was not until early this month that they learned that their family was on its way to America.

The Skujins family—Romanis, the father, 44; Ludmila, the mother, 35; Roman, the oldest son, 13; Juris, 9; Mara, the only daughter, 6; and Ojar, the youngest son, 3—arrived in New York March 3 after a 12-day ocean voyage from Hamburg aboard the steamship *Marine Shark*.

Twenty-four hours later, after a speedy trip from New York aboard a special displaced-persons train, the family was standing on the platform at the C. & O. station here, the realization of a decade-long dream at hand.

None could speak English, but Mr. Skujins had a piece of paper on which was written "Charles George, Ronceverte, W. Va." The druggist was called, and within a few minutes the family was inspecting its new home, loaned by Mr. George.

Townspeople had furnished the frame dwelling with essential items of furniture, while stores sent supplies of fresh food. Housewives had donated their time to clean the house and make it more livable.

Only one obstacle remained. The Skujins spoke Russian, German, and Latvian—but no English.

That barrier soon was eliminated, however. Another Ronceverte resident, Fred Richter, came from Germany 23 years ago, and still speaks fluent German. He was the key to the Skujins family's conversational difficulties.

He acts as interpreter, and at the present time is teaching the family to speak English.

The Skujins had been shoved all over Europe during the past 9 years.

In 1940, they were living on their prosperous 200-acre farm in the heart of the Republic of Latvia, one of the three Baltic states in northeastern Europe.

That year, the Russians took the farm, which had been in the Skujins family for generations, as they made their big sweep over that section of Europe.

A year later, in 1941, the German Army grabbed the farm, along with hundreds of others in the country's rich agricultural belt, as they drove over the Russian border.

As the Red army fled, the soldiers took nearly everything of value, leaving only the buildings standing.

The German soldiers took what remained, burning everything they could not use.

And the Skujins family was herded off to a prison camp. During the next 4 years, they were moved dozens of times.

The daughter, Mara, was born in a prison camp, while her youngest brother, Ojar, was born in a displaced-persons colony.

Then, when Europe was liberated the family was shuttled off to a DP camp in central Germany, where they remained until February.

Romanis Skujins, his worry-lined face and frightened eyes telling a story of horror that could not be expressed in words, explained how his brother and sister-in-law were dragged away by the Germans, never to be heard from again.

His brother's oldest son, however, now is working in a coal mine in Belgium, and expects to come to the United States next year.

Romanis doesn't let his inability to speak English stand in the way of making himself understood. He's developed a special technique.

He carries a catalog, and points to pictures which tell what he wants to say.

Neighbors, who are frequent visitors to the Skujins home, carry on conversations via Sears and Roebuck.

For instance, if Mr. Skujins wants a plow for the farm, he finds a picture of a plow in the catalog and shows it to Mr. George, who tells him what it's called in English.

The father was astonished at the reception his family received in the United States.

"I was told in Europe," he said through his interpreter, Mr. Richter, "that the American people were not friendly. But I changed my mind right away. They are the best people I have seen anywhere."

Romanis and his family plan to take out citizenship papers as soon as possible, and his children will start to school next September.

Ronceverte residents are having a hard time trying to convince the Skujins, who have become accustomed to doing without everything but bare essentials, that America truly is the land of plenty.

Mr. George suggested the family chop down a tree which had been shattered by lightning and use it for stovewood.

The Latvian family became very indignant. "There's no use burning a good tree that can be used for lumber," they protested, and began gathering twigs and small branches instead.

The same situation arises at meals, neighbors said. The Skujins seem reluctant to eat all that is prepared for them, always saving half of what they have for the next meal.

Skujins is working 24 hours a week in Mr. George's drug store, and spends the rest of his time getting Mr. George's farm ready for spring planting.

During that time, he and his family are living in Mr. George's farmhouse without paying rent.

"They should be self-supporting by next year," the druggist explained.

Skujins plans to sow barley and wheat on a large scale, and will raise vegetables for sale at local markets during the summer months.

The family, Lutherans in their home country, has decided to join the Presbyterian Church in Ronceverte, since there is no Lutheran Church here.

With tears in her eyes, Mrs. Skujins, a tall, wiry woman with prematurely gray hair, hugged her children and wondered "why Americans are so good to people they don't know."

A Commemorative Stamp Honoring Frederick Douglass

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. KEATING. Mr. Speaker, next June 9 will mark the fiftieth anniversary of the unveiling of a monument erected in the city of Rochester, N. Y., to the memory of the great Negro-American Frederick Douglass. I propose today a bill to authorize the issuance of a special series of stamps in commemoration of this great author and public speaker, who served the cause of freedom for his race with such courage and devotion and was one of the first Negroes to receive recognition by the Government through designation to hold high public office.

Frederick Douglass, born in slavery in 1817, was 21 years old when he escaped and went to New York City and from there to Massachusetts. For the next 7 years he devoted himself to a relentless attack on slavery throughout the New England States from the lecture platform and through the press. When he was 28, he visited England and Ireland as well as the continent, where he lectured for 2 years and was finally presented by English friends with the funds with which to purchase his freedom and establish a newspaper. Upon his return to the United States, he selected the city of Rochester, N. Y., as the community where he would found his paper named the North Star, subsequently renamed the Frederick Douglass Paper. He continued his work as an editor and lecturer until 1852, when he began an active participation in the political field. He was elected in that year as a delegate from Rochester to the National Convention of the Free Soil Party at Pittsburgh, where John P. Hale was nominated for the presidency. His entry into political life brought him into increased prominence as a speaker, leading to his delivery of the commencement address at Western Reserve University when he was 37, followed the next year by an address to the New York State Legislature, both events a significant recognition of his attainments and stature.

At age 39 he affiliated himself with the Republican Party, realizing that its principles and ideals presented to the people of his race at that time, as indeed they do today, the greatest hope for a future. Two years later he established a monthly magazine, continued his active militant opposition to the institution of slavery and in 1816 actively campaigned in support of Mr. Lincoln for the Presidency. He was instrumental in 1863 in the recruitment of the Fifty-fourth and Fifty-fifth Regiments of Massachusetts and as a result was invited to visit President Lincoln, for whom he again vigorously campaigned when the immortal Lincoln was a candidate for reelection.

After considering Rochester as his home for 22 years, he moved in 1869 to Washington, where he established another magazine, the New National Era. The following year he was appointed Secretary to the Santo Domingo Commission by President Grant. In the following Presidential election, he was elected a Presidential elector for the State of New York and was chosen by the electoral college to carry the vote to Washington.

In 1876 he delivered the address at the unveiling of the Lincoln statue in Washington and the following year was appointed Marshal for the District of Columbia by President Hayes.

Four years after that he was named Recorder of Deeds for the District of Columbia.

He later served as United States Minister to the Republic of Haiti. His distinguished career ended in 1895 when he died and was laid to rest in the city of Rochester, N. Y., which has always been honored by its association with the name of this illustrious American.

Hope for a Non-Communist Asia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following column by Edgar Ansel Mowrer:

SUCCESSFUL SOUTHEASTERN ASIA CONFERENCE THE BEST HOPE FOR A NON-COMMUNIST ASIA

(By Edgar Ansel Mowrer)

Southeastern Asia, already threatened by Soviet communism, may yet save itself by its

own efforts. For the first time in thousands of years, perhaps in all human history, the peoples of Asia and the Pacific islands plan to act together. Not, mind you, as exploited colonials but as free nations.

This is not a revolt of color, either. At the coming conference of the governments of southeastern Asia brown men from India and the Philippines and white men from Australia and New Zealand will sit down together on a basis of equality.

Their common aim will be to organize an Asia that will be at one and the same time free, prosperous, and anti-Communist.

The decision to try to create an organization embracing this whole area was taken at the recent conference held at New Delhi last January. The New Delhi meeting coincided with President Truman's inauguration, diminishing the amount of outside interest focused upon the Indian capital.

Moreover, since the chief conference topic was the conflict between the Dutch and the Javanese Republic of Indonesia, not too much attention was paid at the time by the outside world, and perhaps by many of the delegates, to a decision of the participating governments to explore ways and means for creating a regional pact for a common defense.

CONFERENCE MAY BUCK UP CHINESE NATIONALISTS

Yet this radical decision, curiously hidden in the intricate wording of a so-called third resolution, may turn out to be all-important. It may take its place with the Truman doctrine, the Marshall plan, and the North Atlantic security pact as a great defeat for the U. S. S. R.

For if the many peoples of southeastern Asia do come together on a free, anti-Communist basis, they will be able to prevent any Soviet control outside the Red-conquered areas of China and eliminate Communist influence from places where it is already strong, such as Indo-China and Burma.

Furthermore, they may be able to galvanize the disspirited National Chinese into new resistance. For should they again feel the presence of friendly peoples behind them, these whipped divisions might recover the courage that made them for years more than a match for the Chinese Communists.

Stopping the Red flood at the Yangtse River would obviously be a deed of the first magnitude.

But this might be the outcome of a southeastern Asiatic pact.

The New Delhi move was the more remarkable since it was undertaken in the face of American apathy. Washington had permitted the Chinese Nationalists to be routed without lifting a finger to save them. Secretary of the Army Kenneth Royall blurted out that United States forces might not even try to defend Japan. Maj. Gen. Albert M. Jones, of the United States Army, bewildered and depressed the Filipinos by stating that their American ally would not even try to defend them.

UNION BEST HOPE FOR NONCOMMUNIST ASIA

Yet in the face of this spectacle—the mighty United States of America acquiescing in one-power domination of Asia, which was one of the reasons it fought Japan—or perhaps even because of this incredible sight, the Asiatic governments went ahead and took the first step toward uniting for common defense against the new aggressor.

Credit for this goes in the first place to Jawaharlal Nehru, Prime Minister of India, and to Ambassador Carlos P. Romulo, of the Philippines. These two men understood each other.

They not only agreed at New Delhi that southeastern Asia must unite or be submerged, they saw that such a unit must not be anti-American or even anti-European. Both men understood that without American assistance and European good will, the organizing of all southeastern Asia is probably impossible. The immediate outlook for assistance from America did not seem too good. Certain American diplomats even warned the New Delhi participants against seeking a regional pact. Yet Nehru and Romulo felt that in the last analysis, Washington and the European capitals must see in such a union of free Asiatic peoples their own best hope for a non-Communist Asia.

When they do, they will immediately give the new effort their political blessing. They will then explore the opportunities for the economic development of the area according to point 4 of the Truman inaugural address. They will repeat the promise of military assistance against unprovoked attack already contained in the UN Charter.

And thereby freedom in Asia will be buttressed.

Free Men in America or Taxpaying Serfs?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. REED of New York. Mr. Speaker, the American taxpayer is being asked, not the ECA, to buy and pay for, then send abroad the following items:

Aloes, aluminum, apples, athletic equipment, autos, bandages, beans, boilers, boneless beef, books, boxes, brushes, busses, candies, cane sirup, canned fruits, vegetables and meats, canning machinery, carbon black, castings, ceramics, citrus fruit, clocks, clothing, coal, cocoa beans, coffee, concrete block machines, construction work, cookies, corn, cotton, cotton goods, dairy products, dress snaps, dried foods, drugs, farm machinery, fats and oils, feathers, fiber, fire pumps, fish, fishing vessels, flour, fuel oil, fruit trees, garden tractors, glassware, handles, heavy-duty jacks, horses, horse-fly netting, ice cream mix, industrial chemicals, industrial supplies, insurance (marine), jams and jellies, laundry bluing, leather and leather products, liquor, livestock, locks, machine tools, miscellaneous machinery, malt, mules, music, nuts, oilseed meal, paper and paper products, peanuts, pears, peppermint oil, pickles, pipe and tubing, popcorn, port facilities, prefabricated houses, pressure cookers, pulpwood, radios, rice, rubber goods, sewing machines, shipping, shoes, soap, soft drinks, soya beans and oil, steam locomotives, steam shovels, textile machinery, textiles, tires, tobacco, toys and games, trucks, tung oil, vitamin tablets, watches, weed sprays, wheat, wire screening, woolen goods, wool rags, zippers.

This is only a chicken-feed list for which our taxpayers are asked to pay and send to all corners of the globe.

It is because of the automobiles, trucks, steel, cotton, tobacco, dairy products and innumerable other items paid for by our taxpayers and then given away to foreign countries that prompts President Truman to demand more taxes.

Now when we fortify the foreign countries, arm them at the expense of our taxpayers, the present tax burden will seem light when compared with what is to come.

Shall it be free men in America or just taxpaying serfs?

Address by Mayor D'Alesandro, of Baltimore, Before United States Conference of Mayors

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23 (legislative day of Friday, March 18), 1949

Mr. O'CONOR. Mr. President, major problems facing the municipalities of the country have been presented in forceful manner to municipal officials attending the United States Conference of Mayors, which is being held here in Washington, by Hon. Thomas D'Alesandro, Jr., the outstanding and capable mayor of Baltimore, who is also chairman of the conference's standing committee on legislation.

Enactment of the slum clearance and housing legislation now pending in Congress would afford solution to one of the most pressing and serious problems facing the major American cities today, Mayor D'Alesandro declared. He also called for revamping of the present Federal Highway Act and program to give more consideration to urban area problems, urging that at least 50 percent of Federal funds in this field be earmarked for relieving congestion and traffic bottlenecks in the cities.

He also recommended legislation providing for Federal aid to school construction, which he termed just as important as proposals for Federal aid to education.

Because of the peculiar serious problems demanding attention by the cities of the country today, Mayor D'Alesandro's broad-gaged and well-reasoned address is deserving of the utmost attention by not only State and Federal authorities but by the population of the country generally inasmuch as the mayor of Baltimore is well-experienced and qualified on these pressing problems. For this reason I ask unanimous consent that the address of Mayor D'Alesandro be printed in the Appendix of the RECORD as a supplement to my remarks.

There being no objection, the address was ordered to be printed in the RECORD as follows:

This is my second annual report to you as chairman of your standing committee on legislation. The report is brief and to the point, and I will only refer to the high lights of our activities. All of you have been kept fully informed during the past year by our president and our executive director. And from time to time I have transmitted special bulletins to the full membership of the conference.

Let me say again that it has been a genuine pleasure to have served the cities this past year. Fortunately, Baltimore is just a short distance away from Washington so that it is possible to run over on short notice to appear before congressional committees and to confer with Government officials on our common and mutual problems.

From my experience as a Member of Congress for 10 years, and especially my service on the House Appropriations Committee, I

know the value and usefulness of a cooperative and united front on legislation involving the Federal Government and the cities. All of the congressional committees welcome the views of the heads of our municipal governments, because they appreciate we represent no vested or selfish interest; we simply represent the welfare of the millions of citizens who choose to live in organized communities. These congressional committees likewise know we are not subsidized by anybody or by any private agency or agencies. Congress is very much alive when it comes to appraising and evaluating the testimony of groups which are completely public in character.

HOUSING

Our biggest disappointment for the second successive year, of course, was the failure of the Congress to establish a national housing policy and program. Such failure can be attributed largely to the delaying and obstructionist tactics of a few members of the House Banking and Currency Committee in the first instance, and secondly, the undemocratic action of the House Rules Committee in refusing to grant the House membership an opportunity to vote on the issue. I am confident that if the Taft-Ellender-Wagner general-housing bill which passed the Senate last April had been voted on in the House, the measure would have become law during the Eightieth Congress.

Last December, prior to the convening of the new Congress, your officers conferred with President Truman and administration leaders for the purpose of presenting our recommendations with respect to a long-range housing bill. Our recommendations were graciously received and largely reflected in the bill subsequently introduced.

Last month we appeared before the Senate Banking and Currency Committee in support of the new bill (S. 138). In addition to my own testimony as your chairman, Mayor Murphy, of Newark; Mayor Zeidler, of Milwaukee; and General Farrell, chairman of the New York City Housing Authority, representing Mayor O'Dwyer, submitted statements to the committee. It goes without saying we shall also be represented when hearings are held on the House side.

Housing has probably been the most investigated domestic problem of all time with the same conclusions arrived at with monotonous regularity. It appears at long last that Congress will do something about it. The pending measure, in addition to providing aids and incentives to the private construction industry, would establish a national housing policy under which the low-rent housing program initiated under the United States Housing Act of 1937 would be continued and expanded. A start on the eradication of slums and urban blight would become a reality under the urban-redevelopment provisions of the bill. In short, a solution to one of the most pressing and serious problems facing the major American cities today would become possible with the enactment of this legislation into law and with subsequent adequate appropriations to do the job.

In addition to the broad objectives of the bill, I wish to mention two specific provisions of extreme importance. One was the proposal to subject municipal housing authority bonds to Federal-income taxation—a foot in the back-door technique apparently conceived by the Treasury Department with the taxation of all municipal securities as the real and ultimate objective. Immediately following introduction of the bill your executive director had a number of personal conferences with the sponsors and you were advised of their quick decision to withdraw this particularly obnoxious and controversial provision from the bill. Similar action was taken on March 7 by Chairman Spence of the House Banking and Currency Committee who is sponsor of the companion bill in the House.

Two years ago the Congress first wrote into law by a rider to an appropriation bill a prohibition against any payment in lieu of taxes on public low-rent housing projects in excess of the amount provided for in the original contract. The result has been the creation of an extremely inequitable situation whereby payments in lieu of taxes to municipalities range all the way from nothing to 10 percent of shelter rent. As you know, we were successful in having the bill amended by the Senate committee so as to provide for a 10-percent payment and we will press for acceptance of that provision when action is taken on the Senate floor and in the House.

FEDERAL-AID HIGHWAY PROGRAM

Another matter on which the conference took formal action last year was the extension of the Federal-Aid Highway Act of 1944 which for the first time made mandatory the expenditure of a portion of all Federal-aid highway funds on city-street projects. The Conference of Mayors worked actively in behalf of this legislation for several years prior to its enactment. The authorization contained in the 1944 act provided for a 3-year program expiring June 30, 1948, with annual appropriations of $500,000,000 of which $125,000,000 was earmarked for urban projects.

In accordance with action taken at our last conference, I conferred with members of the House Committee on Roads during March of last year to urge an extension of the program. Favorable action was taken by the House in April and the bill was finally approved during the closing hours of the last Congress. I wish to note here that if it had not been for the concerted action of the members of this conference in urging passage of this bill prior to adjournment of the Congress, I doubt seriously that we would have been successful.

The bill extending the 1944 act authorizes the appropriation of four hundred and fifty millions annually for the next two fiscal years and continues the requirement that 25 percent of the funds apportioned to the States must be spent on urban projects in the Federal highway system. May I just mention here that we have already taken action looking to a revision of this formula so as to provide for the expenditure of a larger proportion on urban projects. It is our feeling that the increasingly serious traffic problems with which every major city is faced today will become only more serious unless something along this line is done. Cities, out of their own financial resources, cannot do the job alone.

From the facts developed it is our belief that certainly at least 50 percent of the Federal program should be allocated to urban requirements. Within the next few days I intend to confer with the chairman of the House Public Works Subcommittee on Roads, whose district is within the city of Baltimore, and urge introduction of appropriate legislation if our 1949 annual conference takes action by appropriate resolution.

EDUCATION

A critical situation has arisen in the field of education throughout the United States. Last year we went on record in support of the bill to equalize educational opportunities between the States. This bill was never enacted and similar legislation is under consideration at the present time with eventual passage anticipated.

Also pending is equally if not more important legislation, in fact it is more important insofar as the larger cities are concerned, providing for Federal aid for school construction. American cities are unable, out of their own resources, to provide the number of schools required by the mushrooming school census that has occurred since the war. As an example, in New York City facilities will have to be provided for an additional 254,000 children in 1954. It seems most imperative that a Federal program for aid in the construction of schools be undertaken. We have left with President Truman personally our views on this and if such a program is undertaken we feel that it should be administered along the lines of the old Public Works program under which grants and loans were authorized direct between the Federal Government and the local communities without any intermediary State agencies involved.

AIRPORTS

Funds were provided for the continuation of the national airport program and for the first time we had no controversy over responsibility for the operation of airport traffic control towers. Funds were appropriated for the operation of approximately 153 towers throughout the country, and this list will undoubtedly be added to as traffic volume increases at airports not now included.

Municipal opposition was recorded with the House Banking and Currency Committee to a bill sponsored by the commercial airlines which would have prohibited cities receiving Federal airport construction grants from imposing certain airport service charges on these airlines. Committee hearings were held but no action was taken by the Congress.

The present Congress will carry forward the airport construction program with added emphasis on those larger city airports which provide the bulk of service to commercial aviation.

RENT CONTROL

At our last annual conference a resolution was adopted calling for the continuation of fair and adequate rent control until such time as the demand for housing had been reasonably met. A few weeks later I conferred with the chairman and most of the members of the House Banking and Currency Committee for the purpose of acquainting them with the official position of the Conference of Mayors on the matter of continuing rent control. As you know, affirmative action was taken by the Congress extending controls for 1 year.

We are now in the midst of congressional debate on a further extension. Just a little over a week ago Mayor O'Dwyer testified before the Senate committee having the pending bill in charge.

Until such time as the existing shortage is alleviated, it is clear that some protection to the millions of families who are tenants must be given. It would be most appropriate for this annual conference to again give consideration to this matter.

NATURAL GAS

One of the most important laws which this organization has sponsored is the Natural Gas Act of 1937. Under this act, natural-gas consumers in our cities were for the first time provided with protection against arbitrary and unregulated rate adjustments by the gas utility companies. The law has worked well over the years for all except those whom it regulates. It is only natural, therefore, that those interests would seek to weaken the law, and their efforts resulted in the introduction of a bill which would have taken from the Federal Power Commission the power to fix natural-gas rates. If successful, the cost to consumers was estimated at $56,000,000 a year in the form of rate increases by only 11 companies. This bill was passed by the House, but we were successful before the Senate Commerce Committee, where the measure was pigeonholed last May by a vote of 9 to 4.

STREAM-POLLUTION CONTROL

Adequate facilities for the sanitary disposal of sewage and other wastes has long been a major and expensive problem for cities and other units of government. The Federal Government has recognized through enactment of the Stream Pollution Control Act in July 1948 that there is an element of Federal responsibility for the correction of conditions leading to the pollution of our country's waterways. The 1948 act authorizes a 5-year program with appropriations of twenty-two and one-half millions annually for loans only at an interest rate of 2 percent and with a ceiling of $250,000 in Federal funds on any one project. Grants up to $20,000 on each project are authorized for planning purposes. Some of the smaller cities may benefit under the act with these limitations, but it is extremely doubtful if the present law will provide much stimulus in getting a national program under way. The bill as originally introduced contemplated Federal grants of 33⅓ percent for construction purposes. If it is the concensus of this conference that the law should be amended—and it is my opinion that it should—we shall, of course, direct our efforts to that end.

HOSPITAL CONSTRUCTION

For the third successive year Congress will approve continuance of the hospital-construction program. Appropriations have been approved by the House and the bill is awaiting Senate action. To date approximately 650 individual projects, with a total estimated cost of about $366,500,000, have been approved.

The bulk of the projects, of course, are in areas not now having hospital and health center facilities, but the larger cities and the metropolitan areas will receive substantial indirect benefits resulting from a decrease in nonresident use of existing facilities.

OTHER MATTERS

We are continuing our efforts to have the Federal Government repeal the admission tax so that this source of revenue may be open to imposition by cities if so desired. As you know, the administration has introduced its social security expansion bill which contemplates extending the Federal retirement program to municipal officials on a voluntary basis. This is primarily of interest to cities which do not now have retirement systems for their employees. There is also, of course, the annual question of Federal payments in lieu of taxes on Government property located within our cities. We are hopeful the President will initiate action on this soon.

President Welsh will indicate several other matters of interest, generally, to all cities.

In conclusion, let me emphasize just one thing. With few exceptions the Members of Congress are a highly intelligent group of men. Too often, however, they are not sufficiently informed with respect to the conditions in our cities and the problems we face. Therein lies a job for you and me—to keep our own congressional representatives continually and fully advised on all matters of mutual concern to the Federal Government and our cities. I cannot urge too strongly the importance of doing this, for isolated appeals to Members of Congress to get this done, or not to do that, carry very little weight when any final decisions are made.

During the coming months your interest and views, as reflected in the formal resolutions of the conference, will be presented to the committees of the Congress as the occasions arise. This job is made easier by the fact that the Members of Congress recognize the United States Conference of Mayors as the voice of the larger cities of the country. On questions of major issues we do not have to appear with a division of views in our own ranks. By the very nature of the organization we are enabled to present a united front free from influences not directly concerned with the welfare of our cities and our people and without the necessity of juggling matters of policy so as to assure that no segment of our membership is offended or gets hurt.

I want to say that you will all be called upon to assist in carrying out the policies adopted by the conference. I know you will respond. My own city of Baltimore has played an active part in the organization for nearly 20 years, and it will continue to do so. I know of no other medium through which our interests on the Federal level can be better or more effectively expressed. It has been a great pleasure and experience to have served as chairman of your legislative committee, and I shall be happy to be of any possible service to the organization during the year ahead if you all so desire. Thank you.

A Letter to the American People Upon Their Duty To Make Themselves Known—View of French Journalist

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I present, herewith, a translation of an article from Illustration by Andre Maurois, which was brought to my attention by a former Delegate to Congress from Hawaii, Victor S. K. Houston.

The translation of the article, which appeared in the January 15, 1949, issue of the publication, follows:

A LETTER TO THE AMERICAN PEOPLE UPON THEIR DUTY TO MAKE THEMSELVES KNOWN

Once again, I have returned from your country, which I have completely covered in a few weeks, from East to West, and from South to North. Again, I found it as I had left it before, not completely happy (that would be against human nature), but happier than the rest of the world. Your political system functions well, your economic institutions adjust themselves as time goes on to new circumstances; your culture is moving along; the American ideal is a living thing.

Hence you have a favorable balance to show, and if in fact an intellectual and sentimental campaign were to be initiated for the conquest of the European heart, as between two ways of life, you could enter upon such an enterprise under favorable conditions, for the spectacle of your society is both noble and beautiful. But what is strange, is that you allow others to be ignorant of this spectacle. You allow legends of the most absurd character to be circulated about you, and you scarcely react to the situation. You, the country of tremendous publicity, are the one nation in the world, whose publicity is badly done. You export your scandals, and your silly happenings, instead of the reports of your virtues and your successes. Because you feel yourselves strong you no longer fear criticism, and you are right. You make light of hostile books and articles.

WHERE ARE THE ANSWERS?

That's all very well, but where is the counterbalance? Which of your writers has told, in a form easily accessible to the foreign public, that which makes for the solidity and the charm of your country? Not one. You are accused of being reactionary. Who answers? Who proclaims urbi et orbi the American ideal? Who recalls to mind that America was founded by rebels, who were enamored of liberty, and that it remains above all the land of righteousness? No one. And yet * * *

And yet the task would be an easy one. Your political life is, as in England but in a different way, a miracle. You have succeeded in combining democracy and stability. Democracy, of that there is not the slightest doubt: it is the people, it is public opinion that leads your country. It is said that the great capitalists, through the newspapers and the radio, can mold this opinion. What nonsense. The press was unanimously against Truman, and he was elected. The radio is available to all who wish to buy time, and the labor unions have for that purpose quite as large funds as the capitalists. They say that the President of the United States, once elected, is a dictator for a period of 4 years. What a mistake. The President lives with his eyes glued to the barometer of public opinion; he acts as the people wish him to act; he tries to guide it, and not to wound it.

DEMOCRACY WITH STABILITY

Hence democracy, but also stability, because political battles with you do not, after the electoral campaigns, carry with them rancor and hate. The results once proclaimed, Dewey sends a telegram of felicitations to Truman, and declares his readiness to work with him. Truman, a Democrat, asks Dulles, a Republican, to preside over the American delegation to the United Nations, and asks Hoover, a Republican, to draw up the plans for administrative and budgetary reforms. How is such moderation possible? It is due: (a) To civic training which is the best part of the American educational system; (b) to the certainty of the minority party, that the majority in power will respect the Bill of Rights, and furthermore that the Supreme Court will see to it that such rights are respected; (c) to the fact that the two major parties do not represent two classes, two different ideologies, but groups of interests and historical ideals of great complexity. An American newspaper once proposed the following competition: "Tell in one phrase what is the difference between Republicans and Democrats." A child answered: "There is no difference." The jury awarded the prize to the child. That is one of your secrets.

LIBERTIES THREATENED

Are not the liberties in your country also threatened? Of course, quite true. Liberty is a possession that must be fought for all the time. The Committee on Un-American Activities has unmasked some weaknesses and perhaps some treason, but it has also unjustifiably troubled some honest people, who had committed no other offense than to have spoken unwisely. It has brought about amongst officials and professors a feeling of fear and prudence, which is essentially un-American. Its only excuse was the excesses that impunity had engendered. Every liberty, yes, but not against the Nation. That established, one must put a brake on all tendency toward intolerance. Your Government is paying attention to

this. The Leagues for Civil Rights watch over it. The President wisely makes light of certain police fanciful stories. With you as elsewhere, the pilot cannot always guarantee that the vessel will not run off its course. There are winds and currents. But when all is said and done, the excellence of your mental gyroscope is shown by the fact that recovery is rapid.

MUCH TO DISCOVER IN ECONOMIC LIFE

As for the economic life, you have much still to discover. The speed of production, new industries, the fall of foreign-money values, have presented problems which have not yet been resolved. But it must be admitted that you are seeking the solutions with efficiency and in good faith. You are attempting to reconcile the virtues of free enterprise with the security of regulation. It looks as though you would succeed. Against the great crises of unemployment, you have set up State apparatus. You are beginning to catch sight of what might be a scientific economy; you know that it must take into account human nature, which is one of the elements of the problem. You will not avoid the minor fluctuations of business; but henceforth, I believe that you will know how to escape catastrophic crises. That's the essential.

RELATIONS BETWEEN MANAGEMENT AND LABOR DIFFER

With you, relations between management and labor are different than they are elsewhere. At least, on the one hand, you have succeeded in eliminating resentment. Not completely, to be sure. In certain industries the laboring class has kept a bitter memory of the way it was treated when there were no unions to defend it. Hence their attitudes with respect to certain somewhat ridiculous regulations. But little by little the inferiority complexes will simmer down. Already they are much less strong. The leveling process works fast in America. The way of life of the masses has improved prodigiously. The thousands of motorcars at the gates of the factories, the clothing of the workers who leave the establishments, are concrete proof. Above all, equality of manner and tone has been realized. The secretaries of the large labor unions are forceful and cultivated men, realists, who discuss as equal to equal with the heads of industry. Hence a familiarity which generates common sense. John L. Lewis, president of the miners, calls the young owners of the mines by their first names. In some of the industries management and workers together appoint an impartial chairman who, as a permanent arbitrator, prevents conflict to the great benefit of the two parties. The breach, dug by the scandalous exploitation of the industrial revolution in the nineteenth century, has not been entirely filled up, but it is no longer so deep. America is driving toward a classless society, which, however, nowhere implies a society without a hierarchy.

INFLUENCE OF CULTURE

Culture provides as between groups of human beings a marvelous means of getting together. To love, to understand the same works is the beginning of understanding and loving each other. Already on this score you have made great progress. Today, you are the country whose masses best understand music, and I mean good music. Your museums are not only rich, which for you is easy, but are directed by men, whose purpose it is not only to attract people, but also to instruct them, which they do. Your universities are widely open, and except for a few exceptions absolutely democratic. Your libraries, even in the villages, are admirable, and whoever, in the United States wishes to better himself, finds ready means at hand. This respect for the arts and letters, this desire to participate in universal culture has begun to produce great results. You have a powerful and new literature, which Europe admires; your scientists lead the world effort. You now occupy as large a place in the domain of the intellect as in the circles of industry.

THESE THINGS MUST BE TOLD

All of which is admirable, and you may well be proud of the results, and we your friends rejoice with you. But these things must be told. Else who will know them? Above all it must be proclaimed that you place all of your new forces at the service of the old American ideal, which was fraternity amongst peoples, equality of man, and liberty for all. To this ideal, in fact, you remain faithful. You accept the sacrifice of a large part of your revenues to help reestablish people whom the hazards of war have treated less fortunately; you are by instinct, and in all countries and under all circumstances, for the downtrodden. But that also, you must let the people know about. Because of your silence, because of the noise of others. and some false maneuvers, some very honest people have concluded, in all conscience, that you are anxious for political and economic conquests, and that you were supporting a little all over the world the forces of reaction. That is false, but it is necessary that people should know that it is false, that you remain the champions of liberty and of those, whom it is wished to deprive of it.

It is as a liberal power that you have grown and triumphed. Let the world know in time that you are the country of Jefferson and Lincoln. More and more within your own country, give an example of tolerance and equality. With an open hand invite our students, our workers, our farmers to come and take note of your progress. I know better than anyone else by experience, that when one gets to know you, one loves you. But make people know you.

The Great Adventure

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. SCUDDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following poem:

THE GREAT ADVENTURE—IN MEMORIAM TO SENATOR HERBERT W. SLATER

(By the Old Philosopher)

They pass by, with problems in daily strife
To see, to feel, and to report on life;
This is a timely work, my constant joy
"Do unto others," to aid, I will employ.

My fellow men need me to serve them well
Heal the saddened heart, with fears to quell;
The Golden State, its laws, I will help frame
For California, more lustre to her name.

Life to be even, must afford fair chance
The needy, the infirm, their lot to enhance;
Lift high the torch, that men may truly see
Our land shall preserve liberty for the free.

Riches vanish, trials and errors do pass
Yet, in the heart, one's soul, forever cast;
Love of friends, to all mankind we assure
Immortal will be—the great adventure.

Selection of Juries in Federal Courts

EXTENSION OF REMARKS
OF
HON. ROBERT L. RAMSAY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. RAMSAY. Mr. Speaker, under unanimous consent, I extend in the RECORD my own remarks on H. R. 3207. This bill is now pending before the Judiciary Committee, Subcommittee No. 4, for open hearings, notice of which will soon be announced by the chairman of the committee.

House bill 3207 provides for the drawing and selection of jurors in the Federal district courts.

The main purpose of this bill is to appoint jury commissioners, who shall have jurisdiction of this subject.

It amends sections 411 and 412 of title 28, United States Code.

Section 411 is so amended that those selected for jurors must be able to speak and understand the English language.

Section 412 is so amended so that all jurors, grand and petit, must be publicly drawn from a box, containing the names of not less than 1,000 persons, possessing the qualifications prescribed in section 411.

Subsection 412 (a) authorizes the judge of the Federal district court, prior to the 1st day of July in each year, to appoint two persons of opposite politics, to serve as jury commissioners. No such jury commissioner shall be eligible for reappointment for at least 2 years after the expiration of the year for which he was appointed. This section further provides that such commissioners shall have a fee of $10 per day for each day employed together with mileage of 10 cents per mile for his traveling expenses.

Subsection 412 (b) provides that the clerk of said court shall notify each commissioner of his appointment. It further provides the form of oath such commissioner shall subscribe to before performing any duties as such commissioner, and one provision of such oath requires such commissioner to "select none whom he may have been requested to select."

Subsection 412 (c) provides that such jury commissioners shall meet on the first Monday of July in each year, at a place within the jurisdiction of the district court, at a place named by the judge, for the purpose of making a list of persons to serve as jurors for the ensuing year.

Subsection 412 (d) provides that such commissioners must select all jurors from the last list of qualified voters of the various countries embraced in each district court of the United States.

Subsection 412 (e) requires the jury commissioners to keep in a well-bound book a record of the proceedings, to be preserved by the clerk of the court in his office. It further provides for removal from office of such commissioners for neglect of duty, and so forth, and for filling vacancies by the judge of the court.

Subsection 412 (f) provides that a list of the persons selected by said commissioners, to serve as jurors, shall be prepared by said commissioners and be delivered to the clerk of said court and by him safely kept. Such list shall be subject to inspection only by the judge, clerk of said court, and the jury commissioners. It further provides that the judge or the jury commissioners, may strike from such list the name of any person who has been convicted of any scandalous offense, or been guilty of any gross immorality.

Subsection 412 (g) provides that at the time of making such jury list, the commissioners shall cause all the names of jurors to be written, each on a separate paper, so as to resemble each other as nearly as may be, so the name shall not be visible on the outside, and deposit the ballots in a secure box prepared for that purpose, which shall be known as the "jury box," and shall be safely kept by the clerk of said court, and shall be opened only by the order of the jury commissioners.

Subsection 412 (h) provides that all jurors required for the trial of cases, including felony, shall be selected by drawing ballots from the jury box, and the persons whose names are written on the ballots so drawn shall be returned to serve as jurors.

Subsection 421 (i) provides that it shall be the duty of the jury commissioners, upon notice served by the Federal marshal of the district court, signed by the clerk, to attend on a day designated in said notice, at the clerk's office of the district court, and in the presence of the clerk of such court, to draw the proper number of jurors from the jury box.

Subsection 412 (j) provides that if either, or both, of the jury commissioners fail to attend as required by such notice, the clerk of the district court shall appoint a special commissioner or commissioners, having the proper qualifications as required by the act, to act in his or their stead, and jurors shall be drawn by such commissioners, and the clerk of the court shall place a list thereof in the hands of the Federal marshal of the district, at least 3 days before the return day summoning said jurrors to appear at the time and place mentioned in the summons.

Subsection 412 (k) provides that when jurors are to be drawn as aforesaid, the ballots in the jury box shall be shaken and mixed together by one of the jury commissioners, and the other jury commissioner shall openly draw therefrom as many ballots, without inspecting the names written thereon, until the proper number shall have been drawn, and if any person, whose name is drawn, is unable, by reason of sickness or absence from home, or other cause, to attend as juror, his name shall at the conclusion of the draft be returned to the jury box; or he be exempted by law, stricken from the list, and such ballot shall be destroyed and another shall be drawn in his stead.

Subsection 412 (l) provides that when any person is drawn and returned to serve as a juror, the jury commisssioners shall endorse on his jury ballot his name and the word "drawn" and place it in another box to be kept for that purpose in the custody of the clerk, and opened only as prescribed by this act, and the date of the draft shall be entered on the list of jurors opposite his name.

Subsection 412 (m) provides that the court, in term time, may require other jurors to be drawn by the clerk in the presence of the court whenever it shall be necessary for the convenient dispatch of business.

House Resolution 2050 recites that its purpose is to amend sections 1864 and 1865 of title 28 of the United States Code. It seems that its purpose is to amend the sections 411 and 412 of the present arrangement of title 28 of the present Code of the United States Statutes.

It is my understanding that this bill was recommended by the judges of the Federal court of the United States, serving in the State of New York. There seems to be no doubt that this action on the part of these Federal judges, was to sustain hereafter the methods of selecting jurors, as used and prescribed by one of their number.

This bill, in section (a) like the present law, provides for the appointment of one jury commissioner to serve during the pleasure of the court.

It further provides that each commissioner shall be a member of the principal political party opposing that to which the clerk is a member.

Section (b) prescribes that the compensation of such commissioners shall be $10 per day for each day, not to exceed 5 days in any one month, when such commissioner is actually engaged in his official duties.

It further provides however, that the judge may appoint one or more such commissioners to full-time duties and pay, with the approval of the judicial counsel, at a salary not to exceed $5,000 per annum, with traveling and subsistence expenses within the limits prescribed for clerks.

Section (c) provides that the clerk of the district court and the commissioner or commissioners shall constitute the jury commission for the district. If more than one commissioner has been appointed, the clerk and that commissioner, who has been designated to serve in a particular part of the district, shall constitute the jury commission for that part of the district, who shall act subject to the instructions of the judge of said court.

It further provides that the commission shall have power to transmit to prospective jurors, questionnaires approved by the judge, to determine whether any person is qualified to be selected as a juror.

It further provides that if any person refuses to answer any question propounded to him, he is subject to punishment for contempt of court.

It will be noted that there is no limitation as to such questions. The only limit is the restraint of the commissioner. Is this unlimited power constitutional?

Section (d) provides for the drawing of the jurors. This is to be done on the order of the court; the names to be drawn from a box or a wheel; 300 persons will be selected, as provided by subsection (c); names to be drawn publicly by the clerk and jury commissioner, or by a judge and jury commissioner, or by a judge and a clerk.

This bill would legalize the discretionary system of selecting jurors, as perfected by presiding Judge Knox of the southern district of New York, who because of his life tenure in office, is not subject to control or curb of his activities by any department of government.

This bill empowers the judge himself to hand-pick and select every juror, and may act as district attorney and a jury commissioner, whenever, in his opinion, he is not restricted to the duties of a judge.

Furthermore, there is nothing in this bill to prevent the appointment of a hand-picked clerk and hand-picked jury commissioner, who also are assured of good jobs for life, so long as they obey their master's voice and continue to hand-pick jurors at his request.

Congress during the past 150 years, has failed in its duties to guarantee in Federal courts, fair and impartial trials to defendants. It is the duty of Congress imposed upon it by the Constitution. It is a duty Congress cannot delegate to others without endangering the very precious liberties of the people.

To permit the judges of the Federal courts to hand-pick jurors, and then permit the judge to tell these same jurors that he believes the evidence offered in any case is, in his opinion only, sufficient to convict, is contrary to every law in every State of the Union.

What can you expect? What do you get?

A court-directed verdict of conviction, without the court running a chance of reversal, because an appeal does not lie for the failure of the judge to truly comprehend the evidence, is certainly contrary to the established law of the States.

How is the list of possible jurors compiled in Federal district courts? No one ever knew, or was ever told until recently by Judge John C. Knox, of New York, when he admitted that he selected his jury after consulting the "social register, Who's Who in New York, lists of college alumni, and lists submitted by large business firms." No effort was made to secure a jury that would represent a cross section of his district, but every effort was made to secure a jury that would have the same view of government and evidence as directed by him. Does anyone but this judge himself believe justice can be administered in this prejudiced manner?

Americans love their courts. Many Americans fear the district courts of the United States. State courts do not participate in the empaneling or selections of jurors. State court judges are precluded from expressing any opinion to the jury upon the weight of the evidence.

Federal courts express and argue to the jury, under guise of instructions, their opinions on the weight of the evidence.

Federal judges interfere and direct the empaneling of jurors, and select jurors that do not represent a proper cross section of the community.

What chances does a man have for a fair and impartial trial, in a court where the judge may argue the evidence before his own hand-picked jury.

State legislatures have provided by statute, in every State of the Union, against such conduct and performance on the part of their judges.

There has been introduced in the House of Representatives H. R. 1423, that will prevent Federal judges from arguing before the jury and expressing their views of the evidence in civil and criminal cases. In other words, it will prevent the judge from acting as attorney for one side or the other.

H. R. 3207 will prohibit the judge from interfering in any manner with the jury commissioners in their duties of selecting and designating the persons who shall serve as jurors in the Federal courts, and will take from the judge the power to act as jury commissioner extraordinary.

I hope the Members of Congress will see fit to throw around the practice in the Federal courts the same security that State legislators have been wise enough to insure the people of their State, whenever they are required to commence or defend action at law therein.

Development of the Missouri River Basin

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23 (legislative day of Friday, March 18), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the St. Louis Post-Dispatch, dated respectively March 3 and March 7, 1949.

These editorials discuss the failure of the Pick-Sloan plan for the development of the Missouri River Basin and the need for a single coordinated program such as the Missouri Valley Authority.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch of March 3, 1949]

RIPE TIME FOR MVA

As Senator MURRAY and 12 colleagues introduce the fourth MVA bill, the moment is propitious.

The Pick-Sloan plan, with which the Army engineers and the Reclamation Bureau have tried to forestall MVA, has discredited itself more quickly and more thoroughly than anyone could have hoped.

Its failure to win the respect of the people of the valley themselves was shown recently when the Nebraska Legislature rejected an appeal by the Army engineers for a vote of confidence. It was shown again when the North Dakota House voted to ask Congress for MVA and the North Dakota Senate came within two votes of doing the same thing.

In the Tennessee Valley, for either chamber of any State legislature to reject TVA, or to come as near doing so as did the North Dakota Senate, would be unthinkable. It would be political suicide for a member to vote that way, so thoroughly has TVA won the support of the people among whom it works.

In the Missouri Valley the contrast is striking. In four brief years, although it has succeeded in getting better than a billion dollars out of Congress, the "fake MVA"—the Pick-Sloan plan—is on the down grade in popular esteem. When it is further considered that the Interior Department, one of the Pick-Sloan participants, has recommended the valley-authority method as superior, and a Hoover commission task force has branded Pick-Sloan "a costly failure," there can be little doubt that something a good deal better is demanded.

The better method is available in the Murray MVA bill. Its sponsorship is impressive—from the Missouri Valley, from the Tennessee Valley, and from elsewhere in the country from Rhode Island to Florida. Because of the national importance of the issue it presents, because of the large and growing demand for MVA in the Missouri Valley, because of its broad and impressive sponsorship in the Senate, it deserves a respectful, fair, and thorough hearing by the Eighty-first Congress.

Because this Congress bears the mandate of last November 2 for progressive legislation, it owes it to itself to give the new MVA bill such a hearing. And such a hearing the two preceding MVA bills never had in the Seventy-ninth and Eightieth Congresses. Both committee hearings given to it were conducted by the late Senator Overton, an Army engineer partisan who hated MVA sight unseen and who did everything in his power to prevent consideration of the measure on its merits. These Congresses refused to conduct hearings in the Missouri Valley and ascertain what the people themselves want in contrast with what small but loud special-interest lobbies have been saying they want. Valley-wide hearings are another obligation the Eighty-first Congress owes to the country.

[From the St. Louis Post-Dispatch of March 7, 1949]

PICK-SLOAN'S HUGE ONE-SIDEDNESS

Few people perhaps realize that the Federal Government has already spent one and a fifth billion dollars on the Pick-Sloan plan and its predecessor works for the development of the Missouri Valley.

It is an enormous amount to be spent under any conditions, and a truly appalling amount to be spent in advance of any coherent plan for spending it or for making certain that the structures it provides will be useful after they are built. Yet that is what is happening. The only "plans" are two conflicting programs which the Army engineers and the Reclamation Bureau drew up in an attempt to forestall each other, and which they then put together and called a "unified" plan in an attempt to forestall MVA.

How one-sided is the present unplanned development was shown by figures in Richard G. Baumhoff's report in the Sunday Post-Dispatch. Analysis of these figures shows the disparity in the treatment which the dominant agency, the Army engineers, is getting for itself, and the treatment which submerged agencies like the Soil Conservation Service are receiving.

The Army engineers, with 19 percent of the program, has obtained 41 percent of the appropriations, while the Soil Conservation Service and the Forest Service, with 9 percent of the program, have received 1.6 percent of the appropriations. Proportionately the Army engineers have done eight times better for themselves! And this is the record of the "plan" which the Army engineers represent as giving appropriate emphasis to every phase of the development.

While there is still time—before error on a mammoth scale has been built into the Missouri Valley for generations to come—this region deserves better treatment at the hands of Congress by enactment of an MVA.

Beef and Veal Imports

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. MILLER of Nebraska. Mr. Speaker, a careful study of the agricultural program will indicate that the administration is subsidizing the production of soil-depleting crops, and at the same time subsidizing exports of soil-depleting crops. This hardly fits in with our soil-conservation program.

The administration program has reduced the total number of sheep in the United States to the lowest number in 50 years, and this has been accomplished in a 5-year period.

The livestock industry is in constant jeopardy because of our trade agreement programs. Livestock farming is closely associated with soil conservation and also with a desirable farm economy. I want to point out that the records of the Department of Agriculture will show we have been on a beef-import basis ever since the Underwood tariff days, except for two short periods during World Wars I and II. The duty has been reduced time after time on livestock products. The report will show that peanuts, rice, and tobacco still have the much criticized Smoot-Hawley tariff protection. In addition an embargo has been placed on cotton importation.

If beef imports were given the same duty protection enjoyed by cotton and some of the other soil-depleting crops, the American beef market could and would be supplied by the American farmer. It should be borne in mind that about 40 percent of the beef and veal of the Nation is derived from cattle kept for milk.

Mr. Speaker, take the matter of the so-called section 32 funds as they relate to agricultural products. These come mostly from the imports of livestock and livestock products. Wool is the principal agricultural import. Now the section 32 funds have been used to subsidize cotton exports and also to subsidize the domestic use of cotton. These funds are also used to subsidize tobacco exports and even to the extent of subsidizing the tobacco which is ground up for fertilizer and insecticides. In other words, we have a program in which the section 32 funds, which are obtained by taking 30 percent of the customs receipts and setting them aside to be used to dispose

of agricultural surpluses are actually being used, not for the purpose intended, but to subsidize soil-depleting crops, particularly cotton and tobacco. It just does not seem as though the Agriculture Department was really interested in protecting the industries in this country which actually provide real soil fertility. The livestock industry helps to keep up our soil fertility.

A table showing imports of beef and veal follows:

Beef and veal: United States imports for consumption, by kinds, by principal sources, 1948 [1]

Country	Fresh chilled, or frozen				Prepared or preserved				Total beef and vea.	
	Beef		Vea.		Canned beef and corned beef		Beef and veal, pickled or cured			
	Quantity	Value	Quantity	Value	Quantity	Value	Quantity	Value	Quantity	Value
	Pounds		*Pounds*		*Pounds*		*Pounds*		*Pounds*	
Argentina					83,343,146	$26,151,196	427,197	$109,173	83,770,343	$26,260,369

Beef and veal: United States exports of domestic merchandise, 1948 [1]

Kind	Quantity	Value
	Pounds	
Beef and veal:		
Fresh or frozen	3,735,034	$2,338,171
Pickled or cured	6,593,795	1,817,080
Beef, cured	5,076,911	2,309,176
Total	15,405,740	6,464,427

[1] Preliminary.

Source: Compiled from official statistics of the U. S. Department of Commerce (U. S. Tariff Commission, February 1949).

This chart boiled down shows over 208,000,000 pounds of beef and veal imported—our exports 15,000,000 plus pounds. It should be noted that the above tables are for boned meat and does not cover the additional 419,000 head of cattle which were imported from Canada in 1948. It does not include the nearly 150,000,000 pounds of canned meat, representing 700,000 head of cattle, which we are obligated to take from Mexico.

If the United States were self-sufficient in beef and veal, millions of dollars could be saved from the amount being spent in storing grains and millions more could be saved by making export subsidies on soil-depleting crops unnecessary. If we are to continue the importing of such huge amounts of meat and the present antilivestock attitude is to prevail, we will certainly want to increase the size of our elevators and corn cribs in order to store all of these grain surpluses. It is my opinion that as the imports of livestock and livestock products increase, the greater the need will be for facilities to store our grain.

If the United States supplied the wool needed and used, our meat prices to the consumer would be lower, and meat would be more plentiful. If we replaced the acreage of unneeded soil depleting crops with crops used in livestock farming, untold millions could be saved the taxpayers because we would not need to subsidize the production of the soil-depleting crops and would not see the public funds used to subsidize the exports of the soil-depleting crops. In other words, Mr. Speaker, it seems that our present agricultural program is upside down. This is apparent when one realizes that in 1948, there was the largest importation of beef and veal in the history of our country.

Big Business Wants Basing-Point System Restored

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MANSFIELD. Mr. Speaker, the National Union Farmer for March 1949 includes a leading article on continuing efforts being made to nullify the Supreme Court decision outlawing the basing-point system. The article follows:

MONOPOLY GAINS POINT IN BASING-POINT FIGHT

WASHINGTON, D. C.—That big business is still able to operate in the Nation's Capital despite the result of the election is shown by the action of a House committee the first of this month.

The House Judiciary Committee reported favorably on bill H. R. 2222 which in effect negates a recent Supreme Court decision which outlawed the base-point price system long used by monopolists to crush competition and prevent industrial development of the South and West.

Specifically, the bill would legalize freight absorption, phantom freight, and uniform methods of pricing which had been used for years by United States Steel, the Cement Trust, and other business groups to effectively strangle competition.

PATTON OBJECTS

Farmers Union President Patton protested the favorable action of the House committee in a letter to Speaker RAYBURN.

"The approval of this legislation," said Patton, "without public hearings is particularly obnoxious because the bill threatens our economic and political democracy."

Patton pointed out that this action of the House Judiciary Committee was part of a pattern which has developed in the last year as a result of the campaign put on by the monopolists found guilty by the Supreme Court.

He said, "I want to emphasize the fact that outlawing freight absorption when it is used to stifle competition in no way prevented businessmen from absorbing freight when necessary to meet competition.

"No new legislation is needed at this time. The whole campaign is designed to weaken and undermine our antitrust laws and pave the way for monopoly."

Helping Our Teachers Combat Communism

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New Hampshire Morning Union, published in Manchester, N. H., under date of March 22, 1949, entitled "Helping Our Teachers Combat Communism":

HELPING OUR TEACHERS COMBAT COMMUNISM

The announcement of the education policies commission of the National Educational Association that it will publish recommendations in the near future to help teachers meet the challenge of communism in our schools is immensely important.

These leaders predict that the cold war against the Soviet Union will probably continue until children in the grammar schools have grown into adulthood—an outlook that places a tremendous responsibility on the American teaching profession today.

A good deal of effort is being directed in various parts of the country toward weeding out Communist propagandists from our high school and college faculties. This work is highly important. Checking the process of subversion in our schools by eliminating Communists and Communist stooges from our teaching staffs should be pressed without any equivocation.

But necessary as this process is, it constitutes a negative approach. In addition to stifling Communist propaganda, there should be some positive effort to present the defects and dangers of communism so as to create a definite understanding on the part of our young people concerning the menace facing all free peoples today. And this effort should begin with younger pupils in our

grammar schools and not be left to schools of higher education.

The education policies commission of the NEA has not outlined in detail just what form its program of guidance to teachers will take. A final draft will not be made until a rough outline has been circulated among the members of the association, and been given their approval. But in a general way, the program would be designed to present the real facts about communism—its repression of freedom, its complete subjection of the individual to state control, the fallacy of its economic pretensions, and its program of world domination. To which would be added, by way of contrast, a survey of the benefits of American free institutions.

A program of this kind is essential to American education today. The soundness of the movement for its adoption is evidenced by the caliber of the leaders who have it under advisement, which include such men as General Eisenhower, president of Columbia University; William Jansen, superintendent of schools for New York City; and O. C. Carmichael, president of the Carnegie Foundation for the Advancement of Teaching.

Mustangs Promoted

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. JACKSON of California. Mr. Speaker, a few days ago it was announced that two distinguished officers of the Marine Corps, Brig. Gen. M. H. Silverthorn and Brig. Gen. R. A. Robinson, had been selected for promotion to major general. Aside from the fact that these officers are highly deserving of such an honor, their selection to two-star rank has an added significance. Brigadier Generals Silverthorn and Robinson both began their service careers as privates, and have steadily progressed through the enlisted and commissioned grades. Consequently, I believe that members of this House who are interested in preserving equal opportunity for promotion for all members of the armed services will be gratified by this example of how the Marine Corps assures unrestricted opportunities for able enlisted men to achieve general officer rank.

Mr. Speaker, under leave to extend my remarks, I include an article from the Army and Navy Journal of January 22, 1948, giving pertinent information on the careers of Brig. Gen. Merwin H. Silverthorn and Brig. Gen. Ray A. Robinson, of the Marine Corps, who have recently been selected for promotion to major general:

General Silverthorn, currently on duty in the office of the Chief of Naval Operations, was decorated with the Legion of Merit and the Distinguished Service Medal for his wartime services as Chief of Staff of the Third Amphibious Corps.

Born in Minneapolis on September 22, 1896, General Silverthorn attended the University of Minnesota before enlisting in the Marine Corps on April 27, 1917. Less than 3 months later he sailed for France, and the following year was commissioned a second lieutenant. In France he participated in a number of major campaigns, was wounded twice, and earned several decorations including the Navy Cross and the Distinguished Service Cross.

During the early months of World War II General Silverthorn served as a member of the United States Joint Strategic Committee, and later as Chief of the Amphibious Warfare Section, Army and Navy Staff College. In 1943 he became Chief of Staff of the Third Amphibious Corps and participated in the invasion and capture of Guam, where he was awarded the Legion of Merit. While still serving in this assignment, he earned the Distinguished Service Medal for his conduct during operations against enemy Japanese forces in the southern Palau and Ryukyu Islands. From July 1945 until September 1946 he served as Chief of Staff of the Fleet Marine Force, Pacific. Before reporting to the office of the Chief of Naval Operations he commanded the Troop Training Unit, Training Command, Amphibious Forces, Atlantic Fleet, for 1 year.

In addition to the medals mentioned, General Silverthorn also holds the Silver Star with Oak Leaf Cluster, the Croix de Guerre with Silver Star, the French Fourragere, the Purple Heart, and numerous others.

General Robinson, Director of the Division of Plans and Policies, also entered the Marine Corps as an enlisted man and served in both World War I and II.

Born on July 1, 1896, in Los Angeles, General Robinson enlisted in the Marine Corps in 1917 and, just subsequent to completion of his recruit training, was commissioned as a second lieutenant. He served in France in 1918–19 with the Thirteenth Marine Regiment.

During World War II he served as Chief of Staff of both the Third and Fifth Marine Divisions, and later as Assistant Division Commander of the Fifth. In March 1946, he was named Fleet Marine Officer on the staff of the Commander in Chief of the Pacific and Pacific Ocean area, and the following September became Chief of Staff, Fleet Marine Force, Pacific. In August 1947 he assumed his present duties as Director, Division of Plans and Policies, Headquarters Marine Corps.

General Robinson holds, among other decorations, the Legion of Merit with Gold Star, the Bronze Star Medal, the Presidential Unit Citation with two stars, and the Navy Unit Commendation with Bronze Star.

Using Taft-Hartley To Perpetuate a System of Industrial Feudalism

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I wish to include the folowing article by the Honorable Harold L. Ickes, which is a case history of one instance in which the Taft-Hartley Act was used literally to enforce industrial feudalism:

MAN TO MAN
(By Harold L. Ickes)

As members of the Fair Deal Congress have been doing figure-skating on that patch of thin ice known as the Taft-Hartley Act, I have been expecting every day to see some soul, hardier than the rest, do an exhibit labeled "Di Giorgio." A long-drawn-out strike of farm workers against a corporation operating a fruit ranch covering 14 square miles in Kern County, Calif., throws an extraordinary light on how the provisions of the Taft-Hartley law can be used to protect and maintain a system of industrial feudalism.

Several times I have called attention to this struggle of farm workers to better their condition, and twice have had held over me a threat of legal action. The notorious Associated Farmers of California with which the Di Giorgio Corp. is affiliated, has even gone so far as to reprint one of my columns in full (despite the fact that it was copyrighted) in an expensive brochure which, by one less tolerant than I, might have been regarded as an attempted smear. As for my involuntary contribution to it, I heartily recommend it as a concise statement of the essential facts back of the Di Giorgio strike.

The walkout occurred on October 1, 1947, when company officials turned down the workers' request for a hearing of their grievances. They had organized in the preceding spring, and had been chartered as a local of the National Farm Labor Union, an affiliate of the American Federation of Labor.

Mediation efforts of the Kern County Central Labor Council having failed, a direct appeal was made to Joseph Di Giorgio, head of the farm corporation. Mr. Di Giorgio had won respect by his amicable dealings with other A. F. of L. unions, and an open-minded hearing by him had been confidently anticipated. But no reply came, and 1,100 of the 1,345 Di Giorgio farmers stopped work. Picket lines were set up around the ranch, and the longest strike of farm workers in American labor history was under way.

At first the company tried to smother the strike with imported labor. The union has charged in hearings before the United States Senate that it even went to the extreme of hiring, in defiance of law, Mexican nationals smuggled across the border in the dead of night. Strong-arm methods failed to choke off a flow of supplies contributed to the strikers. The more bitter the company attack, the more solid became the support of the A. F. of L., whose President, William Green, made personal appeals on behalf of the strikers.

An attempt to smear the striking union as "Communist-led" was exploded in hearings by State authorities and the union was given a clean bill of health. During this phase some gunman, whose identity is still unknown, shot through a window in an attempt to murder the president of the striking union, and very nearly did so.

The events leading up to the farm corporation's resort to the use (or misuse, according to the point of view) of the Taft-Hartley law, were summarized in a statement recently made to the Senate Committee on Labor and Public Welfare by President H. L. Mitchell of the National Farm Labor Union:

"Between raids by the Immigration Service," he said, "which apprehended aliens on the ranch, the Di Giorgio Fruit Corp. managed to produce a crop with scab labor, and began shipping it to market. Union pickets followed the trucks and rode tanks of wine to their destinations, and there appealed to other A. F. of L. union members to refuse to handle the products."

It was at this point, its own efforts to crush the strike having failed, that the Di Giorgio corporation fell back on the Taft-Hartley Act. Charging a secondary boycott, it appealed to the National Labor Relations Board for an injunction. Its lawyers argued that although farm workers are denied any benefits under

the law, its penalties apply to them. Ironically, from the workers' viewpoint, it was on Independence Day of last year that the striking farmers were notified that the Federal court in Fresno, Calif., had issued an injunction forbidding them to secure the help of other union men and women through the refusal of the latter to handle Di Giorgio products.

Since then, the story has been chiefly one of litigation. Meantime, the strike goes on, with the farm worker seemingly at the short end of a grotesquely un-American doctrine "made in California," that while he is subject to the restrictive provisions of a law, he is ineligible when it comes to those which would protect him. At this distance, so far as the striker is concerned, it looks like a case of "Heads you win, tails I lose." A shell game by comparison would seem altruistic.

In view of the great respect for the law so far evidenced by the Associated Farmers of California, I hereby waive the protection of my copyright, and would be glad to have that group of liberty-loving Americans reprint this column in another brochure.

The Chickens Come Home to Roost

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MILLER of Nebraska. Mr. Speaker, let us have a look at the Government reports on poultry and eggs. The 1948 imports of poultry meat were the highest in 14 years of record, and almost tripled those of 1947.

The report shows that there were 34,000,000 pounds of dressed chicken imported in 1948, as compared with 12,000,000 pounds in 1947. The 1935–39 annual average was 2,000,000 pounds.

There were 6,000,000 pounds of dressed weight turkey imported. This compared to 2,000,000 pounds in 1947.

Mr. Speaker, recently the Government took 12,000,000 dozen eggs off the market. Since May of 1948, the Government has bought more than 1,500,000,000 eggs. These eggs were shelled, dried, and added to the Government's huge stock pile of egg powder. In 1948, the total domestic supply of eggs was about 395 eggs per capita. The civilian consumption was 388 eggs.

It is my understanding the Government is supporting egg prices throughout the country. They offer to buy eggs from Midwest egg dryers who pay producers a minimum of 35 cents a dozen. When the Midwest producers cannot get that price from egg handlers and shippers, they can sell to the processors and the Government gets another load of eggs. The support price for eggs in the Midwest is about 35 cents a dozen. It reaches 55 cents in Maine.

Now let us look at the imports of eggs—about 2,000,000 dozen compared to only 1,000,000 dozen in 1947. Most of these eggs come from Canada.

At the Geneva Tariff Conference, the duty on poultry was reduced from 4 to 2 cents a pound. The dressed poultry from 6 to 3 cents a pound. Dried eggs from 27 to 17 cents a pound, and fresh eggs from 10 cents to 3.5 cents per pound. This 3.5 cents per pound is not even a 10 percent ad valorem duty. There are many producers of eggs and poultry in the Midwest who are unable to get the support price for their products. At the same time we reduced the tariff on poultry and eggs, so as to make it more and more difficult to get a support price. If the administration intends to continue to reduce the duties on agricultural products, they will certainly invite larger and larger imports of these products into the United States. It will cost the taxpayers millions of dollars to support the price of the product in this country, on which the same administration invites large exports from other countries. Does this make sense?

I am convinced, Mr. Speaker, that some of the agreements made at the Geneva Conference, not only on eggs, but many other agricultural products will soon place our agricultural economy in a precarious condition. Our present agricultural program, when you compare it with the reduction of tariffs really means that we now propose to support the agricultural products all over the world. If that is done, these agricultural products, under our lowered tariff, can flood the American market for our Government is obligated to support the price on these markets. This must be done in competition with cheap labor and other production methods in countries all over the world.

Not Among the Ruined

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. DEANE. Mr. Speaker, over the past several years of Democratic leadership of the Congress and of the Nation, it has been argued that the New Deal has destroyed free enterprise. You continue to hear it in relation to President Truman's Fair Deal. I submit that we could fill the RECORD for many weeks by citing one example after another of the wonderful progress made in this country since the Democrats took control of the Federal Government in 1933.

Because of the frequent criticism lodged against the Democratic administration by the Chicago Tribune, I take this opportunity to extend my remarks and enclose an editorial which appeared in the March 20, 1949, issue of the Journal and Sentinel of Winston-Salem, N. C., showing that this newspaper has faired pretty well:

NOT AMONG THE RUINED

Ever since the Democrats took over the Federal Government back in 1933, the Chicago Tribune has been predicting economic disaster for the United States. In every election for the last 16 years that leading organ of the Republican Party has appealed to the voters to save themselves and the country from the awful financial catastrophe the Democrats were sure to bring upon them.

But now it turns out that during all these frightful years the Chicago Tribune has been thriving and prospering as never before in its history.

In a page advertisement in a New York newspaper the Chicago Republican organ gives some amazing figures. These figures reveal that in 1933, the year the Democrats started the country toward disaster, the Chicago Tribune carried only 15,801,051 lines of advertising. But during the next 5 years, while the Democrats were ruining the country, its advertising business was boosted to 19,206,873 lines in 1938. And in the next 5 years of Democratic inefficiency in Washington, the Tribune's volume of advertising business jumped to 24,263,295 lines. That was in 1943.

But the big news is yet to come. In spite of all the Chicago paper could do, the Democrats continued in power for another 5 years and by the end of that period of ruin the Chicago Tribune's advertising volume had climbed to the unprecedented total of 42,681,608 lines in 1948.

And now the Tribune boasts that in 1948 its advertising business was "the largest ever placed in a year in any newspaper—or any other publication in the world." With its millions of new income as a result of better business under Democrats than it ever enjoyed under Republican administrations, the Chicago Tribune certainly is not among those who have been ruined by the Democrats.

Speaking of Pyramid

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. REED of New York. Mr. Speaker, the Truman administration has set an example in pyramiding which perhaps has stirred the passion of the people to try a hand at the game.

Our national debt has been pyramided. The Federal expenses has been pyramided. The Federal pay roll has been pyramided. The President's salary has been pyramided. Federal taxes are to be pyramided. But, lest the people are tempted to go too far in this losing game, I am inserting a warning arising out of an old case of gambling in the State of Tennessee, together with the opinion of Judge Catron.

An act of Tennessee, passed in 1817, declared that any person convicted of gaming or betting upon any games of hazard should be disqualified to hold any office of trust or profit. Smith had been convicted of gaming by lottery and had been fined only $5. The attorney general of Tennessee had moved for a writ of error on the ground that disqualification would be added. In the opinion delivered by Judge Catron in this case,

he thus condemned the practice of gambling:

Like other passions which agitate the great mass of the community it lies dormant until once aroused, and then with the contagion of pestilence it sweeps morals, motives to honest pursuits, and industry into the vortex of vice; unhinges the principles of religion and common honesty; the mind becomes ungovernable and is destroyed to all useful purposes; chances of successful gambling alone are looked to for prosperity in life, even for the daily means of subsistence; trembling anxiety for success in lotteries, at the faro bank, or loo table, exclude all other thoughts.

Expectation is disappointed; more losses are sustained; the highly excited desperate feelings are kindled by drunkenness, from which arises a wretch, with a recklessness and desolation of feeling, that the genius of a Shakespeare or a Milton could not, nor can any man, describe. Swindling, forgery, theft—every crime that extreme necessity and outcast desperation can suggest to a man, lost to all the moral ties, though guarded against, are likely shortly to follow in the train. We ask him who has known the world and the ways of men as they are, not as they should be, are these not truths? Have you seen the poisoned arrow pierce the devoted victim? Have you seen him driven to desperation, and end his misery in self destruction? Have you yourself felt the sting of this deadly poison? If you have known and felt these, you can, and do understand us. Who that has gambled much, and to excess, has not partly seen and felt in a thousand shapes the picture of misery here sketched, presenting instance of mental degradation and agony, melancholy as any with which offended heaven has ever permitted the mind of man to be afflicted?

He who imagines this to be extravagant fancy has never sat at a loo table, dealing at then dollars and forfeiting a hundred for perhaps a week together, or a half week, without sleep or ceasing to play. If he has, when young, he will appreciate the feeling (should his head now be gray) that induces him to look back with awe upon the vices and misfortunes of his youth; he may be marked as the earnest advocate of highly penal statutes, to deter his son from similar outrages upon the laws of God, and the laws of this, and, we could hope, of every civilized land.

Judge Catron served on the Supreme Court of Tennessee from 1824 to 1836 .He served as an Associate Justice of the United States Supreme Court for 28 years.

Veterans' Pension Bill

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. RANKIN. Mr. Speaker, during the discussion of this legislation the question arose as to the discharge requirements for eligibility. I believe that the phrase now in the law and in the bill as reported "other than dishonorable" is the best language, and the language which will permit the greatest equity to be done each individual veteran. Under this language the Veterans' Administration can review those discharges about which there is a question and make a decision on each individual case on its merits. In order that we may have the fullest information on the subject for future record, insert excerpts from the House committee report on the GI bill of 1944 dealing with this subject, as well as pertinent debate in the Senate, together with excerpts from House Report 1510 of the Seventy-ninth Congress dealing with the subject of blue discharges, as well as the present criteria for discharge in the Departments of the Army, Navy, and Air Force.

The matters referred to follow:

[H. Rept. 1418, 78th Cong., 2d sess., on S. 1767 (GI bill of rights), May 5, 1944]

Section 1503 amends section 1603 as passed by the Senate and, as amended, requires a discharge or release from active service under honorable conditions as a prerequisite to entitlement to benefits under this act or Public Law 2, as amended, but adds a liberalizing provision to the effect that, except as to persons dishonorably discharged, benefits to which a person otherwise would be entitled but for a discharge under other than honorable conditions may be awarded if his service is shown to be otherwise meritorious, honest, and faithful. It is the view of the committee that generally a discharge under honorable conditions should be required as basic entitlement to benefits; but it was shown by testimony of representatives of the service departments, veterans' organizations, and of the Veterans' Administration that instances occur where after long and faithful or otherwise extremely meritorious service a person may receive a discharge other than honorable because of some infraction of the regulations or rules, perhaps in a period of furlough immediately prior to discharge—perhaps a civil offense rather than military. If such offense occasions dishonorable discharge, or the equivalent, it is not believed benefits should be payable. Except upon dishonorable discharge, it is the view of the committee that recognition should be given of meritorious, honest, and faithful service.

[Permanent volume, CONGRESSIONAL RECORD, p. 3076, March 24, 1944]

SENATE DEBATE ON S. 1767 (GI BILL OF RIGHTS)

Mr. WALSH of Massachusetts. Mr. President, a short time ago I gave the Senator from Missouri, [Mr. CLARK] a letter which I received from Admiral Jacobs, head of the Bureau of Personnel of the Navy. In his letter the admiral called attention to the fact that the language in this bill permits the benefits under it to be extended to persons in the Army and the Navy and the Coast Guard who have been bad conduct dischargees and undesirable dischargees, and he objects to that class of dischargees being given the benefit of this proposed legislation. Will the Senator from Missouri explain why these groups are included in the provisions of this bill?

Mr. CLARK of Missouri. Mr. President, let me say that I am very familiar with the objections raised by Admiral Jacobs. In my opinion, they are some of the most stupid, short-sighted objections which could possibly be raised. They were objections which were considered very carefully both in the Subcommittee on Veterans' Affairs of the Finance Committee and in the full committee itself. The issue revolves around the question whether we should say, as Admiral Jacobs recommends, that a man must have received an honorable discharge or whether we should say, as the Senate bill provides, "under conditions other than dishonorable conditions."

The point to the whole matter is that in the Army there are what are known as blue discharges, discharges without honor. Such a discharge is not an honorable discharge. It may be issued to men who have had no particular fault other than except, for instance, misstatements about age. A boy may have lied a little about his age, in order to get into the Army. He may have said he was 18 years old, when as a matter of fact he was only 16 or 17 years old. If his father or mother come to the Army and say, "You cannot keep this boy; he lied about his age in order to get into the Army," the commanding officer has no recourse other than to discharge him. If he discharges him, he cannot give him an honorable discharge. Under the regulations, he is bound to give him what is called a blue discharge, a discharge without honor.

In the present war, contrary to what occurred during the last war, I understand that in many cases the Army is giving blue discharges, namely, discharges without honor, to those who have had no fault other than that they have not shown sufficient aptitude toward military service. I say that when the Government drafts a man from civil life and puts him in the military service—most of the causes we are now discussing as to aptitude involve older men—and thereafter, because the man does not show sufficient aptitude, give him a blue discharge, or a discharge without honor, that fact should not be permitted to prevent the man from receiving the benefits which soldiers generally are entitled to.

* * * * *

Mr. President, in the committee we amended this provision in order to give the Veterans' Administration some discretion in the matter. The Veterans' Administration pointed out that as the bill was originally drafted, in the use of the words "other than dishonorable discharge," we opened up the opportunity to such persons as fellows "going over the hill," and those who had been absent without leave, and those who possibly had been guilty of desertion, or who have committed larceny or murder or some other crime, and who had been picked up by the civilian authorities and subsequently convicted of some crime, or possibly sent to jail or to the penitentiary, or who did not receive an honorable discharge for other reasons but were given a blue discharge merely because the Army wanted to get rid of them and did not want to take the trouble to court martial them and give them what they deserved—a dishonorable discharge.

I say to the Senator from Massachusetts that what we did was to amend that provision by using the words "under other than dishonorable conditions." That does not say "with a dishonorable discharge." That means that under this provision the Veterans' Bureau, if a man's service has been dishonorable, if he has been convicted of larceny or any other crime or has been convicted of chronic drunkenness or anything else one might think of, the Veterans' Administration will have some discretion with respect to regarding the discharge from the service as dishonorable, and that therefore the man involved will be entitled to the benefit of that discretion.

* * * * *

Mr. AUSTIN. Mr. President, before we leave this point, I should like to ask the Senator from Missouri a question. I wonder if the Senator would not desire to have in the RECORD at this point the statement that the language "conditions other than dishonorable" is not strange language in such legislation? We have used it in some other bills during the present session of Congress.

Mr. BARKLEY. These are practically the same provisions as the provisions with respect to eligibility in the mustering-out-pay legislation.

Mr. CLARK of Missouri. The language was drafted by the general counsel for the Veterans' Administration, and the Veterans'

Administration advised the committee that that language had been used in several bills which had been reported from the Military Affairs Committee. It is a well-understood term, and a term which they regard as the most desirable term to use in this situation.

[H. Rept. 1510, 79th Cong.]

CASES IN WHICH BLUE DISCHARGE IS GIVEN ACCORDING TO REGULATIONS

Under existing Army regulations, a discharge of the third type may be given in the following cases:

1. Misconduct: Fraudulent entry into the Army (sec. I AR 615-366, as amended by Changes No. 1, July 24, 1945).

2. Misconduct: Desertion or aggravated absence without leave bordering on desertion, plus physical unfitness for military service (sec. II, AR 615-366). As here used, the term "physical unfitness" means medical or surgical conditions that permanently incapacitate for military service or mental deficiency and constitutional psychopathy that obviously cannot be adapted to military service; but does not include a physical disqualification that is temporary and curable within a reasonable time or a lack of capacity to distinguish between right and wrong.

3. Misconduct: Final conviction by a civil court of an offense the nature of which clearly indicates that the individual is not a suitable person to associate with enlisted men, or of one of the heinous crimes of treason, murder, rape, kidnaping, arson, sodomy, or pandering, or of any crime of sex perversion, or of prostitution, or of any illegal dealing in narcotics or other habit-forming drugs; or imposition by a civil court, upon conviction of any offense, of a sentence for a period in excess of 1 year in a prison or penitentiary (sec. III, AR 615-366).

4. For the convenience of the Government: Where the enlisted man at the time of induction was an alien of any enemy country or a country allied with the enemy, and prior to such induction objected in writing to service in the Army of the United States, and is unwilling to serve in the Army in any capacity (par. 3d, AR 615-365). In this type of case a blue discharge is mandatory.

5. Upon approval by the appropriate authority of the recommendation of a board of officers, convened for the purpose, that the enlisted man be given a blue discharge because of undesirable habits or traits of character (AR 615-368). Under these circumstances, a blue discharge is mandatory. "Undesirable habits or traits of character" are those which render the individual's retention in the service undesirable and because of which his rehabilitation is considered impossible, after repeated attempts to accomplish the same have failed; or those which evidence a psychopathic personality, manifested by antisocial or amoral trends, criminalism, chronic alcoholism, drug addiction, pathological lying, or homosexuality during service, and because of which the individual cannot be rehabilitated to render useful service.

6. Upon approval by the appropriate authority of the recommendation of a board of officers, convened for the purpose, that the enlisted man be given a blue discharge because his service has not been honest and faithful and he is not entitled to a character at least "good" (par. 4 b AR 615-360). Under these circumstances, a blue discharge is mandatory. An enlisted man—otherwise entitled to an honorable discharge because of physical disability (par. 10, AR 615-361, as amended by Changes No. 2, Mar. 1, 1945), or because of minority (sec. II, AR 615-362), or because of dependency (sec. III, AR 615-362) or for the convenience of the Government (AR 615-365), or upon a writ of habeas corpus (AR 615-367)—will be given a blue discharge if the approved proceedings of a board of officers, convened under paragraph 4 *b*, AR 615-360, determines that this service has not been honest and faithful and he is not entitled to a character at least "good." Although paper of a blue color was not employed until 1918, the practice of issuing discharges of this character is one of long standing in the War Department. Blue discharges to the number of 51,936 were issued from December 7, 1941, to June 30, 1945.

With a view to rectifying the mistakes and injustices which can so easily arise in connection with Army discharges, the Servicemen's Readjustment Act of 1944 provided for a Discharge Review Board to be established in the Office of the Secretary of War. To this board appeals may be made, and the board has authority to alter the type of discharge in any case upon which it passes except when a dishonorable discharge is directed by a court martial. How completely the establishment of this review board solves the problem involved will be discussed later.

DEPARTMENT OF THE ARMY

CONDITIONS UNDER WHICH AN ENLISTED INDIVIDUAL MAY BE AWARDED A GENERAL DISCHARGE

AR 615-360, May 14, 1947, as amended by Changes No. 1, October 27, 1948:

"The effects of an honorable discharge or a general discharge are identical and entitle an individual so discharged to full rights and benefits. * * * Individuals not qualifying for an honorable discharge will be furnished a general discharge, except as otherwise provided * * * in Army Regulations."

AR 615-361, Medical:

Paragraph 10 (C3 February 23, 1949): "An individual discharged for disability will be furnished either WD AGO Form 55 (honorable discharge) or WD AGO Form 53-58 (general discharge) in accordance with criteria established in paragraph 1, AR 615-360, except that when disability is because of his own misconduct, a Form 53-58 will be furnished."

Paragraph 24a (May 14, 1947): "An enlisted woman discharged under the provisions of this section (pregnancy) will normally be given a WD AGO Form 55 (honorable discharge) or a WD AGO Form 53-58 (general discharge). However, nothing in this section shall be construed to make mandatory the honorable or general discharge of an enlisted woman who is not entitled to such a type of discharge."

AR 615-362, Minority and dependency or hardship:

Paragraph 22 (May 14, 1947): "WD AGO Form 55 (honorable discharge) or WD AGO Form 53-58 (general discharge) will be given in accordance with par. 1c, AR 615-360, notwithstanding the enlistment may have been obtained by misrepresentation as to age or consent of parents or guardian."

Paragraph 31: "WD AGO Form 55 (honorable discharge) or WD AGO Form 53-58 (general discharge) will be given in accordance with par. 1c, AR 615-360."

AR 615-365, Convenience of the Government:

Paragraph 5a (Oct. 27, 1948): "Unless otherwise directed, WD AGO Form 55 (honorable discharge) or WD AGO Form 53-58 (general discharge) will be given."

AR 615-367, Resignation:

Paragraph 3d (unconditional resignation): "An unconditional resignation * * * will be accepted under honorable conditions. The individual will be furnished an honorable discharge certificate (WD AGO Form 55) or a certificate of general discharge (WD AGO Form 53-58) depending upon the character of the service rendered."

Paragraph 4a (resignation in lieu of board action): "When recommendation for board action is based upon inaptitude or unsuitability under AR 615-369, the resignation * * * will be accepted under honorable conditions and the individual will be furnished either a certificate of honorable discharge (WD AGO Form 55) or a certificate of general discharge (WD AGO Form 53-58)."

Paragraph 4b: "When the recommendation for board action is based on unfitness under AR 615-368, the resignation will ordinarily be accepted under conditions other than honorable, and the individual will be furnished a certificate of undesirable discharge. The resignation may be accepted under honorable conditions if mitigating circumstances and the character of service so warrant, and a certificate of general discharge (Form 53-58) will be furnished in in such cases."

Paragraph 5a (resignation in lieu of reduction for misconduct or inefficiency): "The resignation will ordinarily be accepted under honorable conditions and the individual will be furnished a certificate of general discharge. In meritorious cases a certificate of honorable discharge may be furnished."

AR 615-368, Unfitness:

Paragraph 1d: "Discharge, if recommended, will be for unfitness, except that discharge because of unsuitability (under AR 615-369 without referral to another board) may be recommended in border-line cases if military circumstances and the character of service rendered by the individual during his current period of service so warrant. As examples, such circumstances would apply where the cause of unfitness has been minor, relative to the length of efficient service or where there has been a definite effort at self-control, or where an individual has, during his current period of service, distinguished himself by an act of heroism which in itself reflected great credit on the individual and the military service."

Paragraph 5: "When discharged because of unfitness, WD AGO Form 53-59 (undesirable discharge) will be furnished. When discharged because of unsuitability WD AGO Form 53-58 (general discharge) will be furnished."

AR 615-369, Inaptitude or unsuitability:

Paragraph 7: "An individual discharged for inaptitude or unsuitability will be furnished a WD AGO Form 53-58 (general discharge)."

CONDITIONS UNDER WHICH AN ENLISTED INDIVIDUAL MAY BE AWARDED AN UNDESIRABLE DISCHARGE

AR 615-365, Convenience of the Government:

Paragraph 5a (October 27, 1948):Only when directed by the Secretary of the Army.

AR 615-366, Misconduct:

Section I. Fraudulent entry into Army; paragraph 6 (December 17, 1948): "An individual who is to be discharged for the commission of a fraud will be given a WD AGO Form 53-55 (undesirable)."

Section II. Physically unfit deserters and absentees, paragraph 10 (December 17, 1948): "Form 53-59 (undesirable) will be used for all discharges under the provisions of this section."

Section III. Deserters from Spanish-American War, World War I, or peacetime deserters in whose case the statute of limitations is applicable, paragraph 14 (December 17, 1948): "Form 53-59 (undesirable) will be used for all discharges under the provisions of this section."

Section IV. Conviction by civil court, paragraph 17 (December 17, 1948): "An individual discharged on account of conviction by a civil court will be given a Form 53-59 (undesirable)."

AR 615-367, Resignation:

Resignation in lieu of board action, paragraph 4b (September 13, 1948): "When unfit under AR 615-368, the resignation, if accepted by the Secretary of the Army, will ordinarily be accepted under conditions other than honorable, and the individual will be furnished a certificate of undesirable discharge, WD AGO Form 53-59 (enlisted record and report of separation—undesirable discharge). The resignation may be accepted under honorable conditions if mitigating circumstances and the character of service so warrant, and a certificate of general discharge (Form 53-58) will be furnished in such cases. A certificate of honorable discharge (Form 55) may be furnished only in exceptionally meritorious cases."

Resignation in lieu of reduction for misconduct or inefficiency, paragraph 5 (September 13, 1948): "If the circumstances of the case and the record made by the soldier in current enlistment so warrant, the resignation may be accepted under conditions other than honorable, and a certificate of undesirable discharge (Form 53-59) furnished."

Resignation for good of service, paragraph 6a (September 13, 1948): "Such resignation, if accepted by the Secretary of the Army, will ordinarily be accepted under conditions other than honorable, and the individual will be furnished a certificate of undesirable discharge (Form 53-59)."

AR 615-368, Unfitness:

Paragraph 5 (October 27, 1948): "When discharged because of unfitness, WD AGO Form 53-59 (undesirable discharge) will be furnished."

CONDITIONS UNDER WHICH AN ENLISTED INDIVIDUAL MAY BE AWARDED A BAD-CONDUCT DISCHARGE

An enlisted person will be discharged with a bad-conduct discharge pursuant only to an approved sentence of a general or special court martial imposing a bad-conduct discharge.

DISHONORABLE DISCHARGE

An enlisted person will be dishonorably discharged pursuant only to an approved sentence of a general court martial or military commission imposing dishonorable discharge.

Department of the Navy

[The purpose of this chart is to show the effect of the type of discharge upon possible eligibility to various rights and benefits. No attempt is made to set forth other requirements of eligibility which must be met]

[1] National service life insurance is forfeited only when the insured is guilty of mutiny, treason, spying, or desertion or when because of conscientious objection he refuses to perform services or wear the uniform (P. L. 801, 76th Cong.).

[2] Determination in doubtful cases as to whether the character of discharge is a bar to entitlement is made by Veterans' Administration or other agency administering such benefit. Veteran is eligible if conditions of discharge or release were other than dishonorable.

[3] Such veteran may apply at any State employment service office for assistance in securing a job, but is not eligible for special veterans' services.

[4] In general, a discharge under dishonorable conditions is a bar to State benefits. Details concerning eligibility for this and other State benefits may be obtained from the appropriate State veterans' commissioner.

[5] Veteran forfeits benefit if such discharge is awarded as a result of his own misconduct.

[6] No, unless due to own misconduct, then yes.

[7] Board for the correction of naval records reviews general courts-martial discharges.

[8] See U. S. Navy travel instructions for exceptions.

DEPARTMENT OF THE AIR FORCE

TYPES OF DISCHARGE CERTIFICATES FURNISHED TO ENLISTED PERSONNEL OF THE AIR FORCE

Honorable discharge, WD AGO Form 55: This form is white in color, and is given when service has been excellent. WD AGO Form 53, Enlisted Record and Report of Separation, which is printed on the reverse side of other discharge certificates, is issued as a separate form, and the reverse side of the Form 55 is left blank.

General discharge, WD AGO Form 53–58: This form is white in color, and is a discharge under honorable conditions. It is given when service is satisfactory, but not excellent. This certificate entitles a veteran to the same veterans' benefits as the Honorable Discharge.

Undesirable discharge, WD AGO Form 53–59: This form is white in color, and is given under conditions other than honorable, where a Bad Conduct or Dishonorable Discharge cannot be given.

Bad conduct discharge, DA AGO Form 53–60: This form is yellow in color, and is given under conditions other than honorable. It is given pursuant only to an approved sentence of a general or special court martial imposing a bad conduct discharge.

Dishonorable discharge, WD AGO Form 53–57: This form is yellow in color, and is a discharge under dishonorable conditions. It is given pursuant only to an approved sentence of a general court martial or military commission imposing dishonorable discharge.

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Manchester Evening Leader, published in Manchester, N. H., under date of March 19, 1949, entitled "The North Atlantic Pact":

THE NORTH ATLANTIC PACT

After 8 months of negotiation, the text of the North Atlantic security alliance has been made public simultaneously in Washington and the capitals of the other participating republics. While the precise provisions of the treaty have been wrapped in secrecy from the start, the general speculations as to the content of the pact have been correct.

The new treaty, marking a significant turning point in American foreign policy, seems destined to rank with the Monroe Doctrine as an historic declaration of this Nation's position in world affairs. In effect, it joins the United States, Canada, and the countries of western Europe into a united front against the expanse of communism and a potent instrument for guaranteeing world peace.

The pact, which must still be approved by the governments of the participating nations, would involve the United States for the first time in peacetime military commitments outside the Western Hemisphere. Its American sanction would mean the end of our traditional antipathy toward international entanglement.

It is expected that the alliance will win ready acceptance by our Senate. The strongest objection was eliminated when Secretary of State Acheson had inserted in the agreement that, while the United States would aid western Europe in repelling aggression, it would take "such action as it deemed necessary, including the use of armed force."

Inclusion of the phrase "such action as it deems necessary" provides the means by which the United States can become a participant in the alliance without relinquishing the constitutional right of Congress to declare war.

Final acceptance of the North Atlantic Pact will mean that the free people of the western world have implemented the documentary agreement their unwritten alliance necessitated by Russia's refusal to cooperate in the maintenance of peace and protection of human rights.

Government Security

REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MILLER of Nebraska. Mr. Speaker, I would advise you to take a look at, and read carefully, the Eberstadt report which was made to the Hoover Commission. This is a part of the report that was kept under wraps by the Secretary of War and other governmental agencies, because it was rather critical. It should cause some red faces, and the report could well call for further investigations by Congress.

This report points out that all has not been well in our armed forces and lacks the coordination we had expected to get. I would particularly call your attention to the Central Intelligence Agency that seems to be the most critical in the report.

The National Security Council is the key agency in the entire security structure and on its proper and effective operation depends the whole success of the plan. It has not yet measured up fully to the needs of the Nation. It has not produced a comprehensive statement of current and long-range policies, although there was before the Council, as of November 1, 1948, a paper dealing with the threats that now confront this country, and our objectives with respect to those major threats.

The National Security Council, in its early months, did not grapple with many of the problems that seemed to come squarely within its jurisdiction. The Council was not consulted in the matter of Palestine. While the President has never refused to accept the views of the National Security Council, he has often failed to ask for them. The Council, not being asked for advice, cannot be very effective.

In many instances the different departments of Government seem to undermine the prestige and authority of the National Security Council, not only with the public, but with the other governmental departments by making it seem primarily an organ of the military.

The first step to forming a Central Intelligence System was taken in July 1941, when the Office of Coordinator of Information was established by Executive order, and authorized to collect, analyze, and make available to the appropriate officials, all the information relating to national security. It will be remembered that the National Security Act of 1947 abolished the National Intelligence authority and transferred the functions of the Central Intelligence group to the President's Central Intelligence Agency, generally referred to as CIA. The CIA has great power, great authority and great hopes of being able to coordinate the activities of the other agencies. It has tried to establish working relationships with a new and ambitious State Department Intelligence Branch.

At one time the FBI investigated all prospective CIA employees for security, but due to the pressure of this and other commitments, the FBI has felt obliged to discontinue this service. The FBI, however, cooperates with the CIA on other requests and on special security checks. It seems to me that there ought to be a very close relationship, and a thorough checking of anyone who wants to get into the Central Intelligence Agency, which is a highly secretive and sensitive part of our protection here in the United States.

It will be recalled that there has been much newspaper, some official, and much unofficial, criticism of the personnel of the Central Intelligence Agency. The CIA is spread around in 22 separate buildings, including warehouses, all of which must be maintained and serviced separately. Moreover, CIA maintains a large number of field stations of one sort or another in various parts of the United States and abroad, which are supplied by the administrative divisions. It would seem that a reduction in the administrative overhead is possible and desirable. There is some evidence of interference of administrative functions in matters of primarily operational concern. A certain amount of such interference is inevitable due to the fact that the Director will tend to entrust the enforcement of budgetary controls to his immediate administrative representatives. Too much of this interference is undesirable and this is an administrative problem which must be solved internally. The Central Intelligence Agency has fallen short of its objective. While it has made some progress in organization and equipping itself, its work, however valid, does not presently enjoy the full confidence of the National Security Council. It does not enjoy the confidence of other agencies it serves and has not, with the exception of a few encouraging exceptions, played an important role in the administration of the National Security Council.

The committee recommended that it was properly located under the National Security Council; that its organization needs continuing careful attention, and that better working relations with other agencies must be established.

The committee emphasizes a truism, that good intelligence depends upon good personnel. CIA must have imaginative and vigorous supervision. The committee is certain that the Director of the CIA must have continuity of tenure and should be selected primarily on the basis of competence, but that other things being equal it would be preferable he be a civilian.

There does not seem to be a very close relationship between the CIA and the field of scientific, including medical, intelligence. In order to make it work successfully, there must be skilled and experienced personnel in the Agency. In the selection and placement of new personnel, this has been extremely haphazard. In one of the services, intelligence systems, and headquarters in Washington no Russian linguist is now permitted to be permanently employed. In Germany the conduct of the Army's counterintelligence corps, a highly important part of intelligence work, became notorious. The personnel assigned to it had no qualifications for the work and was often of inadequate caliber. The Army's remedy for this situation was not to improve personnel selection and training, but to order all CIA personnel to wear uniforms, live in barracks, and report for regular Army meals. Under such a regime they were expected to keep in contact with the local population and to catch spies. Of course, that is ridiculous.

It seems, from the report, that choice intelligence berths in the services have often been assigned to officers, not particularly wanted by other arms or branches. The capable, experienced, and thoroughly qualified and devoted personnel, who have specialized in intelligence, have too often seen their organizations and their systems ruined by superior officers who have no experience, little capacity, and no imagination. In the committee's opinion it is highly important that an intelligence corps be provided by the services and good training be established.

While it is to be assumed that intelligence can best flourish in the shade of silence, if it is not subjected to scrutiny it can easily stagnate. This service ought to be examined every 2 or 3 years, either by a congressional watchdog committee or by some other group.

The committee reports that the greatest need in CIA is an establishment, at a high level, of a small group of highly capable people, free from the administrative detail, to concentrate upon intelligence evaluation. The Director and his assistants have had to devote so large a portion of their time to administration, that they have been unable to get sufficient time to analyze and evaluate reports. A small group of mature men, of the highest talents, having their full access to all information, might well be released from routine and set to thinking about intelligence only. Many of the greatest failures in intelligence, has not been failure in collection, but failure in analyzing and properly evaluating correctly the information made available.

Vigorous action is imperative to improve all facilities for evaluating and stimulating the collection of scientific intelligence. Outside the field of atomic energy this must be done by increasing the authority and support given by the officials responsible for scientific development within CIA.

The CIA and the FBI and all intelligence services have suggested revision of the Nation's espionage laws to reduce the difficult legal burdens of securing convictions under present statutes, and I hope that Congress takes some action relative to this weak link in our present legal handling of Communists and other espionage activities. Detailed suggestions for revision of the present law, which would permit conviction, irrespective of proof of intent to injure the Government, probably will be presented some time during this Congress. I am of the firm opinion that there must be major improvements in all of our intelligence services if this country is to have proper protection. This cannot be achieved overnight. Time is required to build a good intelligence service. A proper selection of personnel and a well thought out program for their assignment and travel are essential.

Now a word about the Joint Chiefs of Staff. This group is going through some remodeling and overhauling under the direction of General Eisenhower. It seems to me that if America is to have proper protection, there must be closer coordination of all of its activities, including its publicity releases. It was rather interesting to note that just recently the Secretary of Defense has designated a single individual to handle all of the news releases that might go out. The country knows that some releases went out, showing detailed secrets of the atomic bomb, and detailed information about some of the other activities being carried on by one branch or another of our services. It does seem to me there ought to be a close strategic planning if the various agencies designed to protect our internal security are to perform the roles and missions which Congress assigned to them.

It is my opinion that the work already produced by the Central Intelligence Agency is by no means adequate to our Nation's safety in the age of cold war and of the atomic bomb. It seems to me that the physical organization of the country's intelligence system should be made effective. I can understand why the Secretary kept the Eberstadt report from being made public because it was very critical of what has been presently going on in the several branches of the Government.

The report stated that in Germany the conduct of the Army's Counterintelligence Corps was almost notorious, partly because of the inadequate personnel which had been assigned to this service. There were men of inadequate caliber; they had no special qualifications or training, and certainly a highly sensitized and developed agency as a central intelligence agency must have the finest men available. You cannot assign the choice berths in an intelligence agency to officers not particularly wanted by other branches of the service. We ought to be concerned over the inadequacies of our intelligence service. The vital importance of reliable, up-to-date scientific information is such as to call for far greater efforts than appear to have been devoted to this need in the past. Scientists in general have expressed considerable distress at the difficulty and the lack of information available, and the relationship between science and the Agency do not seem to be good.

I come to these conclusions because of my recent visit to Panama Canal. I had felt that our Central Intelligence Agency, and the other agencies, while they had joint meetings and were apparently working together, it was rather difficult to analyze and get the information channeled through so that it would be reliable and definitely understood. Mr. Hoover, in his report, recently pointed out that war almost came into being a few months ago because of some inaccurate reporting by the intelligence agencies overseas; that a great catastrophe could have taken place had we relied upon one intelligence report given at that time.

The Commission said it is of the opinion that there must be improvement in all intelligence services. So I am hopeful that with the regulations and the new bills which we pass and the further consolidation of the military activities we will be in a position to see that all intelligence agencies are properly coordinated so that the people of this country may get the protection they deserve. Take the old question of Pearl Harbor. Apparently our agencies were not working together at that time. At least, the information was not properly evaluated. It is past history, but we ought to profit by the mistakes that have been made. So I am hopeful that Members of Congress will read this Eberstadt report and become familiar with the workings of our Intelligence Department in this country and support legislative measures which will make these departments more effective. We can then get more for the dollar we are spending in the protection of our country.

Wood Waste

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. MACK of Washington. Mr. Speaker, since entering Congress I have consistently urged the spending of Federal funds to employ chemists and scientists to search for new uses for wood waste.

Today, 57 percent of the wood in all trees that are cut down by loggers goes to waste, either in the woods or in manufacturing and milling processes. The amount of wood that goes to waste annually, according to the United States Chief Forester, amounts to 109,000,000 tons. This is the equivalent of 2,500,000 carloads. If we can find commercial uses for this wood waste, hundreds of thousands of new jobs will be created in American forest-product industries, thereby adding greatly to employment and national prosperity.

It seems to me good business for the Federal Government to spend reasonable sums of money to discover new products that will create new pay rolls, for out of increased pay rolls will come greater prosperity and enlarged sources of Federal taxes.

Under leave to extend my remarks, I include an article by E. M. Hockensmith from the Elks magazine that tells how

chemistry is creating new products out of waste wood. The article follows:

THE CHEMIST CRIES "TIMBER!"

(By E. M. Hockensmith)

The cry of "Timber-r-r!" no longer heralds the crash of giant trees, the salty lore of lumberjacks, the scream of saws.

Wood has moved into the orbit of the chemist and has begun to reveal secrets which prove that the most abundant and the most wasted raw material in the world is likewise the stuff with the most amazing possibilities.

You can now eat and drink wood, wear it in the form of a wool coat or felt hat, rayon dress or stockings, and make blankets and curtains from it. From wood comes synthetic rubber, plastic radio cabinets, high-octane fuel for cars, vanillin flavoring, explosives, photographic film, cellophane, and lacquer.

The list seems almost endless. An estimated 4,500 different products are now created from wood. During the war, wood disappeared daily into weird chemical digesters and emerged as Army clothing, gunpowder, glycerine, plastics, alcohol, linings for gasoline tanks, cord for heavy-duty tires, and light-weight paratrooper uniforms.

While wood has been playing these radically new parts, it has also been taking seven-league strides in its old role as furniture. When little Johnny finds a sharp nail and tries to draw a picture on mamma's gleaming table, not a scratch will show. Soft wood can now be made far harder than the hardest oak or maple. Other chemicals make wood resistant to fire, termites, water, acid, or alcohol. By impregnating wood with certain chemicals, it can be permanently and solidly infused with any beautiful color to match rugs, draperies, or walls.

Housewives need never again become irritated because doors and drawers stick in damp weather or rattle during dry spells. The new transmuted wood retains its shape regardless of humidity. A special treatment softens wood to a rubberlike state so that it can be bent into any shape, tied into knots, or kneaded like bread dough. When it dries, the wood is as hard as iron.

In tomorrow's houses, public buildings, and factories, nearly everything from walls to kitchen sinks may have wood both as veneer and base material. Thin sheets of wood, no wider than one forty-eighth of an inch, can be cemented to steel, aluminum, or other sheet metal, and the combination bent, cut, and stamped.

You will see this woodfaced metal in paneling for walls in offices and homes, airplane cabins, streamlined trains, and even automobiles. And, to reverse the process, a thin, stainless steel glued to a birch plywood base can make a modern kitchen sink that will be dentproof and lighter than the usual sort at about three-fifths the cost.

These magical transformations of wood are achieved by various devices. To prevent doors or drawers from sticking or shrinking, the trick is to combine with the natural wood one of the new kinds of plastics, also often made from wood. This material, known by the jawbreaking title of methylolurea, is really very simple. It's a white solid, soluble in water, and is made of ammonia (the ordinary kitchen cleaner), carbon dioxide (which you exhale every few seconds), and methanol (the nondrinkable wood alcohol as it used to be when it was made from wood). Incidentally, don't confuse alcohol made from wood and wood alcohol. They are two entirely different products.

When wood is soaked under pressure in a solution of this methylolurea, there is formed within it hard and water-insoluble resins which take up residence in the wood cells and even in the cell walls. Heated at this stage, the wood can be twisted and bent into any shape desired, which is held permanently when cooled.

One of the most astonishing things about all this is that nearly all of these new products come from wood wastes. We can have our cake and eat it too, or, more accurately, we can have our lumber and all these other things also. The amount of wood waste we have been happily tossing into the trash can is enough to make one gasp. Here are the figures:

Loss from forest fire and disease, 15 percent; logging and fuel waste, 24 percent; manufacturing waste, 34 percent. This makes a total waste of 73 percent and leaves only 27 percent as finished products.

"The chemist," said Mr. Chapin Collins, of the American Forest Industries, Inc., "is the man who deserves the credit for these new wood miracles. To a chemist a tree is much more than leaves, bark, and wood. He knows that a tree is composed of two main substances: First, cellulose, consisting of long hairlike fibers which make up 60 to 80 percent of the wood. The second is lignin."

If you don't know what lignin is, think nothing of it—the best chemists in the world don't know either. They say that lignin is a mysterious element which holds the fibers of the cellulose together and gives to wood its woodiness. Every year, for many years, more than two million tons of lignin dissolved in 5,400,000,000 gallons of dark briny-looking liquid were flushed out of the mills and sluiced into the nearest rivers and streams. Now, every effort is being made to conserve this valuable, mysterious substance.

Although we haven't found out what the darned stuff is, we have gone right ahead using lignin as a valuable rubber extender, in plastics, and as a mix for commercial fertilizers. From a ton of wood waste can be made 50 to 60 gallons of ethyl alcohol (seriously needed for synthetic rubber).

Cellulose, less mysterious than its twin sister, lignin, has for some years been extracted from wood and transformed into molasses, rayon, cellophane, imitation leather, sugar, and paper. An acre of yellow pine trees will produce five times as much cellulose as will an acre of cotton, even though the cotton boll is almost pure cellulose. The paper of this page was made from wood cellulose.

Now we get around to the idea of eating wood. In the past, if wood was considered in terms of food it was dismissed as nothing more than a tasty dish for termites. Not so today. Now, human beings eat wood both as carbohydrates and proteins.

Corn syrup comes from wood sugar. Wood sugar can also be refined into sugar granules, used as molasses, or fermented and distilled into grain alcohol. Some German schnapps and much of Sweden's famous aquavit started life as wood.

Wood glucose makes yeast which, in turn, can be converted into a wood "steak"—common fare in Swedish restaurants.

The process of changing wood into food is relatively simple. When certain acids are applied to wood they have the effect of separating the lignin from the cellulose and transforming the cellulose into wood sugar. They call this hydrolysis.

Wood sugar in its natural form is the kind of glucose (a sweet compound not quite as sweet as cane sugar) which may be changed into practically any other carbohydrates, which are basic energy foods, from starch to solid or liquid fuel.

Protein, in one of the most concentrated and durable forms, is obtained by producing yeast from wood glucose. This yeast contains 55 percent pure protein—as much as good beef.

Proteins, as everyone knows, are a vital element in human and in most animal nutrition. Lack of them results in flabby muscles and lowered resistance against disease. This is the chief reason why in every war the tuberculosis death rate rises sharply.

Germany, forced by lack of raw materials, has led the way in production of wood protein. Her annual production prior to VE-day was more than 100,000 tons, enough for the protein ration for the entire German Army. And it was swiftly being increased to care for the nutritional needs of the working population drafted from farms to the munitions factories.

Although our chemists have now forged ahead of all others in the world in this business of transforming wood into food, at the start of World War II European factories were far in the lead with more than a score running full speed in wood hydrolysis. All over Sweden, Finland, Switzerland, central Europe, and the Balkans, factories had been built and were producing sugar from wood waste, chiefly sawdust. That old phrase "tasteless as sawdust" has lost its meaning.

The use of wood as cattle food is probably one of its most valuable services, current world shortages being what they are. Not only does raw sugar, molasses, and protein yeast manufactured from sawdust enrich straw and other low-grade animal fodders, but it has been found that overcooked wood cellulose forms a white powder almost equal in nutritive value to oats. More than 1,000,000 tons of such ersatz fodder were manufactured last year in Scandinavia, replacing some 40,000,000 bushels of imported oats.

Almost as fantastic as the idea of eating wood is the proposition of wearing it. Nevertheless, a Cinderella of the forests may be lurking in the coat or felt hat you are wearing. That grim old witticism about wooden overcoats is as out of date as a hoop skirt. Fibers fully as good as the wool from sheep can now be obtained from trees.

In the bark of some of the giant redwoods or Sequoia trees of California there is fiber that can be used to replace 15 to 60 percent of the wool used in some fabrics. A combination is frequently used, as the short, kinky redwood fibers blend readily with sheep wool.

The newest project in this field is rayon wool, which of course was stepped up by the tremendous military demand for wool. The main problem the chemists ran into was to duplicate the crinkliness and elasticity that form the air pockets and make wool such a good insulator. Their next worry was to develop a resilience that would restore itself after the wool had been laundered. Both difficulties were successfully overcome.

Wood rayon has made swift progress and can now be spun in dozens of forms which do a better job than any other fibers ever have in such useful articles as linings, self-sealing gas tanks, and tire fabrics that save 30 percent of the rubber.

Turning from the chemical miracles to the physical conversions of wood, we discover that a whole new vocabulary has sprung into being as a result of the new processes of wood. Compreg, impreg, papreg, staypak, sandwich wood, plywood, and laminated wood are among the new words we will be hearing more and more often in coming months.

Up to now we've heard more about plywood, because of its great success in the manufacture of airplanes. Plywood is made by sandwiching sheets of wood together, each sheet laid crosswise to the grain of the one next to it. Bound together with water and weatherproof synthetic resin, plywood can be molded into all kinds of shapes—from hinges, lighting fixtures, and all-wood washboards to furniture springs, car bumpers, mail boxes, and wood culvert pipes for roads.

The secret of plywood's incredible strength is redistribution, which makes plywood vastly

superior to plain wood of the same dimensions. Wing materials for Mosquito bombers and hulls for PT boats were made of plywood because under fire of machine guns and even larger weapons, the adhesion of the layers is so strong that they do not separate.

One thousand freight cars of plywood, lighter than conventional steel frames, were constructed by the Great Northern Railroad to carry wartime traffic. These cars weighed 2 tons less than all-steel cars and they also permitted the operation of trains at considerably higher speeds. Plywood tubing or pipe conducts chemicals which would corrode metals. It is used for radio masts because of its lightness and strength.

Housewives are sure to bless "compreg," which is a processed wood with a shining, extremely hard surface. Spilled cocktails, that bane of existence for many hostesses, cannot harm compreg. You will soon see it in fine furniture, tables, the tops of bars, and flooring.

"Compreg" is made by compressing or squeezing together layers of resin-impregnated wood. The raw resin actually penetrates the wood cells—a feat that chemists worked long and hard to master. At this point it's called "impreg" and is practically swellproof, shrinkproof, and decay proof. Sheets of this "impreg" are stacked together and made into "compreg" by being compressed before the resin has set. The result is a hard, dense, dark substance with a beautiful grain showing through a permanent gloss like that of polished marble.

"Compreg" is perfect for airplane propellers because it can be made to give a balance which is impossible in a metal part. It stays exactly "as is" even when it's been under water a long time.

Laminated wood is an especial boon to shipbuilders. It's made by gluing together layers of wood with the grain of all layers running in the same direction.

Before laminated wood made its welcome appearance, shipbuilders had to hunt through the forests until they found a tree big enough to make a beam as large as they needed. No longer is wood-ship design limited by the size of trees. By lamination a large beam can be formed by joining a number of small pieces. Wood laminating, using small pieces of lumber, permits the building of keels, stems, and stern members all in one piece, bonded together as strongly as the natural wood itself.

Churches and other monumental structures are using it also, because everything from straight beams through gracefully sweeping curves to pointed Gothic arches is possible and practical in laminated wood.

"Papreg" is laminated paper which is lighter and stronger than most metals. Besides its great strength, it resists moisture and denting. Householders are soon going to find it serving them in many ways, especially in insulating their refrigerators. It's a better insulator and takes up much less space.

"Sandwich wood" gets its name from the fact that one kind of wood is used for the core and another for the surface. Our bombers, which gave Japan such a drubbing prior to VJ-day, were made of sandwich wood.

Strange things go into the glues which hold these woods together. The dried casein of milk, which is water resistant, and blood albumins are the main items of the development of gluing techniques. These are mixed with synthetic resins.

"It is easy to see that we are standing on the brink of an immense industrial development of wood waste," says M. O. Chenoweth, representative of the American Forest Products Industries. "For a long time, virtually every manufactured product was made out of wood. It is the oldest utilitarian product known to man. Then in recent prewar years, the lumber industry had to take a back seat because of the sharp competition of steel, concrete, and other manufactured materials.

"Wood waste was taken for granted because forests were thought of as inexhaustible. Forest fires were actually hailed at one time in our history as God's way of clearing farm land."

And yet, despite all our prodigal waste, we still have nearly 462,000,000 acres of forest land, of which Uncle Sam owns 26 percent, farmers 30 percent, small industries 29 percent, and large industries 15 percent.

The Federal Government is encouraging a program of reforestation and skillful logging to see to it that lumber supplies become constant, and tree growth is actually on the increase today for the first time in history.

Out of these great forests, via the fabulous magic of the test tube, a new industrial miracle is definitely on the way. This new industry will not be lumber, nor plywood, nor paper, nor chemicals. Rather it will be the welding of them all into the greatest forest industry that has ever been known. And the wonder of it will be that the waste of one will be the raw material of another, until virtually every atom of the tree will emerge as a useful product.

Veterans' Pension Legislation

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein a resolution of the Tacoma Post, No. 1, AMVETS:

Whereas legislation is now pending before Congress that would provide generous pensions to all veterans of certain age without regard to their physical or financial status; and

Whereas cost of this pension bill over the years has been estimated to be in excess of $100,000,000,000; and

Whereas we believe such legislation not to be in the best interest of the Nation or its veterans since its tremendous cost would gravely impair the Nation's economic and financial structure; and

Whereas we believe the passage of this legislation would greatly impair the enactment in the future of any legislation that may be needed by veterans at that time; and

Whereas the national executive committee of our organization has strongly denounced this measure: Now, therefore, be it

Resolved, That we, Tacoma Post, No. 1, AMVETS, in meeting assembled this 16th day of March 1949 do hereby oppose the passage of this veterans' pension measure and declare it to be inconsistent with the best interests of our country and our veterans; be it further

Resolved, That copies of this resolution be sent to the Honorable THOR C. TOLLEFSON, Member of Congress from the Sixth District of Washington, and to our Senators, the Honorable WARREN G. MAGNUSON, and the Honorable HARRY P. CAIN, and to our AMVET national headquarters.

Adopted March 16, 1949:

KITTY FLETCHER,
Adjutant, Tacoma Post, No. 1,
AMVETS, Tacoma, Wash.
By H. R. KESTER.

Save the Soil by Which We Live

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. JENSEN. Mr. Speaker, on February 7, 1949, I introduced in the House of Representatives the Soil Conservation Act of 1949. This new bill, H. R. 2368—a revised and improved soil-conservation program based on H. R. 4417, which I introduced in 1947—provides for lasting benefits to the farmer and to every American.

This legislation provides a national land policy, and the legislative framework for the effective administration of a United States Department of Agriculture soil-conservation program that will assist our farmers and ranchers to conserve and make proper use of their soil and water resources—and will get the job done in the shortest possible time.

In addition, there are provisions which will help to correct the problem of surplus in certain crops. Land-use-conversion payments will encourage farmers to use some of the land contributing to such surplus for the production of crops for which there is greater demand, such as grass for meat and dairy livestock and timber. When the proper and necessary changes in land use are made I am sure there will be no need for acreage allotments. In bringing about a balance in agriculture production the Government will be better enabled to support farm prices permanently at a full 90 percent of parity.

By using about $100,000,000 annually of the funds now being used for soil conservation payments, for land-use-conversion payments, as provided in my bill, 24,000,000 acres of land could be converted from soil-depleting crops to soil-conserving crops in the next 6 years. This would bring our food, feed, grain, fiber, and meat production into better balance, and greatly assist in flood prevention, and soil, woodland, and water conservation.

Conservation payments and grants-in-aid are provided in such manner that the taxpayer can be assured that the Nation will receive a dollar's worth of benefits in true, effective soil conservation for every dollar spent. Farmers receive more responsibility in administering their own national soil and water conservation program. No new agencies are established. The Soil Conservation Service, Extension Service, and Production and Marketing Administration are each given more responsibility and without duplication.

If H. R. 2368 becomes the law of the land it will begin to bring "soilicide" to an end, the crime too often committed against the priceless topsoil of Mother Earth. It will insure a more stable income for our farmers, which in turn will insure an adequate and stable income for workers, business, and industry. It

will be an effective program to help reduce price-depressing surpluses; increase the speed and quality of soil-conservation work in the Nation, while strengthening the farmer-managed institutions engaged in such work; keep more rainfall on the land where it falls, and thus lower flood crests and reduce reservoir sedimentation; give better protection of our rich agricultural uplands and bottom lands, human lives, livestock, and buildings; save the taxpayers'—your—money through a more efficient and effective farmer-managed water, woodland, and soil-conservation program; provide the legislative and administrative framework to put our agricultural house in order—for any national or international emergency.

NATIONAL LAND POLICY

A productive and prosperous agriculture is a must for the Nation's prosperity. The wealth of our Nation is wholly dependent upon the productivity of our soil. As the topsoil is destroyed or weakened through erosion or overuse, the productive capacity of that land is lowered. Food costs rise and a lowered standard of living results. This legislation provides that we use our agricultural land within its capability for safe production, and that we treat each acre in accordance with its needs.

NATIONAL CONSERVATION SURVEY

Early completion of a Nation-wide survey of our farm, ranch, and woodlands to determine the productive capacity and conservation needs of each acre is provided. A land capability map shall then be made available to each landowner, showing how each acre should be used according to its capabilities for safe production.

CONSERVATION TIMETABLE

A conservation timetable shall be developed as a guide to the Nation in determining the speed with which our farm, ranch, and woodlands should be treated to prevent further extensive damage.

SOUND FARM UNITS

H. R. 2368 will assist landowners in acquiring acreage to complete a profitable farm, and thus reduce much land overuse resulting from uneconomic-size units.

TECHNICAL ASSISTANCE

Technical help for effecting proper land use and conservation treatment shall be made available to all farmers. Inside conservation districts, technical help shall include on-site assistance to plan and apply a properly coordinated conservation program. Until a district is organized, such help shall be limited to helping farmers carry out the more simple but effective conservation practices.

CONSERVATION PAYMENTS

To encourage proper use and conservation of our agricultural resources, land-use conversion, soil conserving, and soil-building payments and grants-in-aid shall be made available.

Class A: To avoid surpluses resulting from overuse of the land, payments shall be made to assist farmers in converting the use of land that has been for the previous 2 or more years in grain, row, and other soil-depleting crops. This will encourage a balanced production of food, feed, grains, and fiber, and promote a greater production of meat and dairy livestock, and timber crops.

Class B: Payments shall be made to help farmers defray the cost of applying certain permanent or semipermanent soil and water conservation measures. Generally, such payments shall be made only once.

Class C: As an added incentive to encourage farmers to hold their topsoil through proper land use, and other soil and water conservation practices, class C payments may also be made annually for recurring practices that will retard depletion of soil fertility.

LOCAL CONSERVATION DISTRICTS AND FARMER COMMITTEES

This legislation recognizes that farmers themselves are best qualified to administer their own national conservation program on a local and community level. Farmer-voted conservation districts organized under the laws of respective States and directed by their respective boards of soil-conservation commissioners and supervisors, and county agricultural conservation association, and State Production and Marketing Administration committees shall be the principal farmer-managed organizations through which the Government shall assist farmers with their soil and water conservation problems.

AGENCIES TO BE USED

Primarily, three governmental agencies shall carry out the provisions of this act. Each is well schooled in the art of doing its part in soil and water conservation.

SOIL CONSERVATION SERVICE

Because it is impractical to separate the technical, conservation payment, and grants-in-aid assistance in soil conservation, erosion control, drainage, irrigation, water-conservation development, and flood prevention on farm and ranch land, the Soil Conservation Service shall be responsible for all such provisions of this act, except for the specific responsibilities of County Agricultural Conservation Association and State Production Marketing Administration committees.

EXTENSION SERVICE

This legislation provides for the needed personnel for county extension staffs for educational work in conservation districts and in areas critically in need of conservation treatment not now in conservation districts.

PRODUCTION AND MARKETING ADMINISTRATION

The County Agricultural Conservation Association and State Production and Marketing Administration committees shall be the agents of the Secretary of Agriculture in making all class A, B, and C conservation payments.

FEDERAL LANDS

With cooperation of the agency having jurisdiction, all of the conservation survey, timetable, and technical assistance provisions of this act may be made available for the conservation of federally controlled lands.

We must save the soil by which we live. Rich productive soil will insure the survival of America.

The Phony Culture Conference

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

THE PHONY CULTURE CONFERENCE
(By George S. Counts)

For some days the newspapers have carried dispatches announcing a Cultural and Scientific Conference for World Peace to be held at the Waldorf-Astoria Hotel in New York City March 25–27. The conference is sponsored by the National Committee of the Arts, Sciences, and Professions and is called in the name of Prof. Harlow Shapley, eminent Harvard astronomer.

On the surface it would seem that this conference should be welcomed by all men and women of good will. The words are well-chosen. Who but the most benighted could object to a meeting of the representatives of culture and science from many countries dedicated to world peace? And a great scientist could not go wrong in any field, however remote from his sphere of professional competence.

But if one looks beneath the surface, one sees much more than meets the eye at first glance. First, one sees that the conference is sponsored by the National Committee of the Arts, Sciences, and Professions, an organization having a long record of following the Communist Party line and of springing to the defense of Soviet foreign policy on every occasion.

Second, one sees that the most distinguished representatives of American art, letters, science, and philosophy have been overlooked in the organization of the program. It would seem that political rather than cultural and scientific qualifications might have governed the selection of speakers.

Third, one hears that a Soviet delegation of five, headed by Alexander Fadeev is to be invited. At this point, one is reminded that the World Congress of Leaders of Culture in Defense of Peace which met in Wroclaw, Poland, last August was dominated by the Communist parties of the world, and was addressed on the first day by this same Alexander Fadeev, who spoke on the subject Science and Culture for Peace, Progress, and Democracy. According to the account in Pravda, the speaker was frequently interrupted by the tumultuous applause of the delegates. In its regard for truth, this address was a perfect specimen of party literature and set the tone of the gathering from the first day to the last. The congress itself constituted an effort to create the most gigantic Communist front in the history of the party.

Except for window dressing provided by a number of wholly innocent and eminently respectable American citizens, the projected conference in New York appears to be a continuation of the Wroclaw Congress under superficially changed auspices. The Congress was neither representative of the intellectuals of the countries involved nor devoted to the cause of peace, except on purely Soviet terms. In fact, it was Communist inspired and dedicated to a bitter attack on the United States and the glorification of everything Soviet. The American people, therefore, should have this gathering recalled to their minds at this time.

Alexander Fadeev is the general secretary of the Union of Soviet Writers. He was elevated to this post in 1946 as a result of a

savage attack on Soviet literature and literary writers by the central committee of the All-Union Communist Party in a resolution issued on August 14 of that year. This resolution was followed by others which purged the entire cultural life, from humor to science, of all cosmopolitans and antipatriots and of the last vestige of friendly attitude toward the west in general and the United States in particular. Mr. Fadeev, known for his ruthless adherence to the party line, is the symbol and the agent of this policy. He is undoubtedly an anticosmopolitan and patriot of the most extreme type.

In his address in Poland he delivered an attack on America which in falsehood and invective surpasses the best efforts of Molotov and Vishinsky. The 32 American delegates, except for a few sublimely courageous souls, applauded the speech and subsequently played an active role in organizing the conference to be held in New York. Among those few who dissented and who expressed their dissent at the time, President Bryn J. Hovde, of the New School for Social Research, merits the plaudits of honest men everywhere.

Those who are organizing, sponsoring, and participating in the conference at the end of March should be asked to reveal their stand without equivocation on the speech by Fadeev and the entire proceedings of the congress. If they know nothing about these events, they are innocent far short of the call of the duty of an intellectual who mixes in world affairs. A few excerpts from the speech, as published in the August 29 issue of Pravda, will make clear the propriety of such a request. In the following passages Mr. Fadeev, amid "tumultuous applause," pins the Fascist label on the Government of the United States:

"And now, only 3 years after the defeat of Hitler's Germany, we scientists, writers, and artists are obliged to gather again, troubled by the activity of the warmongers. The imperialists of that country, whose facade by the irony of fate is adorned by the Statue of Liberty, have taken upon themselves in great haste the role of conspirators and organizers of a new war. * * *

"After the Second World War, the entire world was divided into two camps: the democratic, antifascist, antiimperialist camp led by the Soviet Union, and the antidemocratic, reactionary, imperialist camp led by the ruling circles of the United States of America.

"The geographic map gives no semblance of a correct conception of these two camps, because the line of division passes through the interior of each of the capitalist countries, through every city and village—through New York as well as London, through Paris as well as Rome, through Brussels as well as Rio de Janeiro. Each camp has its own program, its own aims and tasks."

In this last paragraph the speaker was undoubtedly uttering the literal truth. At any rate, wherever a cell of the Communist Party exists, the Soviet Union has loyal citizens. The recent professions of such loyalty by Maurice Thorez, Palmiro Togliatti, Harry Pollitt, Otto Grotewohl, Eugene Dennis, and William Z. Foster should make this clear even to the members of the National Committee of the Arts, Sciences, and Professions, and above all to Professor Shapley.

In his attack on America, Mr. Fadeev employs the device of quoting from unnamed persons. The following judgment attributed to a Swedish journalist, he says, "can be acknowledged as entirely just":

"Patented religions, standardized literary ideals, theater, and moving pictures, sport jargon, endless novels, and street songs all beginning with Christian doctrine and ending with shivering American swing—this modern Saint Vitus dance is all, absolutely all, we get now from America."

Mr. Fadeev quotes approvingly an account of the condition of civil liberties in America by one of the prominent leaders of American culture who is obliged to conceal his name:

"Men whom we call the staff of big business have thrown all their forces against us; and after 2 years of savage propaganda unequaled as yet in any other country of the world, the American intelligentsia finds itself facing the threat of cold terror. * * * Henceforth in the United States the expression of any thought which might be regarded as dangerous will be punished with 10 years in prison, a fine of $10,000, and deprivation of American citizenship. * * *

"A writer who writes anything dissenting from the official policy of the Government of the United States is also threatened with 10 years in prison. This rude violence, this mad effort to impose fascism on America by legal means, is the answer of reaction to the growing strength of the people's movement in our country."

Morris Ernst, a distinguished American lawyer who has given much of his life to the defense of the civil liberties in the United States, gives the following professional opinion on this statement:

"There is absolutely no truth in the statement that 'expression of any thought which might be regarded as dangerous will be punished with 10 years in prison, a fine of $10,000, and deprivation of citizenship.'

"I am quite clear that there has never been any sanction imposed such as indicated in the quote. Furthermore there never has been a law permitting the deprivation of American citizenship except on the ground that the citizenship was obtained through fraud.

"I don't know how to answer the statement that a writer who writes anything dissenting from the official policy of the Government is threatened with 10 years in jail. I assume this thought occurred to Fadeev because he cannot believe that in a democracy like ours, there can be no single governmental defined policy. Needless to say, there has never been a statute in our history which places in a penal area anyone dissenting from the official policy of the Government."

Mr. Fadeev places Eugene O'Neil, Henry Miller, John Dos Passos, and other American and European writers in the "motley literary crew of reaction" of the warmongers. Then in the language of party literature he proceeds to summation:

"German Fascists needed beasts. American monopolists find beasts indispensable for the realization of their plans for world domination. Reactionary writers, scientists, philosophers, and artists are ready to serve their masters. They place on a pedestal schizophrenics and drug addicts, sadists, and pimps, provocateurs and monsters, spies and gangsters. These beast-like creatures fill the pages of novels, volumes of poetry, casts of moving pictures. They are presented as heroes to be emulated, as examples to be followed.

"If jackals could learn to use the typewriter and hyenas could master the fountain pen, they no doubt would write just like Henry Miller, Eliot, Malraux, and other Sartrists."

The general secretary of the union of Soviet writers endeavors ingratiatingly to identify two distinguished American writers with Soviet aims and methods without their consent. These two men, Sinclair Lewis and Upton Sinclair, have devoted their lives to the exposure of stupidity, injustice, and cruelty in their own country, something that no Russian writer would dare to do for the Soviet Union.

Mr. Fadeev quotes approvingly, and with the suggestion that it supports Soviet practices, the following statement from Mr. Lewis: "An artist or a scientist must know and loudly declare whether he stands on the side of tyranny, cruelty, and mechanical obedience, or on the side of the people, of all the people."

When given an opportunity to read the Fadeev address, Mr. Lewis acknowledged the substantial correctness of the quotation and then added: "But, of course, it places me not as standing for the Soviet Union and its hysterical crusade but against it and its 'tyranny and mechanical obedience.' "

Mr. Fadeev included Mr. Sinclair in a list of the finest writers, artists, and scientists of the capitalist world who invariably have become friends of the USSR—the whole flower of world culture. After reading the entire address, the American writer asked that the following response be published without deletion:

"Either Mr. Fadeev has not read my books, or they have been incorrectly translated in their Russian editions. For 47 years I have been advocating free, democratic socialism, to be obtained by the method of education and persuasion under our American system of government by popular consent. I defended the right of the Russian people to choose their own form of government, but that was when I believed that they would be given the right to choose. I accepted Lenin's promise that the state would wither away; but it hasn't. It has become a reactionary nationalist imperialism, telling the Russian people even what music they shall listen to and what they shall believe about the inheritance of acquired characteristics. The rape of Czechoslovak democracy destroyed the last trace of hope I had of any good to come from the Soviet Union. If I have any influence with the Russian people, I will use it to tell them that the present party line is bound to lead to another world war, many times more dreadful than the last."

Mr. Fadeev quotes from a number of American journals and books to prove that the United States is in the grip of war mongers and is planning an aggressive atomic war against the Soviet Union. The only solid work among his references is The Absolute Weapon, prepared by the staff of the Institute of International Studies of Yale University and published in 1946. He states categorically that the authors advocate the launching of an atomic war against the U. S. S. R. and are a disgrace to science. An examination of the volume illuminates the ethical standards of this Soviet leader of culture and of party literature generally.

The discussion of the question is found in the third chapter of the volume under the title of "The Atomic Bomb in Soviet-American Relations." If a sober and temperate treatment of the issue is to be found anywhere in the language, it is to be found here.

Prof. Arnold Wolfers, author of the chapter, writes that the idea of a preventive war is so abhorrent to American feeling that no government in this country, to judge from the state of public opinion today, could hope to gain popular support for such a venture. Further on he says that the whole idea of an offensive use of the bomb during the period of our monopoly can safely be laid aside as utterly impracticable.

In discussing lines of defense, he argues that the first line consists in proper efforts on our part to settle our disputes with the Soviet Union peacefully and to avoid adding new ones. He believes that wise statesmanship will have to seek a mode of conduct which will neither tempt the Soviet Government to overstep the limits we can in safety and decency concede nor provoke it to undertake actions out of sheer resentment or suspicion of our intentions.

Professor Wolfers strives generously at every point to view the issues from the Russian standpoint. He even defends the veto on the ground that the Soviet Union has good reasons for believing that the veto constitutes an essential element of her security. Obviously the general secretary of

the Union of Soviet Writers should read this book.

Toward the end of its session the World Congress of Leaders of Culture in Defense of Peace adopted a strongly worded resolution endorsing the Soviet position and created an international committee with headquarters in Paris. Three Americans, renowned for their support of Soviet policy, were appointed to the committee: Howard Fast, Albert Kahn, and Paul Robeson. The names of these men appear prominently in the calling of the Cultural and Scientific Conference for World Peace in New York City March 25–27. Harlow Shapley was appointed to the committee in absentia, but declined to serve.

In his closing remarks as chairman, Mr. Fadeev said that the work of the congress is only beginning.

The American people are entitled to know whether the conference is in any sense a continuation of the congress. Then in the spirit of democratic freedom the meeting should be permitted to take place. Mr. Fadeev should be requested to repeat his address in the shadow of the Statue of Liberty and a full discussion of the proceedings of the congress at Vroslav by competent scholars selected by our learned societies should of course be placed on the agenda. Also in the spirit of fair play and in the interest of good will between peoples John Dos Passos, Morris Ernst, Sinclair Lewis, Upton Sinclair, and Arnold Wolfers should certainly be invited to speak. This session might be chaired very fittingly by President Bryn Hovde.

Visas Granted to Delegates to World Peace Conference

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. CLEMENTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter addressed to the Honorable Dean Acheson by Mr. William H. O'Neill, commander, Queens County Chapter, Catholic War Veterans, New York City:

CATHOLIC WAR VETERANS,
QUEENS COUNTY CHAPTER,
New York, March 18, 1949.

Hon. DEAN ACHESON,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: It was with a great deal of disappointment that we noted that our State Department granted visas to 23 delegates from the Soviet Union and satellite nations in order to attend the so-called world-peace conference under the auspices of the National Council of Arts, Sciences, and Professions on March 25, 26, and 27 at the Waldorf-Astoria Hotel, New York City.

Being an organization of loyal American Catholic veterans, we are unalterably opposed to communism, and we feel that no compromise whatever can be made with it. We consider the granting of visas to these foreign intellectuals a compromise with communism and that their entry can serve no worth while purpose other than the furtherance of Communist aims in this country. There is no doubt that they will follow the dictates of Moscow at this conference as they do in all undertakings.

We would, therefore, respectfully urge that you investigate this flagrant use of our State Department's visa powers and find out why they were granted so readily and, if it is not too late, to recall these visas and not allow any further indoctrination of foreign Communist ideas to be fostered upon our beloved land and its people. We further respectfully remind you that we know if the situation was reversed that a similar number of delegates from this country would be refused admittance to Russia. These steps of guarding our shores become more persistent in light of recent uncoverings of un-American activities and the further flagrant statement of Mr. Foster that in case of war (God forbid) between the United States and Russia, they would pledge allegiance to the latter.

With every good wish for your continued good health and a prayer that God will bless your every act and our beloved Nation, I am,

Respectfully yours,
WILLIAM H. O'NEILL,
County Commander.

There Is a Real Shmoo

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MULTER. Mr. Speaker, Al Capp, one of the best-known comic-strip artists, draws Li'l Abner, which appears in 600 American newspapers and many others all over the world. He recently became famous all over again when he invented the "shmoo," the remarkably beneficent little animal some of whose history is told in the article below. Capp's book, The Life and Times of the Shmoo, has sold very widely. The following article, which is a slightly modified version of his recent address on Town Meeting of the Air, appeared in the New Republic of March 21, 1949. I wonder if certain of my colleagues will get the point:

All I know about modern capitalism, I learned from the shmoo—that little animal which lays eggs and gives milk, both grade A, of course. The shmoo, himself, when fried tastes exactly like chicken and when broiled comes out steak.

A shmoo's eyes make splendid suspender buttons, and his whiskers make the finest grade of toothpicks. When you look at one, as though you'd like to eat it, it dies out of a sheer will to please you. It's a perfectly ordinary little animal, but I learned a lot from it and this is how.

You may find this hard to believe, but in many ways cartoonists are like people. They have a lot of things to be thankful for, but on the other hand they have relatives. I want to tell you about some of mine. It isn't generally known that they're related to me, because while for certain reasons too embarrassing to mention here, I changed my name to Capp, they kept the old family name of Capitalist. I changed mine in 1929, during that great wave of persecution, here in America, of those of us who clung to our faith in capitalism, the simple faith of our forefathers.

One of these relatives is an uncle of mine, J. Parnell Capitalist. He's a fine, upstanding, red-blooded—I mean full-blooded—chap. J. Parnell is as honest as the day is long. He doesn't really have anything against foreigners; he just feels that it'd be safer to shoot anybody who isn't his kind of an American.

His wife has entirely different ideas. She doesn't really despise everything American; she merely feels that our way of life can't ever be truly 100-percent American until we make it 100-percent Russian. We call her Auntie Capitalist, naturally.

Now, with them there lives my cousin, Harry S. Cousin Harry was a good-natured, confused, well-meaning little chap who was always messing around in his cellar laboratory—that is when he wasn't picking out tunes on his mandolin. (The queer thing about this Harry is he couldn't play the piano.) Well, one day Cousin Harry rushed excitedly up from the cellar holding a fat, squirming little creature in his arms.

"What's that you've got there?" asked Uncle Parnell, looking up from the book he was reading, The Immortal Orations of Alf Landon.

"It's a shmoo," cried Cousin Harry. "Not one of those foolish pictures your no-good nephew Al Capitalist draws, but a real, live shmoo."

"How'd you whip that up?" asked Auntie Capitalist, looking up from her favorite newspaper, the Daily-Arise-Ye-Prisoners-of-Starvation - and - Crush-the-Bloated-Bosses News.

"Oh, it was easy as pie," chuckled Cousin Harry. "I mated a pool ball with a duck and 20 shares of National Dairy common stock, and now that we've got one shmoo, there'll be plenty of them. They're wonderful little creatures. Just put one in a warm spot and pretty soon there'll be two, and everybody knows, once there are two shmoos, in no time at all there'll be millions of them—they're very affectionate. All our troubles are over; now every American can have a shmoo."

"Just a minute, buddy," cried Uncle Parnell. "I don't know much about these here shmoos, and anything I'm ignorant of I'm against."

A suspicious look came into his little red eyes—I mean his little red, white, and blue eyes. He grabbed the frightened little animal, shook his big hairy fist in its trembling face, and roared, "I'm going to give you a loyalty test, shmoo. So you give butter, milk, and eggs for free, do you?" He snarled, "Well, what's going to become of every American's right to be gouged by his fellow American if you do that?"

"That isn't the worst part of it," screamed Auntie Capitalist, as she snatched the quivering little shmoo away from her husband and yanked it over to where she sat on the extreme left. "How can the starving workers revolt against their fat, well-fed bosses if they become just as fat and well fed?"

"Ah, give me a crack at that rat of a shmoo," cried Uncle Parnell, yanking the little creature back and punching its trembling little nose. "By providing everybody with the basic necessities of life, you shmoo, you rob free enterprise of its right to freely hijack the whole Nation with murderous prices, and that's un-American," he roared.

Now Auntie Capitalist kicked the shmoo in the teeth and screamed, "By making life happy and peaceful for the masses, you're robbing them of the incentive to overthrow their government." Then she bellowed, "You're counterrevolutionary, shmoo, and you know how us comrades treat comrades like that."

Cousin Harry tore the two apart.

"Don't fight over the shmoo any more," he said quietly. "The little fellow is dead. You killed him."

But don't cry, kiddies, there is a real live shmoo. This big earth itself will give us everything we want, just as the shmoo does, if only we'd let it alone—if only, in our passion and hatred and intolerance, we don't tear it apart.

Bulwark in Asia

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter which appeared in the New York Times of March 13, 1949:

BULWARK IN ASIA—ROLE OF UNITED STATES OUTLINED IN COMBATING COMMUNISM

(The writer of the following letter is president of the India League of America.)

To the EDITOR OF THE NEW YORK TIMES:

James H. Mysbergh's letter which appeared in your paper of February 27 deserves careful consideration at the hands of all those who are interested in putting a halt to the ever-increasing influence of the Communists in southeast Asia.

Mr. Mysbergh rightly states that the Dutch military action in Indonesia "has led to a new and critically important phase" in the relationship between the United States and the southeast Asian countries, and "today these countries—particularly in view of current events in China—are faced with a choice of political kinship to communism or Western democracy."

On the basis of these and other cogent reasons mentioned in his letter, Mr. Mysbergh suggests that, before it is too late, the Southeast Asia League should be formed, perhaps with the cooperation and help of the Governments of those countries. It is further suggested that this league should have "a regional production pool" which will initiate "collective bargaining for the disposition of raw materials on the world market and command power as a strong voice in the United Nations."

UNITING LIBERALS

This is excellent. But there is something that the people of the United States can do, too. I suggest that a Southeast Asia League of America should be formed in the United States. This league should consist of all progressive and liberal elements who desire, not merely to have a negative approach—of being just anti-Communist—but to have a dynamic positive approach of encouraging and standing by democratic forces in the whole of southeast Asia.

The objects of this league should be, roughly:

To help foster and encourage a non-Communist left movement in the whole of southeast Asia.

To keep the American public informed of political and other developments in these areas through all media of information.

To impress upon the United States Government and the Governments of western European countries that if it is important to create a North Atlantic Pact as a bulwark against the spread of communism, then it is equally important to create a non-Communist left movement as a bulwark against communism in southeast Asia.

To request the American Government and farseeing American businessmen to give economic and technical aid for the rehabilitation and industrialization of these countries.

To sound a clarion call, that the American people will give moral and economic support to all Governments and parties in southeast Asia who will fight against totalitarianism—both of the right and of the left.

It is needless to say that the whole world looks to the United States.

TO COUNTERACT PROPAGANDA

I have stated above that the Southeast Asia League of America should foster a non-Communist left movement in southeast Asia. That is most important. Ideologies have to be fought with ideologies. Among the starving millions of southeast Asia only leftist slogans and leftist programs can counteract Communist slogans and Communist programs. A non-Communist left movement is the only weapon which will go to the roots of the Communist evil.

A forthright declaration of the American people that they will support such a movement will help those who are undecided and are wavering.

Practically every country in southeast Asia has democratic leaders—some in the government, some outside of the government—who are being opposed by totalitarian elements, both of the right and of the left. It is these leaders who should be supported and backed by the American people.

The first thing the proposed Southeast Asia League of America would have to do would be to insist upon a settlement in Indonesia, on a democratic basis. American opinion would have no weight or prestige in Indonesia, or for that matter in any other part of southeast Asia, if the peoples of those countries were to come to the conclusion that America was siding with European nations still pursuing imperialist policies. The peoples of southeast Asia would shy away from the United States and would inevitably fall into the lap of the Communists. No amount of warning against the dangers of communism would then avail.

POSITIVE APPROACH

To expect that the non-self-governing peoples of southeast Asia can be won by a negative approach is to deceive ourselves. However, they can be won by a positive approach. They can be won by the American people shouting, without restraint and fear, that it is the birthright of all southeast Asian peoples to be free.

I am not against the proposed North Atlantic defense alliance. I think it is a move in the right direction. But if for the sake of this alliance the imperialist nations of Europe have to be appeased at the cost of freedom, prosperity, and happiness of the peoples of southeast Asia, then history will record the fact that the United States backed the wrong horse.

The United States has a splendid opportunity of taking the moral leadership at this crucial period in human history. I hope it does not miss the boat.

J. J. SINGH.

NEW YORK, *March 2, 1949.*

Report From a Freshman Senator

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, March 23 (legislative day of Friday, March 18), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent that a timely and instructive article entitled "Report From a Freshman Senator," written by our colleague, the junior Senator from Illinois [Mr. DOUGLAS], which appeared in the New York Times magazine of March 20, 1949, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPORT FROM A FRESHMAN SENATOR

(By PAUL H. DOUGLAS)

WASHINGTON.—There is a moment on election night when a new Senator feels himself to be a new Adam, the first of his breed. But on that score, as on a number of others, he begins to change his mind when he comes to the Senate. For one thing, he senses that giants like Clay, Calhoun, Benton, Webster, Stephen A. Douglas, Davis, Sumner, John Sharp Williams, "Fighting Bob" La Follette, and George Norris have been there before him.

For example, I am now filling the identical Illinois seat occupied a century ago by the "little giant" who bore the name of our clan, Stephen A. Douglas. The realization of this tradition humbles a freshman at first. In time it should prove a source of strength and reassurance.

For another thing, a freshman Senator learns that the sense of a living tradition is perhaps one of the reasons for the almost exquisite courtesy which prevails in the dealings of Senators with each other. Our political campaigns are indeed rough and a candidate has to develop a tough hide to withstand the poisoned spears which are driven into him. But on the floor of the Senate, however much Senators may differ, they behave like gentlemen. In a world of sharply differing interests and ideas, this is no mean achievement. This, also, makes the freshman anxious to be worthy of his fellows, the many able men of both parties now in the United States Senate.

Before I came to Washington I thought I knew what I would be up against because my wife had previously served a term in Congress and because, in addition to my experience in local government, I had frequently testified before congressional committees. But only the toad beneath the harrow can really feel the sharpness of the prongs. One must live the life of a Senator to know its pains. It is relatively easy to offer advice. But it is a soul-trying experience after weighing evidence and conflicting claims and interests to be compelled to decide what is best for the people of the United States and then, as one must, to assume full responsibility for that decision. And the strain is intensified by the fact that one is forced to make many such fundamental decisions in the midst of a crushing burden of routine work.

The Labor Committee, for example has been holding two and three hearings a day on the repeal of the Taft-Hartley law and this in itself has taken from 5 to 8 hours of my time each day. Then there are the hearings of the Banking and Currency Committee and the Joint Committee on the Economic Report on which I am also serving, and where I am trying to pull a laboring oar. But in addition to all this, I must also help to answer the mail which now averages over 700 communications a day, and which one morning reached 1,700, and meet callers and delegations. Let me chronicle a fairly representative day when the Senate was not in session:

7–8:30 a. m.: Rise, breakfast, read two morning papers and study memoranda for hearings.

8:30–9:30 a. m.: Look over mail, answer some of the most important letters and block out today's policy with the staff.

9:30–11 a. m.: Hearings on the Taft-Hartley repeal.

11–12: Hearings on the housing bill.

12–1 p. m.: Work on correspondence and see vistitors.

1–2 p. m.: Lunch with constituents.

2–2:30 p. m.: See delegations and telephone Government departments.

2:30–5 p. m.: Hearings on the Taft-Hartley repeal.

5–6:30 p. m.: Sign 250 pieces of mail, send telegrams on pressing matters of business.

6:30–7:30 p. m.: Dinner with group which wants to consult on legislation.

7:30–10 p. m.: Hearings on the Taft-Hartley repeal.

10–12. Read two evening papers and several weekly journals. Clean up correspondence and study more material on Taft-Hartley law and housing problems, block out radio speech for next day.

12:30 a. m.: Go to bed.

I am frank to say that I do not know for how long a man can keep up such a pace. Thus far, it has not seemed to slacken. I thought I had reached the ultimate in work when I ran for election in a way which I described last fall in this same magazine. But the job of serving as a Senator is no less strenuous than running for the office.

It is not merely work, however, but also worry which characterizes a Senator's life. One feels the tug not merely of conflicting forces but also of sharply opposing ideas, in each of which one recognizes some element of truth. On which side does the greater merit lie? Is there a way of resolving the sharp and bitter conflicts into some higher synthesis which will enable the national life to proceed upon a higher level, and if so, how can it be found and put into effect?

Interspersed with these worries there come the reproaches of old friends who feel neglected by decisions which I have had to make concerning appointments and patronage; the criticisms of home newspapers who do not like my votes, and the irate letters of citizens who disagree with my real or fancied opinions and acts. Is it small wonder, therefore, if beneath the surface of a Senator's life there is a deep loneliness and also many inquietudes which at night interferes with sleep, and which, were it not for the reassurance of my wife and friends, would seem overpowering? Never does a man realize the need for fellowship, for religious faith, and for a sense of humor more than when these worries and decisions pour in upon him as a Senator.

A Senator is not suffering from a persecution complex when he recognizes the sober fact that he has a multitude of enemies who are not only ready to shout to the world when he slips on a banana peel, but who are quite capable of strewing them in his path. And there are also a certain number of correspondents who, with the best will in the world, nevertheless regard a freshman Senator as fair game to fill their columns.

In all innocence I have already stumbled into one such booby trap. I was asked by a small group of reporters whether I thought the Labor Committee could complete its hearings on the new labor bill within a set period of time. "Yes," I said, "if the Senators would only work late afternoons and evenings and forego the cocktail hour." And then I innocently added that I thought Washington cocktail parties were too time-consuming.

These words were no sooner spoken than the air was filled with debris and the scent of cordite. From somewhere behind a pall of smoke I heard shrill voices tell me through the press that if I didn't like the Washington cocktail hour, all I had to do was to say, "No, thank you; I can't come today." And to this moment I cannot understand why a few sentences about the schedule of labor hearings should have set off such a hubbub in which everyone purged themselves of bile on a lot of irrelevant subjects. But that is what happened. It is why, when I am now asked what day of the week it is, my instinctive reply is "No comment."

The whole of this trivia summons to my memory Shakespeare's observation that "Honor alone doth not make a good surgeon." Neither, I add, doth it make a good Senator or keep him out of trouble. Something more—and a great deal of it—is needed; something in the way of caution, physical endurance, a sense of selection, a sense of maneuver, and the inner tinkle of a bright "hell's-bells" air. Some of these traits may be inherent in a person prior to his induction into the Senate. Some of them can be absorbed from the memories which hover in the place. And some of them can be acquired through the senior-junior tutorial system.

Let me say here that I had arrived in Washington full of misgivings about the Senate's seniority system. Yet the operation of that system, as it has unfolded in the committees to which I have been assigned, has brought home some of the practical ends which it serves. Stated negatively, I am convinced that no new Senator can or should be the chairman of a Senate committee, even if that unlikely prospect were ever opened to him. Outside of the Senate, he may be the world's foremost expert in a particular field of interest, but knowledge for its own sake, and knowledge woven into a policy of legislative action are, unfortunately, two different things.

The seniority system provides the Senate with a steady flow of leaders who know the past record of the legislative proposals under their jurisdiction, why they were accepted or rejected, who advanced them or blocked them, who testified on their behalf or remained silent, who gave way and compromised and who stood firm under fire. And though the junior Senator can applaud himself for the splendid purity of a scheme he had once devised to remove at least one of the Nation's ills, the older hands around the place may know that this same scheme has been examined in detail before, and for very practical reasons was turned down flat. In all these matters, the senior Senator or the senior member serves the junior as a file of memories dealing with the whole catalog of legislative cunning.

For all their wear and tear, the committee hearings themselves are of incalculable importance to a new Senator. These hearings are indeed one of the principal means by which a new Senator can educate himself.

If one reviews the senatorial day, it becomes evident that there is not much chance for a Senator to undertake a profound or cloistered study of a problem. The research personnel in the departments may be of some help to him. His own staff will be of greater help. But in the final analysis, he must learn for himself what is true or false. And he can only find that out in the committee hearings. Here, he must argue out his thoughts publicly even as the facts on which they are based are presented to him. Sometimes, he gets tripped up by his improvisations in committee sessions and feels like a fool because of it. Sometimes, his head spins under an attack from an unexpected quarter which tramples down his hastily built defenses. But once his injured pride is mended, the net result is both self-education and a more enlightened public opinion.

What, then, about the effect and conduct of lobbies in shaping legislative decisions? I regard it as my duty to listen both courteously and with a judicial mind to the representatives of every responsible group. For every group in a democracy has the right to present its case, both to the public and to the legislature. To this degree lobbies are of distinct aid. But it is a very different thing for a legislator to vote with a pressure group either because of fear or because of favors he has allowed himself to receive.

Even a brief experience with the lobbying of special interests makes a Senator wish, however, that the members of these groups would practice a greater degree of self-restraint and a lesser degree of group selfishness. Not only do groups ask for more than they expect to get, but even the sum of all their bed-rock demands amounts to far more than the country can afford. It is properly the job of Congress to select the most urgent of these needs and to discard those which are less acute.

There are, of course, a number of questions which a Senator, new or old, can only answer by seeking the inner light of conscience. They may involve such matters as the obligations one owes to one's party as against those which are owed to personal convictions. Or they may involve such questions as a reconciliation of the national interest with a State interest.

As to the first question, my tentative answer takes this form: Support one's party in all procedural matters everywhere. Argue substantive programs within party councils in the hope of gaining a majority within the party. But when the chips are down in the Senate, a Senator should vote his profound individual convictions on substantive matters regardless of who is with or against him. Fortunately, I do not expect any sharp conflict between my conscience and party policy, since I believe in the principles of our Philadelphia platform and in the general foreign and domestic program of President Truman.

As to the second question, the answer to it demands that the Senator try to become a teacher, instructing the State as to its function in the Nation, and instructing the Nation as to the nature of at least one of its States.

One further point: Edward Everett Hale is known to present-day Americans as the author of The Man Without a Country. But at the turn of the century he was also known as the wry-tongued chaplain of the United States Senate. One day, as he walked to the Senate Chamber to do his duty and offer his noonday prayer, one of his friends fell in step with him and said, "I suppose, Mr. Hale, that you first look at the country and then pray for the Senate." "On the contrary," Hale replied, "I first look at the Senate and then I pray for the country."

In the day when this barb was first voiced, the Senate seemed little more than a millionaire's club whose Members used it as though it were a board of directors' room for the corporations which they served. As against what happened in Hale's day, the private vocations of todays Senators offer no clue as to where any one of them will stand on any public issue. The lawyers still hold a comfortable majority of the Senate seats, with former university professors in second place, and a scattered assortment of businessmen, newspaper publishers, doctors, and farmers sharing third place. Some of these men are rich. Some of them have no more wealth than is represented by their Government pay. What marks their conduct as a group is their relative independence from the pat views which are commonly identified with fixed classes.

For all the seeming petty bickering, the vying for partisan advantage and even filibustering, the present Senate has a great sense of its function as the supreme forum in the world for free discussion.

British Health Plan

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. MULTER. Mr. Speaker, on March 22 I placed in the RECORD the first of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 18, is the second of the series:

FULL-SCALE OPERATION OF BRITISH HEALTH PLAN SCORED—PREPARATION WAS LACKING, SAY EXPERTS

(By E. J. Delaney)

LONDON, March 18.—The impossibility of providing the people with the care offered to them by the National Health Service proves the complete plan should not have been started last July in one stroke. Thus speak the leading medical men of England today.

They point out their profession always has approved the general idea of a complete health service for everybody regardless of income, but they repeatedly have warned against trying it on a broad scale without necessary preparations. They say the conditions that exist establish positively that they have been correct in their views.

The physicians, through their association, suggested that means of expanding the memberships of the medical and dental professions first should have been arranged. More nurses should have been trained and new hospitals constructed and staffed. However, now the scheme is an actuality, the profession is exerting itself to make it as successful as possible under the handicaps.

BETTER PREPARED THAN MANY

Great Britain really is better prepared than many countries to undertake a program of such magnitude. For 37 years all workmen who have earned less than $1,600 a year have been entitled to almost free care by a physician, and free drugs, too, under a Government-financed plan labeled "Health insurance."

Only the workman himself received this benefit, not the members of his family. There was no hospitalization and no dentistry included in it. But 14,000,000 out of a 40,000,000 population did qualify under that test. That means physicians have had much experience in handling a form of state medicine for a long while. To them the grant of complete care to all the population was not as bewildering as it would be in other lands without any experience in the field.

The Ministry of Health and the professions arranged a method for the people to make use of the new National Health Service that is so simple the citizenry is encouraged to do so. The professions may have some red tape to bother them, but the people hardly need do anything except what they were accustomed to when they wanted private medical or dental care for which they were paying.

FAMILY HEADS HAVE CARD

To start with, the head of every household has a National Health Service card which is all that he needs to secure treatment for himself and all his dependents.

A doctor is also allowed some extra fees, such as $29.40 for delivery of a baby. He is permitted to take 4,000 public patients plus any private patients he desires.

A physician with the maximum number of public patients has a gross income from the National Health Service of $14,400, which might be increased by the special fees and whatever private practice he undertakes.

The names of the physicians and dentists who have registered with the service are posted in public buildings. The cardholder looks at the roster, selects a physician, and goes to his office. He displays his card and asks if he and his family can become patients of the doctor. The latter accepts, takes the card, puts the family on his own list, and sends the card to a local health committee. The committee credits the doctor with the members of that family as patients and puts him on the pay roll for them. The card is mailed back to the head of the family.

WHAT DOCTOR GETS

The physician now will receive $3.60 a year for taking care of each member of the family. If there are four, husband, wife, and two children, the doctor will receive $14.40 a year whether he sees any one or all of them, once, 50 times, or not at all. This is called a capitation fee arrangement and is accepted as the most fair to all concerned. A small mileage addition is granted sometimes, when warranted.

Usually the physician picked by the husband has the entire family as patients. But, if she desires, the wife can have a different doctor for herself. And if the parents choose, still a third physician may be found for the children. The family can change doctors without notice and the doctor can abandon care of any patient or family by giving a reasonable notice to them.

In private practice everything revolves around the general practitioner, the family physician. That is true under the National Health Service, only more so. He is a very important person in this plan and really is the backbone of the whole movement. At present he feels he is not getting a fair deal and conferences are in progress between the Health Ministry and his representatives to smooth things over.

Once the family physician is chosen and settled upon, relations are same as of old when the patient paid the fees. When sickness comes, the patient visits the doctor's office or asks him to come to the home. If medicine is needed, the doctor writes a prescription which someone in the family takes to a drugstore that is cooperating with the plan and it is filled. The Government pays the cost.

If the doctor thinks the sick person needs the attention of a specialist, he fills out a form that provides one. If hospitalization or an operation seems advisable, the doctor takes another form and starts that process in motion.

Eyeglasses, hearing aids, wigs, and every possible device that can help a handicapped or a crippled person are to be had for the asking. If the doctor thinks a person needs a change of scene to speed his recovery from a severe illness, or an operation, and he fills out the correct form, the patient will go to a seaside convalescent home, everything free, and with sick leave pay while he is away.

Those alleging waste of public money choose the wig deal as their favorite topic. They point out that tens of thousands of bald men have been provided with two free wigs. Why two? That's so a man will have one to wear while the other is being cleaned and kept in good condition at a shop that gives such service at Government expense.

When all these circumstances are considered and there is a reflection upon the vast amount of publicity that has been given National Health Service for 2 years, no one should be surprised that the English people have become extremely health-conscious.

Those who helped originate the plan expect an improvement in the health of the people to become clearly evident within a short lapse of time. The most enthusiastic of the sponsors announce, without a trace of a smile, that untold millions now will live to such old ages that the nation will have to construct special homes for them all over this island.

Hawaii-Alaska Statehood Opposition

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I submit a memorandum by the Honorable William M. Chadbourne, of New York. Mr. Chadbourne is a distinguished citizen whose views are entitled to serious consideration:

MEMORANDUM IN OPPOSITION TO THE ADMISSION OF HAWAII AND ALASKA AS STATES

To the Eighty-first Congress of the United States of America:

The following reasons are respectfully submitted to your honorable body in urging that Hawaii and Alaska not be admitted to the Union as States. If Hawaii and Alaska are so admitted, the precedent will have been established whereby Puerto Rico should likewise be admitted, and the people of Puerto Rico will undoubtedly be rightfully indignant if Hawaii and Alaska are admitted as States and admission is refused to Puerto Rico. Accordingly, this memorandum addresses itself to the advisability of admitting as States all three territories.

1. The following statistics with respect to Hawaii, Alaska, and Puerto Rico are pertinent:

HAWAII

Area: 6,454 square miles.

Population as of July 1, 1948: 540,500. (The figures given are supplied by the Bureau of Health Statistics, Department of Health, Territory of Hawaii.)

The racial origin of the population is estimated as follows:

Race	Citizens	Aliens	Percent of total
Hawaiian	10,650	----------	2.0
Part-Hawaiian	70,110	----------	13.0
Puerto Rican	9,820	----------	1.8
Caucasian	177,580	2,900	33.4
Chinese	28,180	2,350	5.6
Japanese	144,640	31,640	32.6
Korean	5,570	1,750	1.4
Filipino	18,350	35,290	9.9
All others	1,580	90	.3
Total	466,480	74,020	100.0

ALASKA

Area: 586,400 square miles.

Population: Nearing 100,000 (the figures as to the population and its constitution are taken from estimates made by the American Geographical Society as of December 1946).

The population is approximately evenly divided between Caucasians on the one hand and Eskimos, Aleuts, and Indians on the other hand.

PUERTO RICO

Area: 3,435 square miles.

Population: 2,113,053 (the figures given, taken from the Statesmen's Yearbook, are as of July 1, 1947).

The racial origin of the population is stated to be as follows:

	Percent
Caucasian	76.5
Negro	23.5

2. The present States of the Union are compact in area and contiguous. The population is homogeneous and since it has become usual for many Americans to motor from one end of the country to the other, the people of each State have come to know and respect the people of the other States.

3. The people of each State understand and generally respect the political institutions of the other States. Even in such a year as 1916 when the choice of President depended upon a close vote in California and the returns from remote counties were delayed as long as 3 or 4 days, the people throughout the country patiently awaited and accepted the final returns.

4. It may well happen that the choice of a President will depend upon the electoral vote of Hawaii or of Alaska or of Puerto Rico. If the vote were close in Alaska the official elec-

tion returns from remote areas would not reach the capital of Alaska for several days or even for a week or more. Undoubtedly, charges of fraud would be made on both sides. Is there not serious danger that under such circumstances the political structure of our country might be shaken from top to bottom, especially if the candidates for President held radically differing views on issues which the people thought vital?

5. The same problems would arise if the ratification of a treaty were dependent upon the vote of a Senator from Hawaii or a Senator from Alaska or a Senator from Puerto Rico. Decisions of the Senate have been accepted even though a Senator from New York represents 6,700,000 people and a Senator from Nevada represents only 55,000 people. Would Senate decisions be accepted as readily in the case of a Senator representing a population such as that of Hawaii, which is very different in composition from that of the present States, or a Senator representing a sparse, widely scattered population such as that of Alaska or a Senator representing a population as diverse as that of Puerto Rico? Might not a serious demand be made for a drastic revision of our Constitution?

6. The issue is not whether the residents of Hawaii or of Alaska or of Puerto Rico are better or worse than those of the present States. The issue is whether the people of the present States would accept decisions which turn upon the votes of Hawaii or of Alaska or of Puerto Rico as they now accept decisions which turn upon the votes of the people of the present States.

7. Today America is by far the most powerful country in the world. Hence, the peoples of other lands are struggling to secure our support and warring ideologies are clamoring for our favor. At the moment, there is on a knock-down and drag-out fight in this country between the ideology of the Communists on the one hand and the ideology of the democracies on the other hand.

This is the most serious struggle, having to do with foreign matters, which has taken place since the early days of the Republic when, in a fight to the death, the forces of revolutionary France and the forces of Britain sought to influence the course of our country. It then became necessary for our country to take the drastic step of expelling citizen Genet, the representative of revolutionary France. Are we not on the brink of a similar struggle in this country between those who favor democracy and those who favor totalitarianism?

8. Why not postpone the consideration of the admission of Hawaii, Alaska, and Puerto Rico, as States, until the time when the world is at peace, and the democratic forces for which we stand have overcome the invading forces of communism and totalitarianism.

9. The real issue is not what the people of Hawaii or Alaska or Puerto Rico want. The real issue is what is best for the United States as a whole and thus for the world. May it be added that there is no reason to suppose that, if Hawaii, Alaska, and Puerto Rico were admitted to statehood, the local governments would be better administered than they are today. If the people of these areas seek more by way of home rule, why would it not be wiser at this time to ascertain their wishes and, by granting them additional home-rule powers, to seek to satisfy their aspirations?

Respectfully submitted.

WILLIAM M. CHADBOURNE.

NEW YORK, N. Y., *March 1, 1949.*

Keeping America Strong

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following talk by Harvey S. Firestone, Jr., chairman, the Firestone Tire & Rubber Co., before the Executives Club of Chicago, February 18, 1949:

KEEPING AMERICA STRONG

Members of the Executive Club of Chicago and guests, it is a great pleasure to be here with you today, and I am honored indeed to have been invited to talk to you.

As one who shares with you the responsibilities of executive work, I am keenly aware of the many problems and difficulties which we all face in these troubled times of cold wars and hot words, of unsettled conditions at home and international tension abroad, of shortages of goods in some lines and surpluses in others.

Today, however, I want to talk to you about a subject of far greater fundamental importance than the irritations and annoyances which beset the daily lives of business executives. I refer to the necessity of keeping America strong by preserving and defending the very source of her strength.

What is the source of America's strength? The tremendous abundance of our natural resources, the superior intelligence and transcendent skills of our people, our democratic form of government and the absence of powerful neighbors that might threaten our security have all been important factors in making and keeping America strong. But many other countries possess these same advantages to a greater or less degree. Surely, then, the great source of America's strength lies in our economic system, which we call individual competitive free enterprise. And that is what each and every one of us must intensify our individual efforts to preserve and defend.

Our country has been forced by circumstances into a position of world leadership. All eyes are upon us. What we say and what we do influence the whole world. We are the chief proponents of the individual competitive free-enterprise system. If we weaken our support of this successful economic system, all the other free nations of the world will crash with us. But if we remain strong economically, if we not only defend but also extend free enterprise, we shall keep our country so strong that none will dare to attack us or those who stand with us on the side of freedom. Therefore, it is apparent that the peace of the world, perhaps even the fate of the world, depends upon the efforts we make to keep America strong.

If we have any doubt that America's system of competitive free enterprise is the real source of her strength, we have only to think back to the early days of American history. The early colonists knew before they left Europe that they would literally have to hack their new homes out of virgin forests and that they would be greatly outnumbered in fighting the savage and merciless red men. They knew that they faced years of back-breaking toil and constant danger before they could establish themselves. Nevertheless, they came, because they could no longer tolerate the tyranny and oppression of the Old World.

Some came to worship God in their own way. Others came to escape political punishment. Still others came to seek their fortunes. But, whatever their motives, all came to gain freedom of one kind or another. Consequently, it is not surprising that they valued above all else their right to personal liberty. They had an unshakable belief in the power of individual initiative.

To our forefathers freedom was a heritage so precious that without it life was not worth living. So firmly did they implant this idea into the minds and hearts of their descendants that many years later, when the United States took its place among the nations of the world, safeguards for human liberties were woven into the very fabric of the law of the land. They established a republican form of government. And they laid down the rules for its operation in a living document called the Constitution. They laid the cornerstone of a new economic system, based upon individual competitive free enterprise. The rules for its operation were recorded in the first 10 amendments to the Constitution, which we call the Bill of Rights. In effect, they made it possible for every person to go as far as his will and his skill permit, provided that he does not deprive his fellow man of the same right.

As the years passed and as the United States grew stronger politically and economically, people in other countries regarded America as a land of opportunity. They saw over here a country in which individual initiative was fostered and encouraged. Millions upon millions of them left their homes in foreign lands, where life was regimented and opportunities restricted, and came to our hospitable shores. And, today, millions more wish with all their hearts that they were over here instead of over there.

Yes, the great source of American's strength is our system of competitive free enterprise. We know it, but so do our enemies. And, as you would naturally expect, those who seek to destroy our power and our prosperity are concentrating their attacks on this keystone of our success. They knew that if it collapses, the entire structure will fall.

Today, one-third of the cost of Government is being spent for national defense. For the next fiscal year, the United States Army, Navy, and Air Force are asking for a minimum of $15,000,000,000. I cannot tell you whether this huge sum of money is too much or too little. But I can tell you that no army, no navy, no air force, however large and efficient it may be, can protect the minds and hearts of the American people against the poisonous propaganda which is being fed to them. The only protection against this form of attack is a determined and continuous counterattack, a barrage of truth which will completely nullify the bombardment of falsehoods to which the American people are being constanly subjected.

We in America must guard against taking liberty for granted and regarding it as a natural state of man. We must face the fact that there are forces at work which are striving to deprive us of those fundamental rights for which so many brave men have fought and died. They seek to return us to those dark days when our people were subject to the whims of tyrants.

The origin of these forces lies in foreign lands where people live in poverty, in misery, and in fear. They come from countries which call themselves democracies, but where a citizen may not own land or select his own job. He may not be tried by a jury of his peers. He may not stay away from work without good and sufficient reason. He may not employ anyone to work for him. He does not have freedom of speech, freedom of assembly, or freedom of religion, and his press and radio are censored by his government.

Surely, with a knowledge of these facts, the American people are too wise, too alert, and too intelligent to be taken in by the promises and propaganda of alien doctrines, no matter how subtle or clever they may be. However, this belief in our strength may, in fact, be our weakness. Many of our people simply do not realize that liberty is not a permanent possession but must be cherished and protected.

We must always remember that an integral part of the American character is forever to seek improvements. Americans are never satisfied. They are always looking for ways and means to improve their lives, their fortunes, their jobs, and their Government. That is one reason why we have been such a progressive and successful nation. But, on the other hand, this same restless spirit may make their minds susceptible to the false promises which are so lavishly made by the disciples of economic systems that seem at first glance to offer greater benefits to a greater number of people.

Unfortunately, many Americans do not think about the source of these promises. They do not remember that these highly-touted economic systems have failed miserably in the past in countries where they have been tried. They do not realize that the security which these systems allegedly offer must be paid for by giving up many of the privileges which we Americans believe are the basic rights of man.

Nobody in this world is more secure than a man in a penitentiary. He is fed, clothed and housed. But he is not free to go and come as he pleases. He is watched, guarded, and disciplined. There are millions of people in other lands who have that same kind of security. But we Americans have always believed that the only real security lies in liberty and opportunity.

In recent years, the propaganda mills abroad have been grinding out misleading promises which have been picked up and spread over here. As a result, an increasing number of people are led to believe that we should have a paternalistic form of government on which they can lean for security. This is a challenge to business, and it is the high responsibility of business to give convincing evidence that real and lasting security can be more soundly acquired through the American system of competitive free enterprise.

Frankly, I did not come here today to convince you of the worth of our competitive system of free enterprise, or of the superiority of our American way of life. As business executives, I know that you already believe in both. Rather, my purpose is to urge that you personally carry on a crusade to keep America strong. Each one of us should use every means at our command to remind the people of the United States that no other economic system can compare with our American way in providing more of the good things of life for more people.

Now, I have no doubt that you will ask: "What can we do about it?" I shall try to answer that question.

Primarily, it seems to me that we waste entirely too much time selling each other on the superiority of competitive free enterprise. With whom do we usually discuss the subject? The chances are that we talk about it principally with our fellow club members and our friends and associates whose lives run parallel to our own. But do we try to get our ideas over to our employees? Do we talk them over with our children, with Boy Scout troops, with YMCA members or with farm-youth organizations? Do we meet and talk with women's clubs, with the teachers of our children and with church leaders? If we are not doing all these things, and more, we are not helping to keep America strong.

The next question which you will probably ask is: "What shall we tell them?" Frankly, there is much to tell.

First. The United States, although it is a relatively new country, has a higher degree of culture than any other nation. This is exactly contrary to the propaganda which is being poured into the minds and hearts of our people so forcefully and so relentlessly. But the facts are that with less than 7 percent of the population of the world, we have more young people in high schools and colleges, more musical and literary organizations, more libraries and more distribution of the written and spoken word than all of the other 93 percent combined.

Second. We have the highest standard of living in the world. We are better fed, better clothed, and better housed than any other people on earth. Our health as a nation is unparalleled and it is constantly improving. Our life span grows longer every year.

Third. We hold a position of moral and spiritual leadership. We have more hospitals, more charitable institutions and, probably, more churches per capita than any other country. After fighting and winning two world wars, which cost hundreds of thousands of lives and hundreds of billions of dollars, we gained neither additional territory nor domination over any other country. On the contrary, we helped friend and foe alike to regain political, economic, sociological and spiritual health wthout asking any favors in return. Can any other nation match this record of generosity and understanding?

Fourth. From a standpoint of material possessions, we Americans have more luxuries, more comforts and more conveniences than anyone else. Free-enterprise America has one automobile for every four of its citizens. Socialist Great Britain has one for every 22. Communst Russia has one for every 252. Under free enterprise, there is one radio for every three Americans. Under socialism there is one radio for every five Britons. Under communism there is 1 for every 45 Russians. One out of every 5 people in free-enterprise America has a telephone, compared with 1 out of 155 in Socialist Great Britain and 1 out of 188 in Communist Russia. Even more startling comparisons could be made in such commodities as washing machines, refrigerators, vacuum cleaners, electric lights, food, clothing and almost any other item which contributes to the happiness or welfare of mankind.

Fifth. Let us point out that America's system of individual competitive free enterprise is tried and proven successful, whereas other systems are either untried experiments or downright failures. During World War II, free-enterprise America turned out more war materials than all the rest of the allied nations combined. Under the impetus and incentive of war, companies which fought each other in good old-fashoned sales competition in peace time, pooled their resources and worked together as a well-integrated team to multiply the output of war materials. Compare that system with the methods used in totalitarian countries, where government control of production restricts the number of enterprises and, consequently, results in a shortage of industrial capacity in time of emergency. It was America that furnished much of the materials for our allies, as well as for our own armed forces. Without those materials, the nations united with us might have been conquered by our common enemies.

Sixth. Let us set somebody straight about the matter of profits. Let us correct the idea which has been spread by soapbox orators, wily subversives, and well-meaning but misled reformers that the workers get the smallest share of the income which manufacturing produces and that the owners get fabulous amounts. Let us tell them that, actually, out of every dollar of sales made by manufacturer, 47 cents go for materials and supplies, of which 35 to 45 cents go to the workers who produce those materials. Nine cents go for taxes, of which 4 cents are paid to Government employees. Six cents go for depreciation, maintenance, repairs, and interest, 2 cents for advertising, and 1 cent for research. That leaves 35 cents from the sales dollar of which the employees get 29 cents. The remaining 6 cents are profits, of which 3 cents are set aside for tomorrow's jobs by reserves to buy new machines and to expand the business. The remaining 3 cents are paid to the stockholders, who are the owners of the machines, the tools, and the factory buildings which are used by the workers to increase their earning power. All told, approximately 85 cents out of every dollar of sales by manufacturers go for salaries and wages.

Seventh. Let us tell the real facts about who owns American business. Let us correct the impression that it is owned by a mere handful of individuals. Let us point out that under some other economic systems, industries are owned by the government. Over here, industries are owned by the people. Every one of the 50,000,000 Americans who has a savings account, each of the 54,000,000 who has a life-insurance policy, and each of the 14,000,000 who has shares of stock or industrial bonds, owns directly or indirectly a part of American industry. All of them have a stake in American business and they should be among the first to insist that business concerns make profits. Otherwise, their savings accounts, their life-insurance policies, and their securities will be of little value. Anything that hurts business hurts them, personally, and individually, because they are an integral part of business.

How necessary it is to get this story over is shown by a recent survey among teachers of social studies and clergymen of various faiths throughout the Nation. The members of these professions believed that only about 70 percent of the wages and salaries and 30 percent of the income from dividends, interest, and rents were paid to people who earned less than $5,000 a year. On the contrary, a national-income study made by the bureau of economic research of the University of Notre Dame, shows that 90 percent of all wages and salaries, nearly 70 percent of dividends and interest, and 83 percent of income from rents were paid to those earning under $5,000 a year.

This same study shows that, after payment of Federal taxes, only 5½ percent of wages and salaries, 17 percent of all dividends and interest, and 9½ percent of income from rents goes to those earning more than $5,000 a year. If people with above-average education, such as teachers of social studies and clergymen, can be so far wrong, imagine how completely misinformed the average American must be about this all-important distribution of national income.

Eighth. Let us be realistic. Let us stop talking about the good old days, which really may not have been as good as some thought they were. Let us try to win friends and influence the people who really count. Let us stop telling each other how good our economic system is and start telling those who do not already believe it. Let us show them that we are all playing on the same team, the freedom team, and that we and they must work together if we are to win the all-important game of survival in which our individual, personal liberties are the stakes.

Finally, let us ask the critics to take a long and searching look at the rest of the world and to ask themselves this question: "Is there any other country where I would be better off than here?" If the answer is

"Yes," then remind them that they are free to go and live in that country. If the answer is "No," then warn them that they should take a more active and personal part in stopping the efforts of those who are trying to import some other country's way of life and impose it on us.

We have all got to realize that we are living in a new and different kind of world. We have never before found it necessary to take an active personal part in defending our way of life, because until a relatively few years ago, the American way was accepted by all our people. Until recently, it was not under attack by false disciples of foreign doctrines.

But times have changed. Today we must reinforce the faith of our people in the American way of life. We are faced with the greatest competitive battle in history. It is a battle between those who believe in the American way of life and those who seek to destroy it. But competition is no stranger to us. We thrive on it. It is the very lifeblood of free enterprise. All of us in this room, and thousands more like us, know how to fight and win against competition. Consequently, the only thing we have to guard against is that we shall be lulled into a false sense of security and that we shall fail to realize the necessity of joining in this crusade.

If individually we devote the same thought and energy toward waging and winning this battle of economic principles as we have in the past devoted to winning the battle of business survival, I say to you that there is no power on the face of the earth that can destroy the American system of individual competitive free enterprise. By each doing our part, we can and we will succeed in keeping America strong.

Delayed Pilgrims

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. CELLER. Mr. Speaker, on Sunday, March 13, 1949, several members of the Committee on the Judiciary traveled to New Orleans to witness the arrival of *General Sturgis*, the first refugee ship to dock in the port of New Orleans. The committee members who were present are: FRANCIS E. WALTER, MICHAEL A. FEIGHAN, FRANK L. CHELF, ED GOSSETT, KENNETH B. KEATING, EDWIN E. WILLIS, and myself.

The *General Sturgis* brought 843 displaced persons to the United States under the Displaced Persons Act. The *General Sturgis* chartered by the IRO which pays for the passage of the displaced persons to new homelands was the last of seven ships to leave north German ports in February.

The final destination of the displaced persons were: Louisiana, 251; Illinois, 211; California, 72; Iowa, 65; North Carolina, 45; Missouri, 37; Texas, 29; Indiana, 24; Tennessee, 20; Arkansas, 15; Kentucky, 11; Kansas, 10; Georgia, 9; Nebraska, 9; Oklahoma, 7; District of Columbia, 6; South Carolina, 4; Ohio, 3; Wisconsin, 3; Minnesota, 2; Florida, 2; West Virginia, 2; Delaware, 2; Oregon, 2; Colorado, 1; and New York, 1.

Among the immigrants are 197 families, with 115 children under 6 years of age and 128 between the ages of 6 and 16. The largest family group is the nine-member Polish family of Mr. and Mrs. Stanislaw Matuszewski who were bound for St. Michaels Parish, West Memphis, Ark. Sponsored by the National Catholic Welfare Conference, the Matuszewskis have seven children ranging in age from 16 months to 18 years. Three of the youngsters were born in Germany where their parents had been brought for slave labor.

Farm families aboard the *General Sturgis* totaled 79, representing 279 family members. In addition, 23 single men were listed as farmers.

Other occupational groups included skilled workers, 177; clerical, 39; professional, 33; personal services, 27; and unskilled labor, 17.

I appreciated keenly this opportunity to see these people who were to become Americans. I was deeply impressed with them, and I say this without reservation. I felt certain they would add immeasurably to the welfare of the country because of the appreciations and democratic ideals they brought with them in addition to their special skills and professions.

Their joy at landing in the United States was unmistakable, and it was a moving sight indeed to watch these "delayed pilgrims," as I call them—to watch the repressed fervor after these long years of suffering and deprivation with which they greeted the new and promised land.

Considerable space in all the New Orleans newspapers was devoted to the arrival of the displaced persons. From the wide selection I have taken some typical examples which indicate the welcoming attitude and warm reception of the people of New Orleans. A news story and two editorials follows:

[From the New Orleans Item of March 14, 1949]

EIGHT HUNDRED AND FORTY-EIGHT DP'S ARRIVE HERE—251 TO MAKE THEIR HOMES IN LOUISIANA

The day couldn't have been worse.

Fog shrouded the ship and it was raining like all get out.

But not one of them stayed below. The whole group, there were more than 800, crowded the rail to get a glimpse of the United States of America.

There were Poles, Czechs, Lithuanians, Latvians, Hungarians, refugees from iron-curtain countries, and eastern Europeans.

Few of them spoke English. But you didn't need to understand their language to know what they were trying to say.

Two words summed it up: "Thank God."

That was how 848 displaced persons landed in New Orleans today.

DOCKS AT 8 A. M.

Their ship, the *General Sturgis*, landed at the Poland Street wharf a few minutes before 8 o'clock.

They had a royal reception. Bands were playing. People crowded the wharf. Several Congressmen, officials, and the mayor were there to greet them.

The welcoming ceremonies were lengthy. But not one of the DP's seemed to mind. Alternately, they laughed and cheered as the speakers were heard.

Mayor Morrison said "it is significant that you landed at the Poland Street wharf because many of you are Polish."

GREAT EVENT

Representative EMANUEL CELLER, of New York, said "it is a great event for New Orleans to be chosen to receive this ship. It is a symbol as a haven for those oppressed."

Others welcoming the DP's were Representative KENNETH B. KEATING, of New York, Representative MICHAEL FEIGHAN, of Ohio, Representative FRANCIS WALTER, of Pennsylvania, Representative FRANK CHELF, of Kentucky, and Representative EDWIN WILLIS from St. Martinville in Louisiana. Also present were Watson B. Miller, Commissioner of Immigration from Washington, and Ugo Carusi, chairman of Displaced Persons Commission.

Aboard were 848 persons, 251 of whom are destined to settle in Louisiana, the rest to be scattered to every section of the country.

Every one has a guaranteed home and job waiting under the displaced persons' resettlement plan.

Most of them are farm workers from Poland, Lithuania, Latvia, Estonia, Czechoslovakia, Hungary, and Yugoslavia.

Many are married couples, seeking homes for their families, uprooted by Hitler's ruthless armies. Two hundred and forty-three children, ranging from less than a year old up to 16, are in the group.

Of the 251 immigrants to Louisiana, only four will remain in New Orleans.

They are four Polish women who will be given work at the Ursuline Convent, 2635 State.

The rest of the Louisiana settlers will go to sugar and cotton plantations throughout the State where homes for them and their families have been offered.

Only a few professional men and women—some teachers, several doctors, one musician, and an optician—and a light sprinkling of industrial workers are aboard. All of these are going to jobs in the North and on the west coast.

The rest are bound for farms, mostly in the South and the Middle West.

CORDIAL WELCOME

On hand at the dock were representatives of each of the national agencies acting as their sponsors in their new country. Many individual sponsors were there to greet them in person.

There was also a well-organized battery of volunteer interpreters, motor-corps chauffeurs and canteen assistants ready to help them through the confusion of their first day. They saw them aboard trains or buses or to emergency lodgings, to serve them coffee and doughnuts and regular meals.

The welcoming ceremonies were scheduled to be opened by H. Vance Greenslit, chairman of the New Orleans committee.

BAND TO PLAY

There was music by the Jesuit High School Band, brief addresses by Representatives CELLER and WALTER and by Senator Guy J. D'Antonio, representing the State, and Mayor Morrison, representing the city.

All three religious faiths were represented in the ceremonies, the Catholic by Archbishop Rummel, the Jewish by Rabbi Emil W. Leipziger, and the Protestant by Dr. John S. Land, president of the New Orleans Council of Churches.

Each immigrant will find plenty of help, according to Mrs. Jean L. Benson, of the Council of Social Agencies, which has coordinated the plans of the local volunteer groups.

Each individual or family is sponsored by one of the six national resettlement agencies which will all have representatives at the docks.

Interpreters, recruited through the churches in New Orleans, were helping them through the formalities of disembarking and acting as guides.

Those who are to catch trains or busses immediately found a fleet of cars ready to take them to the proper stations, and those who had more than a few hours to wait were given accommodations either at the port of embarkation aboard the ship, or—in some cases—at the Jewish community center.

FIRST AID

The Red Cross had a first-aid station in operation on the dock and will also have a canteen unit there to serve coffee and doughnuts all day and hot soup at noon. The canteen unit will also serve a hot supper in the port of embarkation cafeteria for any who must wait overnight.

A special train has been scheduled to take the group bound for Illinois and the Middle West to Chicago.

National agencies sponsoring the immigrants include the National Catholic Welfare Conference, Hebrew Sheltering and Immigrant Aid Society, United Ukraine-American Relief Committee, International Rescue and Relief Committee for the Resettlement of Polish Displaced Persons, the National Lutheran Conference, and the Church World Service.

Assisting with transportation and travel problems will be the Travelers' Aid Society.

The *General Sturgis,* which sailed from Bremerhaven, Germany, February 26, is the fourteenth ship to bring refugees out of Europe under the Displaced Persons Act. The others have docked at Atlantic seaboard ports.

Another DP ship, the United States transport *General Black,* is scheduled in New Orleans April 13.

[From the New Orleans Times-Picayune]

IN THE LAND OF THE FREE

Monday morning, here in New Orleans, Mme. Janina Karczewski, of Poland, led 842 other emigres from central and eastern Europe down the gangplank of the United States Army transport *General Sturgis.* She stepped onto the soil that now becomes her own in the same way that America for over three centuries has become the home of those from other lands.

It was an occasion of intense joy mingled with sorrow. For those who now realized their dreams, the moment was saddened by thoughts of the many who were not so fortunate: Those who had perished miserably in Nazi and Russian concentration camps; those who are still enduring serfdom, terror, and torture under the Communists; and those still awaiting their chances to emigrate to a new country.

The past sufferings of these new residents, who one day we hope will become our fellow citizens, have forced them to become Americans the hard way. There should be no doubt that they will appreciate and value many aspects of our way of life much more highly than we who take much of our life for granted. We have so many liberties and so many inalienable rights that we fail to sense the extraordinary worth of our social, economic, and political systems. These new Americans-elect, on the contrary, know fully the splendor of what we have because they have experienced what it means to be without these liberties and rights.

Americans, as many foreign observers have pointed out, are adept at counting their material blessings, but not so capable of appreciating nonmaterial advantages. Certainly our unique standard of living is impressive to all newcomers. But these refugees from the anguish and horror of Red and Nazi despotism will be much more inclined to estimate as priceless the freedoms we have enjoyed for so long that we never think of them.

From this very group of newcomers may come men and women who by their accomplishments will swell the list of illustrious refugees to this country during the past 10 years: Twelve who have received Nobel prizes, 103 listed in Who's Who in America, and 200 included in America's Men of Science. But we shall gain from the worthy actions and work of each of these people whom we welcome to our Nation and to the chance of one day becoming citizens of the United States of America.

[From the New Orleans Item of March 14, 1949]

NEW ORLEANS GREETS THE DP'S

No great bronze statue with torch upraised stood at the harbor's mouth to greet 843 former displaced persons as these entered the United States of America at New Orleans this morning aboard the U. S. S. *General Sturgis.* But in the brown current of the river they breasted when passing inland from the sea, was water from some 30 States of this great Nation—from the Montana mountains where men delve into the earth for copper and other metals, from the coal fields of Pennsylvania, from the cattle ranges of New Mexico, from the industrial centers of Ohio or New York State, from the peach orchards of Michigan and the cotton plantations of Georgia, from the timberlands of Minnesota and the wheatfields of Kansas, from Kentucky's blue grass and the farms of the Illinois corn belt, from Wisconsin's dairy land and the Louisiana sugarcane fields.

No matter whence they came, no matter what fields they made fertile, what mill wheels they turned, what cargoes they bore, what turbines they whirled into productive power—here where displaced persons from an Old World today enter a new home those droplets of water are united and indistinguishable from one another in a river whose might is derived from their union.

That river, then, is as eloquent a symbol of what waits those newly come to this land as any piece of man-made sculpture could provide. For it welcomes them to a Nation made up of particles from every country, race, creed, and clime on earth. No matter what they were at the source of their migration; no matter what factory machines they tended, farms they tilled, mines they worked, or schools they taught; no matter at what altars they worshipped, what languages they spoke, or clothing they wore; whether they came from mansion or hovel, mountain or plain, teeming city or lonely wilderness—

Here in this land of their journey's end they can become one with their fellows in a stream that is mighty because of its unity. At the point of the great river's united might we greet today new arrivals, many of whom will settle among us in Louisiana, while others journey still farther among the 48 States of the Union. Whether they reached our shores from Lithuania, Czechoslovakia or Poland is of no consequence. Only their will to join with us in working unitedly for the proud freedoms that generations of freemen secured and perpetuated for all who might come after them can condition their future.

That these newest of Americans debarked in a dreary downpour of rain is regrettable of course. Yesterday morning's warm sunshine would have brightened the rippling banners and the new greenery of a springtime landscape. But it could not have made the greeting extended to the newcomers any more hearty. Sunshine or rain, it is with full confidence that they will make the shining best of the opportunities awaiting them here that we bid them welcome to what is henceforth to be their cherished homeland as well as ours.

The North Atlantic Treaty

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Mr. Felix Morley which appeared in Human Events under date of February 16, 1949. I recommend the reading of this article to every Member of the House, so they may have the benefit of the thinking of this outstanding journalist.

THAT NORTH ATLANTIC TREATY

(By Felix Morley)

In his statement of February 9, condemning the vicious persecution of Cardinal Mindszenty, Secretary of State Acheson took occasion to attack all governmental procedures in Communist Hungary.

Mr. Acheson noted that in Hungary: "Parliamentary opposition, an element indispensible to the democratic process, has been ruthlessly eliminated." Then he added: "The people of the United States * * * are sickened and horrified by these developments and fully comprehend the threat they constitute to free institutions everywhere."

There is no question that the American people are sickened and horrified by the actions of the Communist tyranny in Hungary and elsewhere. But a good many Americans also remember that it was our own Government, with Mr. Acheson even then prominent in its councils, which acquiesced in the Soviet occupation of Hungary, to say nothing of Communist infiltration of Poland, Czechoslovakia, Yugoslavia, Albania, Rumania, Bulgaria, and much of Austria and Germany as well.

So it is somewhat naïve, to say the least, for Mr. Acheson, who served the Roosevelt administration well, to be critical now of the results of our earlier ardent flirtation with communism. It is only a little over 5 years since President Roosevelt, on December 24, 1945, told the American people that "I got along fine" with Stalin. This "stalwart" Communist dictator, Mr. Roosevelt said further "is truly representative of the heart and soul of Russia; and I believe that we are going to get along very well with him * * * very well indeed."

It is not Stalin who has changed in the interim. In 1944, as 20 years earlier when he pledged himself to the cause of atheistic world revolution at Lenin's bier, Stalin was working to destroy all democratic processes. And if Secretary Acheson is really surprised by the present logical application of Stalin's philosophy in Hungary, the blame for retarded education cannot fairly be placed on the Kremlin.

II

Short of another war—this time to destroy Soviet Russia and rebuild a powerful Germany—there is little we can now do to save the helpless millions of people whom we have turned over to the tender mercies of communism. But Secretary Acheson, however short-sighted in the past, has currently made an observation of great cogency. It is his statement, already quoted, that: "Parliamentary opposition [is] an element indispensable to the democratic process."

The Secretary of State thereby passes much-needed criticism on the so-called bipartisan foreign policy, which has so far meant in effect that parliamentary criticism in this field is eliminated here as completely as in Communist Hungary. Mr. Acheson is

to be congratulated for thus indirectly denouncing the pusillanimous Republican leadership in Congress. And it may be hoped that the words of the Secretary will encourage the most careful congressional scrutiny of the so-called North Atlantic defense pact, now under preparation in the Department of State.

The precise content of this projected treaty, on which the great minds in the Department of State have been working for months, is still a carefully guarded secret. These officials are quick to denounce infringement of "the democratic process" under the Soviet tyranny. They are much more cautious about "open covenants, openly arrived at" when it is a matter of upholding the democratic process at home.

The Department of State, however, has prepared the groundwork for this treaty carefully. It bases its legal case on two earlier governmental actions. One of these is the adoption of the United Nations Charter, in which it is stated (art. 51):

"Nothing in the present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security."

A second justification for the projected North Atlantic treaty is found in the so-called Vandenberg resolution, adopted by the Senate on June 11, 1948. In principle this endorsed "association of the United States by constitutional process" in collective security arrangements within the United Nations framework. In debate on the resolution (May 22) Senator VANDENBERG assured the Senate that no European alliance would be underwritten without specific congressional approval.

The Department of State is trying manfully to turn the Vandenberg resolution, and article 51 of the Charter, into two pillars for the support of the North Atlantic treaty. It can only be done by a tour de force. The projected treaty is clearly designed as a military alliance of some members of the United Nations directed against other members (the Soviet bloc) of the United Nations. And to assert that the UN Charter ever contemplated such a travesty is absurd on the face of it. The Vandenberg resolution, on the other hand, specifically stated that subsequent treaties must be in accordance with the Constitution of the United States, and that provision undermines the contemplated alliance.

III

Among the powers vested in Congress by the Constitution is that of declaring war. Section 8 of article I says flatly: "The Congress shall have power * * * to declare war."

From the viewpoint of an autocratic administration, willing to make war an instrument of national policy, this is a most unfortunate provision. One of the great assets of a dictatorship is absolute control of foreign policy, including the right to declare war at what seems to the dictator the correct psychological moment. That comes when people have been so conditioned by governmental propaganda as to believe that an act of aggression by their leader is really an act of national self-defense. This was the Hitler-Goebbels technique, and they were good at it.

The Constitutional provision that only Congress can declare war is not very much of a safeguard against the will of a President determined to go to war, as we learned in 1940–41. But it does raise difficulties. It means that a state of war cannot be imposed on the American people automatically, and to that extent it hampers the executive will. Naturally enough, the other parties to the projected North Atlantic alliance are not interested in the liberty of the American people. If we cannot preserve self-government it is not the business of others to give us lessons on the subject. So Great Britain and France have stipulated, very naturally, that in the proposed military alliance we should go to war automatically if they are attacked.

That request is currently causing headaches for the Department of State. It is a reasonable enough request, under the age-old pattern of European thinking. The very essence of the European alliance system is that if one ally goes to war, the others automatically become belligerents. But the men who wrote our Constitution had the temerity to despise what George Washington called entangling alliances. So they put into the Constitution that awkward little provision about Congress. Secretary Acheson, believing as he does in the desirability of congressional opposition, can scarcely wish to circumvent it.

IV

But Secretary Acheson, with the enthusiasm of a new appointee to a post of command, has been making his difficult job even harder than it needed to be. It wasn't easy to work out a binding military alliance confined to ourselves, Canada, Britain, France and the Benelux nations. The Dutch, for instance, have pointed out that if the Netherlands decides to smash the Indonesian Republic, and if we are an ally of the Netherlands, then we too should line up against those aggressive Javanese natives.

All that has been tough for the Department of State. Yet Mr. Acheson has proceeded to enlarge the problem. Even before the alliance in its original design was concluded he sought to bring the Scandinavian countries into it. And where he has met a diplomatic defeat which would seem crushing if our diplomacy were not so well accustomed to reverses.

The obstacle encountered by this diplomacy, when it sought to bring Scandinavia into the projected alliance, was the traditional neutrality of Sweden. The hard-headed Swedes, like the Swiss, successfully sat out the last two wars. They are perfectly willing to sit out a third in the series. And it is difficult for us to tell the Swedes that since the establishment of the United Nations, the concept of neutrality is meaningless. The obvious retort is that the United Nations, as our diplomacy set it up, has even less meaning. Only Americans are fooled by our feverish effort to build an alliance against Russia within the framework of the United Nations.

The wholly intelligible Swedish plan is for a Scandinavian neutrality pact, embracing Norway and Denmark. If we could offer the Norwegians and Danes an automatic guaranty of military aid, we might be able to seduce them from the side of Sweden. But section 8 of article I of the Constitution prevents. And—again thanks to Mr. Roosevelt's trust in the stalwart Stalin—both Norway and Denmark are far too open to Russian occupation to invite that fate without even a moral commitment from us.

Secretary Acheson is not unique in sketching out policies which look magnificent, but wither away before the cold winds from Russia. Where Mr. Acheson differs, from his immediate predecessors at the swinging tiller of the Department of State, is his frank tribute to the value of that parliamentary criticism which he rightly calls indispensable to the democratic process.

It now seems certain that the State Department planners will get this criticism, and nobody is likely to call it premature. Of considerable significance in domestic politics is the fact that the first real rumblings of opposition to the proposed North Atlantic alliance come from Senator TOM CONNALLY, the old-fashioned Democrat who now sits as chairman of the Senate Foreign Relations Committee.

Pennsylvania Must Make Her Choice

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by David H. Stewart, president of the Pennsylvania State Education Association, at the legislative dinner, western convention district of the Pennsylvania State Education Association, Pittsburgh, February 26, 1949:

PENNSYLVANIA MUST MAKE HER CHOICE

Mr. Toastmaster, distinguished guests, and fellow teachers, I welcome the opportunity to discuss the program of the Pennsylvania State Education Association tonight. Present here are representatives of these groups, Members of the National Congress, the General Assembly of Pennsylvania, school boards, parent-teacher associations, Federation of Women's Clubs, other service and civic groups, and teachers in the classrooms of Pennsylvania. These groups determine the destiny of the public schools, and if they could be made to realize the serious plight of our schools, I am confident, the necessary measures would be taken to rehabilitate and improve our schools.

Now if teachers were the only ones lamenting the situation of our public schools, our opinion might be suspect as that of prejudiced witnesses. But current magazines, the daily press, the radio, and books written by impartial observers paint a more alarming picture than we do. Time will not permit a complete recital of these witnesses but may I cite a few. After a very careful survey Mr. Benjamin Fine published his findings in a book, Our Children Are Being Cheated. The September 1948 Kiplinger Letter is entitled "Our Poor Schools." The February 1949 Atlantic Monthly publishes an address before the United Parents Association of New York City by Miss Agnes Meyers entitled, "Are Our Public Schools Doing a Good Job." The September 9, 1948, Pathfinder published the results of a survey of the schools in every State under the title, "How Good Are Our Schools." Dr. Harris, an economist of Harvard University, published a book, "How Shall We Finance Education," in which he carefully examined the problem.

In general, the conclusion of all these is that our schools are in a serious condition because teachers are underpaid and teach in overcrowded classrooms and that buildings and equipment are not what are needed for today's children. The situation is becoming more serious because there is already a marked increase in elementary enrollments due to the high birth rate of the 1940's. Something must be done to retain in and attract to the teaching profession capable men and women in larger numbers. The conclusions of these observers are that salaries must be increased, retirement provisions liberalized, and the status of the teacher improved.

The program of the PSEA is designed to correct this situation in our State. What is the situation in Pennsylvania? According to our own State department of public instruction our elementary enrollment will increase approximately 270,000 in the next 6 years. This will require 1,500 more teachers per year, or a total of 9,000 in 6 years, and almost that many more classrooms. The normal replacement demand is 3,000 elementary and 2,000 high-school teachers to replace those who withdraw from teaching or retire. Add the

1,500 elementary teachers to take care of the increased enrollment and we will need 4,500 elementary teachers and 2,000 high-school teachers each year of the next six. In the year 1947 there were graduated about 550 teachers prepared for the elementary grades and 3,000 for high-school grades. There will be an over supply of the latter until about 1953, when the crop of war babies starts arriving in our high schools. Thus it is easy to conclude that unless something is done, and that quickly, the children of our veterans for whom we want to do so much will go to an over-crowded school taught by an overworked teacher. I predict that our veterans will wonder what they fought for if their children have not adequate school opportunities.

To attract capable young men and women into the teaching profession we have had introduced legislation making the beginning salary for a teacher with 4 years of college training $2,400 with 10 annual increments of $200, making the maximum mandated salary for the classroom teacher $4,400. So long as other occupations offer better beginning salaries and higher potential maximum salaries we cannot expect to attract young people of quality in sufficient numbers. A recent survey gave the average teacher salary in New York as $3,652, District of Columbia, $3,480; Maryland, $3,440; New Jersey, $3,118; Ohio, $2,800, and Pennsylvania, $2,675. It is easy to understand why Pennsylvania's young people prefer to teach in these neighboring States. According to the September 8, 1948, Pathfinder, Pennsylvania ranks twenty-first among the States with an average salary of $2,450.

Under the present retirement system, a teacher must be 62 years old and have 40 years of service to retire on slightly less than half pay. Of the approximately 8,000 on the retired rolls, about 1,600 receive less than $500 per year and 3,200 from $500 to $1,000. We have had introduced legislation which, if enacted, will permit a teacher to retire on half pay after 35 years of service, to guarantee each teacher with 40 years of service a minimum of $100 per month, and to grant an additional allowance to those now on the retired rolls to increase the allowance of those with 40 years of service to a minimum of $100 per month. The actuary of Pennsylvania's system in a speech before the education congress stated that we have one of the most, if not the most, conservative retirement systems in the country.

The purpose of a retirement system is to enable those teachers who have worn out under the stress and strain of teaching to retire when they are no longer able to render a high quality of service. The purpose is to see that there is an alert and physically fit teacher for every child. If the State has an attendance law compelling parents to send their children to school, the State has a responsibility to see that each child has a capable teacher and goes to a suitable school.

We have also had introduced subsidy legislation whereby the State would pay its share of these increased costs. Good schools cost money and this fact must be faced. Either our schools will continue to deteriorate rapidly or enough money will be supplied to have good schools. If the general assembly finds it necessary to enact tax measures to finance this program, our association is pledged to support this legislation.

I want to take this opportunity to point out that the PSEA has a program to improve teachers in service; to challenge young people to enter the profession; to improve the materials and methods of instruction; to improve the ethical conduct of our members; and to give relief to worthy ex-teachers who are in need to whom we contributed last year, $18,000. I wish I had time to go into more detail about our professional program because I am convinced that many people, including some of our own members, do not know that we have more committees and members working on professional programs than we do on salaries and similar matters.

It is our considered judgment that this package of salaries, retirement, and subsidies is a must for the 1949 general assembly if good teachers are to be retained and if enough young people of ability are to be attracted to the profession. Unless we improve conditions at the teacher-pupil level, there will be little permanent improvement in our schools. We must act and act promptly. Unless the measures we advocate are enacted into law, the effect will be felt in the 1950's more than this year. Teachers cannot be educated and prepared on short notice. Teacher preparation is a matter of long-time planning. Pennsylvania must make her choice.

Next to being proud that I am an American I am proud of being a Pennsylvanian. I was born in this State; Pennsylvania has been good to me. I am proud of Pennsylvania's position and program on highways, on stream pollution and for mental hospitals. I hope the day is not far distant when my State will take her rightful place among the leaders in the field of education, so I can say with equal pride, educationally I am a Pennsylvanian.

Washington Letter

EXTENSION OF REMARKS
OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. NIXON. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include last week's copy of the Washington Letter, mailed weekly by my distinguished colleague, the gentleman from California [Mr. JACKSON] to his constituents in the Sixteenth District of California. In this exchange of correspondence between Mr. JACKSON and the California CIO Council, I feel that Members will find much of interest with respect to pending labor legislation in the Congress. Mr. JACKSON has, in his usual courageous manner, set forth many of the points in contention, and I recommend the following to my colleagues, not only in the committee, but others on both sides of the Congress.

THE WASHINGTON LETTER

(By DONALD L. JACKSON, Representative in Congress, Sixteenth District, California)

WASHINGTON, D. C., March 11.—One of the hottest topics on Capitol Hill and throughout the Nation generally these days is the problem of writing new labor legislation. Since the Eighty-first Congress convened more than 2 months ago, the respective committees of Senate and House have been struggling with the thorny problem of labor-management legislation.

PRESIDENT PROMISED REPEAL

One of the principal promises made by President Truman during the course of last summer's campaign was his pledge to seek immediate and outright repeal of the Taft-Hartley Act if reelected. To the joy, consternation, amazement, concern (depending on your political philosophy) Truman was reelected, and the drive was under way to put the Taft-Hartley Act in permanent legislative camphor in favor of the old Wagner Act, which measure organized labor has long considered its Magna Carta.

BOGS DOWN

However, the passing months have disclosed that it is one thing to make a promise, and quite another thing to redeem it. Both the proponents and the antagonists of Taft-Hartley have gone "all out" in their attempts to retain the measure on the one hand, and to repeal it on the other. An estimated 400,000 (to date) have sent answers to the General Electric-Fulton Lewis, Jr., poll to Members of the Congress, demanding retention. On the other hand, organized labor has branded the poll misleading and half-truth, and have urged their supporters to write demanding full and immediate repeal of the Taft Hartley Act.

CIO GOES TO WORK

This week the California CIO Council, with headquarters in San Francisco, dispatched long letters to members of the California delegation in the House (and presumably in the Senate). The letter is of sufficient interest to reproduce in part this week instead of the usual content matter of the letter. In order that your Representative's stand on the subject of the Taft-Hartley Act may be clearly understood, we are publishing our answer to the CIO Council.

CIO LETTER

Letter is addressed to Hon. D. JACKSON, United States Congressman, House Office Building, Washington, D. C., and reads, in part, as follows:

"DEAR CONGRESSMAN JACKSON: Upon unanimous instructions of the California CIO Council Executive Board, meeting in regular session February 25–27, I am communicating with you regarding the following legislative matters:

"The election results of last November proved conclusively that the American people were not in accord with the repressive legislation passed by the Eightieth Congress. The most important single issue in the election was repeal of the Taft-Hartley Act. The results of the election proved the American people desired immediate and outright repeal.

"For 2 months, a studied campaign has been going on, launched by the proponents of oppressive labor legislation, to thwart the will of the American people on this No. 1 election issue. The failure to enact repeal to date is looked upon by working people and their families as a continuation of the attack by the Eightieth Congress upon the standards of the American people.

"The Taft-Hartley Act, after 18 months of operation, has proved itself unworkable. It was a main contributing factor in the growing unemployment and the drying up of purchasing power which now threatens our economy.

"The members of the CIO in this State are not misled by the fumbling and procrastination taking place in congressional committees on this issue. They realize that the interests for whom Senator TAFT is the spokesman are playing for time by shifting from one phase of the act to another, prolonging debate and citing isolated horrible examples as justification of the act, in order to give big business propagandists more time for their attempt to stop the election mandate of the American people.

"We are informed that pressure is being exerted upon the House Labor Committee to hold up action upon the Kelly resolution, H. R. 237, passed by the subcommittee of which he is chairman. This resolution, calling for outright repeal of the Taft-Hartley Act and full restoration of the original Wagner Act, is what the people voted for and what they still demand.

"The executive board of our State organization urges you to support this resolution in every way possible, and requests that you make known your support of the Kelly reso-

lution to Majority Leader Congressman RAYBURN and to the chairman and members of the Labor Committee."

OTHER RECOMMENDATIONS

The paragraphs having to do with the Taft-Hartley Act are followed by a number of other recommendations on pending legislation, which are omitted because of space limitations. Your Representative has today sent the following reply to the CIO council:

"Mr. PAUL SCHLIPF,
Legislative Representative,
California CIO Council,
San Francisco, Calif.

"DEAR MR. SCHLIPF: This will acknowledge receipt of your long and interesting letter of March 4, setting forth the position of your organization with respect to proposed labor legislation and requesting the support of the undersigned in seeking immediate repeal of the Labor-Management Relations Act of 1947, more commonly known as the Taft-Hartley Act. I am very happy to have your opinion and recommendations in this connection, although the stand of your organization was made very clear during the course of the last election when your group gave its unqualified support to my opponent, Mr. Ellis E. Patterson.

"Several contentions set forth in your letter are not, in my opinion, substantiated by facts. Your statement that the election results of last November proved "conclusively" that the American people were not in accord with the "repressive legislation" passed by the Eightieth Congress does not, for example, coincide with the opinions expressed by many political economists and capable analysts. While I acknowledge that you have every right to the opinion that the leaders of organized labor were the spearhead in the defeat of the Republican Presidential and Vice-Presidential candidates, I am personally convinced that Republican failure to stand toe-to-toe and fight out the issues raised by Mr. Truman was the prime factor in that defeat.

"Throughout the course of the campaign in the Sixteenth Congressional District specific answers were given to specific questions asked. When the voters of my district went to the polls on November 2, last, they knew exactly where both my opponent and myself stood with respect to the Taft-Hartley Act, socialized medicine, socialized housing, continued Federal rent control, price control, and rationing, and any other questions having to do with the creation of an American socialized state. If they did not know, it was simply because they had not followed the newspaper accounts of my public debates with Mr. Patterson.

"I agree with your contention that one of the most important, if not the most important issue in that campaign was the question of Taft-Hartley repeal. That issue was made a matter of prime interest by President Truman and by your organization during the course of the preelection campaign. It remains today an unfulfilled promise, but it does not stand alone in that category. The committees of the House and the Senate are jammed with legislative measures which were promised early passage by the President and by the leaders of the Democratic Party, and no amount of Republican opposition could stop a determined and sincere effort on the part of the Democratic leadership to report the measures out for floor action.

"I am sorry that I cannot agree with your assertion that 'the Taft-Hartley Act, after 18 months of operation, has proved itself unworkable. It was a main contributing factor in the growing unemployment and the drying up of purchasing power which now threatens our economy.'

"I have at hand some very pertinent statistics with respect to the effect of the Taft-Hartley Act on unemployment in the metropolitan area of the city of Los Angeles, figures which I am certain will impress the objective analyst with the inescapable fact that Taft-Hartley has actually resulted in more employment rather than less, and that the operation of the act has resulted in retaining for the workers in a great many unions the fruit of their labors to the extent of millions of dollars in one city alone. It is to be hoped that the figures will make an impression upon the average working man and woman.

"During the course of the 19 months immediately preceding passing of the Taft-Hartley Act there were 441 strikes in the metropolitan area of Los Angeles, involving groups of union workers ranging in size from 1,324 in a December 1945 walk-out to a strike which called out 26,003 employees during May 1946. During the 19-month period a total of 186,539 workers were on strike at one time or another, with a total man-days lost figure of 2,521,623.

"During the 19-month period immediately following the passage of the Taft-Hartley Act a completely changed situation was reflected in the statistics. In the period covered there was a total of 215 walk-outs, ranging in size from a small strike in July of 1948 involving a total of 437 workers to the largest strike during the period in question, one which involved a total of 14,010 workers in November 1948. In all, a total of 95,353 union members were called out in strikes which resulted in a total of 1,531,426 man-days lost. Without respect to the merits of the many disputes, the irrefutable fact remains that during the course of the 19 months immediately preceding passage of the Taft-Hartley Act workers were out of pocket in excess of $10,000,000 lost in idle man-days. Add to this figure the amount of savings expended by the workers during the period when they were out on strike, and it is reasonable to assume that another sizable sum might well be added to the grand total lost to working men and women. In addition, and contrary to early claims that the Taft-Hartley law was designed to wreck unions, membership in organized labor has experience a healthy increase.

"There is nothing to indicate that those workers who were called out on strike following the passage of the Taft-Hartley Act were in any way deprived of their constitutional rights to strike, guaranteed in both the Taft-Hartley Act and the Wagner Act. Slaves do not have the privilege of striking, but these free Americans struck of their own volition, or at the behest of their unions. Incidentally, and in passing, the right to strike is fundamental and must be preserved in whatever labor legislation is finally passed by the Congress. There is no disagreement on that score among labor leaders and the Members of Congress, and the undersigned is happy to pledge his utmost support to the preservation of that right.

"You state that the members of CIO in this State are not misled by the fumbling and procrastination taking place in congressional committees on this issue. Neither, I may add, are the American people, nor the members of the Republican minority in the Congress. The fumbling and procrastination is as repugnant to the undersigned as it is to any member of the CIO. The majority of members on the committees having Taft-Hartley repeal under consideration at the present, have the power to vote out a repealer at any time and on an instant's notice. These are Democrat-controlled committees, and a better appraisal of the situation would indicate that they realize outright repeal of the Taft-Hartley act is impossible in the face of public opinion throughout the country at this time. Only last week seven Democrats joined nine Republicans in refusing to consider a motion made by Representative KELLEY to vote out immediately a Taft-Hartley repeal measure. The Republicans were in no way pledged to repeal of the act, but if your contention is correct that Democrat victories were achieved because of the support of organized labor, it might be well to ask yourselves just who is double-crossing whom?

"For my part I should welcome an opportunity to cast my vote on a legislative measure designed to repeal in toto or to retain in toto the Labor-Management Relations Act of 1947. That was the promise made to labor leaders by President Truman during the course of the election, and again we are in a full and complete measure of agreement on the course to be taken.

"But that course will never be taken. Those in control of the legislative machinery here in Washington are probing for a face saver, for some measure that will pull the sting out of the tail of the Taft-Hartley Act without pulling them out of office at the same time. The somewhat beclouded mandate of last fall is becoming no clearer as the days and weeks of inactivity go by. A vote today on the provision of the Taft-Hartley Act which requires union officials to sign non-Communist affidavits would reinstate that provision by a voice vote, although I see no logical objection to requiring the same affidavits to be filed by those in positions of management. The Democratic-controlled committees now at work on labor legislation have a wild bull by the tail and I should not care to hazard a guess on the outcome.

"In short, the undersigned voted for the original Taft-Hartley measure in the House of Representatives, and for the House-Senate conference report which sent the bill to the President who vetoed it. I cast a third vote to override the veto. My campaign was conducted largely in defense of the major provisions of the act, and my district returned me to Congress with a vote that exceeded by many thousands the margin by which President Truman carried the State of California. Consistency is not generally considered to be a political virtue, but in the present instance failure on my part to support the major provisions of the Taft-Hartley Act would be a breach of faith not only with the people who sent me to the Congress, but with thousands of laboring men and women in the organized labor movement who have regained a measure of personal dignity and freedom of action under the provision of the much-maligned act, and whom, in many cases, have notified Members of Congress of their complete satisfaction with the major provisions of the act.

"Important as are the rights of labor and the rights of management, I consider the welfare, the health, and the security of the majority of the American people to be the paramount consideration in any legislative device accomplished for the regulation of labor-management relationships. If my legislative acts are at variance with that concept of my sworn duty, I cease immediately to represent the people of my district as a whole and become instead the agent of special management or labor interest. This I do not propose to do.

"As indicated elsewhere in this letter, several changes might well be made in the Taft-Hartley provisions. These changes I shall support, but in the main it is my intention to oppose outright repeal of the Taft-Hartley law and to support, paragraph by paragraph, amendments which will be offered on the floor of the House seeking to reinstate important features of the present bill in the proposed administration measure.

"I shall give your other legislative recommendations the fullest measure of consideration during the course of committee hearings and later on the floor of the House.

"Thank you for communicating with me, and while we are not in agreement in the present instance, I appreciate your interest."

Voice of Alameda

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MILLER of California. Mr. Speaker, the Alameda Times-Star, one of the home-owned independent papers on the Pacific coast, has recently published an editorial that I commend to my colleagues.

The people at home are dissatisfied with many of the things that we do in Congress. They have grounds for their attitude toward us.

Perhaps it would be well if we stood back from the picture so that we could view it in its proper perspective.

To my thinking, the filibuster is outmoded and its use repulsive to a great majority of the people of the United States.

The editorial contained in the issue of March 18, 1949, reads:

VOICE OF ALAMEDA

Some 42 Senators the other day cast votes that completely thwarted, at least for the time being, the attempts of the balance of the Senate to do away with the filibuster.

In our opinion they struck a heavy blow for communism.

Regardless of the fact that the filibuster is a hoary American institution, its history has not been honorable or glorious.

The filibuster is nothing other than a weapon designed for use by a minority in preventing the exercise of the majority's will.

As such, it is not in accord with the principles of the brand of Americanism that we have had held up to us as uniquely admirable among all the various isms that infested the earth since the discovery of the Western Hemisphere.

But to say that the filibuster is not in accord with our highest type of Americanism is not enough to explain how those Senators in thwarting its end did the Communists a favor.

That requires a little more explanation.

The prerequisite to a successful Communist revolution is a condition of society in which a large portion of the people are thoroughly discontent. The reason for that is obvious. No person who has a good job, for example, will be inclined to upset the State under which he lives.

Given the large discontented section of the populace, the Communists then proceed with their agitations in order to increase the discontent to the point where an actual revolution can be brought about.

They accomplish their agitation by the simple expedient of calling for reforms, thus giving themselves the appearance of benefactors of the depressed and discontented.

But though they call for reforms, they do not wish the reforms to be effected by the government in power.

Obviously, if the reforms were instituted, the cause for discontent would be lost, and the Communists would then have to root around for other subjects of agitation with which to start their cycle over again.

Well, the case of the filibuster is a case in point.

If the filibuster were either done away with or vitiated, the way would be cleared for passage of the civil-rights bill, the anti-lynching, and anti-poll-tax bills, as well as various other pieces of legislation that cannot hope for passage so long as the present legislative set-up permits the filibuster.

The passage of such bills as these would immediately mean a tremendous relief to the Negroes and other discontented minorities.

The Negroes and these other groups, such as Americans of Mexican ancestry, would then become comparatively poor material for Communist agitators to work with.

One of the most important, if not the most important, positions on which the Communists stand in making their bids for leadership in this country would then be so completely undermined that they would be compelled to look elsewhere for another to replace it.

The above is the stark and naked truth as any person of intelligence can see who takes the trouble to read the writings of Lenin and Stalin, to say nothing of Karl Marx.

It is as elementary as the alphabet for a professor of English literature.

And so, among intelligent people, there can be no doubt that those Senators who have opposed so successfully the end of the filibuster have done as satisfactory a job, from Stalin's point of view, as if they were all working like beavers to make themselves eligible for the order of Lenin.

New York and the German Industrial Fair

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. JAVITS. Mr. Speaker, I append a temperate and well-thought-out presentation of the situation in New York behind the opposition to the German Industrial Fair. New Yorkers want to be sure that democracy, love for peace, and respect for neighbors are firmly rooted in the German mind:

POSTPONED THIS FAIR

Someone in our military government blundered in deciding to hold a great German trade exhibition in New York, of all places, next month. The purpose of the exhibition, according to the monthly bulletin of the United States-German Chamber of Commerce, was "to extend and strengthen trade relations between the United States and Germany, which were formerly so extensive and valuable." The sponsors intended to emphasize the need of swift economic recovery in Germany to ease the burden on American taxpayers. For this purpose our unimaginative and insensitive authorities named a Duesseldorf firm to handle the arrangements, put a committee of 11 German industrialists in charge and planned to admit 240 German businessmen to New York to advertise their products on the spot.

The project has run into difficulties that could easily have been foreseen. One of the committee of 11 turned out to have been a leading Nazi propagandist and was dropped from the list. Another, not yet dropped, held a title bestowed by Herman Goering upon Germany's most highly dependable industrialists. The architect appointed to design the exhibit proved to have been a Nazi Party member from 1933 to 1945. Altogether 102 Germans have been banned out of 231 exhibitors or salesmen whose applications for a trip to New York have been screened up to now.

This is only a faint foretaste of the troubles that are sure to arise if and when this contingent of German businessmen sets up shop in Rockefeller Center. Millions of New Yorkers will be affronted, rightly or wrongly, by the effort to peddle cuckoo clocks and optical goods in their midst and to advertise the pleasures of travel in Germany. It shows about as much understanding as to have set up a flashy show of German goods in the destroyed areas of Rotterdam or Warsaw. Certainly the American people, like all Allied peoples, will have to accustom themselves to buying German and Japanese goods once more; nations cannot be penalized forever for their past misdeeds. But it is neither good business nor good statesmanship to try to sell German goods with all this fanfare, and in the one American city, above all others, where the recent past is not easily nor quickly forgotten. The project should be postponed indefinitely, and German exports should be encouraged by other and less blatant methods.

Welfare, Garrison State

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer:

WELFARE, GARRISON STATE

In an address at the University of Chicago, M. S. Szymczak, Federal Reserve Board member, said the country was in danger of slipping "into a policy of chronic deficit financing. * * * If tension in the international situation persists, no retrenchment from high military budgets will be possible. At the same time a considerable expansion of the welfare activities of the Government is probable."

The danger is real, the warning timely.

The condition of chronic deficit financing which the Federal Reserve Board members fear, existed, as a matter of fact, throughout the 1930's and until the end of the war. It threatens again because in the years that have passed since the end of hostilities we have not only failed to bring expenditures under control, but have been committed to a variety of new and additional expenditures at home and abroad.

It is time thoughtful consideration were given in high Government circles to the answer to this question: What can the American economy afford in taxation and expenditures?

In his campaign last year President Truman traveled about the country promising more and more in the way of welfare expenditures. At no time since he succeeded to the Presidency has Mr. Truman voiced the obvious fact that the economic stability which is a major objective of his program can be realized only as the budget is balanced. With all his expressed concern regarding inflation he has seldom connected the inflationary danger with the Government's imprudence in spending and taxation.

From the reports of the Internal Revenue Bureau at the beginning of the month it appears that the deficit financing that Szymczak fears may have to be resumed before the end of the present fiscal year. In the light of this evidence it becomes increasingly clear that the Treasury will definitely be in the red in fiscal 1950 since revenues are almost certain to diminish, assuming no increase in taxes, and expenditures to increase.

President Truman and his advisers seem to believe that it will be possible for them in the late 1940's with budgets well in excess of forty billions annually to pursue the same broad policies, political and economic, which prevailed under Roosevelt when the average annual budgets were less than one-fourth as great. They seem to take no cognizance either of the tremendous difference between annual expenditures of ten billions and forty billions, or of the implications of a public debt of two hundred and fifty billions for the soundness and stability of the national economy.

By the same token they seem oblivious of the effects of extremely high taxation over a period of many years on incentives, capital creation, and other major ingredients of a dynamic economy.

It is true, doubtless, that we face dangers that cannot be averted if we go forward with extravagant spending and turn again to chronic-deficit financing. It is also true that the time is at hand when we need to appraise the broad policies to which as a Nation we are committed lest, in our zeal to insure welfare and security, we undermine the bases of both.

Communists Should Be Forbidden Entry

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport (Conn.) Life of March 20, 1949:

COMMUNISTS SHOULD BE FORBIDDEN ENTRY

According to report, as this is written, the State Department has not refused to sanction the entrance into this country of six members of a Soviet delegation to attend what is euphemistically called the Cultural and Scientific Conference for World Peace, scheduled to be held at the Waldorf-Astoria in New York the latter part of this month. It is reported the Department has not raised any objection to this gang visiting this country but has left the matter up to Attorney General Clark. Under our immigration laws Communists are not permitted to come here, but the Attorney General has some discretion in the matter and can admit them under conditions he lays down. We are spending billions to combat communism abroad but never seem willing to curb them here. This does not make sense.

ALL GOOD COMMUNISTS

The Communists who seek to attend this conference include Dimitri Shostakovich, the composer who, it will be remembered, crawled around practically on all fours in complying with the edict issued by the Soviet authorities demanding his music conform to Soviet ideas. He confessed his sinful crimes and promised to keep from offending in the future. That is how free Shostakovich is. The rest of the delegation includes Peter Pavlenko, prize-winning novelist; A. I. Oparin, biochemist; Sergei Gerasimov and Mikhail Chiaureli, motion-picture producers; Ivan Rozhansky, secretary of the delegation, and the man who heads it, Alexander Fadeyev, secretary-general of the Union of Soviet Writers.

Probably Fadeyev is the best known here, aside from Shostakovich, and that which brought him prominently into general knowledge should win him no encomiums in this country, much less getting him entry. It was this man who indulged in an ill-tempered outburst, so characteristic of the Russians, at the World Congress of Intellectuals held at Wroclaw in Poland last year. This congress was bitterly anti-United States, and while Reds can change their line faster than a chameleon can change his spots, one wonders just why Fadeyev would soil his shoes with the dirt of a country he holds in such contempt. We should be very wary of letting him into our land, and particularly under the conditions asked for by the Moscow Foreign Ministry.

SEEK DIPLOMATIC IMMUNITY

This embassy sent a note to the American Embassy requesting diplomatic visas for six members of this delegation, and with the note were diplomatic passports for them and a special passport for the secretary. The note also requested laissez-passer for the members of the delegation. All this means that American visas stamped in the six submitted passports would give the holders diplomatic immunity in the United States. So these Communists could go freely about this country with none to say them nay and not at any time subject to any one of our laws. Issuance of laissez-passer would exempt them from customs examination.

In short, they could bring almost anything into this country, and no one would be the wiser because of the protection this course would afford them. We say it would be just about the most foolish thing in all the world to grant such wide and sweeping privileges to avowed enemies of this land. They are ordinary Russians, not diplomats in any sense of the word, although, of course, they are Russian agents, as is every other member of the party. There is no reason on earth why they should be permitted to enter in the first place. This idea they will do anything to promote peace is about as phony as anything could possibly be.

OUR CULTURE "FILTHY"

Fadeyev stated his position in respect to the United States and how he regards this land at Wroclaw. He stated that behind the facade of the Statue of Liberty, America is producing the plotters and organizers of a new war, taking up where fascism left off in their hurry to start a new shambles. He also called American culture disgusting filth with the dollar sign on it. We could tell him we suspect some so-called American exponents of culture have something worse than the dollar sign on them, in shape of the hammer and sickle. It is our idea we should not permit such a creature as Fadeyev ever to get into this country, and particularly under diplomatic immunity. He should be held fully responsible for his deeds and utterances while in our country if we are as foolish as to admit him.

As many see it, this conference, to be held in such an aristocratic place as the Waldorf-Astoria, and how is it the comrades can stand to meet in such an atmosphere, is merely an American offshoot of the Cominform-dominated world congress of intellectuals at Wroclaw. One wonders just who adjudged them intellectuals, and to what ends do they apply their intellectuality, if any. It is just one more Communist-front camouflage and it is put forward in the name of peace. Never was so desirable a condition put to such subversive ends as has the cause of peace by the Communists and their fellow travelers. Its aim is to disseminate Soviet foreign policy and to seek to gain support. How Americans even at the moron level can fall for such bait is beyond understanding. We are sure the term intellectuals is a pretty bad misnomer where those who attend such a conference are concerned.

HENRY IS TIP-OFF

The fact that Henry Wallace is to attend to speak is just about enough to erase the intellectual stamp. Paul Robeson is another of the sponsors of this session which also should place it in the exact category where it belongs. The conference lists some 280 sponsors in all and on the list are many other known Communists and sympathizers. It is going to oppose the European recovery plan and it intends to pin down the responsibility for the cold war on this country. You may be sure that every possible step to stir up trouble and dissension here will be taken if our authorities are as blind as to permit the Kremlin to get away with any such activity right inside our own borders.

It is not too reassuring to note that among those to speak at the meeting are Dr. Sarah G. Blanding, president of Vassar, and Dr. Herbert John Davis, president of Smith College. We have heard a great deal lately of the infiltration of Communists and Communist sympathizers into the colleges and universities and the fact that presidents of two of the leading colleges in the country are willing to be connected with any such occasion as this is not at all reassuring that the allegations are not correct. We have come to the conclusion that the two classes in our public life today most easily befuddled and led up the garden path are ministers and educators.

WHY ATOMIC SCIENTISTS?

It is even more disconcerting to note that three persons connected with atomic matters are also on the list of speakers as announced by Dr. Harlow Shapley of Harvard. They are Dr. Lyle Borst, chief of the atomic pile at the Atomic Energy Commission's Brookhaven National Laboratory in Upton, Long Island; Dr. Philip Morrison, Cornell atomic scientist; and Dr. Victor Weisskopf, of the Massachusetts Institute of Technology. Perhaps the investigations into the workings of the Atomic Energy Commission and its head, David Lilienthal, have not gone nearly far enough. Just what are these men going to impart to our Russian friends? Does anyone think their choice as speakers was haphazard? We do not. We think the State Department, the Attorney General, and the immigration authorities should think more than twice before admitting these seven Communists into this country. They are certainly a greater menace to our security than are a few photographers taking pictures of the President lazing on vacation when he should be in Washington attending the Nation's business.

A Protest Against Invitation to Grand Mufti of Jerusalem To Attend United Nations Palestine Conciliation Commission Hearings

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. CELLER. Mr. Speaker, I was startled to learn that our member of the United Nations Palestine Conciliation Commission, Mark Ethridge, who is also Chairman of the Commission, felt that the Grand Mufti of Jerusalem should be permitted to be heard at the hearings of the Commission, because of its established policy to accept cooperation from any group desiring to assist the United Nations General Assembly resolution for peace in Palestine. What kind of cooperation and what kind of peace can one expect from this Hitler stooge? The

Mufti did all in his power in his broadcasts from Berlin at Hitler's side to stir up the Arab world against the Allies and particularly against the Jews. He should have long since been tried as a war criminal. The files in our State Department contain pounds of evidence indicating his thirst for Jewish blood and of his guilt as a tool of Axis Powers.

Under no circumstances should the United Nations Palestine Conciliation Commission grant a forum to Haj Amin el Husseini, the exiled Mufti of Jerusalem, within which to sound off his anti-Jewish poison.

Reforms or Else

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis News of March 19, 1949:

REFORMS OR ELSE

A shrewd observer of the political scene the other day smiled ruefully and said: "You know, the Hoover Commission is doing a tremendous job, but its reports probably will be ignored like many other good reforms."

His pessimism was not unfounded, for the Hoover studies are but the latest in a 40-year series, and undoubtedly will be followed by others over the next 40 years. In 1910, President Taft appointed an Economy and Efficiency Commission, but 2 years later the House cut off its appropriations.

In 1932, President Hoover, the overseer of the present study, submitted to Congress a regrouping of 58 executive agencies, but he had been defeated for reelection, so the incoming Democrats ignored his recommendations, maintaining that the incoming President should not have his hands tied. The subsequent New Deal period of taxing the spending probably would have bypassed those reforms anyway.

At any rate, the mistakes and the oversights of the past should remain with the past. Even though previous reports on governmental organization have been ignored, there is no excuse for Congress to shunt aside the present studies. The bitter truth is that the Nation cannot afford to do so, because the costs of government are rising at a rate that threatens the entire economy. A way must be found to improve efficiency, eliminate overlapping duties and reduce needless personnel or some day the Nation may awaken to a bankrupt Government.

The Hoover Commission studies show how these reforms can be made. Already the Commission has surveyed a number of agencies; last week it came forward with recommendations for improving the Department of Commerce, the Treasury and the regulatory agencies; Thursday it reported to Congress on steps needed to streamline the Interior Department, and now it proposes the establishment of a Department of Public Welfare and Education and the merger of Federal medical care under one agency. Logic certainly calls for the latter; medical services are scattered among 40 Federal offices. Yet this sensible consolidation already has drawn stiff opposition. Its critics resemble some Congressmen who cry for greater governmental efficiency, but who wince and draw away when it becomes apparent that they might lose patronage or some of their friends might be affected by it.

In all its reports there is a recurring theme: Reorganization of each major department along functional lines—transferring agencies whose activities are not part of the Department's major purpose. The Treasury Department, for example, "should again be made the real fiscal center of the Government," the Commission asserts. It recommends transferring the Coast Guard to the Department of Commerce, the Bureau of Narcotics to the Department of Justice.

The Interior Department, it sensibly decides, should be given more clearly the mission of development of subsoil and water resources. And since these activities require large public works, the Commission feels that "other public works also should be managed by this Department."

The Commission recommends similar transfers for all the departments, correctly reasoning that many "disastrous conflicts and overlaps" in both policies and duties will be eliminated.

It should be evident that the Nation will save billions if these recommendations are carried out, and it should be equally plain that unless they are carried out there is a serious risk that the Government could collapse from its own weight. Government, no less than business, cannot forever escape bankruptcy if it persists in a senseless course of overspending on hopelessly entangled administration.

Local Control of Rent Legislation

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. HAND. Mr. Speaker, yesterday the other body, in considering rent-control legislation, passed a modified version of the amendment adopted by the House providing for State and local control. It is difficult for me to see how this can be objected to, except on the dangerous theory that the people back home have no wisdom or intelligence, and are not fit to deal with their own problems, and everything in order to be properly done must be done by this great sprawling bureaucracy in Washington. A timely editorial on this subject was recently published by the Atlantic City Daily World which follows:

LOCAL OPTION ON RENTS

The bill passed recently by the House of Representatives to allow each community the option of ending or continuing rent controls was received with favor here in the resort by local realtors.

As one realtor stated "it is impossible for an individual in Washington to possess the information and facts necessary to regulate the housing of 150,000,000 people."

Each community is faced with its own individual problems concerning housing and rentals and it seems that the only sensible approach is to allow each municipality to regulate the situation according to its needs.

This does not sit well with those who believe in bureaucracy and a strong central government, and the bill is probably due for some rough sledding before it gets through the Senate.

But a resort community such as Atlantic City where one of the principal means of livelihood for many of our residents is the renting of their homes to summer tenants have problems that are decidedly different from a community where rentals are on a year-round basis.

Therefore, to administer and regulate rent controls to the fairness of all concerned it should be left up to local option and not put into the hands of a Federal office in Washington.

The Eighty-first Congress

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. WALSH. Mr. Speaker, a great deal has been said recently here in the House and by some of the newspapers regarding the Eighty-first Congress, and our distinguished whip, the gentleman from Tennessee, who a few days ago did a splendid job in the defense of the Eighty-first Congress.

Last Sunday there appeared in the Indianapolis Sunday Times an article by Dan Kidney, who is recognized as one of the best political writers of this country, which helps express some of the views expounded by Mr. PRIEST. Under leave to extend my remarks I include this article, as follows:

DEAR BOSS
(By Dan Kidney)

HALLECK LEADS HOUSE REVOLT—PREDICTS TRUMAN'S FAIR DEAL PROGRAM WILL NOT PASS

WASHINGTON, March 19.—DEAR BOSS: Harry S. Truman has a right to squawk when he has a Democratic Congress in which a Republican minority leader in the House—CHARLES A. HALLECK, of Rensselaer—wields more power than the President of the United States.

Our CHARLEY is one of the principal chefs who cooked up the GOP coalition with the southern conservative Democrats which is strong enough to cause him to openly predict that the Truman Fair Deal program will not pass.

When this coalition kept the filibuster alive in the Senate, until they were ready to compromise and quit, freshman Democrat Representative JOHN R. WALSH, of Anderson, cried out in anguish—

"The common man's mandate of the last election—to enact legislation that would benefit all rather than a privileged but articulate few—was cynically ignored * * * the Tories and Dixiecrats will block civil rights, Taft-Hartley repeal, extension of rent controls, a higher minimum wage, universal coverage of social security, increased social-security benefits, crop price support measures, much-needed housing laws, inflation control and health legislation."

READY TO STOP TRUMAN

To such a tirade, Mr. HALLECK might well shout "Amen" and mean it literally—"so be it." Nothing would suit him better. He still thinks the Eightieth Congress—which President Truman termed "do-nothing"—was among the greatest in United States history.

It was a Republican Congress and Mr. HALLECK was the majority leader. Right now he is willing to settle for the sort of coalition which checkmated the Truman program in

the nominally Democratic Seventy-ninth, however.

While laying his roadblocks, Mr. HALLECK takes enjoyment in taunting the administration leadership for its failure to get the Truman program passed. He took the House floor and answered a defense of the congressional slowness made by Representative PERCY PRIEST, Democrat, of Tennessee, majority whip, like this—

"In my opinion this attempted apology for the record of the Eighty-first Congress to this date is nothing more than a smoke screen to cover up the fact that none of the pledges made to the people in the last campaign, as to what would be done in this Congress, have as yet been carried out.

"I hazard this prediction, from what I have been able to see around, that very few of those pledges are finally going to be enacted into law."

ADDRESSED DIXIECRATS

Just to help see that they will not be, Mr. HALLECK flew down to New Orleans this week and addressed a group of Dixiecrat businessmen warning them that the Truman program means socialism if not communism. They ate it up.

"The basic conflict today is not the historic differences between the Democrat Party and the Republican Party over details of government," he told the southerners.

"The basic conflict today is between two distinct philosophies of government. The one emphasizes the government, the other emphasizes the individual. The one advocates more government control and regulation, the other advocates more freedom and opportunity for the individual. The one is a philosophy of state socialism, the other a philosophy of real Americanism.

"Whether we are Republicans or whether we are Democrats, whatever our political faith, our creed, our race or religion, above all else, we are Americans (exclamation point)."

A COMMON LOVE

"Whether we are from the North or the South—from Louisiana or Indiana—we have a common love and devotion, and that is to these United States and to the principles of freedom and justice for which she stands. And we have a common task. That is to preserve and to make secure those cherished principles that make this country the one great hope of liberty-loving peoples everywhere."

During the Eightieth Congress when the Republicans and antilabor Democrats were passing laws the CIO and Americans for Democratic Action didn't like, Mr. HALLECK would say that the Congress had been given a mandate to do so. He constantly called the Congress "the real representatives of the people" and indicated that President Truman was just a political accident.

With President Truman elected entirely on his own and the Eightieth Republican Congress replaced by the Eighty-first Democratic one, Mr. HALLECK takes a dim view of that mandate now. Hooking up with the southerners, he feels that the GOP job is to try and prevent President Truman and his Democrats from doing anything they promised. Then he will campaign on the failure he has helped cause.

Local Option on Rents

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1949

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of March 17, 1949:

LOCAL OPTION ON RENTS

Some of the critics of the House decision to put future rent control on a local-option basis are in danger of being carried away with excitement.

They say that this provision would gut the bill extending rent control for 15 months, and would result in confusion thrice confounded. That is good free-swinging language, but it is less than helpful to anyone who wants to know just why the States or political subdivisions of States should not be permitted to terminate rent controls in their own areas if they want to do so.

At the present time Federal rent controls are in force in about 1,100 counties. Why are not the elected officials of those counties just as competent, if not more competent, than some Federal officer to determine whether rent controls should be retained in their communities? Are the local officials less cognizant of local conditions or less responsive to the needs and wishes of their local constituents?

The chances are that the furor which has been "kicked up" over the local-option provision is simply another manifestation of the big Government complex which seems to be taking possession of a good many people. There are those who think the function of the Federal Government is constantly to assume new responsibilities and never surrender any of its old ones. If they had their way more and more of this country's affairs would be run from Washington, even though in many cases the people in the local communities can do a better job. Rent control is a case in point. Sooner or later the Federal Government will have to let go of it, yet the longer it holds on the harder it seems to be to turn loose.

Perhaps the House-approved bill, if finally adopted, will help this releasing process along. Tighe Woods, the Housing Expediter, who does not share the alarm of some of the critics, predicts that not more than 10 percent of the controlled counties would be decontrolled under local option. That would be 110 counties. He said the other day that he would decontrol 100 areas now himself if he had authority to recontrol, which, incidentally, the House bill gives him. So it seems not unreasonable to suggest that the critics are unduly excited. They ought to be willing to give the local authorities a chance. That would be something of a novelty, and perhaps they might do a surprisingly good job.

Books on Fascism in Action and Communism in Action Available Free Through Members of Congress

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. PATMAN. Mr. Speaker, the United States Senate on yesterday approved the House concurrent resolution providing for the printing of 100,000 copies of House Document 401, Eightieth Congress, entitled "Fascism in Action." The House had previously passed this same resolution.

The Congress has heretofore authorized the printing of aproximately 600,000 copies of Communism in Action to be distributed free by Members of Congress. This resolution for the printing of the book on Fascism in Action represents the first action on the part of Congress to make available this important book free in the same way and manner that the book on "Communism in Action is made available.

Anyone who desires a copy of either one of these important books should make a request to a Member of the House or the Senate.

The Honorable J. Edgar Hoover, Director of the Federal Bureau of Investigation, recently had this to say concerning both communism and fascism:

> There is as much danger in moving too far to the right as there is in swinging too far to the left. There is little choice between fascism and communism. Both are totalitarian, antidemocratic and godless. Both use the same means of treachery and deceit to accomplish their goal of tyranny and oppression. In our fight against communism we have no place for the political police that have dominated Fascist and Communist countries.

We must continue to be on the alert against either communism or fascism. There is no better way than an informed citizenship. Anyone reading the book on Fascism in Action and becomes acquainted with the methods used by the Fascists in Italy, Germany, Spain, and Japan will very quickly discover the earmarks and footprints of fascism in many of our organizations here in the United States of America.

Trusteeship of Italian Colonies

EXTENSION OF REMARKS
OF
HON. WILLIAM L. PFEIFFER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under leave, I wish to extend my remarks as follows, and to include therewith resolution of the Federation of Italian-American Societies of Buffalo, N. Y., adopted at a regular meeting held on February 22, 1949.

In April the question of the disposal of Italy's African possessions will come before the United Nations for a final decision. I urgently appeal to every Member of Congress to do everything in his power to have our Government take the initiative toward having the UN assume the trusteeship of the Italian colonies and assign Italy as the trustee of these territories.

To date, about $1,000,000,000 of Italian money has been invested in improving these African lands. Hundreds of thousands of Italians have had administrative and agricultural experience in these areas. Italy alone of all the democratic nations has the necessary available manpower, the vitally important geographical proximity, and the adequate technical skills and intellectual capacities to serve as the UN trustee, improve the material conditions of the natives, and systematically prepare them for their eventual national independence. By giving democratic Italy an opportunity to discharge

this great humane responsibility, we will be strengthening her prestige and prowess as a force for international security. The contemplated Atlantic Alliance would be useless if strategically placed Italy were kept out or kept weak. America alone cannot defend the entire free world. We need help from our friends. Our friends should be strengthened. To pursue any policy in Africa, Europe, or elsewhere which would weaken any of our friends would mean simply piling more heavy burdens on the American people. Our national welfare and security demand a different course.

Moreover, we will also thereby help Italy ease the terrific pressure of her surplus population. Impoverished Italy has a population density of 140 to the square kilometer—almost double that of the naturally wealthy France, which has only 76. Through granting Italy this outlet in Africa for her surplus population, we will be strengthening her economy by thus reducing the number of unemployed. Otherwise, our entire economic aid program to Italy will tend to be a policy of patching leaks and scurrying for pans in order to catch the dangerous and continuous drip caused by the heavy excess of population.

I earnestly plead with you to do all in your power to have the full weight of our Nation's moral prestige and material prowess placed on the side of justice for the talented, industrious, and peace-loving people of Italy. The greatness and strength of our country can and must assure democratic Italy the UN trusteeship of her former African possessions.

RESOLUTION OF FEDERATION OF ITALIAN-AMERICAN SOCIETIES OF BUFFALO, N. Y.

Upon motion duly made and seconded, at a regular meeting duly called and held on February 22, 1949, at the city of Buffalo, N. Y., the following resolution was adopted by the unanimous affirmative vote of the Federation of Italian-American Societies of Buffalo, N. Y.:

"Whereas the territories of Libya, Eritrea, and Somaliland have been, for scores of years, under legitimate Italian sovereignty, under which these territories, for the first time in their history, enjoyed the benefits of civilization and especially a sound political economy, which guaranteed to their inhabitants progressive social advancement; and

"Whereas Italy, although poor in capital, but rich in labor, has invested in Libya, Eritrea and Somaliland years of hard work and industry, requiring a high toll of sacrifice through decades, thus making it possible to develop these areas which originally were little more than desert lands; and

"Whereas many generations of Italians have established large and flourishing communities, have established their homes and centered their interests in these territories to the extent that they have become permanent inhabitants therein, resulting in vital ties between these territories and Italy, which cannot be broken without irreparable damage and grave danger to the welfare of all concerned; and

"Whereas Italy is able, ready and willing to undertake its moral and spiritual obligation to continue and further the economic and social progress in these African territories as the virtual mother country of these territories, or as trustee within the framework of the Charter of the United Nations, and in the furtherance of the humanitarian ideals which inspired this world organization; and

"Whereas this crisis of overpopulation is a constant threat to Italy, which vitally needs a political and economic tie with these territories in order to reconstruct itself as a peace-loving member of the world of nations; and

"Whereas according to article 23, annex 11, of the Italian Peace Treaty, the Governments of the United States of America, Great Britain, France and the Union of Soviet Socialist Republics were bound jointly to determine within one year from the date of the said treaty, i. e., by September 14, 1948, the final disposition of Italy's former colonies in Africa; and

"Whereas, since the four powers involved were unable to agree within the prescribed term, this subject matter was referred to the General Assembly of the United Nations; and

"Whereas over 46,000,000 Italians and millions of friends of Italy in America and elsewhere in the world, are, at the present time, focusing their attention and hopes on this situation, confident that the friends of Italy will once more lend a helping hand to Italy, in which so much recent interest was shown in the large national elections in that country, wherein a true freedom-loving and peace-loving administration was elected to office; and

"Whereas great moral and political strength will be invested in the Italian Democratic Government, which is presently a bulwark of strength in the democratic world in which the United States of America enjoys the pride and responsibility of leadership: Now, therefore, be it

"Resolved, That Libya, Eritrea and Somaliland be returned to Italy as its colonies, or, in the alternative, Italy be declared the trustee of these territories within the framework of the United Nations Charter."

STATE OF NEW YORK,
County of Erie, City of Buffalo, ss:

I have compared the foregoing with the resolution duly adopted by the Federation of Italian-American Societies of the City of Buffalo, N. Y., at a meeting regularly called and held in the city of Buffalo, N. Y., a quorum being present on February 22, 1949, and I hereby certify the foregoing to be a correct copy of said resolution so adopted, and of the whole thereof, and that the same has not been revoked or rescinded.

ANGELO GALTI, *Secretary.*

The Cultural and Scientific Conference for World Peace Arranged by the National Council of the Arts, Sciences, and Professions

EXTENSION OF REMARKS
OF
HON. JOHN S. WOOD
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. WOOD. Mr. Speaker, on March 25, 26, and 27 there will be held in New York City a so-called Cultural and Scientific Conference for World Peace, arranged by an organization known as the National Council of the Arts, Sciences, and Professions. I should like the Congress and the people of the United States generally to know the background, purposes, and real nature of this gathering.

This conference is being held as a follow-up to a similar gathering on a world scale called the World Congress of Intellectuals, which was held at Wroclaw (Breslau), Poland, in August 1948. One of the delegates to the latter meeting was Bryn J. Hovde, of the New School for Social Research. His description of the Wroclaw congress gives a foretaste of what we may expect from the New York meeting:

> Every speech insulting the United States and glorifying the Soviets was wildly applauded. * * * After the first speech by the Soviet novelist, Fadiejew, a speech which for vituperation was never excelled and which set the tone for the Congress. * * * I wound up with a strong statement of democracy as the only basis for peace. No speaker at the Congress got a colder reception. * * * Speaking was like throwing flat stones on an icy lake.

I note among the international guests listed on the program of the March 25, 26, and 27 conference the same A. A. Fadeev (Fadiejew), secretary-general of the secretariat of the Union of Soviet Writers.

Among the sponsors of the New York meeting are the following participants in the Wroclaw Congress: Jo Davidson, Harlow Shapley, Albert Kahn, and Howard Fast.

In a series of radio broadcasts from behind the iron curtain, from Moscow, Prague, and other centers there is a steady stream of propaganda urging the calling of a world peace congress to rally support for the Soviet Union and create hatred toward the United States.

The New York meeting is clearly a preliminary to this world congress aimed primarily to counteract and destroy the Atlantic military pact.

What is the National Council of the Arts, Sciences, and Professions which is sponsoring the New York meeting? What is its background? Who are its supporters?

The National Council of the Arts, Sciences, and Professions is a descendant of the Independent Citizens Committee of the Arts, Sciences, and Professions, which was repudiated in 1946 by Harold L. Ickes, its chairman, because of its Communist character.

In August 1945, June Hoffman, representing the cultural section of the Communist Party at its New York State convention, declared proudly:

> We built the Independent Citizens Committee of the Arts, Sciences, and Professions, and it is a great political weapon.

At that same meeting Lionel Berman, husband of Louise Bransten, a known contact of Soviet espionage agents, was praised by the cultural commission of the Communist Party for his role in setting up the ICCASP—Independent Citizens Committee of the Arts, Sciences, and Professions. This organization is listed incidentally as a Communist-front organization in a report of the Committee on Un-American Activities dated September 2, 1947. Among the leading members or supporters of the National Council of the Arts, Sciences, and Professions who played a similar role in the Independent Citizens Committee of the Arts, Sciences, and Professions are the following: Louis Adamic, Franklin P. Adams, Leonard Bernstein, Walter Bernstein, Ernest Boas, Henrietta Buckmaster, Rufus E. Clement, Aaron Copland, Norman Corwin, Jo Davidson, Olin Downes, Albert Einstein, Philip Evergood, Henry Pratt Fairchild, Howard Fast, Jose Ferrer, Lillian Hellman, Langston Hughes, Howard Koch, Isaac M. Kolthoff, Leon Kroll, Canada Lee, Linus

Pauling, John P. Peters, Walter Rautenstrauch, Anton Refregier, Paul Robeson, Harlow Shapley, Herman Shumlin, Max Weber.

Let me add that on August 2, 1948, Louis F. Budenz, former managing editor of the Daily Worker, testified before the Senate subcommittee of the Committee on Expenditures in the Executive Departments as follows:

The Independent (Citizens) Committee of the Arts, Sciences, and Professions was worked out originally in my office in the Daily Worker. It was worked out by the cultural commission of the Daily Worker, of which Lionel Berman, of the cultural section, organizer of the party, was a member, and he was entrusted not only by that meeting but by the political committee, as the result of these discussions, with the task of forming the Independent Citizens Committee of the Arts, Sciences, and Professions.

In 1932 a League of Professional Groups was formed in support of William Z. Foster, Communist candidate for President, a man who has openly avowed his intention to establish a Soviet America and to support the Red Army in the event of a conflict with the United States, together with James W. Ford, Communist candidate for Vice President. The following present sponsors of the National Council of the Arts, Sciences, and Professions were included in this Red league: Adolph Dehn, Langston Hughes, Matthew Josephson, Alfred Kreymborg, Edwin Seaver, Frederick L. Schuman, Ella Winter.

In 1936 the Communist Party ticket included Earl Browder for President and James W. Ford for Vice President. A committee of professional groups for Browder and Ford included the following present sponsors of the National Council of the Arts, Sciences, and Professions: Marc Blitzstein, Robert M. Coates, Aaron Copland, Langston Hughes, William Gropper, Edwin Seaver, Max Weber, Ella Winter.

On December 4, 1947, and September 21, 1948, Attorney General Tom C. Clark cited the Civil Rights Congress as a subversive organization. On September 2, 1947, the Committee on Un-American Activities in a special report stated that the Civil Rights Congress was dedicated "specifically to the defense of individual Communists and the Communist Party." Today the Civil Rights Congress is in the forefront of the fight for the defense of the 12 Communist leaders who have been indicted by a Federal grand jury. Among the leading supporters of the Civil Rights Congress who are sponsors of the National Council of the Arts, Sciences, and Professions are: Louis Adamic, Thomas Addis, Leonard Bernstein, Marc Blitzstein, Henrietta Buckmaster, Lester Cole, John W. Darr, Olin Downes, W. E. B. DuBois, Philip Evergood, Howard Fast, Henry P. Fairchild, Lion Feuchtwanger, William Gropper, Uta Hagen, Dashiell Hammett, Pearl M. Hart, Marion Hathway, Howard Koch, Ring Lardner, Jr., John Howard Lawson, Ray Lev, Jack R. McMichael, Arthur Miller, Clifford Odets, Paul Robeson, Harold J. Rome, Frederick L. Schuman, Agnes Smedley, Dalton Trumbo, Harry F. Ward, Coston E. Warne, Max Weber.

Earl Browder, former general secretary of the Communist Party, was convicted in 1940 on a charge of passport fraud. A Citizens' Committee to Free Earl Browder was formed under Communist initiative. Among the supporters of this committee were the following sponsors of the National Council of the Arts, Sciences, and Professions: Howard Bay, Marc Blitzstein, Edward Chodorov, W. E. B. DuBois, Henry Pratt Fairchild, Dashiell Hammett, Mary Van Kleeck, Ring Lardner, Jr.; Kenneth Leslie, F. O. Matthiesson, Albert Maltz, Carey McWilliams, Paul Robeson, Ira DeA. Reid, Harlow Shapley, Harry F. Ward, Max Weber, James Waterman Wise, James H. Wolfe.

The National Council of American Soviet Friendship was cited as subversive by Attorney General Tom C. Clark on December 4, 1947, and September 21, 1948, and previously by the Special Committee on Un-American Activities on March 29, 1944. Among the supporters of this organization we find the following sponsors of the National Council of the Arts, Sciences, and Professions: Louis Adamic, Aaron Copland, Norman Corwin, Jo Davidson, Albert Einstein, Henry Pratt Fairchild, Lion Feuchtwanger, Langston Hughes, Corliss Lamont, Emil Lengyel, Robert S. Lynd, Arthur W. Moulton, Clifford Odets, John P. Peters, Anton Refregier, Paul Robeson, Guy Emery Shipler, Herman Shumlin, Donald Ogden Stewart, Oswald Veblen, Max Weber, Mary Van Kleeck.

Recently Maurice Thorez, leader of the French Communist Party, declared that the French people should welcome the Red army in the event it entered France. The same treasonable sentiment has been echoed by Communist parties throughout the world, including the Communist Party of the United States, through its spokesmen, William Z Foster and Eugene Dennis. It is clearly incumbent upon each delegate and supporter of the so-called Cultural and Scientific Conference being held in New York on March 25, 26, and 27 to state unequivocally exactly where he stands in reference to this official position of the Communist Party. This issue will furnish a clear-cut acid test of the character of this conference.

The Cultural and Scientific Conference for World Peace has more than 500 sponsors. Included in this list are numerous persons who have been exposed as Communists by the Committee on Un-American Activities. Included in this category are John Howard Lawson, Ring Lardner, Jr., Lester Cole, Albert Maltz, Dalton Trumbo, and Richard O. Boyer.

The committee has proof of the Communist Party membership of additional sponsors which at this time has not been placed in the record. Of the 524 sponsors of the Cultural and Scientific Conference for World Peace, it is interesting to note that 291 have associated themselves with Communist-front organizations. Fifty-five of the sponsors have associated with 20 or more Communist fronts, 50 others have associated with from 10 to 19 Communist fronts, and 61 others have been associated with from 4 to 10 Communist organizations.

Now let's take a look at the guests from foreign countries who have been invited to this conference. The committee has information concerning 54 persons who were invited to attend the World Peace Conference from the following countries: Canada, Czechoslovakia, England, France, French West Africa, Hungary, India, Italy, Norway, Poland, Puerto Rico, Rumania, Russia, Venezuela, Yugoslavia, Brazil, Bolivia, and Ecuador. Of the 54 persons invited, 15 of them have been reported to our intelligence agencies as being members of the Communist Party. Eleven of these foreign visitors are classified as fellow travelers of the Communist Party. These last two categories do not include or take into consideration the seven visitors from Russia. One of the visitors from Russia has been reported as a member of the MVD formerly known as the NKVD, commonly referred to as the Russian secret police.

I am greatly concerned that among the sponsors for this conference are many professors from our leading universities and colleges. An examination of the list of speakers scheduled to address the conference shows that professors from such well-known institutions of learning as Howard, Smith, Cornell, Amherst, Illinois, Michigan, Columbia, Sarah Lawrence, Haverford, Massachusetts Institute of Technology, North Carolina, Yale, and Williams, are scheduled to address the conference. There are 83 sponsors of this Communist-conceived conference who have the title of professor. There are also numerous persons bearing the title of doctor who are teaching in our American universities and acting as sponsors of this conference.

I am also greatly concerned that there are 35 representatives of the clergy listed as sponsors of this Communist conference.

I also note in the list of sponsors that there are several persons whose names appear in the files of the Committee on Un-American Activities as close acquaintances of persons presently under investigation by the committee as Soviet agents. One of the sponsors is known to have been removed from an important post in the United States Government because he furnished information to a Soviet agent who will be called before the committee in the near future.

Several of our atomic scientists are also listed as sponsors of this Communist peace conference.

I can only view with alarm the fact that here in this country we permit lace-curtain Communists to hold a conference that could not be held in an iron-curtain country, although the conference's main purpose is to create sympathy for the foreign policy of the principal iron-curtain country, Soviet Russia.

No, Thank You, Mr. Truman

EXTENSION OF REMARKS

OF

HON. HUGH D. SCOTT, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under permission granted by the

House, I include in my remarks an editorial by Beatrice Hancock Mullaney, of Fall River, Mass., entitled "No, Thank You, Mr. Truman":

NO, THANK YOU, MR. TRUMAN

(By Beatrice Hancock Mullaney)

When you were elected, Mr. Truman, even though I didn't vote for you, I was prepared to accept you as the choice of the majority of my countrymen and to keep my gripes to a minimum. After all, when a person is numb with defeat it isn't too hard to accept that theory about that guy in the White House away off in Washington not affecting one.

I forgave you for that State of the Union speech wherein you declared that you found the country in splendid condition. Of course, you had just finished telling the people of this country that the Eightieth Congress had about ruined the country and that we were on the verge of disaster, but I was willing to call that sales talk. I even forgave you for capitalizing on the Taft-Hartley bill. You didn't fool me, like you fooled a lot of people, Mr. Truman, because I have seen too many statistics about strikes decreasing; improved conditions for employees; the wholesale purge of Commies from top union jobs; but there were three or four sections of the bill that should be changed; Taft said so himself. Yet, four bad sections in a law that has over 20 sections and that provides for its own amendment, that's a good average, Mr. President. But the Eightieth Congress failed to change those dubious sections; they also failed to sell the other 18 sections including the several that protect the public. Like the section you used several times to avoid national emergencies, Mr. Truman, your memory was conveniently short on how the Taft-Hartley bill helped you and the American public. But, as I said, I forgave you all that because you won that argument by default.

But now we come to the budget that covers your plans for our country for the next year. Let me state here and now that if the housewives of this country (well, the good ones, anyhow, who live within their incomes), ran their homes the way you are running this country, their husbands would go bankrupt, they would fill the poor debtor's court every day, and every child would be born into such homes with the debts of his parents for his birthright.

I have read every analysis of that budget that I could get my hands on and I think that even now I'd forgive you the immensity of it; the waste of it; the maximum estimate features of it if I could ignore the moral implications of it. But your kindest critics, your apt pressmen, your closest pals all call it the same thing, a budget composed for international and domestic planning; two-thirds of it to continue the cold war with Russia and the other third? For your welfare state, Mr. Truman.

That big-two-thirds item doesn't bother me at all, in spite of all the news stories about our lend-lease materials rotting on docks; of European countries selling what they get from us to Russia; or black-marketing by our own foreign supervisors. I can swallow all that if the plan helps the starving and the homeless and averts war with Russia. But your welfare state budget.

Is this America, the land of freedom and opportunity? Is this America, where today's laborer is tomorrow's owner and manager? Is this America, where anyone with a good idea, a special talent, willing to work and willing to risk a few hundred might be tomorrow's millionaire? Is this America, to which our fathers and forefathers fled and to which refugees still come to escape being told how to worship, where to work, where to send their children to school?

Don't get me wrong, Mr. President, the plodder who stays at a job all his life and who wants to save through social security should be able to do it; Mr. Dewey would have done just what you are going to do, extend form of saving.

And don't think that I'm against the Government going into low-cost housing that eliminates slums with their costly crime and poverty element. The Lord said we'd always have the poor with us, so we have to do something about them, but He did not say anything about treating everybody as if they were poor. If one of my sons wants to be a contractor I hope he does not have to compete with the Government and I hope that he won't have to know the right guy in Washington to stay in business.

As for your socialized medicine, there's no point in telling my son at medical school to work hard and distinguish himself, is there, if how far he gets depends on whether my Congressman knows the top man? England just asked us for $9,000,000,000 (yes, nine billion) more to keep her socialistic schemes in operation for another year. What country are you planning to get help from, Mr. Truman, when your welfare state really gets along?

I'm just a housewife who, like millions of other housewives over this country, have preached to my children of their glorious heritage. I've taught them that how far they go in life will depend on how hard they work, how courageously they tackle the normal hardships of life, and that they have the means within themselves to achieve their goals. I hope that I have taught them that to run to the Government for every little problem expecting relief is an illusion, because they themselves are the state and that they pay one way or another for everything the state hands out.

I've taught them to be thrifty and self-reliant and that there is nothing evil about saving their money and buying stock or investing in a business, and if there is anything evil about such things, there are plenty of wrongdoers in this country who saved when they were young and worked hard to provide for their own old age. And contrary to what you made the people think, Mr. Truman, there are as many Democrats among this crowd as Republicans. I might add that most of the Republicans I know have only clipped the type of coupon which, if sent with a quarter, gets them a silver-plated spoon or a sink brush.

Have I been all wrong in this outlook for future American citizens? Have I got to change these ideas and start teaching that the state is a kind of superman who holds their destiny in his hands and takes his tribute in taxes for a welfare state? This is what you seem to imply with your budget. I hope the rest of the women of this country are as indignant about your offer as I am. No; thank you, Mr. Truman, I do not want any part of your welfare state. As a good citizen, I will have to bear my part of the expenses of it, but consider this a formal notice that I will work as hard as I can to change it.

The Inaugural Story—Historic Film Record of a Great American Event

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. BLATNIK. Mr. Speaker, I would like to bring to the attention of my colleagues an outstanding film—a color motion-picture recording of the Inauguration Day ceremonies—produced by an enterprising motion-picture company, the Sherman Plan, Inc., of Washington, D. C.

This film, produced with sound, marks the first time in motion-picture history that a Presidential inauguration has been recorded in full color. As we all recall, January 20 was a beautiful, sun-drenched day, and this picture has captured the spectacular pageantry of a colorful occasion.

The high lights of the day are dramatically pictured, although the film is much too brief. I feel that The Inaugural Story is a motion picture worthy of high praise. It deserves a prominent position in the film libraries of American schools and organizations. It is truly a patriotic delineation of an event that transcended party lines and is worthy of the attention of all who are interested in seeing, on the screen, a vivid and stirring picture of democracy as it is practiced in our great Nation.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I append the following resolution relative to General Pulaski's Memorial Day recently passed by the Board of Aldermen of Melrose, Mass.:

Resolution relative to the General Pulaski's Memorial Day resolution now pending in Congress

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in the United States of America: Now, therefore, be it

Resolved by the Board of Aldermen of the City of Melrose, Mass.—

1. That we hereby memorialize and petition the Congress of the United States to

pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, the two United States Senators from the State of Massachusetts, and to the Representative in Congress from the Eighth Congressional District of the State of Massachusetts.

Clinton Rider Holds Twentieth St. Patrick's Parade

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include a recent article from the Worcester, Mass., Telegram describing the twentieth one-man St. Patrick's Day celebration in my home town of Clinton.

The rider, my good friend, Mr. John Fitzgerald, who has been celebrating the Irish patron saint's day in this manner for the past 20 years, was properly costumed for the occasion. There is, of course, a much larger celebration in Clinton to mark this festive day at which large numbers of people gather to pay tribute, but there is certainly none more colorful or inspiring than that of the single rider dressed in Irish costume who traverses the streets of the town as his own tribute to St. Patrick.

CLINTON RIDER HOLDS TWENTIETH ST. PATRICK'S PARADE

CLINTON, Friday.—The one-man Hibernian horse brigade, John Fitzgerald, paraded through the streets of Clinton yesterday for the twentieth successive year in observance of St. Patrick's Day.

Thousands turned out to watch as Fitzgerald's horse carried him to all corners of the town.

John was dressed in Kelly green with top hat, Prince Albert coat and trousers.

His horse, too, was dressed for the occasion with green ribbons in his mane and green blanket marked with gold lettering "Erin Go Bragh."

Nor was the march without incident. When it arrived on High Street, the main thoroughfare, it headed into a crowded food market and drove out the patrons, including Michel E. Kelly, chief of police.

THRILLS PATIENTS

When the march arrived at the hospital on Greely Hill many patients went to the windows.

Traffic was stopped on Mechanic Street when the parade passed the high school and the students poured out and swarmed about the one-man brigade. A photographer mounted a stepladder in the middle of the street to take pictures.

The idea of a St. Patrick's Day parade for Clinton first occurred to Fitzgerald two decades ago when he joined the Ancient Order of Hibernians.

He said yesterday, "When I joined the organization I felt that the thing should be done right and an Irishman should march on St. Patrick's Day."

ALWAYS SAME ROUTE

Since that day Fitzgerald has covered the same route each March 17 for 20 years. He starts at High and Water, goes up Water street to Cedar Hill, over Chestnut street to the Acre; back down the hill again along High street and then up Burditt Hill; back down Burditt Hill to the north end and up Greely Hill to the hospital where the march comes to a weary end.

At first the parade was on foot, but for the past 10 years the cavalry took over.

At first Fitzgerald paraded around town with his green top hat, but as the years rolled by and he became an institution his attire has become more elaborate.

COSTUME DONATED

This year his green Prince Albert coat was contributed by Rev. James Tunney, of St. John's Church. The horse was clipped by Jim Watson, the green trousers were given by Carl Strunz, and the horse's blanket made by Strunz's wife, Flora.

The fame of the one-man parade has spread throughout the State and each year Fitzgerald receives letters of admiration on St. Patrick's Day from all over signed "Secret Pal," "An Ardent Admirer," and in the like manner.

An invitation to participate in yesterday's parade in South Boston was turned down by Fitzgerald in order to preserve the tradition that has been established in Clinton over the past 20 years.

To top off yesterday's festivities the one-man parade was invited to attend the annual police ball and entertainment last night at Fallon Memorial Auditorium—but without his horse.

Transfer of C–4 Vessels to Army Operation

EXTENSION OF REMARKS
OF
HON. VITO MARCANTONIO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include herein a letter addressed to President Truman regarding the transfer of C–4 vessels to Army operation:

MARCH 22, 1949.

Hon. HARRY S. TRUMAN,
President of the United States,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: Within the last week I have received letters from over 50 of my constituents who are now at sea employed aboard C–4 vessels operated by the Maritime Commission.

These seamen are among the 2,000 union seamen now employed aboard the 9 vessels operated by the Commission in the transportation of displaced persons who will be unemployed by April 1, 1949, unless you rescind the directive transferring these vessels to Army operation.

There are over 25,000 union seamen now unemployed. The average seaman is waiting 2 to 6 months for a job. The lay-off of 2,000 union seamen by the transfer of these vessels to the Army will heap added hardships and suffering on these workers and their families.

The prospective transfer of these vessels will extend the control of the Army to more than 220 merchant vessels and to over 15,000 maritime jobs. Army control of these jobs means loss of union protection acquired by years of struggle, loss of unemployment-insurance rights, and loss of old-age-insurance rights.

On behalf of these seamen, I urge that you rescind the directive transferring the C–4 vessels to Army operation.

Sincerely yours,

VITO MARCANTONIO.

Is It Too Late in China?

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. ENGEL of Michigan. Mr. Speaker, I am a great admirer of people who present their case on the basis of real facts and hence who speak with the authority that can come from intimate knowledge of their subject. I have had such a presentation sent me on the subject of what the United States, even at this late date, might do to help China to help itself in the world-wide crusade to keep the ideals of democratic government from being submerged by Communist assault.

The United States in recent years has spent tremendous sums in that undertaking but, particularly in China, has not done well. Our governmental experts in the State Department and elsewhere have produced no miracles, to put it mildly. Despite the millions that have been voted out of the pockets of American taxpayers for aid to China, chiefly to prevent spread of communism in a part of the world where ultimately this spread might be most serious for our own future, despite our terrifically lavish expenditures, we have obtained little in the way of hard-headed results. As a government we stand bewildered today as to what to do.

In view of the frustration of the policy-making Government experts, I have been particularly interested in this statement which I am about to include. It was prepared by A. L. Burridge, Jr., captain in the United States Marine Corps air forces, during World War II, in the Far East theater, who since the war has been one of Gen. Claire Chennault's chief assistants in operating the China air transport. Captain Burridge, who is supervisor for certain sections of China Air Transport, suggests a definite plan which he feels could be profitably followed by the United States in helping the Chinese people to win the struggle of democracy versus communism. In view of the investment we already have, naturally he dislikes to see us sit on the sidelines, even at this late date, and have that battle go to the forces of communism by default.

Captain Burridge's statement is full of conviction and is refreshing in that there are no diplomatic niceties in his directness of comment. He feels the situation there, despite the rapid Communist advance in recent weeks, is far from hopeless. He feels what is needed principally

is a concept of what actually can be done, starting in one area, to show that democratic methods can and will win out over Communist despotism whenever put to a fair and equal test.

Captain Burridge never intended nor expected that his statement would reach the CONGRESSIONAL RECORD. He wrote it merely as an outpouring of his own convictions in a letter to his family, Mr. and Mrs. A. L. Burridge, Sr., of Cadillac, Mich. It happens that Mr. and Mrs. Burridge, Sr., are long-standing friends of mine, but even so I possibly would not have seen Captain Burridge's comments had they not been printed in the March 10 issue of the Evening News, daily newspaper published at Cadillac by T. O. Hackle and his son Earl Hackle.

Here is Captain Burridge's analysis which I hope all of you will read:

At the rate things were going it looked like North China was about finished and I could complete the evacuation of Tsingtao and take my long-delayed vacation before taking over my new area, which is to be the West China-Indochina-Burma area with headquarters in Kunming.

However, events have turned a little different. My area has been increased to include Shanghai and Nanking in addition to Tsingtao, Taiyuan, Ninghsha, Paotou, Kweisui, and my caretaker staff at Peiping and Tientsin with whom I am in contact but doing no business at present. The number of stations are fewer than I had last year at this time but they are bigger and the area is much larger. I am keeping two offices, one in the north at Tsingtao and the other for the southern half at Shanghai. Am trying to administer it by flying back and forth, spending 3 days a week in the Tsingtao, northern half, and 4 days a week in the Shanghai, southern half.

There is no Communist activity whatsoever near Tsingtao but that does not preclude the possibility of warfare starting in the next few weeks but does mean any evacuation, at present, is premature. Tsingtao is still the only practical means of supply for Taiyuan, which lies 600 miles west. Though it can be done from Shanghai the distance is nearly twice as far and of course the net result is twice as expensive. Our job right now is to get 200 tons of food flown in there each day, rain or shine. This may sound easy when compared to the Berlin airlift but in Berlin the flight is less than 2 hours and you can land at your destination. This Taiyuan shuttle is a 9-hour nonstop round trip from Shanghai and 6 hours from Tsingtao. Due to the fact that all 11 airfields there are being shelled you cannot land and the Reds hold all the area in between so you have to make it both ways without trouble—or else. There are no facilities for navigation or emergency between either of the two points so that also is a little rough.

IN RICH VALLEY

Taiyuan itself is located in a valley surrounded by very ancient mountains which are rich in minerals, especially coal and iron ore. Yen Hsi-shan has been governor of the province (Shansi) since the imperial days. He is in his thirty-sixth year now, which makes him the last of the warlords to retain his domain intact. He has seldom stirred from the province and fought anyone who tried to force him out. In the last 20 years he has had battles with the National Government, Chiang Kai-shek, Japanese, and Communists. He established a rather benevolent dictatorship in which he ruled from the bottom with his absolute veto remaining at the top.

At many times he used a hard hand but usually his results proved his method. During the 35 years he has taken this isolated area of 3,000,000 people and built it up to the point where it manufactures steel, glass, dyes, iron, woolens, cotton cloth, cigarets, cement, and all the byproducts of these industries. In spite of the 12-month blockade by the Reds every one of these industries is still producing, due 90 percent to his foresight in stock piling raw materials and 10 percent to the products we fly in. This winter the biggest difficulty has been the food question which is our entire duty there now. It takes 200 tons daily to feed the people. In the last year he has built nine airfields to expedite our deliveries, but each has been captured at some time or another. Last August every one was occupied and he didn't even hold an area within 2 miles of the city's perimeter. Everyone in China gave him up then but Chennault. We redoubled our airlift, which all had to be dropped then, and in 2 weeks he had fought out and taken back three fields. Today he holds all 11 airfields, but we have been shelled every time we landed on any but 2 of them. The Reds figured he was a pretty hard nut to crack along in December, and holed into the mountains for the winter, so except for shelling our planes when we try using the strips, it has been fairly quiet. Meanwhile, his factories are going full blast turning out everything from mortars to 105 howitzers, with which to blast them out of their boots in the spring.

His independent nature (once battled with the Gimo) kept him from receiving much ing the way of support from the Central Government which generally bothered him not a whit until when, in a state of siege, the assistance of the Gimo in procuring rice and allotting foreign exchange for gas was essential. He was given second place after Mukden but when Mukden fell, and he surprised everyone by holding out after the big Red fall push, he was given more active support.

Though the strategic value of Taiyuan no longer remains, it and Tsingtao must be held if any resistance to communism is to persist north of the Yangtse. Tsingtao and Taiyuan are working to provide the people with a government which they will support and defend if necessary. If this is successful they will both stand out as a contrast to the Communist areas around them which are already stiff-necked with the controls of the Reds.

NO TERRORISM—YET

Red treatment is not the terrorist system of its earlier days but is now evolving into a smart, aggressive government slightly surprised at its success but laying seeds for its failure with restrictions on personal liberties the people may obey but will never approve.

If the United States would only realize that the Chinese are interested only in freedom and personal security they would aim at those two things in an aggressive manner which would give us a China which would be the bulwark against communism that it should be.

Friends of mine in the State Department here have a tendency to feel either "Let the Chinese help themselves first," or "Communism can never work here any better than anything else has been able to." Both these viewpoints I could condone if directed at nearly any other country in the world but not for China.

In the first place the "Let China help herself" school overlooks the fact that though China may be one of the world's oldest countries she has been governing herself less than 40 years which makes her a youngster at self-government. It seems to me like telling a 5-year-old child to educate himself. He would probably develop knowledge all right but heaven only knows what tangent he would take and he would always be a ripe plum for anyone who wanted to direct his education for their own interests. I believe that is the trouble today and also the reason communism has taken a foothold.

We gave China the idea of democracy without the ideal of democracy. We told her how we did it and said now "you do it." As soon as she makes a mistake we start berating her without sufficient firmness and sensible assistance to get her back on the path. We never did take the problem to the people of China and ostriched ourselves on every issue, letting the wheels of China carry the ball on the slippery questions and then raised holy cain when they got into trouble, which our own advice had probably caused. I have personally seen this happen a few times and it is a sad sight to see the disillusionment in their eyes when they suffer from their trust in our advice.

I do not say we have been all bad nor do I mean to intimate that we did not try, but most of the time we have been too late, too little, and too easily defeated in our purpose.

CHINESE ARE PROUD

It is my contention that the situation gets better the worse it gets. The reason for this is that Chinese are just as proud and stubborn as Americans but when in a tight spot they are more prone to take advice and follow it to the letter as well as make concessions which would involve a loss of face under other conditions.

Therefore enough of "let China help herself" as she is only going to get into trouble that way. She must be aggressively assisted and directed and backed and pushed and propped and cleaned up and cleaned out and educated and above all understood and tolerated with a parent's patience. She has the will now, more than ever before, to clean her house and redeem her people. She does not have the resources she had 2 years ago, nor the production. We must assist to furnish the food, the advice, and the cane when needed. A folded-arms complacency will find us looking down the barrel of Junior's shotgun wondering how he got the darned thing and why he wants to bump off his papa.

As for the communism-can't-work-here school of thought, this is harbored by the businessmen (except those in Peiping and Tientsin) and some of the State Department people who feel that this is just an agrarian movement of revolt against upper classes and official oppression. This is true, as far as some of the seeds of this thing go but wait till you see the fruit. Generally they feel it won't work because every sort of business, reform, revolt, and government seems to have been tried here at some time or another but all fail to hold their identity and fall back into something rather lackadaisical, but in the old pattern. That thought is the most deadly form of Communist propaganda.

The very nature of the Chinese people makes them very easy to mold if a firm hand is used, leaving a margin of freedom for minimum sustenance. The Communists have taken up every point at which we failed and developed it to the utmost. Roughly, they fall into simple classifications: Propaganda, controlled economy, firmness of purpose. That is why, once instigated, communism will work. The people will be given just enough freedom to keep them content. They will be under a rigid economy, subsidized where necessary and drained where plentiful. They will be propagandized until only the Red system seems logical. They will be treated with a firmness not to their liking but less than that which would cause revolt. A man will have freedom from hunger in the end but that is a big thing here and we must realize it is sufficient to insure the success of the Red plan. Within a period of time Red China will be molded into a union dominated by the Comintern and can be held in that union because the propaganda will be simple and believed. There will be food for the first time in years and the peace that goes with it. There will be a firm government that will give a feeling of

security. The loss of their beloved freedom will be slow and except for the very old, little missed. We will have a hard time cooperating with the child of that school.

FOOD IS BIGGEST PROBLEM

In short, then, communism will work because it has the qualities that made other systems fail. It has the discipline that will not allow opposition. It has a minimumness that China, whose biggest problem is its belly, will overlook for the rice bowl and temporary peace it offers. It has the propaganda that will sell it as it evolves from its waitress to its jailer stage.

Perhaps this sounds as though things are hopeless for us, then. On the contrary, take a chapter from Yen Hsi-shan or from the Reds themselves and fight fire with fire but add that extra ingredient they cannot offer—freedom.

Therefore we have propaganda, controlled economy, firmness of purpose, and freedom with which to make our cake. If you look at those closely, you will see that that is about what you need to raise a child properly, and therein is our approach.

Take China as a child and put just half the effort we put into the Berlin air lift. Put just a fraction of the expense of our European propaganda to work here. Give ECA aid in proportion to population where needed. Give and demand freedom in decision. Assume the responsibility of development where it will show.

Take the area nearest the Communists. I would suggest Tsingtao, because of its year-round port and fine facilities, as well as its easily defendable terrain. I would declare this city and an area within 80 miles a nonbelligerent area. The armies would be to protect its borders and no more. They would not advance and would not retreat but would maintain order and guarantee safety of the area inside that perimeter. They would be trained and educated and financed to the highest practical degree. That would give us raw products to keep all the local industries going, cotton, coal, and tobacco in great bulk as well as salt, fish, and a hundred smaller products.

This area would be put under intensive development with all the aid possible on the most businesslike basis possible. This aid would be administered with a firmness that would absolutely guarantee results. To begin with, everyone must be fed, not just enough to exist as now, but enough to work productively to halt erosion, increase housing, utilities, and restore farmland. The port would be unrestricted to all who wanted to do business there. Citizens of Red area would be free to enter peacefully and free to trade but would not be allowed to be residents until a quota was available.

I would start at the top of the government and work through every department to establish a livable wage in accordance with the state of the office. An accounting and police system would be established to assure public accounting for public funds. A tax study and enforcement bureau would be established to protect business from tax strangulation while at the same time assuring ample Government revenue for essential expenditures. This difference the United States should make up until it could be borne locally.

WOULD TEACH DEMOCRACY

Give every facility toward development of private and free enterprise which is the foundation of democracy.

Educate as we have never done it before, teach government, economics, and freedom, for to have one you must have the others.

We would spare nothing in patience, investment, labor, arms, or sacrifice to make this tiny experiment a success.

We would demand a free hand in government organization and procedure to get the thought and purpose of government back to the welfare of all the people, not just a favored few.

Once we had an economic possibility established with a popular support it would make no difference what the Reds did, they could not intimidate it. Then there would be established an ideal that could be defended with a purpose and a will. These people could do that till the end of time. Right now democracy is an empty promise but with an example to place on the shelf beside communism there is not one of the 400,000,000 who would not recognize the better buy.

On the other hand we are allowing ourselves to be driven to the gates of San Francisco without a battle or an argument. Surely now is the time for test. If we cannot make our system work and receive voluntary support by comparison, now is the time to find out.

If we cannot make Tsingtao a model why sprinkle millions over Asia?

We must put forth the ideal of democracy but we must first give that ideal a place to work. Surely 400,000,000 supporters are worth the effort.

I hope we can take Junior out of the reform school and with a new resolve to prove the truth of our convictions start anew to prove by example and determination that democracy is not hopeless here or anywhere else.

What Should We Do To Win the Cold War With Russia?

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1949

Mr. SHORT. Mr. Speaker, under leave to extend my remarks I include the following radio broadcast of Town Meeting, December 21, 1948, from Kellogg Auditorium, Battle Creek, Mich., over the ABC network:

WHAT SHOULD WE DO TO WIN THE COLD WAR WITH RUSSIA?

Moderator DENNY. Good evening, neighbors. The last time we were here in Battle Creek, we discussed the question, What Are the Basic Differences Between the United States and Soviet Russia? Since that time, the basic issues have become so clear that nearly everyone throughout this country and the world understands them.

Using the Marxian philosophy of communism as a spearhead, the small group of men in the Kremlin have spread their absolute control over the lives of 300,000,000 people in Russia and eastern Europe.

In China, the Chinese Communists are now seeking control of the country of 450,000,000 Chinese, and this week, they appear to be within striking distance of success.

Observing Russia's ruthless swallowing up of neighboring states, the United States in 1947 set out to check this so-called peaceful conquest by military aid to Greece and Turkey, economic aid to western Europe, and a firm policy in Germany, particularly in Berlin.

In the meantime, the Soviet leaders announced the establishment of a new Cominform consisting of the nations under their influence in eastern Europe, with the avowed purpose of fighting the Marshall plan and spreading Communist doctrine throughout the world.

These advances, fostered by Moscow, and the attempt to check them, by the United States, constitute what is known as the cold war.

The question, then, uppermost in the minds of most of us today is: Are we winning or losing the cold war with Russia? So, we're asking our experts tonight to come to grips with the question, What should we do to win the cold war with Russia?

Will a conference between Stalin and Truman help?

Are further compromises possible?

Will any agreement between us and the leaders of the Kremlin be of any real value?

What should we, the people of the United States, through their Government, do now?

We are to hear from Congressman DEWEY SHORT, Republican, of Missouri; Arthur Gaeth, foreign correspondent and ABC commentator; Louis Fischer, foreign correspondent and author; and Dr. Daniel Q. Posin, professor of North Dakota State College, of Fargo, N. Dak.

We will hear first from Congressman DEWEY SHORT who has represented his State in the House for 16 years, is ranking Republican on the House Committee on Armed Services, and has just returned from a tour of Europe inspecting our military resources there. Congressman SHORT. [Applause.]

Congressman SHORT. We have won two world wars in our generation, but have not yet won the peace. We knocked off Hitler, but raised up Stalin. One dictator has been substituted for another.

The Communist state is as totalitarian as was the Nazi. It is obvious from Russia's greedy and ruthless expansion in both Europe and Asia that her aims are incompatible with our way of life.

Her cruel domination of the peoples behind the iron curtain and the satellite governments which she has set up in these nations proves that her whole policy is one of world conquest to destroy the property-owning classes everywhere and to set up mob rule by the masses in all countries with political and religious liberty destroyed.

We ourselves are largely responsible for the Soviet's present position. Not only because of lend-lease and UNRRA aid, but because of secret deals of a stupid diplomacy.

Since the close of the shooting war, Russia has carried on a ceaseless propaganda against the United States, hoping and working to bleed this country white to bring on a severe depression with vast unemployment.

Though she joined the United Nations, Russia has repeatedly and constantly used the veto power to thwart the efforts of that body to bring about world peace. Until the United Nations becomes more firmly established and has an international police force, to carry out its decisions, the United States must, of necessity, and in sheer self-defense, remain strong on land, sea, and in the air.

The Russians may be more or less of an enigma, but they are a very practical and realistic people. They understand clearly only one language—that of force. They respect strength and have only contempt for weakness.

If we are wise, we shall support strong defense measures, particularly in this troubled and uncertain world. The Congress voted $15,000,000,000 for national defense in the last session and will vote, perhaps even more in the next.

The fact that we have fought two world wars at an enormous cost to ourselves and won both without asking for an acre of territory or a dollar of indemnity should be convincing proof to all reasonable people that we are not pursuing an imperialistic or militaristic policy around the world, but that we are sincerely and earnestly striving, at great sacrifice, to promote peace and good will among all nations and peoples.

I know of no terms or concessions which we could make to Russia that would satisfy the dozen or 14 men in the Kremlin who are drunk on power. Already we have had too much appeasement of the Soviet at Tehran, Yalta, and Potsdam.

If Russia does not wish to join a world federation or to cooperate with the other great powers in the United Nations, then we should go ahead without her and leave her alone to paddle her own canoe.

If Prime Minister Stalin wants to confer with President Truman, then let him come to this country or the Western Hemisphere. We already have traveled too far and given away too much to be insulted again.

Russia has been winning battles in the cold war without firing a shot. While she has vast potential possibilities, her present strength has been grossly exaggerated. The masses are still backward; she has not the oil, steel, or rubber with which to fight another world war.

Our air lift into Berlin, which I saw the other day in action, is a miracle of our modern age. Our Navy is still by far the largest and best in the world. We have the atomic bomb and the greatest industrial output of any nation in all history.

Russia realizes where she would have been without our aid at Stalingrad. Her leaders know that her own economy is bad, their standard of living is low, and that there is much misery and unrest not only in the subjugated countries behind the iron curtain, but also inside of Russia herself.

We need to build a strong centralized intelligence to take advantage of these conditions. At least two out of every five Communists outside of Russia are Communists because of the terror and fear that Russia instills, not because of free choice.

We can win this cold war, not merely with bread and bayonets, but we should employ every legitimate and honorable means in order to destroy this world menace. Communism is doomed because it is based upon deceit, tyranny, injustice, and fear.

For these reasons, we should do everything in our power to win the cold war with Russia, not only with economic and military might, but also with ideas, better understanding, and a more effective psychological warfare, always striving to make our own Government better and to prevent conditions here at home in which the seeds of communism can take root and grow. [Applause.]

Moderator DENNY. Thank you, Congressman DEWEY SHORT. Veteran newspaper correspondent, writer, and lecturer Arthur Gaeth, has spent a great deal of his adult life in Europe, which has given him invaluable background and first-hand information about many of the complex riddles of European power politics. His Views on the News are heard on this network on Monday nights at 10 o'clock, eastern standard time. Mr. Gaeth, may we have your ideas on what we should do now to win the cold war with Russia. Arthur Gaeth. [Applause.]

Mr. GAETH. I do not accept Congressman SHORT's description of World War II's international conferences as secret deals of questionable repute or appeasement. I do not think Roosevelt fostered an appeasement policy. He took cognizance of the realities in our own military positions and tried to lay foundations for the future.

Lend-lease helped the Russians at Stalingrad, loss of their blood saved the lives of hundreds of thousands of our boys and helped sap the flower of the German Army.

I have no apology for Russian actions. I question them, but I don't think we've been on a one-way street since 1945.

First of all, we cannot let this cold war turn into a hot war. We're in no position to win a hot war in Europe or in Asia. We do not have one dependable ally on either continent, not in France, Italy, Germany, or China.

After another war the world would be even worse off than now, with the same problems unsolved, so we cannot win the cold war against the Russians by turning it into a hot war.

Any basis for world conflict today lies, not in the danger that our capitalistic system is to the U. S. S. R. or that communism is to the U. S. A.; it's to be found in the endeavor of the Russians and Americans to influence people in other nations which are in the process of political and economic change. Three-fourths of the nations of the world are. There the Russians have been vying for position to influence world revolution toward communism.

We mostly have been obstructing. Unless we really support democracy, economic as well as political, we cannot maintain our world position. That's where the little people enter the picture. We haven't been reaching them. We've had little to offer them. Our policy needs reorientation.

We've poured billions into China, but apparently little of that got down to the people. Today it's beyond our economic capacity to alter the economic and social morass China is in. If we support the whole rotten past in China, we will be shutting ourselves out of Asia for the future. Communism will become the dominant influence.

Guns and dollars won't change the tide. There must be a new program—one that will free work slaves, bring peasants out of their dirt, and give the great undeveloped land a new life. Chinese and Asiatics are going to have to make that program—not foreigners.

In the cold war in Europe ERP needs redirection. Today it's solely a business operation by businessmen and financiers backed by the military.

ERP largely is recovery for feudal landlords in Italy who own 75 percent of the land, for the owners of cartels and trusts in the Ruhr in Germany, for the moneyed cliques of France. True, some of the benefits finally trickle down to the people.

How do you get to the common people? Not by insisting that the aid flow through reopened channels to the trusts and cartels; not by giving the impression that the dependent governments must follow the patterns in our republican past.

Instead, we clamp down on expensive, private profits made out of ERP. We encourage basic economic reorganization which places no onus on a planned economy, if that is what is necessary.

We show no opposition to expansion of cooperative enterprise, public-power projects, the production for use, not merely for profit. We embrace no government merely because it is anti-Communist, but give it to understand it receives our blessing when it produces a program that expands the benefits of economic and political democracy to the common people.

If our aid program permits the people to make their own choice, to plan their own economies, which they must do after a consuming war, then we have a chance to win grass-roots consideration.

If we get down to the grass roots, we add to our support for negotiations with the Russians. We'd better get the militarists out of those negotiations. Let diplomats resume and permit United Nations to be more than just a tool for the great powers.

Herbert Evatt and Trygve Lie both seem to think we could have settled the problem of Berlin. There was a growing impression, when I was in Europe last summer, that we Americans were trying to avert real give-and-take negotiations, because in struggling for balance of power, we believed the Russians had the advantage with strong Communist Parties in so many countries. We must negotiate settlement in that German mess.

Our present foreign policy is merely an anti-Communist one. As long as we pour in guns and dollars, we may hold some semblance of a position, but we will not win anything, and we will not end the cold war.

We bragged about our achievements in Greece. What success have we had? We're no longer voluble about China. We herald ERP, but no basic reforms are being produced except in Britain and there we may even be hindering.

If we follow our present procedure with a military program to divert strength from reconstruction, we may even push the countries over the brink to war.

Our foreign policy hopes for world stability and a chance for peace, unrealizable unless we can give the millions of little people something for which to live. Fundamentally, they seem to want economic security first, and at the expense of their monopolies, trusts, and feudal landlords, with more socialization, and a planned economy.

Our chief aim seems merely to stop communism by preserving some form of private enterprise. We can hold up our end and end the cold war by gaining the support of the common people. We can back the vested interests, but if we do, we'll end up bankrupt or in war. In both latter cases, we will be sunk. [Applause.]

Moderator DENNY. Thank you, Arthur Gaeth. Louis Fischer has had unusual opportunity to learn and know Europe well. As a journalist, he roamed Europe and Asia and the Middle East, as well as western Europe. He's one of the outstanding authorities on Russia, where he spent 14 years of his life. His latest book, Gandhi and Stalin, paints these two as they embody the two conflicting concepts of democracy and dictatorship in the world today. Perhaps his best known and most influential book is an autobiography called Men and Politics. Mr. Louis Fischer. [Applause.]

Mr. FISCHER. The cold war is a very good thing. It is the best way to prevent a hot shooting war. The cold war is a means of blocking further Soviet expansion by strengthening the countries which lie in the path of a possible Russian forward push.

If we stop waging the cold war, Russia would simply have a free field. The cold war is the Marshall plan, the western European union, the Berlin lift, our aid to Turkey and Greece. Without these measures, Russia would be a greater menace and war would be nearer.

To work out a strategy of victory in the cold war with Russia, we must first understand what Russia is up to. Soviet expansion started in 1939. It reached its height before the atomic bomb was developed, and while the United States of America and England were supplying Russia with billions of dollars in lend-lease.

Soviet imperialism, therefore, is not a product of western hostilities. The war aftermath simply offered Stalin an opportunity to grab weak countries and he made the most of it.

Many people, and, perhaps Mr. Gaeth as well, tend to forget that the Kremlin is not just another government. Russia is a cruel, ugly dictatorship. A dictatorship needs enemies. It must be able to say to its subjects that their privations are necessary, and the terror is necessary, because enemies threaten the state.

During my 14 years in Soviet Russia, I saw one enemy succeed the other as the official excuse for continuing the dictatorship. But the alleged domestic enemies have been liquidated and Germany and Japan have been crushed. If Russia now established friendly relations with America and England, there would be no enemies, and the main reasons for the terror, the labor speed-up, and the lack of consumers' goods would disappear. That would be a threat to the Soviet dictatorship.

The Soviet Government wants either victories abroad in order to glorify the dictator-

ship or tension abroad in order to justify the dictatorship.

Moscow actually does not want friendship with the West. That is why it rejected the Baruch atomic energy plan, the Marshall plan, the agreement which we had already reached in Moscow over the introduction of Soviet currency in Berlin. That is why it doesn't cooperate with the United Nations.

Mr. Gaeth just said that we Americans are trying to avert real give-and-take with Russia. He could not prove that. For years there was give-and-take between us and Russia. We gave and the Russians took.

If we examine scientifically all the wartime and postwar negotiations between Russia and the Western Powers, we will find that where there was agreement, it resulted from an acceptance by the West of all or some of Stalin's demands.

Where there was disagreement, it resulted from the West's refusal to accept Russia's demands. But no agreement, not one, resulted from Stalin's readiness to compromise, and to reduce Russia's power beyond her frontiers.

I have learned that some months ago the United States Government offered to send a battleship to a Soviet port and bring Joseph Stalin to a mid-Atlantic position where President Truman would meet him. But Stalin rejected the proposal. He wants Truman or Vinson to travel to him so that he could boast to his people that the whole world must come to Moscow. He would, therefore, be strengthening the dictatorship.

Stalin does not want war because he cannot afford it now. But neither does he want peace. He prefers his cold war, which consists of producing chaos, economic distress, and civil wars in the non-Soviet world.

Moscow is afraid of one thing above all: That a prolonged period of peace would enable the western democracies to demonstrate their economic, technical, political, and moral superiority over communism. This would be the end of communism. That is why, as their part of the cold war, the Communists throw every possible monkey wrench into the life machine of the democracies.

Meanwhile, Moscow keeps its iron curtain down, lest its citizens learn the truth about western superiority. In this, thanks to the Voice of America, Moscow does not always succeed.

The more democratic we are, the more likely we are to win the cold war. We must fight dictatorships within the democratic world, like Franco in Spain and Peron in Argentina, else how can we say that we want to fight dictatorships?

Neither we nor the British should bolster up the rotten feudal Arab regime. We must keep ex-Nazis and pro-Hitler German industrialists out of power, else how can we expect the German people to recognize us as democratic?

What is needed to win the cold war is a more perfect union of more perfect democracies. This is not merely a struggle, as Congressman DEWEY SHORT seems to think, between capitalist America and Communist Russia. With us against Russia, Mr. Gaeth, please note, are British and other European Socialists, more fiercely anti-Communist than even DEWEY SHORT himself. [Applause.]

Moderator DENNY. Thank you, Louis Fischer. Our fourth speaker, Daniel Q. Posin, was born in Russia, in Turkestan, but fled from there with the coming of Russia in 1914. He spent his life in science and mathematics, and did important war work in the radar radiation laboratory at MIT. He is the author of Mendeleyer, a novelized biography of the great Russian scientist, and is now chairman of the physics department of North Dakota State College in Fargo, N. Dak. Dr. Daniel Q. Posin. [Applause.]

Dr. POSIN. Congressman SHORT believes that we can win the cold war by building a strong military machine. That won't do it.

Mr. Gaeth believes that we must build democracy throughout the world, including our own land. That's certainly a large part of the right answer

Mr. Fischer believes in strengthening democracy, but in addition he believes that the Russians, and they alone, are to blame for the crisis of the world. This is not a fact, so he has no answer.

Now, in the first place, in my opinion, the cold war must be won in such a way that everyone wins—all nations, all people. To spend time blaming Russia is to waste precious time and to arouse further hatred.

Besides, any scientist knows that there is more than one side to a problem. There is also a principle in physics which states that action and reaction are equal and opposite, and if you really want to find out who started it all, you'll have to go back and back with this until Adam and Eve. Even then you might have a hard time figuring out who was really guilty.

Ladies and gentlemen, it seems to me that science offers us an indication of what we must do. Think with me of the earth for a moment. It is moving around the sun. The sun moves toward a certain star. That star moves relative to another star, and that one relative to this, and everything moves relative to something else.

That's all we know. That's all we have—relative motion and nothing standing still in the universe; no central point, no hitching post in the universe where you can tie your horse and say, "This it is. This is really the place above all places."

So it is with the affairs of men. There are only relative values. No nation is really the nation, the hitching post, the ego center on this earth.

All men must be regarded as brothers. So the people of the United States must offer to the people of Russia, of France, of Britain, to all people a chance to jointly write a genuine charter of brotherhood, a world constitution for a world government, world president, world supreme court.

Oh, I know it is true that first it may be necessary to ease the tension in the world! If the Russians won't do it, then we must. This is no time for trivial considerations of "saving face." Why, we must save our entire heads.

Therefore, in Berlin we must be willing to say, "All right, you run the economics of the city. Go ahead, establish your currency," and then our boys come down from the skies and resume the motor transport and the blockade is over.

But this is not the end of the so-called cold war and no appeasement will end it either. The moment that the Berlin tension is eased, we must make the genuine offer of world federation.

Even if I were to grant that many of the things that have been blamed upon the Russians were true, it would all go to prove my point that in a world of independent nation states, that's what you must expect—preparations for war. That's what we've always had, long before there were any Communist nations. Why, we've had wars for centuries among the capitalist nations, and I have no doubt that we will have wars among independent Communist nations, too.

Of course, the Russians are doing nothing toward establishment of a world federation, but neither are we. The Marshall plan uses food to influence western Europe politically.

Remember the case of Italy. A few weeks before their election we announced that we were sending food. Yes, but they must vote our way.

The Marshall plan is being used to win us allies for the coming war. The Marshall plan is a glorified bribe; it does nothing about doing away with war. Economic aid to the world ought to be dispensed by an agency like the International Red Cross or a strengthened United Nations.

But as things are now the United Nations is achieving little of vital value, and this is because it is a mere assembly of nations without any superior law. It is a kind of gentlemen's club where frequently some of the members forget that they are gentlemen.

Let the United Nations admit Israel; let it condemn the Netherlands, and pull them off the backs of the unfortunate Indonesians.

The United Nations does not operate under world law. It is, therefore, handicapped.

Nor will the Atlantic union win the cold war. It is a mere bloc—a military alliance which will enable us someday to kill more human beings than some other nations will kill. No, a mere ganging-up will not win the cold war. There will be no winners in the hot atomic war of atomic bombs, atomic clouds, and radiation sickness.

If you think that the Russians will not be interested in a genuine world federation, you might be mistaken. Or, I admit—I admit, you might be right. But in science we do not make a conclusion before we perform the experiment.

We must perform the experiment, we must demonstrate our own genuine interest in brotherhood, or world federation, and then we must make an honest offer of federation.

Let us be scientists in this critical atomic age; make the experiment. We are at the crossroads—to the right, world federation and atomic energy for peace; to the left, nations arming for massacre and atomic energy for killing. Somewhere—where was it that I have read—I do not recall the exact words, but the meaning I certainly do remember—"I call heaven and earth to witness that I have given you life and death, blessing and cursing. Therefore, choose life so that thou and thy seed may live." [Applause.]

Moderator DENNY. Thank you, Dr. Posin. Now you've heard four distinct points of view on this important question. I understand the last time we were here in Battle Creek that one member of the audience said, after hearing this complex problem discussed and no decision arrived at, that she would never again listen to Town Meeting because we didn't solve the problem.

Well, we're not going to solve the problem tonight, but we're going to continue to discuss it. I'm going to ask the members of the panel to step up here around the microphone now and carry on their discussion for a little while before we take the questions from this representative Battle Creek audience. Congressman DEWEY SHORT, have you a comment?

Congressman SHORT. Mr. Denny, in order to keep the record straight, Dr. Posin stated that I said in my opening statement that we could win the cold war by building up strong military defenses.

On the contrary, I specifically stated that we could not win the cold war with bayonets and bullets alone, but that, in addition to economic and military might, we should use ideas of better understanding to carry on a psychological warfare through the Voice of America and those other instrumentalities—organizations like the OSS—behind the iron curtain in order to sell Russia a better philosophy than they now have.

Mr. DENNY. All right, thank you. Mr. Gaeth?

Mr. GAETH. Congressman SHORT, you're a member of the Armed Services Committee. How much should we militarize in the United States? How sizable should the Army be?

Congressman SHORT. We are not militarizing in the United States, and I might say to the gentleman that I have opposed peacetime conscription. I have even fought universal military training. I don't think it's necessary in this country. However, I do

believe on voting adequate funds to build up a mighty Navy, Army, and Air Force second to none in all the world.

Mr. DENNY. Thank you. Mr. Fischer?

Mr. FISCHER. I'm asking this question of Congressman SHORT because I know he can take it. What would you do about Franco, Congressman?

Congressman SHORT. I'm awfully glad, bebecause much as Mr. Fischer and I agree on the great fundamentals in this debate, I differ with him violently on the question of Spain.

I think we are absolutely foolish not to admit Spain to the United Nations. Here we are fighting communism with everything we've got, yet we refused to let the one nation that first fought communism—perhaps the most anti-Communist country in all Europe with the exception of Switzerland and Turkey—join the United Nations. And from a strategic point of view, God knows we need the Iberian Peninsula below the Pyrenees Mountains in order to control the Mediterranean. [Applause.]

Mr. FISCHER. Congressman, I would like to say that we're not only fighting communism; we're also fighting fascism and all form of dictatorship. [Applause.]

Mr. DENNY. Thank you. Mr. Gaeth?

Mr. GAETH. Mr. Fischer, if I understand your thesis correctly, it is that since 1939 Soviet policy changed into one of nationalist expansion. Are you implying that the Russians actually physically occupy such countries as Poland, Hungary, Bulgaria, and Czechoslovakia? Or, are they dominated by local Communists supported by the Russians, and therefore, these countries find themselves in the Soviet sphere.

Mr. FISCHER. In the Soviet empire, Russia has helped to establish Soviet regimes. There has not been a revolution in any one of the satellite countries. They were occupied by Russian troops who then set up Communist dictatorships. May I ask a question of Dr. Posin?

Mr. DENNY. Dr. Posin has a question first, and we haven't heard from him for a while.

Dr. POSIN. I'm the smallest and that's why they push me around so much. [Laughter.]

Mr. DENNY. Yes, but I pushed you up here.

Dr. POSIN. You stand over here next to me, Mr. Denny; I'm a little nervous. [Laughter.] Now, let's see. Mr. SHORT just now said to me that I accused him of finding a military solution alone. I only said that because it seemed to me that his emphasis was on the military, but if he wants to come forward with ideas on democracy, why, I welcome him—I'm very happy about that.

On the other hand, all of a sudden he says we need Franco because he't got a lot of soldiers, so now he's got me all mixed up again. Where are we here, anyway?

Now, may I have another moment, because I'll never get in here again, to talk to Mr. Fischer. He says that the Russians refused the Baruch plan on the atomic bomb proposal because they're just ornery, these Russians, but that's not why they refused it. One has to understand the physics of the thing. You see, what we wanted to do is to have the Russians allow inspection of everything they have—all their armaments, everything—and then we can inspect everything and they could inspect everything that we have, but meanwhile we keep the bomb.

You know, we want to put all the cards down but we want to hold the gun. They don't play poker that way in Russia, I guess. [Laughter and applause.]

Mr. FISCHER. The answer to that is that anybody can inspect in this country and everybody knows where our atomic plants and laboratories are, but you can't inspect in Russia.

Now, I would like to ask Dr. Posin a question. Were you so sweetly reasonable about the Nazi dictatorship? Did you talk about it in relation to the sun, moon, and stars, or did you condemn Hitler? And then why don't you condemn the Soviet dictatorship? [Applause.]

Dr. POSIN. I am a firm believer in world federation, and I would offer world federation to the Nazis, to Franco, to Stalin, to everyone. We must make the experiment. Someone may take us on it.

Mr. FISCHER. May I say that, as a scientist, he ought to get down to the facts? I read the Soviet newspapers and magazines. They regularly attack the very idea of world federation. They are fiercely reactionary and nationalistic, and have not cooperated even with the UN. They said they won't join a world federation. Reluctantly, therefore, I, who am in favor of world government, have come to the conclusion that the only thing we can aim for is a world government of the democracies, and we had better get it soon before the Russians get the atomic bomb, else then they will be able to break off one country after the other. [Applause.]

Mr. DENNY. Thank you. Mr. Gaeth?

Mr. GAETH. Mr. Fischer has given us a picture of the oppressive Soviet empire dominated from Moscow. Now, we have had about 5 years of that in all. If these countries are actually tied to the Soviet Union the way he describes they are, then how is it that the first time one of these new converts in Yugoslavia breaks away from the mother church, the Soviets do not use force to bring the convert back? Seems to me you have to qualify your charges of Soviet imperialism and expansion.

Mr. FISCHER. That's fine. Certainly I qualify them. Yugoslavia was the one country not conquered by the Soviet Army. It is strong enough, therefore, to break away from Stalin, and that's the proof.

Russian imperialism is nationalistic and in Yugoslavia it collides with Yugoslav nationalism. This is the reason why Russia cannot solve the problems of Europe. Nationalism won't solve it. You need internationalism and Russia hasn't got it.

Mr. DENNY. Thank you. It's too bad there isn't more time, but now while our speakers get ready for the question period, I'm sure that you, our listeners, will be interested in the following message.

ANNOUNCER. You are listening to the five hundred and thirty-ninth broadcast of America's Town Meeting originating tonight in Battle Creek, Mich. We are about to take questions from the audience.

For your convenience, Town Hall prints each week a complete text of each Town Meeting, including the questions and answers to follow in the Town Meeting Bulletin. Copies of tonight's program, as well as past and future programs, may be secured by writing to Town Hall, New York 18, N. Y., enclosing 10 cents to cover the cost of printing and mailing. You should allow at least 2 weeks for delivery. If you would like to subscribe to the Bulletin for 6 months, enclose $2.35, or for a year send $4.50. Or, if you would like a trial subscription, enclose $1 for 11 issues.

The question period which follows is completely spontaneous and unrehearsed. In order to discard irrelevant and useless questions, members of the audience are asked to write their questions of 25 words on a card and send them back to an assistant moderator by one of the ushers. If the question is approved, the usher returns it and during the question period the questioner holds up one, two, three, or four fingers to indicate to the moderator the person to whom his question is directed. This is to keep from having too many questions for the same person.

Now for our question period, we return you to Mr. Denny.

QUESTIONS, PLEASE!

Mr. DENNY. Now we're ready for our question period in the W. K. Kellogg Auditorium, here in Battle Creek, Mich. We'll start with the gentleman over there on the front aisle.

MAN. I'd like to ask Congressman SHORT: From your personal observation while in Europe, do you not believe there is no intention on the part of Russia to bring about a peace except at her own dictation?

Congressman SHORT. I can answer that very quickly and emphatically in the affirmative. I agree with Mr. Fischer that Russia doesn't want an agreement with the Western Powers; that her sole policy and purpose is world-wide domination by destroying the property-owning class and setting up the rule of the proletariat.

Mr. DENNY. Thank you. Mr. Gaeth has a comment on that.

Mr. GAETH. I don't think Trygve Lie and Herbert Evatt were quite as positive about the assertion that the Congressman just made as he was.

Mr. FISCHER. Yes, but after they tried, they failed, and there was no agreement on Berlin.

Mr. DENNY. Thank you. Congressman, come on in.

Congressman SHORT. I might say this to Mr. Gaeth, about his opening statement when he referred to the secret diplomacy. I wonder if he sanctioned all the agreements that were secretly arrived at and made at Yalta, at Tehran, and at Potsdam; if he favored withholding our armies out of Berlin and Prague and Vienna to allow the Russians to go in first and pick off the best sections, not only in those cities but of the country. Russia got the agriculture, Britain got the industry, France got the mines, and we got the scenery. [Applause and laughter.]

Mr. DENNY. All right; thank you, Mr. Gaeth?

Mr. GAETH. That's a very long, complex question, but let's begin at this end first. General Eisenhower seems to indicate in his book, Crusade in Europe, that all was on the up and up with regard to the manner in which the leading cities, the capitals of the central European countries were taken.

Congressman SHORT. I would suggest that Mr. Gaeth reread, if he has already read, The Great Globe Itself, by William C. Bullitt, Mr. Roosevelt's own Ambassador to Moscow and later to Paris.

Mr. GAETH. Yes; but Mr. Bullitt isn't the authority that General Eisenhower is for my money. [Applause.]

Congressman SHORT. And Mr. Gaeth was the man who wanted to get rid of these militarists and have diplomats run the show.

Mr. GAETH. But I was talking about military affairs and not diplomacy. The general was in military operation.

Mr. DENNY. All right, Dr. Posin.

Dr. POSIN. I'm going to talk not about a military man, but an educator, President Eisenhower of Columbia University. He said that we had to stay away from Berlin and take a different route for military reasons, so that we would lose less American lives.

Mr. DENNY. It looks like we're not going to get any more questions here. All right, Mr. Fischer, come in.

Mr. FISCHER. Instead of quoting authorities who may differ, I think we ought to get down to history, and I have asked this question: Is there one agreement that came about as the result of Russia's readiness to compromise, or to give away anything?

Mr. DENNY. All right, Mr. Gaeth, that's directed evidently to you. Oh, Dr. Posin, are you going to tackle that one? All right.

Dr. POSIN. Yes, before I answer that I want to say that when a principle is announced in science, if there is one violation, that principle is no good. Mr. Fischer is asking for one single instance which will show that the Russians did not have bad faith all the time. Here is an instance.

Mr. FISCHER. I said where the Russians gave up power—something that they had—in order to reach a compromise.

Dr. POSIN. Exactly, and when I finish telling this thing, which is an exception to your law, you must stand up and admit that it's

no good—we do that in science. Now, in the Foreign Ministers meeting in September 1945, the Russians wanted to have only the Big Three decide on the peace treaty. The Americans fought them on this, and a few months later in December, the Russians said, all right, you win, we will now have all nations who took part in the war, take part in the peace treaty. Therefore, you lose. [Laughter.]

Mr. FISCHER. Isn't that terrific! The Russians admitted France to the negotiations and then what happened? The negotiations were about the Balkan countries. Stalin kept the Balkan countries; where's the compromise? Where did he give up anything?

Mr. DENNY. All right, thank you. Mr. Gaeth.

Mr. GAETH. Offhand, I recall that we sent Harry Hopkins over in 1945 to get some concession in connection with UN and he came back from a visit to Stalin with the necessary commitments. In the Moscow meeting in December 1945 we found Jimmy Byrnes satisfied with the results in a give-and-take basis. It seems to me that in the winter and spring of 1945 we got definite commitments for a big-scale offensive; it was mammoth in size. Seems to me that late in 1945 we were taking the attitude that everything the Russians did was wrong. We made no concessions and neither would they after that time.

Mr. FISCHER. You still have not given me a single instance where the Russians gave up something that they had in order to reach a compromise.

Mr. DENNY. Thank you. Now, we've got to get back to the question period. I'm going to take a question from a lady up in the balcony who has a question for Dr. Posin. I think we'd better abandon the discussion here on the platform and take questions for the few minutes that are left.

LADY. Dr. Posin, if Russia refuses an offer of world federation, should one be formed without her, or would this lead to a hot war?

Dr. POSIN. In the first place, you are jumping far ahead of the game. Why should you put the point on Russia if they refuse? In the first place, we haven't offered this yet. We have to educate ourselves to this problem. We haven't offered this yet. But I'll go along with you. Very well, if the offer is a genuine one like a world federation which springs from a people's constitutional convention, with delegates coming, like that which happened in our country in Philadelphia in 1887—Russian delegates, American delegates, French delegates, with scratch paper—and if they draw up a world constitution there, that would be a measure of success. If they don't want to do this, then we federate without them. But you make the experiment first.

Mr. DENNY. All right, thank you. Gentleman on the second row.

MAN. My question is directed to Mr. Gaeth. Do you believe that an agreement could be reached between the United States and Russia, whereby we might stay in Berlin, without showing them we had the force to back that agreement up?

Mr. GAETH. Well, of course, we have the force to back agreements up. We have actually in the Berlin situation gotten ourselves in a mess because in settling the currency problem, when we first began to think in terms of currency reform, we were not cognizant of what might develop inside Berlin.

Our currency reform produced a currency reform on the part of the Russians which was natural. They had their Berlin sector directly attached to the Russian zone. Their currency reform went into the Russian zone. We came in with a counter-currency measure. That produced the scrap around currency.

I was in Berlin on the 6th and 7th of September when the meeting between the four governors—the military governors of Berlin—actually was recessed. At that meeting, General Clay told Sokolovsky that this was only a recess—they had to send reports back to their governments—France, Britain, and the United States. But that meeting never reconvened because the Western Powers took it to Moscow instead of sending it back to Berlin where General Clay implied there might even be agreement, because the Russians had been making some concessions contrary to the opinion of Mr. Fischer. Then, of course, in Moscow, the thing blew up because the Russians wouldn't back down on their own general, or governor, in Berlin.

Mr. DENNY. Thank you. Now the gentleman in the second row, there.

MAN. My question is addressed to Mr. Fischer. Do you think there is any chance of Russia cracking from within, say by reason of political trouble in the cabinet, or death of Stalin, or some other weakness cropping out?

Mr. FISCHER. I try to refrain from prediction and prefer to analyze. I would say that it's very difficult to overthrow a dictatorship from within. I believe that the dictatorship may grow weak as a result of proof that western democracy is supreme—or better.

What I plead for is demonstration by the democracies that we are better—that we can give more to the individual—more freedom. That will trickle through to the Soviet people and ultimately—maybe 10 or 20 years from now—that will bring about a change in the Soviet regime. First, Russia will lose her satellites and, ultimately, we may get democracy in Russia, but I do not look for a violent overthrow.

Mr. DENNY. Thank you. Congressman SHORT?

Congressman SHORT. Mr. Denny, I am very happy that question has been asked. I do not know Russia as Dr. Posin or as Mr. Fischer know it. However, in 1931, I did visit European Russia. I know they are the most suspicious people in the world. I do know that they have repeatedly used their veto power to obstruct progress in the United Nations, that they've had opportunities to cooperate and have absolutely refused.

Now, the question that the gentleman asked was whether or not there was any likelihood of a break from within. With a pistol to your temple and a bayonet to your back, it's hard to oppose. But I want to remind you that following the First World War, the million Hindus brought from India by Britain to western Europe to do the housekeeping job for the Allied armies got a taste of western life—they saw it for the first time. Each one returned to India following the close of that war, became a personal ambassador, and today India has her independence.

In this last conflict, thousands of Russian soldiers, for the first time, left Russia—got outside of their own country—and in spite of the devastated areas they visited, they saw that many of the poor peoples in eastern Europe, in Hungary, in Rumania, and Poland, and East Prussia, were living much better than the Russians had ever lived, so there is a lot of unrest and uneasiness inside Russia. Should there be a fighting war soon, it will be because Russia will be forced to fight in order to keep down the chaos at home.

Mr. DENNY. Thank you. The lady there in the center of the house.

LADY. This is for Mr. Gaeth. Don't you think that our position and that of the European people would be much better if we negotiated to get the Russian troops out of Europe now?

Mr. GAETH. At the present time, it seems to be the State Department policy that we're not anxious to negotiate withdrawal, for example, from Germany because we feel that the Russians hold the stronger position. Because it's a balance-of-power situation, we do not want to move at the present time. We are aiming, of course, to use Germany, or western Germany, in the reconstruction of western Europe.

Mr. DENNY. Thank you. Now the young lady in the balcony.

LADY. Congressman SHORT. "Making more arms" is the statement he made in his speech. How would this help the cold war? It would only make Russia more and more want to control to be safe from us.

Congressman SHORT. Russia is very realistic and very practical. I repeat what I said in my opening statement—that the only language she understands is force. She respects strength and has contempt for weakness. Only because of our present military might, our great industrial output, and our possession of the atomic bomb plus the demonstration we have given by our airlift—that and that alone, in my opinion, has kept Russia from taking all of Europe by this time. [Applause.]

Mr. DENNY. Thank you. The gentleman down here—second row.

MAN. I am directing a question to Dr. Posin. What do you think about student exchange with Russia and other communistic countries?

Dr. POSIN. Why, yes; that's a very nice, intelligent question. I am, of course, in favor of all that. However, that's a long-range problem and I am worried. I would like to ease the tension in Berlin and make a people's constitutional convention to draw up a world charter—do that right away; it can be done very rapidly—for world government.

Mr. DENNY. Thank you. Mr. Fischer?

Mr. FISCHER. How can you expect the Russians to participate in a world parliament of which Dr. Posin spoke when they don't have free elections of their own parliament? [Applause.]

Mr. DENNY. Dr. Posin? Just 15 seconds.

Dr. POSIN. The Russians will participate, as any nation would, in a world federation for world government. The only question is: What kind of world government? This remains to be answered at the constitutional convention at which you arrive with pencil, scratch paper, and begin to draw up the document—the over-all settling document for humanity.

Mr. FISCHER. They don't even cooperate with the UN, which is much less than a world government.

Mr. DENNY. Thank you. Now while our speakers prepare their summaries of tonight's question, here is a special message of interest to you.

ANNOUNCER. More people are writing in asking for Mr. Denny's pamphlet What Can You Do? Mr. Denny prepared this small, pocket-sized pamphlet to answer the question asked by so many Town Meeting listeners, "What Can I Do?" It tells you simply and directly how to be an active citizen, how you can play your part in making this democracy of ours work. It also tells you about the various activities that take place in this world famous Town Hall.

You may secure your copy by sending 10 cents to Town Hall, New York 18, N. Y., asking for the pamphlet entitled "What Can You Do?

Now for the summaries of tonight's discussion here, is Mr. Denny.

Mr. DENNY. Now for our first summary, here is Mr. Louis Fischer.

Mr. FISCHER. I think that Russia is losing the cold war and cannot win it, because Russia is nationalistic, reactionary, and antiscientific and antimodern, witness music, arts, and science.

I think we could win the cold war if we were actively engaged in fighting for democracy everywhere; for instance, now in Indonesia, where the Dutch must be stopped from destroying Indonesian independence, else there will be a threat of communism in Indonesia. That's the way to win the cold war. Fight for democracy everywhere [Applause.]

Mr. DENNY. Thank you, Mr. Fischer. Now, Mr. Gaeth.

Mr. GAETH. Times like these when there is a clamor for change have happened before in world history. Two great peoples are in a lather about the economic and political faiths of representative democracy and communism. Let's get out and proselyte for democracy, but let it be a message of salvation for the here and now, not for the hereafter. If it possesses the redeeming power, it will win converts.

If we don't make of it what it's cracked up to be, the little people of the world will turn to another faith. Up to now what had been proclaimed in Europe and Asia as the great doctrine for the West, they have not wanted.

Mr. DENNY. Thank you. Now, Congressman SHORT.

Congressman SHORT. To win the cold war with Russia, we should:

1. Arouse the American people to the real dangers of communism both abroad and at home. It is certainly something more than a red herring.

2. Maintain the biggest and best Navy, the most modern and efficient Air Force, and build up our Army through scientific research and technological development.

3. Continue aid to those people who believe in our way of life, but not bankrupt ourselves. It should end as soon as possible. We must have a sound economy and healthy industry at home.

4. Wage an aggressive psychological war and exert moral and economic pressures.

5. Remain patient a little longer, but if necessary, sever all diplomatic and trade relations. [Applause.]

Mr. DENNY. Thank you, Congressman SHORT. Now Dr. Posin.

Dr. POSIN. 1. The cold war must be won by all people.

2. All nations are guilty.

3. Science indicates that world harmony comes only from world law.

4. World government is possible, and I, for one, will work with all my strength for it. [Applause.]

Mr. DENNY. Thank you, Dr. Posin, Congressman Short, Mr. Gaeth, and Louis Fischer.

Nevada Asks Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to exend my remarks in the RECORD, I wish to include herewith a copy of the Assembly Joint Resolution 27, adopted by the Assembly of the State of Nevada, asking statehood for Hawaii.

The resolution follows:

Assembly Joint Resolution 27

Joint resolution memorializing Congress to extend full statehood to the Territory of Hawaii

Whereas the Territory of Hawaii has no congressional representative and is limited to one Delegate who does not have a vote; and

Whereas the people of this great and wealthy Territory through their service to the United States in time of war have proven their fitness for statehood; and

Whereas the legislature of the State of Nevada believes that full representation of this Territory should be granted by establishing a State thereof; Now, therefore, be it

Resolved by the Assembly and the Senate of the State of Nevada (jointly), That the Congress of the United States be, and it hereby is, memorialized to extend to the Territory of Hawaii full status of a State of the United States, thus assuring full representation in Congress; and be it further

Resolved, That duly certified copies of this resolution be transmitted to the President of the United States, and to each Member of the Nevada congressional delegation.

Federal Excise Tax Is Not Luxury Tax

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. MCCULLOCH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Mercer County (Ohio) Chronicle of March 18, 1949:

FEDERAL EXCISE TAX IS NOT LUXURY TAX

Time was when the phrase "women and children first" sounded the spirit of chivalry. But in today's America the same phrase ironically designates the group which bears the rudest brunt of the tax on toilet preparations.

Consider the one-sided budget strain in a typical family of moderate means. The mother keeps her children looking healthy and clean with the aid of simple baby oils and talcum powder—on which she pays 20 percent luxury tax. She keeps her own appearance by using shampoo, hand lotion, cold cream, and face powder—all of them subject to the same 20-percent excise tax. Her husband, on the other hand, uses dentifrices, shaving cream, razor blades, and hair tonic to look well-groomed. But he pays not a single cent Federal tax for any of them.

The fact is that the excise tax on toilet preparations originally was regarded as a wartime luxury levy. As such, while hostilities continued, women consumers made no complaints about it. But in January 1947, after the President proclaimed the end of hostilities, Congress reenacted the levy, and it was then that American women started to register their justified resentment. They were happy as anyone to see millions of men being mustered out of the armed services. But they still wanted to know why their budgets were kept on a wartime basis.

Since reenactment of the tax there have been no less than 11 bills calling for its repeal. There is also in the congressional file a 747-page report reviewing these bills and recommending that at least one of them be passed. To date, there has been no action on any of them. And women continue to ask why the legislators consider it a luxury to be well-groomed.

The idea of classifying essential toilet preparations as luxuries just doesn't make sense. Even during hostilities, the War Production Board listed cosmetics among toilet necessities and allocated critical materials for their manufacture. And the OPA placed cosmetics in the category of cost-of-living necessities.

Personnel officials can give you very definite answers to the question of whether ordinary cosmetics are essential in the life of women. They'll cite the situation of two girls with parallel ability and experience seeking the same position. They'll ask you to suppose that one girl looks pallid and uncurled while her competitor, thanks to the intelligent use of wave lotions, lipstick and face powder, makes a much better appearance. Invariably, the second girl is the cne who will get the job. It is unfortunate that, in some cases, the other girl may miss getting it because she can't afford that 20 percent tax on the little things that make the big difference.

The bills asking repeal on these taxes will be reviewed by Congress some time this spring. Any action taken on them can be influenced importantly by letters which budget-weary women write to their congressmen. And the husbands, who ultimately foot the family bills anyway, will do well to join their voices to the protest.

Isn't it about time, in this postwar, twentieth century America, that well-groomed ladies and unchafed babies cease to be considered marks of the luxury class only?

The Federal luxury tax on such essential items as luggage, billfolds, watches and clocks could also be dispensed with or reduced considerably.

A Walk in Naples

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Catholic Worker:

A WALK IN NAPLES

"See Naples and die." I heard the phrase first when I was still in high school. We decided to walk around, and for the next 4 hours we kept at it. I don't think I'll ever forget that walk. And, remember it took place in 1949, more than 3 years after the war ended. Someone walking around the city tonight will see the same sights. It was just an ordinary Sunday evening in postwar Naples.

Most of the Neapolitans who don't have seaside villas seem to live in crowded, smelly tenement houses of the kind that are to be found on the Lower East Side of Manhattan. Maybe that is why they escape to the streets at all hours of the day and night. As soon as we left the opera house we melted into a crowd of them pushing its way aimlessly up and down the streets. I say melted. Not exactly. Everywhere, we were recognized as Americans. Maybe it was the plaid shirts; more likely, something more basic. Whatever it was, I don't think we missed a black marketeer, a pander, or a shady proposition abroad in Naples that night.

They came at us from all sides, sometimes literally running down the street through the thick crowd, arms stretched out like a football player's, to catch up to us. They offered to sell us everything from Rosary beads blessed by the Pope to their 15-year-old sisters. Then when they had finally accepted the fact that we weren't in the market for anything, they pestered us to sell something to them: American cigarettes, watches, fountain pens. Some of them were slick young characters straight out of the gangster movies. But others were only raggedy kids with a little English who had been sent out by their parents, they admitted, to bring back business for the adolescent daughters in the family.

Neither of us at this stage of the game is easily shocked. We had both run into prostitution before—in the tenderloins of American cities, in wartime London, even in postwar Germany. But to be approached

10 times in a single block, and in every block. This was not the canny business, the professional hariotry of Piccadilly, the Pigalle, or North Clark Street, but the prostitution of poverty. The skinny kids marketing their sisters should have been home in bed, getting enough sleep to go back to school in the morning. But these kids don't go to school. Their sisters themselves are at the age when, normally, they would be having innocent crushes on movie stars and be busy electing class presidents. But they, too, are still displaced persons. And their parents? God forgive them. Who that is not as poor as they will throw the first stone?

We were not the only Americans in Naples that night. A big American aircraft carrier stood out in the bay. Its crew had shore leave in the city. At the opera house we had seen an American car drive up, two official stars marking it off as command. But the young sailors were not at the opera. They were wandering up and down the streets of Naples, pursued as avidly as we were. Most of them, it was obvious, had come a long way since graduation from high school last June or the June before.

As the night wore on, there were more and more drunken American sailors to be seen staggering out of bars, and more and more being led away from the center of town by the sleek young men and the ragged kids with a little English. Here was the corruption that war and poverty have brought to Italy reaching out to the youth of full-bellied United States. But it is fair to say, too, that the drunken sailors were in the minority. At midnight, most of the American gobs were still wandering aimlessly and indecisively, as servicemen are forever doing in the loneliness of leave in a strange city. Some of them, arms loaded down with cheap souvenirs, were already on their way back to the ship. For these, every step of the way involved of necessity a "Begone, Satan." There was no let-up in flesh peddling as the night wore on.

The innocence of some of the little kids mixed up in this business hit us when one of them, after offering to bring us to his sister, refused to leave when we sent him away. Instead he stared worshipfully for a silent minute and then tagged along beside us, an obedient puppy. Finally we found out why. "You camboys!" he said. "Bang-bang! You bang-bang Indians. I never see camboys, only in cinema. Now I see you. You show me gun?" Those shirts again!

On the way back to the hotel, along the quieter streets, we saw dozens of the homeless children of Naples.

One little boy about 8 or 9 was propped up, asleep, against the side of a building. He wore a picket's sign over his shoulder which told his story in emotional Italian. According to the sign (a homemade invention of brown wrapping paper and bright water-colored letters) he was a war orphan who had no home and depended for food on the lire given him by "the good Christians" who passed him on the street. The very sign itself betrayed a professional hand somewhere. But the fact remained that here he was, after midnight, curled up on the street.

In a doorway, we found two more children, a boy 6 or 7 and his little sister, 4. The girl was sound asleep, but the boy heard us coming. He got up right away, holding the 4-year-old in his skinny arms before us, like a priest lifting up a paten. Then he spoke in rapid Italian. We didn't understand a word he said. But he might have been saying: "Look, this little thing is your responsibility, too." We understood, of course, that he was making an appeal for lire. The sleeping child never stirred through all this. God knows how many times before morning the boy picked her up and held her, accusingly, before the eyes of passers-by.

In still another doorway there were three little ones mothered by an incredibly filthy girl about 12 years old. The girl had the instincts of an overly dramatic actress. She stood before us and pantomimed wildly and shamelessly to spell out their needs. All the drama in her situation was exploited with a recklessness that belonged only on the operatic stage. She even went so far as to stretch out her arms like one crucified and cast her eyes, saintlike, toward heaven. For several minutes she kept at it furiously while the little ones gazed in wonder, first at her and then at us. Again, despite the stridently false notes, the facts were on her side. Here were the ragged little kids for all the world to see, and she alone with them.

There were others, too, usually huddled together in a doorway, clutching each other for warmth and comfort. Sometimes we would pass a lone child spread out flat on the sidewalk, dead to the world. Most of them did not wake up. In time we found ourselves whispering and tiptoeing carefully when we passed, as if we were going through some weird nursery after hours.

When we talked about the walk in Naples later, we heard many things. We heard that the Neapolitans "have always been that way." And it is true that we saw nothing like it in Rome or Florence. We heard that in Naples the very infants in the cradle are already crafty little beggars who know how to wring a couple of lire from an innocent stranger. We heard all kinds of explanations. But we heard nothing that could explain away the sights that sent us back to that hotel room, finally, with no words that made sense but only a deep, burning shame.

JOHN COGLEY,
9 rue Jordil, Fribourg, Switzerland.

"Truman's Ride," Coming Up

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, March 23 (legislative day of Friday, March 18), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "'Truman's Ride,' Coming Up," from the Indianapolis Times of March 18, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"TRUMAN'S RIDE," COMING UP

"I may even get on the train again and make another tour around the country"—President Truman.

Shades of little Phil Sheridan and his famous ride of 1864—when he galloped 20 miles up the Shenandoah Valley to stem the rout of his army by the special interests.

Sheridan, the doughty and likewise cocky Union leader, had been in Key West—no; it must have been some other place—away from his troops. Taking advantage of his absence, a southern coalition under Gen. Jubal Early struck a sudden blow and the administration forces were in full retreat.

On his way back to the front, Sheridan had reached Winchester when he heard sounds of the battle from afar. Leaping upon his trusty charger, he dug in his spurs and raced up the Valley. To his disorganized soldiers he shouted, as he flashed by on thudding hoofs, these immortal words:

"Face the other way, boys. We're going back."

Thrilled by his dramatic appearance, the crestfallen troops rallied and re-formed. A few hours later Sheridan attacked brilliantly and swept Early's men from the field, recovering the ground that had been lost. Strong men wept, and poets wrote flaming verse to memorialize Sheridan's ride.

Well, a man can dream, can't he—under that Florida sun?

Labor-Relations Legislation

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, March 23 (legislative day of Friday, March 18), 1949

Mr. MORSE. Mr. President, last night the able junior Senator from New York [Mr. IVES] delivered a very able address on labor relations legislation before the Third Annual Bulletin Forum at the Bellevue-Stratford Hotel, in Philadelphia. In his address the Senator from New York outlined in a very able fashion the major principles of the amendments to the Taft-Hartley law. It is about these principles the Senator from New York and the junior Senator from Oregon have been in conference, and I wish to express my sincere compliments to the Senator for his very able address, and I ask to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is my pleasure and privilege tonight to outline for you my personal views concerning the essential content of labor-relations legislation which is scheduled soon to be before the Congress for decision.

As you know, there is much speculation nowadays concerning the nature of this particular legislation, which will emerge finally from the present Congress. This speculation ranges all the way from slight amendments to the Taft-Hartley Act to complete repeal of that act and the substitution in its place of the former Wagner Act with slight modifications, as has been proposed by the administration. I do not subscribe to either of these extreme courses of action.

As one who recognizes the field of labor relations to be dynamic and volatile, affected constantly by changing conditions, procedures, and techniques, I have never regarded any labor-relations statute as final. Over the years this has been a grave mistake of those who were the chief supporters of the Wagner Act. In the case of the Taft-Hartley Act, I regarded it not only as a temporary expedient, but as a statute containing serious imperfections which should be remedied by the Eighty-first Congress. It was, however, the best product which could be evolved by the Eightieth Congress, plagued as that Congress was by conflicting personalities and interests which prevented agreement upon any completely reasonable and sound statute of this nature. The Eightieth Congress nevertheless recognized the basic unbalance in the Wagner Act and sought to correct that unbalance by a new and more equitable statute.

It should be remembered that the main objective in writing the Labor-Management Relations Act of 1947 was to bring the relationship between labor and management into a condition more nearly approaching equality than had been possible under the Wagner Act. In this effort, because of circumstances I have cited, a wholly desirable legislative product was out of the question.

In part because of political vicissitudes, in part because of the natural course of events in which the Taft-Hartley Act has been given an opportunity to demonstrate its strength and weakness, its wise and unwise provisions, the time has now come to write a new labor relations statute. Moreover, this statute should be, not a mere series of amendments to the Taft-Hartley Act, but a brand new approach to the solution of problems inherent in the field of labor relations.

To this end, the Taft-Hartley Act itself should be repealed and, simultaneously with its repeal and as a part of the repeal measure, a new act, based on experience under the former Wagner Act and under the Taft-Hartley Act, should be formulated and enacted. Furthermore, in the writing of this new act, the Congress should not be prejudiced by allegations and charges which have been falsely made against the Taft-Hartley Act. Never, to my knowledge, has so important a legislative measure been so maligned, misrepresented, and misunderstood because of hostile organized propaganda calculated to make it unpopular.

In its form and construction, the new statute should contain, both in the language of finding and policy and in the core of the law itself, the principle that the right of collective bargaining and opportunity for workers and employers to enjoy the full and unimpeded exercise of this right is fundamental and should be held inviolate. In addition, the obligation of both labor and management to bargain collectively in good faith and their common responsibility to the public and for the public welfare should be not only recognized, but required, as a prerequisite to collective bargaining rights. Free collective bargaining directly between management and labor should be assured the fullest play, with the Government stepping in to settle disputes only as a last resort to protect the national health and safety.

It is indeed regrettable that partisan politics has been dragged into the midst of our consideration of labor-relations legislation. It seems to me that this is one field where there should be no partisanship and where all Americans, regardless of political party, should work together in a common endeavor to attain a common objective. The fact that the administration has submitted to the Congress what would appear to be a piece of "must" legislation dealing with this subject is truly deplorable, and it is discouraging to many of us who are seeking to resolve the question by conference and discussion and objective approach.

I might utilize the remainder of my remarks by criticising the so-called administration bill. To me, however, such a course on my part would seem neither creative nor constructive. Rather, I shall briefly outline what seems to me to be the more essential substantive requirements for a sound labor-relations statute.

I have indicated already that the right of collective bargaining itself is basic. It would appear, therefore, that the new act should be written around the original Wagner Act and should include, above and beyond the provisions of the Wagner Act, additional provisions which will insure by statutory enactment the establishment of a true and necessary balance in the relationship between labor and management which the Wagner Act alone did not possess and which the Taft-Hartley Act failed satisfactorily to achieve.

Such a statute should protect workers, employers, and the public both against coercion from among themselves and from unfair and harmful activities on the part of any one of them.

It should afford adequate protection to the Nation in the case of a national emergency, occasioned by a labor-management dispute in any area of our economy. Here delaying and cooling-off procedures similar to those in the Railway Labor Act, may well be adopted, and the President should be given greater specific authority and responsibility to act. Finally, in the event all other efforts will have failed, an especial obligation should rest with the Congress to take whatever action the crisis may demand.

Far more equitably than is provided in the Taft-Hartley Act, this new act should make provision for the settlement of unwarranted jurisdictional disputes and for the prohibition of unjustified secondary boycotts. Morever, it should provide a suitable means by which innocent victims of this kind of jurisdictional strife or secondary boycott may recover damages.

It should permit freedom of speech as much to employers as to employees, insofar as the exercise of free speech may not include threat, intimidation, coercion, bribery, or other undue influence.

It should insure the sanctity of the labor contract which should be binding equally upon both parties to the contract.

It should require as a prerequisite by which labor organizations and employers are empowered to utilize the processes of the National Labor Relations Board, that officials of both unions and employers take what is commonly called the Non-Communist Oath, and affirmatively repledge their allegiance to the principles of the Constitution of the United States. I make this statement as one who opposed the non-Communist affidavit provision in the Taft-Hartley Act and who readily recognizes the loyalty of the vast majority of labor leaders and employers. But I feel strongly that, with the threat of communism as it is today, this is no time to abandon measures aimed to help safeguard our country against subversive activity, and it is no time for loyal Americans to quibble about the propriety of subscribing to an oath of allegiance to our country.

This new act should provide that welfare funds be regarded and administered as trust funds for the benefit of the beneficiaries and for the proper purposes for which these funds are created. To make this provision workable and effective, moreover, the establishment and operation of welfare funds should be subject to the approval and supervision of the Secretary of Labor.

If possible, the new act should permit the closed shop, at least, in those areas where historically the closed shop has been an accepted institution; and simultaneously it should provide legal machinery for the prevention of abuses which may occur under such legalization. At the present time the Taft-Hartley Act's prohibition against the closed shop is being violated in spirit, if not in the letter, in certain important instances where it is clearly unworkable, and these conditions should be met realistically.

The new act should require that labor organizations furnish to the Secretary of Labor and to their membership detailed financial statements and such other information as may be pertinent to their functioning and operation.

By the terms of this new statute and in line with the status of all other administrative agencies, the National Labor Relations Board should function as an administrative agency under the Administrative Procedure Act, by which its functions would be appropriately separated.

The new act should provide that the Mediation and Conciliation Service shall continue to be a separate and independent agency of Government and shall continue to be able to act as a truly neutral and impartial force in aiding the voluntary settlement of disputes and controversies between labor and management.

Time does not permit me to make a complete enumeration of those provisions in a labor-relations statute which seem to me essential, if it is to provide a satisfactory balance between management and labor and, at the same time, safeguard the public interest. The suggestions I have made will indicate the type of act I advocate.

By and large, any legislation dealing with labor relations should recognize that organized labor has been one of the mightiest forces in our economy by which we have been able to preserve a free capitalistic society. It is altogether probable, moreover, that the elimination, or even serious impairment, of trade-unionism and the trade-union movement would contribute more than anything else to the destruction of freedom in America.

Let us ever remember that in our political life our forebears gave us a balance of powers between the legislative, the executive, and the judiciary. In our economic workaday life let us evolve a similar balance of powers between organized business, organized labor, and the national general interest. Let us seek that balance impartially, persistently, and above all confidently, knowing full well that the inner light of American institutions cannot fail.

Shall the Generals Run Our Foreign Policy?

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the February 23 issue of the Christian Century:

SHALL THE GENERALS RUN OUR FOREIGN POLICY?

Every thoughtful American knows that enactment of the North Atlantic defense alliance will mean that the United States has cast aside a principle of foreign policy which it has observed ever since George Washington was President. As the bulletin of the Foreign Policy Association has said, in the past the United States has made a few temporary alliances to deal with temporary emergencies. But ever before has this Nation seriously considered entering a permanent military pact. Washington's parting advice to stay out of entangling, i. e., permanent, alliances with the nations of Europe has hitherto been the foundation stone of our foreign relations. President Truman is the first chief executive to dare propose that it be replaced.

Of course, the mere fact that Washington—and Jefferson after him—warned against permanent alliances does not prove that this particular alliance should not be established. After all, Washington and Jefferson lived a long time ago; our world is a very different world from the world they knew, and the United States is a very different country. American interests range far abroad nowadays, and the requirements of defense within a generation have involved us in two gigantic wars fought in Europe, Asia, Africa, Greenland, Iceland, and the isles of the Pacific. In today's world, with our national interests so vastly enlarged, perhaps the time has come to abandon the old policy and adopt the one soon to be pressed on the Senate.

Our military men insist that the time for such a change is here. They are pushing for this military alliance with European nations because they say our security is at stake. That is the ground on which the State Department, in its brief for the alliance, Building the Peace, asks for ratification. "Our own security," it insists, is endangered. To

be sure the Russian threat looks like much more of a present danger to the security of France, or Italy, or Britain, or Norway, or the Low Countries. But the argument is that a threat to the security of any of those nations is a threat to our security. The way to neutralize this threat, to offset it, to stop it in its tracks, so the argument continues, is to make a permanent military alliance with the nations immediately in the Russian path.

This is a military policy. It has been conceived by military minds, and it is the sort of foreign policy whose wisdom seems self-evident to military minds. If communism must not be allowed to move farther westward in Europe, and if the western European states are too weak to lick the Russian Army, then make the armies of those western states larger, give them better equipment, and a hard-and-fast promise of American fighting support—and the Russian threat will be contained.

The gentlemen in the Pentagon Building don't understand how anyone can even question the correctness of the conclusion. This paper does so, because we think that the size of armies by no means settles their fighting worth. The French and Italian armies showed that 10 years ago; the improvised forces of the Israelis have just shown it again in the case of the Egyptians. Of the whole lot of potential allies in the proposed North Atlantic defense alliance, the only ones we wouldn't regard as liabilities in case of war with Russia would be the Canadians, the British, and the Norwegians. And Norway would be a geographical liability.

But this is not the ground we wish to examine in this editorial. Here we wish to point out not only that the North Atlantic defense alliance is a military conception, a major departure in American foreign policy being pushed by military pressure, but that, if it goes into effect, it will hand over to the military services actual control of the foreign policy of the United States for as long as the alliance remains in force. Establishment of the alliance means that the relations of the United States Government with the rest of the world will be in the hands of generals, admirals, and the Secretary of Defense.

Here is something for Congress and the Nation to stop and think about. No development in American Government since the end of the war has been more marked than the growth of public apprehension at the increasing influence of the military. As generals and admirals, former generals and admirals, retired generals and admirals took over post after post traditionally held by civilians, public murmurs of anxiety began to mount until they became a Nation-wide roar of protest. Without regard to party affiliations or sectional or other groupings, the American people generally came to feel that it just was not wise to have the military mind in such positions of power. Who has not heard, since last November, the hope expressed that now Mr. Truman had won the Presidency in his own right he would return our government to civilian control?

That well-informed Washington weekly, the United States News, threw a revealing shaft of light which reflected this widespread feeling at the time Mr. Acheson became Secretary of State. It reported that before he accepted the office, he secured a promise from President Truman that civilian control of foreign policy would be restored, especially by ending the military domination of the National Security Council in which, Sumner Welles says, foreign policy has recently been formulated. We cannot vouch for the accuracy of the report by the United States News. It sounds reasonable, however, for during his previous service in the State Department, Mr. Acheson was known as an opponent of the military clique. His principal achievements were the Acheson-Lilienthal report, which induced Congress to take atomic energy control out of the hands of the Army, and his Cleveland, Miss., speech which adumbrated the Marshall plan for economic, rather than military, aid to Europe.

Whatever the private terms on which Mr. Acheson became Secretary of State, he inherited the North Atlantic defense-alliance scheme in the final stages of its negotiation, and now he must defend it. Possibly he does so without seeing how, if the alliance is formed, actual domination over foreign policy will permanently pass to the armed forces. But the prospect should become clear to anyone who will analyze what the situation will be from the day the military pact goes into effect.

From that day on, for as long as the alliance continues, the central interest of American foreign policy must be the alliance. The alliance must be held together; it must be kept strong; if it seems to be developing weaknesses (and it will start out with the European end nothing much but weaknesses) its strength must be built up. So far as America's overseas interests are concerned, these are then bound to be the dominant, the overriding issues. No important decision in foreign policy will be made save in the light of these considerations.

But now note: Every one of these involves a military problem. On every question of the sort that arises the President, the Secretary of State and the Congress will have to go to the Pentagon for the answers. Even on the supposedly civilian matter of the amount of money to be spent to keep the alliance strong and vigorous, the Pentagon will rule.

The Pentagon will rule, not because the armed forces are always grasping for power (though they seldom prove backward about taking it when the chance offers), but because in a matter of this sort it just cannot be any other way. It has to be the army staff of France, for example, which reports to Washington on the needs of the French Army if the Russians are to be held in line. It has to be the Pentagon which receives and analyzes the report. It has to be the Pentagon which draws the conclusions concerning what needs to be done and goes either to the President or to Congress to demand that they do it. It has to be that way, for no other policy of dealing with the problems and demands that will come up under a military alliance would make any sense.

In other words, from the day the pact goes into effect the foreign policy of the United States will be controlled in the Pentagon Building. This is certain to be so because the North Atlantic defense alliance will be the heart of the policy, especially now that the effort to contain communism in China has been written off the books. The President and his Secretary of State may try to modify Pentagon decisions and demands. Army and Navy top brass will probably avoid being too high-handed; they won't hunt for unnecessary trouble. But that will not, because it cannot, change the essential nature of the situation. When administration of a military alliance becomes the central core of foreign policy, that is the job of military men. And that means military men hold in their hands the actual control of the Nation's international relations.

So when the wisdom, or otherwise, of this departure from America's historic policy comes before the Senate, we hope the Senators will see that there is more at stake than any question of the inerrant inspiration of Washington's Farewell Address. Just possibly Washington (or Hamilton, or whoever wrote it) had more reason for warning against such permanent military alliances than a timorous and selfish desire to grow fat on the fruits of isolation. Just possibly he wanted to keep control of the Nation's foreign policy in civilian hands, where it belongs.

Truman's Program Bogged Down

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 23, 1949

Mr. SHORT. Mr. Speaker, under leave granted me to extend my remarks I include the following broadcast:

TRUMAN'S PROGRAM BOGGED DOWN

(Broadcast between Walter Cronkite representing KWK, St. Louis, and KMBC, Kansas City, Mo., and Hon. DEWEY SHORT, Representative in Congress, Seventh Missouri District)

Question. Basically, Congressman, what do you think has happened to the Eighty-first Congress? Why, with a large majority in the House, and what should have been a comfortable majority in the Senate, has the administration program been delayed up to now?

Answer. Mr. Cronkite, the program is not only delayed but bogged down. The chief reason is that it is basically unsound and fundamentally wrong. In the hour of hysteria, when no one, including the President himself, thought he could be reelected, he promised everything to everybody—which is impossible of fulfillment. Of course, the present administration cannot deliver on false promises, and many thousands who voted for, as well as against, the President, now know it.

Question. It is hard to understand why, even with those factors, the administration should fail in pushing its program through. The Democrats don't seem to be lacking in skilled, veteran leadership—Vice President BARKLEY, CARL HAYDEN, ED JOHNSON, and others Senators, and SAM RAYBURN and a host of others on the House side—all of whom, during the Roosevelt administrations, have had plenty of experience in dealing with recalcitrant Congresses? Why do you think they should have succeeded in the part, and failed so far in this session to get the Democrats in Congress to work together?

Answer. Lincoln once said, "You can fool some of the people all the time, and all the people some of the time, but you cannot fool all the people all the time."

I agree with you that the Democrats have skilled, veteran leaders in the Vice President, the Speaker, and others whom you have mentioned—but at long last the American people are beginning to realize what a dreadful mistake they have made. The reason the Eighty-first Congress has failed is that the promises the New and Fair Dealers have made are fantastic and impossible and the stand they have taken is fundamentally wrong. In spite of the able leadership in both Houses, the rank and file of our citizens now feel that they have made a miserable mistake. This is my impression after having recently spoken in Minnesota, Missouri, and Ohio, and from my mail from several other States.

Question. Do you have the feeling at all, Congressman, that this reluctance on the part of many of the Democrats to go along with the administration program—or, at least, not to rush the program too much—do you think this attitude might be prompted by indications that the folks back home aren't as solid behind the administration program as people might have thought last November?

Answer. This question already I have answered to the previous one. Congresses may be recalcitrant and oppose the administration in power but every Congress pretty well reveals the true feeling of the people. I am

convinced that the majority of our people do not want the program laid down by the administration and that is why it is not pushed through. After all, my fellow Missourian, Mr. Truman, was elected by less than half of the voters casting their ballots in the last election. And remember, only two-thirds of the eligible voters cast their ballots. What a sad commentary on our vaunted democracy.

Question. Where would you say that the administration has failed in capitalizing, in cashing in, on that so-called mandate of last November? Certainly there was a lot of enthusiasm for the President's program among the Democrats when Congress first convened in January. What has caused the dissipation of that enthusiasm?

Answer. It is only natural for any party to be flushed by enthusiasm and carried away by excitement over victory—especially unexpected victory. The happiest and warmest hours of Harry Truman's Fair Deal was at the inauguration. Since that Belshazzar's feast and bacchanalian revelry the heat has turned to cold and rejoicing has given way to weeping.

I repeat, sir, that only about two-thirds of the eligible voters of this country cast their ballots; less than one-half of those who voted were for Mr. Truman, so the election cannot be interpreted as a mandate by anybody. The Democrats did not win, but the Republicans lost—throwing the election away by our weak, timid, pusillanimous, and indefensible tactics by failing to join an issue. I do not blame the Democrats or New Dealers for our defeat, but the cowardice of some of our own professed Republicans. We lost; they did not win.

Question. Congressman, here's a rather difficult question. It is based on frequently recurring reports that the Republicans are pursuing a policy of sabotaging the Eighty-first Congress—to make it look as bad as President Truman said the Eightieth Congress was. From your observations, would you say that such is really a considered policy of the Republican Party?

Answer. Definitely no. Two wrongs do not make a right, and no party should win an election because of the mistakes of another. Personally, I want to cooperate with the President because he is from my State, and I have always gotten along with him personally, and, in spite of his unwarranted, maligned, and inexcusable charges against the Eightieth Congress, I think it will long be remembered with gratitude after the present ignoble Eighty-first is forgotten. I am tired and disgusted with our present performances.

Question. Do you see any possibility that President Truman and other administration leaders will be able to pull this session of the Eighty-first Congress out of the hole?

Answer. Of course, all things are possible in war, politics, and love. If President Truman will listen to his real, genuine, and proved friends—and not to a few wild-eyed, radical left-wingers—I believe he will still be able to pull this session of the Eighty-first Congress out of the hole. Certainly, I hope so. Frankly, I do not believe it will happen.

Question. What, in your opinion, will it take on the President's part to pull off this recovery?

Answer. It will be most difficult because of the many conflicting interests and contradictory elements that now make up the present administration. Definitely, it is not the Democratic Party; it is not even the New Deal Party; it is not altogether the radical party, but it is a conglomeration of heterogeneous elements which the most skillfully trained lawyer, highly educated scientist, and profound philosopher could begin to comprehend. Mr. Truman, or any other man, would find it most difficult to reconcile all these discordant elements or to bring peace out of such a welter and confusion of babbling tongues. I feel sorry for any President of the United States, most of all Harry S. Truman. He is more to be pitied than censured.

Question. In view of all this, Congressman, what do you think the prospects are for the basic legislation in the President's program—for instance, repeal of the Taft-Hartley law, civil rights, housing, and anti-inflation legislation, increased taxes, and expansion of social-security coverage?

Answer. Mr. Cronkite, you certainly do not overlook any point in the program. We could spend all night discussing any one of these pieces of legislation, but, to be brief, I will say that I believe the Taft-Hartley law will not be repealed—some amendments will be adopted, which are acceptable to all, but the substance of the law will be kept. Experience has shown that it is fair and acceptable in the main to employer, employee, and the public.

Some civil-rights measures might possibly be passed, though I think most or all of them will be defeated. Many crimes have been committed in the name of civil rights. Most of our people still believe in the Constitution of the United States and are against communism in all its forms.

Housing and anti-inflation legislation—more of a sop to get votes than anything else—will likely fail of enactment. Government largess and dishing out of doles cannot take the place of individual initiative and private industry and thrift.

To own property is an honor and not a disgrace. To receive a just reward on honest investment is not a crime. Good-by rent control.

Increased taxes are out. The House perhaps will pass the bill but the Senate will not. Our budget is now four times larger than any peacetime budget and we simply cannot add further to the load of the overburdened taxpayer of the Nation. A Nation like an individual cannot spend more than it makes without getting into serious trouble. We cannot spend ourselves into prosperity. Stop deficit financing, balance the books and end the year with a surplus.

Social-security coverage may be expanded but it will be done in a limited and a careful manner. Wholesale pensions or the granting of security to everybody as the President has planned is laudable in purpose but impossible of fulfillment. Such a careless and indiscriminate philanthropy would lead us to an inevitable bankruptcy and ruin. Nevertheless, I believe we should give less to foreign countries and more to certain classes of our veterans and old people at home. Even Mr. Truman's own Congress, the Eighty-first, will not do a job as good as the Republican Eightieth Congress which he bitterly condemned. Sad, but true.

Columbia Valley Authority

EXTENSION OF REMARKS

OF

HON. GUY CORDON

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, March 24 (legislative day of Friday, March 18), 1949

Mr. CORDON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article dealing with the controversial question of the Columbia Valley Authority, written by Mr. Tom Humphrey, and published in the Oregon Journal of March 20, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIVE OF SEVEN WESTERN GOVERNORS QUESTION VALUE OF CVA PROPOSAL

(By Tom Humphrey)

The proposed Columbia Valley Authority, modeled after TVA, may look like Miss Glamorpuss of 1949 to Representative HUGH MITCHELL, Democrat, of Washington, and his CVA league. But it doesn't look that way to the governors of five of the seven CVA States, or to Oregon Congressmen or Oregon newspapers or to approximately 100 agricultural, industrial, and promotion groups of the Pacific Northwest. On the contrary, they're asking:

"What's TVA got that we haven't got?" And they're prepared to make their case and fight it out in the region and in the Congress.

The CVA leaguers have been having a field day since President Truman made his surprise CVA declaration the other day and asked a five-agency committee to come up with legislation to implement it.

They have only a general idea concerning the CVA bill the President's committee will offer, but they're rallying around Representative MITCHELL who has tried repeatedly and unsuccessfully to interest the Congress in an imprint of TVA for Columbia Basin. They figure now's the time, with a Democratic Congress, with the President back of them and all. They figure what's good for Tennessee Valley would be good for this region. And they're saying that with a CVA this region will get more Federal money, with a CVA there'll be no more floods like those of last year, and with a CVA there would be no power shortage.

Grange masters of Oregon and Washington who will buy anything with a public power label on it are whooping it up. Several labor leaders have climbed on the band wagon. Representatives MITCHELL and JACKSON of Washington and Senator TAYLOR, of Idaho, radical third party running mate of Henry Wallace, simply can't wait for Mr. Truman's five-agency committee to report. They're for introducing their own CVA bills. And Senator MURRAY, Democrat, of Montana, is going to make another pitch for his Missouri Valley Authority bill, even though it isn't welcome in the Missouri Basin and President Truman has said he believes existing agencies can do the job there.

Finally Bonneville Power Administrator Paul Raver, strong advocate of coordinated development of Columbia Basin but lukewarm advocate of CVA, went to Washington, D. C., talked to his boss, Secretary of Interior Krug—former power manager for TVA—then came out wholeheartedly in favor of a regional agency in the nature of a CVA.

And right there the opposition came to life.

Gov. Douglas McKay, of Oregon, demanded: "What's the matter with the way we're doing now?"

"I cannot agree with any plan for a Columbia Valley Authority under which the States surrender their autonomy and our natural resources pass into complete control of Federal bureaus," he wired President Truman. Governor McKay told the President that he could do a great service to the region if he permitted the Army engineers to complete development of the power, navigation, flood-control, and navigation projects outlined in their master control plan for the Columbia Basin.

Gov. C. A. Robins, of Idaho, said: "On the basis of past performance of knowledge both special and general of the entire area, it is my belief that existing agencies can best develop the Columbia Basin. Authority development and control, I believe, would invade the area of sovereign rights of the States."

Gov. Arthur B. Langlie, of Washington, started his own backfire against CVA by sponsoring a Senate bill giving his State authority to go into the power business at the wholesale level. He declared it would protect the State against the "overpaternalistic interest of Federal Government."

Governor Langlie also warned that "if the people of the State don't run their own power business today the Federal Government is going to come in and do it for them, and we are not going to have local control. Control of our resources and economy will come from Washingtn."

Gov. Vail Pittman, Democrat, of Nevada, and Gov. C. A. Crane, of Wyoming, parts of whose States would be in the proposed 279,000 square-mile Columbia Valley Authority area, also oppose it. That makes five out of the seven Governors on record against valley authority proposals. Gov. J. Bracken Lee, of Utah, is expected to clarify his position soon, and Gov. John Bonner, of Montana, ran on a platform of "Montana water for Montana people."

Former Governor Ford, of Montana, was a strong opponent of CVA and MVA, being a leader in the Missouri Basin Interagency Committee, which, like the Columbia Basin Interagency Committee, works for basin-wide development on a coordinated interagency Federal-State basis.

That isn't all. Heads of the three outstanding municipal power agencies of Oregon and Washington strongly oppose CVA.

E. R. Hoffman, superintendent of Seattle City Light, and C. A. Erdahl, commissioner of public utilities, Tacoma, the latter chairman of the Northwest Utilities Conference of Public and Private Power Agencies, say they think satisfactory progress can be made in the development of power on the Columbia River and its tributaries by existing agencies if given a free hand.

"I should be most unhappy to see any major part of this immediate [power development] program caught in the rip tides of politics," Commissioner Erdahl said. "I doubt the wisdom of any serious attempt in this session of Congress to upset present controls."

J. Frank Ward, superintendent of Tacoma City Light, former Bonneville engineer, added: "Coordinated development is desirable, but not so desirable that the people of the Northwest can afford to lose control of the development of their own area. I feel that will be the inevitable tendency of a large authority unless it is made very responsible to the people of the Northwest."

And R. R. Boals, general superintendent of the Eugene, Oreg., water and power board, said: "I very much object to a Columbia basin authority or to any other authority so far proposed."

Oregon congressmen are almost unanimously opposed to a TVA-type CVA.

Senator GUY CORDON who as a member of the Senate Appropriations Committee has waged a successful fight for funds for McNary Dam and other Army engineer projects, strongly opposes CVA.

Senator WAYNE MORSE, progressive Republican, says: "I am anything but convinced that we in the Northwest want any government agencies in control of our rivers based upon the Tennessee Valley pattern. Our economy is entirely different and our people are strong believers in a maximum of local self-government."

Representative LOWELL STOCKMAN actively battles CVA. And Representative HARRIS ELLSWORTH indicates that he may offer an alternative river development bill. Meanwhile his newspaper, the Roseburg, Oreg., News-Review, is campaigning for all it's worth against CVA.

Senator CAIN of Washington and Representative ANGELL of Oregon are withholding comment until they see the final draft of the proposed administration bill, but Senator CAIN is not expected to go along with his authority-minded Democratic colleague, Senator MAGNUSON, when the chips are down. And Senator ECTON of Montana appears to be just as strongly opposed to CVA and MVA as Senator MURRAY is for them.

Almost every major newspaper in Oregon, Washington and Idaho are on record against a TVA-type CVA, strong as they are for development of the Columbia and its tributaries. Every power company president in the region, while favoring McNary Dam and other Federal power projects, is actively antagonistic to CVA, remembering, no doubt, that TVA has elbowed 32 privately owned electric utilities out of the picture in Tennessee Valley, either in part or in toto. Every major chamber of commerce, including Portland, Seattle and Spokane, is on record against CVA, recalling that TVA engages in 30 different business enterprises in competition with private enterprise.

And while Oregon and Washington State Grange leaders are plugging CVA, other farm groups are adamant in their opposition. Among them are:

The Oregon State Farm Bureau Federation, the Idaho State Grange, the Washington and Idaho State Reclamation Associations, the Western Montana Fish and Game Association, the Wyoming State Planning and Water Conservation Board, the Conference of Northwest Reclamation Associations, the Wyoming Stock Growers Association, the Yakima Valley Farm Council, the Columbia Basin Resources Commission, the Northwest Mining Association, the Western Forest and Conservation Association, and the Washington and Idaho State Cattlemen's Associations, just to name a few.

These organizations declare in forthright resolutions and statements that they want no superstate to endanger their State water and mining rights and to supersede existing Federal agencies, such as the Army engineers, Bureau of Reclamation, and the Soil Conservation and Forest Services, with which they have dealt satisfactorily for years and which are susceptible to local wishes.

The Pacific Northwest Development Association of Portland says there are almost 100 farm, industry, and promotion organizations on record against a Columbia Valley Authority. Even the tribal council of the Warm Springs Indian reservation of Oregon is against CVA.

The reasons are obvious.

The Northwest is one of the most progressive and prosperous regions in the United States, in marked contrast to Tennessee Valley States. It has the highest per capita income, while TVA States have only 60 percent of the national average, despite 15 years of TVA. Oregon, Washington, and Idaho are among the top eight States in rural electrification, while Tennessee is forty-fourth. This region has cheaper power than TVA, the domestic rate in Portland under private-company operation averaging 1.28 cents per kilowatt-hour, while the average under the vaunted TVA is 1.58 cents.

Working through the engineers and the Bureau of Reclamation, the Northwest has developed within 10 percent of as much power at Bonneville, Grand Coulee, and other Federal projects as TVA has developed at 28 dams—and for less than half the cost. The Army engineers have provided ocean-steamer navigation as far up the Columbia as The Dalles, 200 miles from the sea. And the Bureau of Reclamation is developing at Grand Coulee the largest reclamation project in America—the 1,200,000-acre Columbia Basin project, Washington. And Bonneville and Grand Coulee are repaying every cent they cost, with interest, in 50 years—something TVA isn't doing and cannot do.

The Northwest is short of power, all right. The fastest growing region in America, it needs at least 6,000,000 kilowatts more power in the next 10 years to keep pace with its needs. But it has 40 percent of the Nation's hydro sites, and the Army engineers have just completed comprehensive plans for basin development. If they are approved, it can supply its power needs through Federal, municipal, and private company projects.

The Northwest has a flood-control problem, too, but again the Army engineers have plans that will cut flood damage to 10 percent of last year's figure.

On the other hand, TVA has a power shortage, too. In fact, it has stirred up a national controversy by asking the Congress for $54,000,000 for steam plants.

And TVA still has floods, too, plenty of them, despite some $165,000,000 allocated to flood control. In fact, its 28 dams permanently flood more productive land than seasonal floods ever covered. And while the 1948 report of TVA boasts that its flood-control program has averted $13,000,000 worth of damage in the Chattanooga area, the fact remains that the people of Chattanooga appealed to the Congress to authorize the Army engineers to provide flood protection TVA hasn't supplied.

Thus, the difference is that most of the people of the Northwest believe that the Army engineers, the Columbia Basin Inter-Agency Committee, and the Bureau of Reclamation have done and can do a better job for this region for approximately $350,000,000 than TVA has done in Tennessee Valley—despite the expenditure of almost $1,000,000,000.

All this and freedom, too.

Change of Method of Counting Electoral Vote for President and Vice President

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, March 24 (legislative day of Friday, March 18), 1949

Mr. LODGE. Mr. President, in furtherance of Senate Joint Resolution 2, which proposes a constitutional amendment abolishing the electoral college and counting electoral votes for President and Vice President in proportion to the popular vote, I ask unanimous consent to have printed in the Appendix of the RECORD certain statements made by Mr. Basil Brewer, publisher of the New Bedford (Mass.) Standard Times, together with my answers thereto.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

MARCH 18, 1949.

Hon. BERT H. MILLER,
Chairman, Subcommittee on Constitutional Amendments, Committee on the Judiciary, United States Senate, Washington, D. C.

DEAR MR. CHAIRMAN: On March 9, 1949, Mr. Basil Brewer, publisher of the New Bedford Standard Times, a Massachusetts newspaper, appeared before your committee in opposition to Senate Joint Resolution 2. At the conclusion of Mr. Brewer's testimony, your committee kindly expressed a willingness to receive from me, as part of the record of hearings, a written reply in rebuttal to Mr. Brewer's argument.

Let me say at the outset that Mr. Brewer made many statements with which I am in complete agreement. When, in referring to the proper congressional attitude toward amendment of the Constitution, he observed tbat "we should not only proceed slowly and carefully but humbly, and even prayerfully,"

he expresses a basic policy with which I wholly sympathize and which I ever sought to practice.

When Mr. Brewer said that the founding fathers "knew the Constitution must provide within itself the means for change necessary to meet new conditions and to reduce the minimum temptation to violate its provisions," he recognizes, as I do, that the Constitution is not a dead letter, perfect at the time of conception, but is susceptible to improvements which experience and history prove utterly necessary.

I subscribe entirely to Mr. Brewer's conclusion that "you cannot destroy the Republican Party without destroying the two-party system." Indeed, it is my steadfast belief in the strength and validity of our two-party system which prompts me to urge every possible means available to strengthen and buttress it.

And I also agree with what Mr. Brewer had to say regarding the undesirability of multiple party government.

But Mr. Brewer made many statements and drew many conclusions with which I cannot agree and which I am impelled to challenge.

Permit me to comment on these statements and conclusions in the order in which they appear in Mr. Brewer's testimony.

1. Mr. Brewer stated: "I am astonished to find the Congress in process of considering changing the electoral system of the country without thorough study of its implications."

This observation assumes that the proposal to reform our procedure for electing the President and Vice President is some new idea to which Congress has given scant attention. History proves otherwise. The idea of abolishing the electoral-college system is almost as old as the Government itself. In fact, as long ago as 1798, a Senator of that day observed: "I have been unable to comprehend the motives which influence the Federalists to neglect the infinitely important subject of electing the President and Vice President. The defect of the Constitution in this particular is so obvious, and the inconvenience and absurdity of it so much felt, that I should imagine a proposition to amend it could not fail of success."

Senator Benton, of Missouri, agitated the subject in the 1820's and for two decades thereafter. In the 1870's, Senator Morton, of Indiana, made it one of his chief legislative preoccupations and submitted a very able and convincing committee report and recommendations. Congressman DeArmond, of Missouri, in the 1890's, as chairman of the Judiciary Committee, submitted another and similar report. In the Seventy-second and Seventy-third Congresses, House committees unanimously reported resolutions calling for the abolition of the electoral college, sponsored by Congressman Lea, of California. In 1934, the Senate twice voted on a proposal by Senator Norris to do away with electors. The first vote was 42 to 24; the next vote was 52 to 39. In the Eightieth Congress, the House Judiciary Committee held extensive hearings on this proposal, followed by a unanimous favorable committee report. Likewise, during the Eightieth Congress the Senate Judiciary Committee submitted a favorable report. During the Eighty-first Congress, the House Judiciary Committee has conducted extensive hearings on House Joint Resolution 2, which is identical to Senate Joint Resolution 2.

It seems to me that Mr. Brewer's charge that Congress has given this proposition but a fleeting and superficial examination is not supported by the facts.

2. Mr. Brewer stated: "This is the election machinery which on the whole has worked well for 150 years."

The contention that the electoral college procedure has worked well during the term of its existence has been so thoroughly refuted over the years by historians, students, lawyers, experts in political science, journalists, statesmen, and the plain facts of history that no useful service would be served be reviewing all the manifest defects of the system here. Suffice it to say that the witness is most definitely in the minority in his expression of satisfaction with the way our indirect system for electing the Chief Executive has operated over the years. Whatever disagreement may exist with respect to the best way of reforming this system—be it direct popular election, popular selection of electors by congressional districts, or splitting the electoral vote in proportion to the popular vote—the record shows virtual unanimity in the sentiment that the electoral college idea is obsolete, inaccurate, uncertain, frequently unfair, potentially dangerous, and undemocratic.

In the very brief time that the present sponsors of Senate Joint Resolution 2 have been putting it forward, there has come the wholly unsolicited support of such weighty authorities as Prof. Arthur M. Schlesinger, of Harvard, Rev. William J. Lucey, of Holy Cross College, President Harold W. Dodds, of Princeton, editorial support in newspapers from coast to coast, and that towering authority on governmental questions, the Brookings Institution—all of whom point to defects in the present system.

3. Mr. Brewer asked: "Should it not be the duty of Congress to make the most searching investigation into the future implications, as well as the immediate effects, of proposals as fundamental as this?" And immediately afterward Mr. Brewer said: "Senator LODGE's statements in behalf of his amendment are full of inferences and speculations."

Frankly, it is somewhat difficult to reconcile these two propositions. In one breath, the witness calls for future implications and in the next breath chides the sponsor of this amendment for doing that very thing.

We have always advocated and will continue to advocate searching investigation into this question. The more thorough and exhaustive the discussion and study of this reform, the more it will please those who believe, as I do, in the validity of this proposal. We have done everything possible in the past to promote this type of discussion. There is no disposition on the part of the sponsors of this reform to bypass complete and minute scrutiny or to place any obstacle in the way of deliberate investigation. As indicated above, it is contrary to the fact to assert that this proposal has not received conscientious and faithful attention in the past. We strongly approve of every effort to continue the investigative process until light has been cast in every corner and every possible objection has been fully met or corrected.

Respecting this matter of inferences and speculation, no apologies are offered. After all, the whole Constitution of the United States was an attempt to project what was frankly conceded to be an experiment into the future. The true art of statesmanship consists in large part of looking into the future—the art of inference and speculation. Webster's Dictionary defines "speculation" as the "faculty, art, process, or product of intellectual examination or search; a conclusion, opinion, or decision reached as a result of thought and reasoning." The word "inference" is defined as "a truth or proposition drawn from another which is admitted or supposed to be true; a conclusion; a deduction."

Not only was the Constitution itself founded on inference and speculation; our whole foreign policy, our decisions in military campaigns, decisions in our individual daily lives, almost every piece of legislation passed by Congress and by State legislatures, administrative policies, political campaigns, even the business and editorial decisions of newspaper publishers—are all the end results in the last analysis, of inference and speculation. No less must we speculate when we seek to reform our procedure for electing the President of the United States.

Indeed, when the purpose suits his argument, Mr. Brewer appears to be not reluctant himself to draw inferences and to speculate. In one place in his statement, for example, he infers and speculates that the proposed reform would encourage a proliferation of splinter parties, but he concurrently refuses to speculate or infer any resulting change in the voting habits of the American people which this reform would certainly foster. This inconsistency of approach, apparent throughout so much of his testimony tends, in my opinion, rather to taint the validity of the whole.

4. Mr. Brewer stated: "Senator LODGE says that Senate Joint Resolution 2 will reduce or eliminate the possibility of a candidate getting an electoral majority despite receiving only a minority of the popular vote. On the contrary, his amendment would make this possibility, which has occurred only three times in the Nation's history—in 1824, 1876, and 1888—a probability, if not a certainty."

The witness here indulges in an inference and a speculation, but because he failed to produce a single argument or fact to support his assertion that the proposed amendment would create a probability, if not a certainty that a Presidential candidate would be elected without at least a plurality of the popular vote, the task of rebuttal is made rather difficult.

It would be interesting to have for the record some disclosure of the basis for the speculation that the proposed system for making the electoral vote more exactly reflect the popular vote would make a certainty of minority Presidents.

The witness' inference is certainly at diametrical variance with the conclusion drawn by the Brookings Institution in a letter to me dated May 27, 1948, where the conclusion was drawn that the proposed constitutional amendment "will practically eliminate the chance that a President will receive a majority of electoral votes despite the fact that his opponent polled a majority of the popular vote."

An extended analysis of the reasons supporting this conclusion appears in my reply to question No. 5 raised by Senator FERGUSON.

"But Senate Joint Resolution 2, by increasing a popular participation in all the States, will measurably decrease apathy and absenteeism.

"This introduces a further factor—in addition to the two-vote bonus—which makes it theoretically still possible that the decision of the popular vote and that of the electoral vote will be different. Under Senate Joint Resolution 2, however, the possibility is reduced as much as is possible while still leaving control of election laws in the hands of the States."

5. Mr. Brewer stated: "(This constitutional amendment) will destroy the Republican Party * * * and the two-party system."

I must most vigorously dissent from both of these speculations.

The whole question of the effect of this proposed amendment on the two-party system is covered in my answers to questions Nos. 3, 4, 7, and 8, propounded by Senator FERGUSON.

Regarding its effect on the Republican Party, I believe that some supplementary observations are in order here.

Assuming no change in the voting habits of the American people—an assumption which I believe to be unwarranted by any reasonable prediction of human and political behavior—and applying the counting formula proposed in Senate Joint Resolution 2 to the 1948 elections, we find that the outcome in electoral votes would have been 258 for President Truman and 221.4 for Governor Dewey (the actual count having been 303 for Truman and 189 for Dewey). These figures do not indicate that the Republicans would have lost anything; indeed it shows

that the Republicans would have made a net gain of 32 electoral votes. For the life of me, in the face of these statistics, assuming that people would have voted the same way and in the same numbers, I cannot see the logic or common sense in the assertion that this method of reflecting more accurately the popular will would destroy the Republican Party.

The contention that under this reform the Republicans would make a very small gain in the South which would be much more than offset by the loss of so-called Republican States in the North like New York, New Jersey, Pennsylvania, Ohio, and Illinois would be a very strong argument indeed from the Republican standpoint if it were based on fact.

Actually, however, no one aware of the facts can possible say that New York or Pennsylvania or any of the other States with a significant number of electoral votes are sure Republican States. President Roosevelt carried most of them in the elections of 1932, 1936, 1940 and 1944 and if Mr. Wallace had not been a candidate, Governor Dewey certainly would not have carried New York and New Jersey in 1948. This is certainly not what one normally expects of sure Republican States. They may have been sure Republican once, but only those who think that the politics of the future are going to resemble the politics of the McKinley era can possibly believe that they are going to be sure Republican in the future simply as a matter of inertia and without a new and imaginative effort by the Republican leadership.

It must, of course, be set down that if the present system is wrong, dangerous, and unfair—which I believe it to be—then it should be reformed regardless of party advantage. There are many people today who believe that our political parties give altogether too much thought to the political advantage which accrues to a party organization and not enough thought to the fact that our parties exist to serve the people and have no other excuse for being.

I could give this as the complete answer, but I do not. I submit that the proposed constitutional amendment will not only not hurt the Republican Party; it will, I believe, give the Republican Party the greatest chance it could possibly have for a real rebirth. If we can be assured that votes cast for the Republican Party in the South will actually be counted and added on to the Republican votes which are received elsewhere, we will have an incentive for making our campaign on the issue of civil rights and individual liberty. This is the issue which brought the Republican Party into existence in the first place. It is the issue (as contrasted to economic questions) on which all Republicans can unite. It is, moreover, an issue of utmost urgency to millions of people in all the States of the Union who feel strongly that there is no place for second-class citizens in America and that all people must be treated and recognized on their merits, regardless of any consideration of race, color, or creed. Far from fatally penalizing the Republican Party, the proposed reform could, if we had the imagination and vision to rise to the challenge, result in the remaking of the Republican Party and thereby give new validity, force, and scope to our great two-party system.

6. Mr. Brewer stated: "Each electoral vote won in the South represents an average of 40,000 popular votes against an average of 110,000 votes per electoral in the remaining 37 States of the North and Central States. To all practical purposes, this will make a Republican Presidential victory impossible as long as the Solid South remains solid in its voting habits."

As indicated in my comments on Mr. Brewer's previous statement, this is a fundamental point upon which he and I are at complete variance. He refuses to recognize that a procedure by which every vote would count would inevitably, by every rule of predictable political behavior, change the voting habits of the people in the South.

In this connection, I invite the committee's attention to the following extract from an article written by an eminent southern student of political science, Mr. C. S. Potts, Dean Emeritus of the Law School of Southern Methodist University. He writes:

"Finally, the present writer is convinced that the electoral college is largely responsible for keeping the Solid South solid. As just pointed out, the existence of doubtful States concentrates the educational value of the national campaigns in those States that are never visited by candidates or campaign speakers. Is it a matter of wonder that States that are never visited by candidates and campaign speakers, States to which no literature or campaign workers are ever sent, continue to vote with the same party from year to year, even from generation to generation? What influence is ever brought to bear upon them to change their political allegiance? The politicians in these States are active and the masses of the people are sometimes mildly excited until the national conventions have been held and the rival candidates are placed in the field. But from that day until the November election, the solid States only catch faint echoes of the great struggle that is going on in a narrow belt of States farther North, and the citizens of these States are almost as completely idle spectators of the contests as are the people of Mexico or Canada. The only part they have in the campaign is to be called on from time to time to contribute money to help pay the expenses of the campaign, but no part of the money is ever spent within their borders. It is safe to say that south of Maryland, Kentucky, and Missouri there are 6,000,000 voters who have never heard a campaign speech delivered by the Presidential candidate of either of the two great parties, after their nomination for office.

"The writer believes that the abolition of the electoral college would work the political readmission of the Solid South to the Union. When votes in Georgia are worth just as much as votes in Indiana, Georgia will be cultivated by the parties just as assiduously as Indiana is now cultivated. As it is now, the voter says to himself, 'What is the use of my going to the polls in November? There is no chance that my vote will do any good, for everybody knows beforehand that Georgia will give her electoral vote to the Democratic candidate.' The result is that there is an enormous stay-at-home vote, alike of Republicans and Democratic voters. Not only so, but the Republican Party finds it impossible to win new recruits among the native southern population or to hold its members who move into the Solid South from elsewhere. The voter realizes that as a Republican his vote is utterly worthless so far as the result of the national election is concerned, but by becoming a Democrat he can go into the Democratic primaries and have a real share in settling State and local matters. Hence, we find that most Republicans, upon moving into the Southern States, soon cease to affiliate with their party and vote the Democratic ticket."

Because, as so forcefully indicated above, the voting habits of the people in solid States would change, it is my conclusion that the present divergence between electoral votes and the number of voters would be substantially narrowed. So long as States retain the two-vote bonus regardless of population and so long as outside influences (weather, interest in local issues, personalities of candidates, etc.) affect the size of the vote, there will always be some inequality between the weight of an electoral vote in one State as contrasted with its weight in another State. This is one of the prices we pay for our Federal system and our indirect way of electing the Chief Executive.

7. Mr. Brewer stated: "In the functioning of democracy, no vote properly marked and cast is ever lost, whether or not the party voted for wins."

The witness here refers to the contention of the proponents of this constitutional amendment that in effect literally millions of American voters are disfranchised in every Presidential election.

I believe that this contention is more than a mere figure of speech. It is an actuality. It arises, of course, from the fact that Presidential electors are voted for as a unit and the party that has the largest vote in a State wins all the electoral votes to which the State is entitled.

In the 1948 elections, Governor Dewey received in the 16 States that he carried 8,644,000 votes. These States gave him a total of 189 electoral votes. But in the 32 States that he failed to carry, he had a total of 13,326,000. This great mass of votes gave him not a single vote in the electoral college. These votes, remember, were cast for Governor Dewey—and yet they were of no more effect than if they had never been cast at all. Mr. Brewer's additional comment, therefore, that "in every election where one man is concerned, such as the election of a President, no votes cast, except for the winner, count, and all others are in the sense 'lost' " misses the point completely. It confuses a direct-election procedure, as for a governor or Congressman, with the indirect procedure we use in electing the President.

Under the unit, or all-or-nothing, system of counting electoral votes, not only are the votes which are cast for the candidate failing to command a plurality in a given State lost; they are—what is worse—taken from that candidate and credited to another. The proposed constitutional amendment completely cures that defect.

9. Mr. Brewer stated: "This is something for future generations to worry about, if not ourselves—minority elections, minority parties, splinter parties, coalition government—the face of western democracy looking east."

I respectfully dissent. I believe this to be something which this generation must definitely worry about. Because, in the words of the Brookings Institution, "the proposed constitutional amendment will practically remove the chance that small minority groups can attain and exercise great power over Presidents, Presidential candidates, and political parties because they hold the balance of power in pivotal States." I hold that our present system fosters an evil which we of this generation are obligated to correct.

10. Mr. Brewer stated: "The Lodge-Gossett bill starts proportional voting at a high level, the highest office in the country * * *"

To be completely accurate, it must be stressed again that the Lodge-McCarran-Fulbright - Sparkman - Stennis-Neely-Kefauver-Smith - Morse - Flanders - Gossett resolution does not introduce proportional representation, in the commonly accepted meaning of the term. Because this distinction between proportional representation in the election of a body like a legislature and the counting procedure proposed in Senate Joint Resolution 2 has been already discussed at some length, no useful purpose would be served to repeat it here.

Mr. Brewer's statement is extremely well phrased and it enunciates general principles regarding our system of government which I applaud. But I am constrained to set down my firm belief that his opposition to the constitutional amendment proposed in Senate Joint Resolution 2 is fallacious.

With kind personal regards.

Very sincerely yours,

HENRY CABOT LODGE, Jr.,
United States Senator.

In Boston, Not the South

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 24 (legislative day of Friday, March 18), 1949

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Arkansas Democrat of March 17, and I call it especially to the attention of some of my northern friends.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN BOSTON, NOT THE SOUTH

You've read the pitiful news stories out of Boston about the 13-year-old boy whose mother had imprisoned him in the house since babyhood, because of her own secret sin. It is a thing that would move any heart not actually petrified.

Apparently the youngster is bright, quick to learn, and affectionate to a degree which touches all around him. How his mother could have treated him so is a mystery which passes understanding.

If the like had happened in Arkansas, the sensational press of the North would be holding up its hands in pious horror. It would have editorialized on our backwardness in a style somberly colored by misterpreted statistics, hillbilly shows, and ancient myths. It would have run pictures of share-cropper cabins, which, however shabby and mean, are at least out in the clean air, and far preferable to a big city's unsunned, frowzy slums.

Well, let's not judge the North by its scavenger publications. It has lots of good people—witness the Republican backing given our southern boys in the Senate on the filibuster question. So let us judge this Boston incident charitably.

Everywhere a few persons get strangely, madly twisted in their emotions. That seems to have been what happened to this Boston mother. He was a wise man who said: "To know all is to forgive all."

Improvement of Intergovernmental Relations

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 24 (legislative day of Friday, March 18), 1949

Mr. HENDRICKSON. Mr. President, as one of the sponsors of Senate bill 810, which has for its purpose the improvement of intergovernmental relations, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials, one entitled "The Mayors and Money," published in the New York Times of March 23, 1949, and the other entitled "Sprouting Seed," published in the Newark Evening News of March 22, 1949.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of March 23, 1949]

THE MAYORS AND MONEY

The United States Conference of Mayors, meeting in Washington, has heard an unusually impressive list of speakers, including the President and some elder statesmen. The mayors have been brought up to date on international and national issues. Finally and inevitably, however, the talk always gets around to the painful subject of money and taxes.

Except for certain large, key problems, which cannot be dealt with wisely on the lower level, we think there is a growing and refreshing tendency to question the wisdom of carrying municipal problems to State capitols for solution, and for the States and cities also to go to Washington. The current session of the New York Legislature supports that view, for there has been a noticeable abstention from wholesale, undiscriminating demands upon the State treasury. General Eisenhower and Bernard Baruch both advised the mayors in Washington against depending too much on the Federal Government. "Everybody wants to lean upon the Central Government," said Mr. Baruch, "but who is the Government to lean on but the people?" General Eisenhower commented upon the temptation to "pass things unnecessarily to the Federal Government because thereby they (local officials) escape the necessity of levying locally unpopular taxes which may be hard to explain to the voters."

While various factors are at work which warn against too sweeping a generalization, it is instructive to note that as a rule the farther government gets from the people the larger is the tax increase. Federal tax collections rose from $3,300,000,000 in 1929 to $40,000,000,000 in 1948; States' tax collections rose in that period from $2,000,000,000 to about $7,900,000,000, while local tax collections increased from $4,800,000,000 in 1929 to roughly $6,000,000,000 in 1948. Everyone is well aware to what extent the military and European recovery budget accounts for the Federal Government's heavy demands on the taxpayer. Yet, with the Federal Government taking 75 cents of every tax dollar, it is obvious where economies must be made if they are to return any substantial benefit to the taxpayer.

The problem of overlapping taxes will not be solved until it is approached on a national scale, with Washington, the States and cities sitting down together. President Truman brought to the mayors' conference the good news that the Secretary of the Treasury will soon invite State and city officials to meet with him and other Federal officials to devise a program to bring some order out of the tangle in the field of taxation and financial relations.

This will not be easy. The Federal Government has reached more and more into the local field; meanwhile two-thirds of the States have taken up the income tax, and cities are increasingly adopting it or the pay roll tax. The Federal Government has not set a good example to the States, either in multiplicity of taxation or economy of operation. As a result, to a certain extent, States and cities have unfairly become the whipping boys of the public because of Federal extravagance. The taxpayer will feel more liberally disposed to his State and city governments when the costliness of the Federal establishment is reduced.

[From the Newark Evening News of March 22, 1949]

SPROUTING SEED

The campaign to end duplication of taxes by Federal, State, and municipal governments, in which none has been more energetic than Governor Driscoll, is beginning to show results.

In his speech yesterday before the United States conference of mayors, President Truman announced that the Secretary of the Treasury will soon call a conference to work toward a program for action in this field.

Mr. Truman admits that financial relations among cities, States, and the Federal Government are a tangle and that bringing some order out of it is one of the most important first steps toward solving local government problems.

That's what governors have been saying for years. Mr. Driscoll has repeatedly called attention to Federal encroachment on State revenue sources, notably its taxation of gasoline and alcoholic beverages. In addition, there are numerous excises on nonluxury items which duplicate local sales taxes. Governor Driscoll has argued the States' case in Washington conferences and referred to the problem at his recent meeting with the President. Apparently Mr. Truman listened.

On other matters, President Truman told the mayors little that they didn't already know. Undoubtedly they were pleased by his statement that they represented the form of democratic self-government which is closest to the people. They are fond of saying that themselves. Then the President told them that the Federal housing program, when adopted, would increase their responsibilities. He reminded them that early failure to regulate urban growth has created slums which must be eradicated, and manifold problems which can be solved only at great expense. He admitted their revenues are insufficient to meet all the demands on them. It was a familiar catalog of city hall difficulties.

But all this was less important than the promise of an effort to redraw the lines of tax areas. He nailed the promise down with this statement:

"Back in 1928 when I was an executive officer in the biggest county in Missouri, I wrote an essay on tax distribution between the Federal, State, and local governments. I reread it the other day and it's just as good now as it was then."

Perhaps he'll let the Secretary of the Treasury have a copy.

The North Atlantic Security Pact

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, March 24 (legislative day of Friday, March 18), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the North Atlantic Security Pact, written by George Sokolsky and published in the Washington Times-Herald of March 23, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George Sokolsky)

The North Atlantic Pact, like all other treaties, is only as strong and effective as the nations which accept it. This is a military offensive-defensive alliance designed to produce unity in war and in the preparation for war. It rests on the broad base of American aid to western Europe—monetary and military aid.

Western Europe is a small, densely populated area of about 270,000,000 people and includes what in our civilization has come to be known as the principal countries on earth.

They have produced the culture of our times and a standard of living higher than all other peoples except the United States, which is composed principally of Europeans who migrated from Europe to America.

Although we speak of a European civilization, 2,000 years of history have broken Europe into a large number of small countries, economically dependent upon each other.

From the time of Charlemagne to the present day, two conflicting movements have been apparent in Europe, namely, a movement to build a universal western European state and a movement for the breaking up of western Europe into small nationalistic units.

The Holy Roman Empire, Napoleon, and Hitler represent three phase of one side of the paradox; the wars and revolutions since 1815 represent the nationalistic effort.

The League of Nations and the United Nations mark the most current attempt to merge these conflicting ideas into a workable unity. The North Atlantic Pact is another.

For purposes of unity, no western European nation may remain out of the North Atlantic Pact, if it is to succeed at all. That means that Spain, Eire, and Sweden must be in it.

In fact, the pact would be strengthened if the countries that seceded from the Austro-Hungarian empire were in it.

Perhaps the problem might be stated this way: The current struggle in Europe is between Christianity and Marxism.

The power of Marxism is symbolized by Soviet Russia, a universal state of 500,000,000 or 600,000,000 people, ranging from the Elbe in Europe to the Pacific on the edge of Asia, most of whom have been conquered and are, in effect, enslaved.

The power of Christianity is symbolized by the free countries of western Europe, North and South America, and the English-speaking British dominions.

Marxian countries reject western civilization in its economic, social, and theological manifestations.

The impact of such a departure from 5,000 years of human development on so vast a scale is disturbing human relationships beyond anything that has ever before been experienced in human history.

It is possible that the conflict of ideas and aims can only be resolved by war. The North Atlantic Pact is designed to meet that situation.

The theoretical essence of the pact appears in this sentence:

"They are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty, and the rule of law."

This clearly is anti-Marxian and leaves no loopholes. Communist Russia cannot safeguard freedom because it rejects freedom. It cannot associate itself with democracy or individual liberty because both are abhorrent to Marxians.

Article 5 contains the effective heart of the pact:

"The parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all."

This article conflicts with the Constitution of the United States. The Constitution grants to Congress the power to declare war. When the Senate shall have ratified this pact, war becomes automatic.

Should, for instance, a Communist country attempt to seize Algeria, a French colony, the United States would automatically be at war, no matter what the circumstance.

There are two ways of arguing about this: One is that we shall have to go to war anyhow. We entered World War I because Great Britain was imperiled by the rising power of Germany; we entered World War II for the same reason.

On the other hand, there is the argument that a treaty ought not to amend the Constitution. My guess is that the pact will be ratified even though it amends the Constitution—and that will be another milestone on the path of altering our form of government by a whittling-away process.

Local Rent Rule

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks I wish to include therein an article from the New York Times dated March 24, 1949:

MAYORS DENOUNCE LOCAL RENT RULE—THEY SAY CITIES AND STATES LACK ADEQUATE MACHINERY TO ADMINISTER CONTROLS

The United States Conference of Mayors adjourned a 3-day meeting here today after the municipal leaders endorsed several points in President Truman's legislative program, including extended and strengthened Federal rent controls.

In their resolution the mayors recommended that Congress extend, strengthen, and improve existing rent-control laws until the present housing shortage is alleviated.

MACHINERY HELD INADEQUATE

The resolution called Congress particular attention to the fact that State and municipal governments are ill-equipped to administer rent controls in a form which would give adequate protection to the people of our cities, and any such provisions should be eliminated from the bill.

Civil-Rights Filibuster

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the Appendix of the RECORD the following editorial from the Pittsburgh Post-Gazette of March 21, 1949. This short editorial on the recent filibuster fight puts the blame where it rightfully belongs.

DUBIOUS HONORS

Partisan blowing in the wake of the recent filibuster is almost as noxious as the big wind itself. Truman Democrats and Republicans are engaged in a futile debate as to who came off with the honors. It seems to us a hollow argument.

Certainly the Truman Democrats lost the filibuster fight. The victory, if it may be called that, went to the southern Democrats, who succeeded in sidetracking the President's civil-rights program for the time being if not for this session of Congress.

They would not have succeeded to the extent they did, however, had it not been for the coalition they were able to form with many hypocritical Republicans who pretended to oppose the filibuster and stand for civil-rights legislation.

The turning point in the administration's effort to change the Senate rules and curb the filibuster came when Vice President Barkley ruled that cloture on a motion could be invoked by a two-thirds vote of those present. Had the Republicans backed Truman Democrats on that ruling, the filibuster could have been halted and rules limiting debate could have been changed as the administration proposed. Then there would have been some chance for civil-rights legislation.

But 23 Republicans chose to ally with southern Democrats to overrule Mr. Barkley by 5 votes and continue the filibuster. The result was that the southerners were able to force a compromise giving them a stronger position than they would have enjoyed had the Republicans gone along with the Truman Democrats.

Thus 23 Republicans must share with southern Democrats the onus for deferring civil-rights legislation. But there is a big difference between them. The southerners never sought to deceive anyone as to where they stood. Now the Republican challenge to the administration to bring on civil-rights legislation has the unmistakable ring of hypocrisy.

New Jersey Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. ADDONIZIO. Mr. Speaker, supporters of civil-rights legislation who are disheartened over the recent bitter Senate filibuster may be encouraged by the fact that during the same period the New Jersey Senate unanimously passed a civil-rights bill with the most liberal provisions in the Nation.

This bill, A65, was sponsored by Assemblywoman Grace M. Freeman, of East Orange, in the Eleventh Congressional District, and its passage climaxed a long and valiant struggle by her to obtain the enactment of civil-rights legislation in the State. For every reason of decency, fair play, and democratic ideals, racial discrimination should be eradicated. To discriminate against an individual because of race or color is to deny the fatherhood of God, the creator of all mankind. The Freeman bill implements the noble concept of the founders of American democracy that men are created equal, with equal rights to life, liberty, and the pursuit of happiness.

Following is a letter from Mr. Seldon M. Kruger, president of the Jewish Youth Council of Essex County, which supported the Freeman bill. Also included is an article from the Jewish News of Essex County of March 4 concerning the presentation of a scroll to Miss Freeman by members of the council:

JEWISH YOUTH COUNCIL
OF ESSEX COUNTY,
Newark, N. J., March 17, 1949.

Hon. HUGH ADDONIZIO,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE: Assemblywoman Grace Freeman on February 27, 1949, addressed the general assembly of the Jewish

Youth Council of Essex County, a coordinating body for 55 youth organizations in Essex County, on the Freeman civil rights bill. As you know, Miss Freeman is the sponsor of the legislation and has won the support of 65 organizations in the State of New Jersey. Yesterday, March 16, this bill became law.

I am sure that you join with us all in congratulating Miss Freeman on behalf of her efforts in the field of civil rights. Her endeavors truly represent the best interests of the youth of New Jersey. It truly was a hearty sign to see both houses of our State Legislature pass her bill unanimously; without the usual party vote.

With my best wishes, I am,

Always sincerely yours,

SELDON M. KRUGER, *President.*

MISS FREEMAN IS LAUDED BY YOUTH

Assemblywoman Grace M. Freeman is anxiously awaiting the fate of her civil-rights bill when the State legislature reconvenes this week. To help her morale she has a scroll presented to her by members of the Jewish Youth Council, of Essex County, to show their appreciation of her fight for civil rights in New Jersey.

"Don't relax your efforts because the bill passed the assembly unanimously—we still have to get it out of senate caucus," she told the young people at their general assembly at the Newark Jewish Center on Sunday.

"When I was teaching school in Montclair we used a simple chart to show how a bill is passed. I wish I could go back and teach students that it isn't so easy," she said. A similar Freeman civil-rights bill was defeated in the senate caucus last year.

"If we are to have international peace, we must first have national peace," Miss Freeman said. "We are spending millions on the European recovery plan to teach other nations our form of government. Then we look in our own backyard and find we are frequently not practicing what we are trying to sell others."

SECRET OPPOSITION

She said much of the "secret opposition" to the bill in rural and resort areas came from a lack of understanding of its contents.

The Freeman bill, A65, would outlaw discrimination in places of public accommodations such as hotels, theaters, and restaurants.

"It has been interesting to see so many organizations—Catholic, Protestant, and Jewish—working together in support of civil rights," she concluded. "After the bill is passed, we will still have to work to see that it is practiced."

Gov. Alfred E. Driscoll telegraphed the Youth Council that he joined with them in spirit in honoring Miss Freeman. The telegram read: "Miss Freeman's bill, Assembly A65, implementing the objectives of the Governor's committee on civil liberties, has my wholehearted support. We now have a great opportunity to establish the basis for a new and practical concept of our civil liberties."

Veterans' Pensions

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. JENSEN. Mr. Speaker, at the outset of my remarks I want to say that I deeply resent the unwarranted insults which certain Members of this House on yesterday directed against the American Legion, which is composed of over 2,000,000 patriotic American veterans of World War I and World War II, who have pledged their devotion to God and country, and who have for the past 30 years rendered loyal, untiring service to their community, State, and Nation.

Mr. Speaker it is a sad commentary for Members of this House who have voted for every needless expenditure proposed by the great spenders in power, now to hear those same Members rise on this floor and say we cannot afford to pension our old soldiers. Now I ask them just when did they begin worrying about the financial condition of the United States Treasury? You have heard a number of these reckless spenders here accuse me, even insult me, for opposing requests for great sums of the taxpayers' money, which in my studied opinion would be wasted, but no man will ever have cause to say I brought the pruning ax of economy down hard on veterans, especially our disabled veterans and widows and orphans of deceased veterans or the old soldiers of any war.

Our Nation has always given fair treatment to its fighting defenders and because of that our peacetime volunteer system has worked wonders in times of emergency. Many nations of the world whose veterans were not fairly treated were forced to maintain a great standing army by the compulsory system at staggering cost compared to our traditional system.

The future welfare of America can best be served by giving old soldiers their just dues.

Purposes of H. R. 3272

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, on March 7, I introduced a bill, H. R. 3272, which has as its title: "A bill to mitigate the effect of double taxation of corporate income by allowing a limited credit against the income tax of the shareholder receiving dividends."

The general effect of H. R. 3272 is to provide a tax-credit equivalent to 20 percent of the amount of dividends received by individuals in determining Federal income taxes. The tax credit is, however, limited to a maximum of $400 in the case of a joint return by husband and wife, a return by an unmarried individual, or a return by an estate or trust. In the case of a separate return by a married individual, the amount of the credit is limited to $200.

The general purpose of the legislation is threefold: First, to mitigate the effect of present laws taxing dividends in the hands of individual shareholders when such income has already been taxed in the hands of the corporation.

Second. To open up a reservoir of equity capital.

Third. To encourage an interest and participation by lower and middle income groups in American business enterprise.

In spite of the inequities involved, it seems quite apparent that the complete elimination of double taxation of corporate dividends is not a possibility at the present time. This situation can be attributed to a recognition of the loss of revenue involved as well as to political considerations. House bill 3272 is, therefore, designed only as a step toward mitigating the effect of double taxation.

The 20-percent credit is used because it approximates the present effective corporate tax rate of 21 percent on the first $5,000 of taxable income. It also approximates the first bracket of individual taxes. Justification, therefore, can be based on the theory that the corporation has already paid a tax in excess of 20 percent and also in excess of the first bracket rate on individual incomes. Section 36 (a) is in keeping with this theory. The fact that the 20-percent figure lends itself to simple calculation is a third factor.

Since the 20-percent figure represents an amount slightly in excess of the first bracket individual tax rate, provision is made in the bill so that the credit will in no case be greater than the total tax due. (See section 36 (b) (2) and (3).) This will avoid refunds resulting from the difference between the 20-percent tax credit and the first bracket tax rate.

As a practical matter, it is highly probable that any loss of revenue to the Government by adjustments in this field of taxation must be limited to an amount that can be offset by a reasonable increase at some other point. House bill 3272 limits the application to dividends up to $2,000 per year, and the loss of revenue with such a limitation is estimated at $605,000,000. This loss can be recovered by a 2-percent increase in the corporate surtax rate. An increase in corporate rates by more than 2 percent might well produce results which would more than offset the anticipated beneficial effects of the dividend-received credit. This has dictated the limitation established in the bill.

The amount of credit is limited to $200 in the case of separate returns by married individuals in keeping with those provisions of the Revenue Act of 1948 devoted to the geographical equalization of individual income taxes. The dividend-received credit is thus accorded the same treatment as the standard deduction and the deduction for unusual medical expense.

There are many and varied proposals designed to eliminate, mitigate or shift the burden of double taxation of corporate dividends. One of the chief advantages of that proposed by H. R. 3272 is its administrative simplicity. It is easily understood and should raise no real administrative problems.

The procedure would be thus: The stockholder would include his dividends

in his taxable income. After computing his tax, he would take a credit on account of the tax paid by the corporation with respect to his dividends up to a maximum of $400. This credit would be calculated by multiplying his dividends by 20 percent.

An important consideration is the need for opening up a source of equity capital. It is generally admitted that there is a great need today for a source of equity capital for businesses, large and small. The present state of the stock market is evidence of this need. As pointed out recently by William Miller in Life magazine, many companies today are worth more dead than alive because former customers for stock no longer have money to invest. So far as small-business enterprises are concerned, the situation is even more acute. Today, the smaller the business, the harder it is to get equity funds. If the American economy is to expand, and all agree it must if the Nation is to meet the huge political and economic demands upon it, investment capital must be found for the expansion of present productive facilities and the creation of new industry. The present tendency to shift from equity financing to debt financing has the effect of aggravating economic instability.

Some 47,000,000 individual income-tax returns are expected for 1948. Forty-five million will appear in the income brackets of $5,000 per year or less. An additional one and a half million will appear in the $5,000 to $10,000 per year bracket. It is estimated that of a total personal income (after deductions but before exemptions) of $138,000,000,000, about $120,000,000,000 will be accounted for by persons in the brackets of $10,000 or less per year. This group will receive better than 86 percent of the net taxable income of individuals. Here then are the people who must be relied upon to supply the investment capital that is so badly needed. H. R. 3272, by reducing the tax discrimination against equity financing, will lend material encouragement to the investment of this reservoir of American capital in business enterprise.

The proposal will make possible a return to equity financing. It will be of particular assistance to small and new businesses in obtaining capital.

Investment by the low- and middle-income groups in the future of American business will be the greatest possible insurance for the continuance of American economic and political institutions. As the number of people who own a stake in corporate enterprise increases, the number of people who want business to flourish and prosper will increase. They will want to maintain a political and economic environment in which it is possible for business to prosper.

The effectiveness of attacks upon business profits which have produced socialism and semisocialism in other countries would be lessened.

What we need today are many new small capitalists, people drawing dividends as well as wages. That is an objective of H. R. 3272.

Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. YATES. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include a letter to the editor which appeared in the Chicago Daily News on Tuesday, March 22, 1949:

LEGIONNAIRE THINKS MAJORITY OF VETS ARE AGAINST PENSION

I am an active member of Broadview Post, No. 626, American Legion of Broadview, Ill., and wish to go on record as vigorously opposing the veterans' pension bill now pending before Congress and supposedly backed solidly by the American Legion.

The national office of the Legion is making many public utterances that are not only misleading, but somewhat tainted with untruths.

To say the American Legion, 2,800,000 strong, is 100 percent for the pension is an obvious bit of imagination. The truth of the matter is the rank and file in the individual posts were never polled to determine exactly how they felt about this $90-a-month handout at the age of 65 to every honorably discharged vet with at least 90 days' service. This bonanza was high-pressured through the national convention at Miami last fall by the potent old guard and was not given a fair and open hearing before the general Legion membership at the post level.

It is my opinion that if a free vote would be taken within the Legion itself, on this pension bill that our organization is supposedly supporting, the majority of Legionnaires would vote against it. Opposition is especially strong in the ranks of World War II veterans although I have talked to many World War I vets who also realize this program is sheer nonsense.

There seems to be a dangerous philosophy sweeping our country—one that is a complete about-face from the American system as established by our forefathers. This philosophy of "let Uncle Sam take care of me" seems to have invaded the smoke-filled room of the top Legion brass when they designed this Christmas-tree handout bill.

To disabled veterans of all wars and to those needy families whose living has been curtailed because of war casualties, I say, give them help and more help, but to give every GI of both wars $90 a month when he reaches 65 until he dies, as a reward for faithful service to his country when she was in trouble, I state is not only discriminatory, but entirely undemocratic.

We Legionnaires should never forget that we are citizens of the Nation first and members of the American Legion second. And that goes for the top brass too.

GILBERT J. MCEWEN.

Veterans' Pension Bill

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks I wish to include an editorial from the New York Times of March 24, 1949, entitled "About-Face in the House":

ABOUT-FACE IN THE HOUSE

No medal for courageous conduct under fire will be pinned on the collective chest of the House of Representatives for its performance of the last 2 days on the veterans' pension bill. So long as the Members of the House could vote their own convictions on a secret ballot, so long as no one was there with pencil and pad to take down their names, they showed by their votes that they recognized this bill for what it is: a proposed raid on the United States Treasury to the tune of many billions of dollars and the introduction of a new kind of social-security system in this country, under which war veterans would be established as a specially favored class at the expense of the rest of the American community. But when it came to a recorded vote on this same question, a vote taken under the watchful eyes of the great veterans' organizations, which, to their discredit, have lobbied for this legislation, these same gentlemen ran rapidly for cover. It is our duty to report that in this face-about the Republicans, who have so often and so bravely denounced the philosophy of spend and spend and elect and elect, ran even faster and harder than the Democrats.

The veteran of either World War who was injured or disabled in war service deserves and at all costs should have the generous and unremitting care of a grateful people and their Government. But that is not the purpose of the legislation which the House has been debating. This is, instead, a plan to pay pensions indiscriminately to veterans, upon their reaching a fixed age, regardless of whether or not they were injured or disabled in war service and whether or not they were ever engaged in combat.

Various amendments, somewhat limiting the scope of the bill and reducing its tremendous cost, have now been adopted tentatively. But the bill remains, despite these amendments, special-interest legislation, pure and simple. A final vote on it will come today. We shall see then whether the balance of power in the House is held by men who will vote against their own convictions because they haven't courage encugh to stand up for them.

Propaganda and the Nation's Health

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES

Thursday, March 24 (legislative day of Friday, March 18), 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Propaganda and the Nation's Health," by Marquis Childs, which appears in the Washington Post of today. It seems to me to contain so much down-to-the-ground common sense that I think it is well worth printing in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROPAGANDA AND THE NATION'S HEALTH

(By Marquis Childs)

The most effective propaganda is to make use over and over again of a few scare words. Hitler knew that. So do the Russians who

scream "imperialist war monger" a thousand times a day.

So, too, do the propagandists in this country who incessantly attack the program of social reform on which President Truman campaigned last fall. The scare word they use is "socialized."

The attack is concentrated with particular fury on the proposed Federal health-insurance system. Certainly, that system proposes a radical innovation to raise present standards of health which are too low for a country with the wealth and the resources of the United States.

Whether it would actually raise those standards is, in my opinion, highly doubtful. My doubts of a Federal health-insurance system are chiefly on two points:

1. The excessive cost of the bureaucratic apparatus necessary to administer such a system on a Nation-wide basis. Allied to this is the question of medical standards under an act that would almost surely make concessions to administration by the separate States.

2. The net effect of a Federal health-insurance system might well be merely to spread even thinner the existing facilities for medical care. The problem is to increase facilities rather than to disperse what already exists.

But those who attack health insurance with the word "socialized" are even more vulnerable than the proponents of the system. They talk as though defeat of the Federal proposal were an end in itself. Behind much of what they say is the implication that we can let well enough alone. That is the tone of many of the letters that have come to me in response to a previous column on this issue.

This is not, to be sure, the view of those who have looked at the facts with some objectivity. There are glaring weaknesses in health standards, in hospitalization, and in medical care in this country.

One thing the Federal proposal has done is to stir widespread discussion of health and medical care. In my opinion if it had done nothing else it would have been enormously worth while. Complacency and smugness cannot be tolerated if the American system is to meet the challenge of communism.

Two stimulating and provocative proposals have been put forward in place of the Federal insurance system. One comes from Dr. Paul B. Magnuson, in charge of medical care in the Veterans' Administration. Dr. Magnuson says:

"As a professional medical man, I am distressed to hear the emotional arguments used by those, on the one hand, who favor compulsory health insurance and by those, on the other hand, who blindly oppose every proposal to meet the problem of national medical care. It seems to me that the proponents of both extremes miss the point—the heart of the problem is the lack of diagnostic and public-health facilities."

Dr. Magnuson proposes diagnostic clinics accessible to all the population, equipped with the most modern facilities for complete health examinations and staffed with the highest-type medical and professional personnel available. Financial support would come from the Federal Government, State and local governments, and private contributions.

The second proposal comes from Senator ROBERT A. TAFT, of Ohio, who agrees with Dr. Magnuson that one of the chief problems to be solved is protection for low- and middle-income families who often find themselves ruined by a long illness. In a speech in Pittsburgh, Senator TAFT advanced a four-point program calling for a wide range of Federal assistance to raise standards of medical care.

Senator TAFT gets at a basic weakness—the shortage of doctors—in his recommendation that the Federal Government subsidize medical students or medical schools, or both. To remedy the acute shortage in rural areas he suggests a Federal subsidy to the States which would in turn underwrite medical care in poor districts.

In all this, discussion is the base for concrete, constructive action that cannot be considered as violating American principles. The time for such action is overdue.

The danger is that the propagandists will so becloud and confuse the whole question as to produce stalemate and a futile sense that nothing can be done. That is the strategy of those who would block any social change whatsoever. In a democracy that is a dangerous strategy.

Declaration of Human Rights

EXTENSION OF REMARKS
OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. HÉBERT. Mr. Speaker, on page 1 of the New Orleans Daily States of Monday, March 21, 1949, there appears the following notice in a two-column space:

WHERE DO WE GO?

The Declaration of Human Rights of the United Nations is a far-reaching document the implications of which you, as an American, should know and think about. The first of a series of six editorials on this declaration appears today on the editorial page.

Today many Members of the Senate and the House of Representatives received the following letter from Judge Leander H. Perez, one of Louisiana's most distinguished and influential citizens:

DALCOUR, LA., *March 22, 1949.*

DEAR SIR: The New Orleans Daily States will publish a series of about seven editorials analyzing the Universal Declaration of Human Rights and how it can become our supreme law as part of a plan for world-wide socialism.

Since so little has been publicized about Mrs. Eleanor Roosevelt's works in this matter, which ultimately will be submitted to Congress for approval, these articles should be highly informatory.

Therefore, the New Orleans Daily States will be sent you during the next couple of weeks so that these articles will be available for your consideration.

Yours very truly,

L. H. PEREZ.

Now what is this all about?

It is about what many of us in this country have been fighting for a long time.

Not fighting simply during election periods in an effort to garner the votes of various groups, minorities, and organizations.

Not fighting on the eve of elections in an appeal to the hates, prejudices, and bias of minorities.

Not fighting from the platform of the demagog expounding catch phrases and attractive words for the sole purpose of winning an election.

This is not about that at all. It is about something which compels us to fight day in and day out. It is about something which demands our full attention at all times. It is about something which strikes at the very core, the very heart of the foundation upon which this Government is builded.

I am not interested about what names we are called—Democrats, good or bad, Dixiecrats, States' Righters, or what not. I am interested in the way we think and in what we fight for. That is the important thing.

The trend of Government today has been called creeping paralysis by Gen. Dwight D. Eisenhower and creeping socialism by the chairman of the National Republican Committee which opposes this administration. Regardless of what it is called it is definitely a trend away from what most of us believe to be the philosophy upon which this Nation was founded and builded. That is the important thing.

It is tragic that we realize only too late what has happened.

It is because we do not want that to happen now that this matter is being brought to your attention in this manner.

What appears on the surface to be a laudable and sincere effort in the direction of humanity is in reality an insidious and destructive force, which, in the ultimate, will destroy the very thing we seek to preserve—our American way of life with its constitutional guaranties and protections and assurance of self-government and the sovereignty of the individual States.

Disaster lurks near us.

It is important that we be made fully cognizant of that impending disaster.

That is why the New Orleans States announces its series of editorials on the so-called Declaration of Human Rights.

The New Orleans States is one of the Nation's great newspapers. It looks forward to its centennial in the not very distant future. It has a record in the area for public service and for courage in journalism.

It was my privilege at one time to be the city editor of this newspaper. I came to this body from the city desk of that newspaper.

Since my political baptism I have not always agreed with the policy of the New Orleans States in its local political affections and affiliations but I have never disagreed in its approach to national and international problems. As far as I know we have been in almost complete accord. Our Nation's safety is of far greater importance than a transitory local political condition or situation.

The New Orleans States is a newspaper of great influence in the community. I take this opportunity of congratulating its editor, William H. Fitzpatrick, on this editorial series. It is timely. It is to the point. It is important. It sounds a warning that everyone of us must heed—lest we be destroyed.

It is of more than passing interest that Judge Perez has made it possible for the Members of this Congress to receive the several editions of the New Orleans States in which these editorials appear.

Here again is a splendid example of the security of the Nation and the protection of our accepted way of life, rising above all other considerations. In Louisiana Judge Perez is regarded, and justly so, as the possessor of one of the most resourceful and fertile political brains in the State. His differences with the New

Orleans States on local political matters have been shared by me from time to time. Judge Perez is a strong and determined man. His strength of character and his determination to carry the fight for the principles in which he believes is evidenced by his action in this instance. He joins hands with the New Orleans States in bringing to the attention of the elected representatives of the people of this country the dangers which lurk at our side. I direct your attention to these matters in order to emphasize the importance of this fight and the advisability of reading these editorials.

While this subject matter is something which directs itself to the conclusion of the Senate, it is nonetheless important to the Members of the House.

I shall not attempt to discuss the issues involved but I do urge each one of you to not only read but clip and file these editorials.

For my part I shall do more than bring this matter to your attention. I shall collect these New Orleans States editorials and when they have been completed I shall insert them in the RECORD in order that they may become a permanent part of this Congress' deliberations and records. I want them to have that degree of permanency and I want them to remain at all times available to those who might want to see and learn for themselves.

When you receive your copy of the New Orleans States for the next several weeks turn to the editorial page and read these enlightening editorials on the "Declaration of human rights" which affect each and every one of you today and the lives of those who are yet unborn.

Meaning of the Truman Victory—Mission of the Democratic Party—and the Responsibility of the Democratic Party in Government.

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. O'SULLIVAN. Mr. Speaker, at this time, when we find so many southern Democrats joining unholy hands with ultraconservative Republicans to frustrate and defeat the program as outlined in the last Democratic National Platform, and presented to the American people so forcefully and ably by President Harry S. Truman, it might not be amiss to pause a few minutes and take stock, so to speak, in the vain hope that something might be said and done to bring these recalcitrant Southern Democrats back to their usual good political sense and action.

In an effort to accomplish this purpose I wish to place in the CONGRESSIONAL RECORD one of the finest political speeches which it has been my privilege to listen to in recent years.

This speech was written and delivered by my true friend, and ever loving Democrat, Nelson G. Kraschel, former Democratic Governor of Iowa, and at the time of its delivery he was the General Agent of the Farm Credit Administration of Omaha, Nebraska. Without doubt Governor Kraschel was the only Democrat in high position, in either Nebraska or Iowa, who really extended himself to help President Truman, and the Democratic ticket in the last election, yet strange as it may now seem, in spite of Governor Kraschel's loyal, unselfish work he was the first fatality of an alleged economy plan, and was relieved of his position, while the fawning Wednesday Democrats held their jobs, as is usually the case in politics, so that in the future, I guess, they might again be able to demonstrate that they can grow into bigger and better double-dealers, double-crossers and undercover Republicans. Men who are not a credit to either party—mere professional opportunists.

If the Fair Deal has made any mistakes thus far it is that it has permitted politically faithless Democrats and others to remain in high positions in and out of the councils of the party, and on committees, and other important places, and has discarded the faithful for the faithless, proving again that the more you do for a political cause the less is thought of you, and that right, like truth, "is forever on the scaffold and wrong forever on the throne."

The second mistake which possibly the Fair Deal is making is that propositions of great pith and moment sometimes do not seem to be thought through very well by the leadership, and consequently Members of Congress, who are anxious, ready, and willing to be cooperative feel that they are required to leave the leaders for the moment.

By way of example the Democratic platform called for a repeal of the tax on oleomargarine and up comes a bill to not only repeal this tax but to permit oleomargarine to be colored yellow, as most butter is colored now. This effort to do more than the party platform required has been very bad. I with other Democrats have been forced to be against this "overflowing measure plan" for the rich and powerful foreign and domestic oleomargarine manufacturers. The southern Democrats and administration leaders are for permitting oleomargarine to be colored yellow. You can see quite readily that I must represent the people, and the real interests of my district and not England's Lever Brothers and Unilever, and others. Omaha is one of the largest butter producing centers in the United States, and perhaps the world, and my district, has in it many farmers who rely in part upon milk cows for their livelihood. I cannot turn my people down for the interests of southern Democrats, and so forth. I must stand with two and one-half million farmers and Omaha creameries against this big and powerful domestic and foreign combine which would give us a synthetic product for the real thing.

Also the platform of the Democratic Party is opposed generally to sales taxes, yet when the District of Columbia bill came up the leadership was for it on the theory that the Democratic platform was against a national sales tax only. Of course the sales tax for the District of Columbia was the entering wedge for a national sales tax, and I could not go along and still claim to be at least farseeingly consistent as well as shortsightedly consistent. Of course it was and still is the desire of the rich property owners of the District of Columbia, who pay only $2 per hundred on the low assessed value of their real estate, to have a sales tax bill passed saddling their burden on the people generally, instead of bringing their property tax up to the figure obtaining in the other 48 States. They wanted special handling, but Congress on the last try-out refused to put this selfish makeship interpretation on the platform plank which denounces sales taxes—period.

Lest I forget entirely my purpose in making these remarks, I now introduce to you the speech which I appreciated so much, and which real Democrats I am sure will prize very highly, and freely use in the future.

ADDRESS OF NELSON G. KRASCHEL

Mr. Chairman, distinguished guests, ladies and gentlemen, President Roosevelt once said: "This generation has a rendezvous with destiny." The impact of succeeding events has fulfilled his prophecy.

During the last 15 years, we have seen man's struggle for freedom reach a great crisis. All the basest and most sublime emotions of man were unleashed in a holocaust such as this world had never seen before. World problems that had been accumulating for ages exploded with a violence never before experienced. The clash of opposing ideologies drew the entire world into horrible war. Statesmen were discredited and governments fell; and science invaded uncharted realms with results still unforeseen.

Throughout this turmoil and darkness and despair, only one beacon light remained shining aloft as a symbol to mankind of those ideals of the dignity of man, Christian tolerance and stability of governments. That shining light was—and is—the United States of America. And during all this period our Government has been guided and directed by the principles of the Democratic Party under the leadership of Franklin Roosevelt and Harry Truman.

We meet tonight to celebrate a Democratic Party victory. It was a victory that authorized the continuance of the policies that brought America to world leadership—policies which place human rights above and beyond the power of greed. It was a victory of the people—little understood at the time, but now interpreted as a rededication of America's faith in the ability of man to govern himself. It proved that the American people cannot be stampeded into an unwise political decision—no matter how smooth or slick or high-powered the would-be stampeders. The victory was a veritable vote of confidence in American democracy. On the world scene, it reestablished confidence and hope in the hearts of all mankind. It strengthened America's leadership in world affairs.

This victory dinner will not be devoted to arrogant gloating or silly bragging. It is intended as a sincere and humble tribute to those who had the courage to lead and the ability to win.

My remarks are divided into four parts:

1. The meaning of the Truman victory.
2. (Deleted because of natural modesty of Congressman offering article for printing in CONGRESSIONAL RECORD.)
3. The mission of the Democratic Party.
4. Our responsibility in government.

THE MEANING OF THE TRUMAN VICTORY

On the subject of Truman's victory, it would be both gracious and revealing to await all the apologies of pollsters and newspapers that so confidently predicted his defeat. The more they explain, the more evident it becomes that the opposition to Mr. Truman was a highly publicized campaign diabolically conceived by the captains of greed to deceive American voters. The administration which they sought to establish in Washington could not survive an honest exposure of its purpose. They knew that the public would never accept an administration that proposed a continuance of the Eightieth Congress, with all of its sins. There was but one course open to them, and that was to admit nothing and claim everything.

Louis Bromfield, the columnist, admits in an Omaha World-Herald article that perhaps, after all, the results of the election were best for the country. He says that by its smug complacency the public gives him the impression that it has licked a bunch of city slickers.

As time goes on, more of them will turn State's evidence and tell the truth.

There were many amusing incidents of the campaign that deserve repeating. They deserve repeating, not because their comedy amuses us, but rather as an object lesson to the voters in the future.

Governor Dewey's opening speech of the campaign at Des Moines sealed his fate. He failed to offer a single sound reason for his election. The following day the Council Bluffs Nonpareil headlined his speech as follows:

"Dewey begins campaign to unite America." The Nonpareil also stated: "Dewey ignored President Truman's contention 2 days previous at Dexter, Iowa, that 'gluttons of privilege' were out to take control of the Republican Party."

Mr. Dewey's proposal to unite America was one statement that confused me.

In 1933 when President Roosevelt took over the reins of government, America was disunited. Bread lines existed in every major city. Farmers were bankrupt because their crops would not bring the cost of production. Our banks were closed. World trade had been stagnated by the Republican high tariff, and our Nation could scarcely claim a friend among the other nations of the world.

In the ensuing years, remedial legislation corrected the economic injustices of the Republican era. The wheels of industry began to turn, farmers produced at a profit, and production restored jobs for the unemployed. Despair soon changed to hope.

When the war burst upon us, all the people of our Nation rallied to its defense. Farmers, short of help and short of equipment, labored until late at night. Laborers gladly left their comfortable homes to live in trailer camps where the war industries were located. Over night, industrialists converted their factories to the production of war material. We all submitted to price controls and rationing of strategic material. We were united.

And yet, this self-appointed messiah had the unadulterated gall to come before the American people and say he is going to unite them. Whether he knows it or not, his phony campaign of unity served only to unite the American people more solidly behind Truman and the Democratic Party.

One of the early moves of the new candidate (after "blitzing" the Republican Convention at Philadelphia) was to call a conference of all farm editors at his palatial farm home at Pawling, N. Y. The farm editors' report of that "rugged farmers' conference" is somewhat like the polls of 4 months ago. You should read them again. One of the farm editors of a neighboring daily newspapers wrote as follows:

"Mr. Dewey can rightly be called a farmer. He talks like a farmer. He acts like a farmer. He thinks like a farmer. During his entertainment of midwestern farm editors, he displayed a complete disregard for his gubernatorial shoe shine and my best britches, as he took us about his farm.

Continuing, he said:

"Mr. Dewey has not decided who will be Secretary of Agriculture."

The farm editor also said:

"Dewey does not just talk farming, he demonstrates it. He took us right into the bottom of his silo to examine its content and discuss its operation."

Well, I have visited thousands and thousands of farms and ranches throughout the United States and Canada, and I have never yet encountered a farmer or rancher who attached much importance to a shoe shine. And I have seen thousands and thousands of silos, but I have yet to have a rancher or farmer invite me down into the bottom of his silo to explain how it works. The voting record of farmers indicates that the deluxe conference of rugged farmers at Pawling, N. Y., deceived no one but the candidate himself and his invited guests.

Dewey's discussion of the Taft-Hartley labor bill, the Eightieth Congress, and his refusal to be specific on anything will long be remembered as America's greatest exhibition of shadow boxing during a political campaign. He talked of uniting America; he talked of going forward together; and, on one occasion, he actually came forth with the profound statement that America's future lies before us.

Mrs. Kraschel, who is an excellent bridge player, tells me that an intelligent player takes into account the losing tricks before bidding, and this the Republicans failed to do before nominating a candidate.

While all this dramatized comedy was being accepted by the pollsters and the newspapers as conclusive evidence of a Dewey victory, Harry Truman, the rightful successor to Roosevelt, was traveling up and down the country, and in plain, understandable language was telling the people all the truth. He was telling them what had happened. He was telling them what he would do if reelected. He was specific; he was honest. Truman's record reveals that from the fateful hour of April 12, 1945, when he grasped the torch of liberty from the still hand of Roosevelt, he had been true to his trust and to the principles of the Democratic Party, and his courage and his defense of these policies had never wavered. Because Roosevelt asked his party to place Truman in position to succeed him, we now have a greater respect for the wisdom and foresight of the immortal Roosevelt.

The clean-cut issue in 1948 was one between a phony campaign of negation and an honest defense of Democratic principles as laid down by Roosevelt and Truman. The people knew that if these principles were denied life under Truman and his successors, they would be buried at Hyde Park.

The Truman victory, therefore, means:

1. Absolute confidence in Truman and Barkley—the men.

2. Absolute confidence in true Democratic principles of government.

3. A repudiation of the Republican Party principles and its leadership.

4. A distrust of any party or candidate who opposes the Democratic Party without endorsement of, or a proposal to improve on, the protection now given to human values.

And the Truman victory has further significance:

5. It means an end to abortive attempts to found new political parties.

6. It means that the two-party system is more firmly assured than ever before in our history.

7. It means that the Democratic Party has been purged of radicals of the right as well as the left.

8. It means that until the Republican Party purges itself of the leadership which represents the captains of greed, it will not attract the support of young men and women whose careers are ahead of them.

9. It means a great future for our two-party system, and it is a definite warning to the management of both parties that whenever they fail to provide constructive leadership, they are doomed to defeat.

10. It means that politics, contrary to common belief, is accepted by the average citizen as a serious business and not just a game.

MISSION OF DEMOCRATIC PARTY

The Democratic Party has a great mission to perform in America. It has a brilliant record. Unfortunately, it has been called into service only in times of emergency, and not until the November 2 election has it appeared that the American Nation is ready to accept the philosophy of the Democratic Party as its fundamental principles of government.

Our dictionaries define a Democrat as one who believes in social equality. In my years of association with the Democratic Party, I have found that the party is made up of congenial and tolerant people with a single objective—that of solving the practical problems of American life. I have found that the Democratic Party rejects the plea of selfish forces who seek special privileges. The most humble citizen can be heard in its councils. It is a haven for distressed and troubled citizens, and it is the party to which our Nation turns during a crisis. Blind partisanship is not a Democratic trait. We could win more elections if we were more enthusiastically partisan, but for my part there is little satisfaction in winning an election unless our candidates and our policies are clearly entitled to public support. To be accepted as an active member of the Democratic Party is a privilege because it offers the average citizen his best opportunity for public service. Membership in this party should be looked upon as an opportunity to serve—it should not be regarded as a license to receive personal benefits.

Under Woodrow Wilson, from 1912 to 1920, the Democratic Party rendered a great service to the Nation. During that period, women were given equal status with men, the Federal Reserve Banking Act was adopted, and the Federal land bank was established. President Wilson rapidly advanced to a position of world leadership, but the captains of greed, working through the Republican Party, were strong enough to sabotage his efforts. In the campaign of 1920, the American people fell victim to the campaign slogan of Back to Normalcy With Harding and Coolidge, which was the beginning of 12 years of Republican rule.

During that period, the Republican philosophy of government was given a fair trial. It ended in complete chaos. Our economy was wrecked. Our Nation stood friendless among the nations of the world. The Republican foreign policy, and particularly its high-tariff policy, had brought on stagnation of world trade. Depressions, accompanied by social disorder, prevailed in many countries. Totalitarian forms of government sprang up everywhere.

But the American people, having had recent experience with democratic principles during the Wilson administration, had not forgotten. So in the elections of '32, while the earth shook with marching feet (many of them goose stepping under dictators), our people were marching to the polls to reestablish, under Roosevelt, the democratic philosophy of government that had served us so well in the past.

In the 16 years that have elapsed since the eventful campaign of '32, the American people have enjoyed the blessings of a government that believes in the dignity of man. The reforms that have been adopted during

this period are necessary to implement the Democratic Party's philosophy of government.

I shall enumerate only a few of the agencies and measures:

Security and Exchange Commission.

Guaranty of bank deposits.

Reconstruction Finance Corporation—loans to banks and business enterprises.

Farm Credit Administration—loans to farmers and ranchers.

Price support for farm commodities.

Commodity Credit Corporation—market stabilization and loans to farmers.

Collective bargaining for organized labor.

Old-age pensions.

Unemployment compensation.

Abolition of child labor.

Reciprocal trade treaties.

Soil conservation—timber, range and water resources development.

Development of river resources—power, irrigation, transportation, and flood control.

Rural electrification.

Each and every one of these reforms, together with many more not listed here, is a part of a broad plan to insure the people more liberty and more security.

During this 16-year period, the Republican opposition made a frantic effort to deny the people their new-found freedoms and privileges in order that the captains of greed could continue to exploit the public. The Republican propaganda has, in great part, been dishonest and unfair. The Republicans have sought to disturb the people by claiming that we were surrendering personal rights and privileges to the Government. They have charged us with destroying the free-enterprise system. The truth of the matter is—we have never had a completely free-enterprise system in this country. We have a protected private-enterprise system. From the very beginning, every major industry of this land had been subsidized in some way or another.

Grants of land to railroads, mail subsidies to railroads and steamship lines and air lines, high tariffs on imports to protect domestic manufacturers, patent laws for the protection of industry, special freight rates—these are only a few of the subsidies, direct and indirect, which the Government has provided to protect private industry.

The laws of our land protect the investment dollar and the investor. Property rights have never been questioned. We sought, and achieved, under the Democratic Party program, comparable protection for human rights. I have never been able to understand why the proponents of the Republican theory of government had failed to recognize that in the period from 1920 to 1932, their philosophy of government wrecked the economy of the people, and thereby destroyed the buying power necessary to maintain a prosperous national economy.

The Democratic program, in the past 16 years, has built solidly from the ground up. The farmer, the laborer, the clerk, the small-business man, and the professional man have been established on a sound footing; and this means that all business has a greater opportunity to prosper. The regulatory measures for the control of business are designed to maintain a proper economic balance between all segments of our people. This is a necessary procedure unless we wish to return again to the law of the jungle and permit the strong to override the weak.

I yield to no man in America in a desire to protect and improve the capitalistic system. I want enterprise as free as possible. An opportunity for financial independence, yes. An opportunity for job security and job advancement, yes. A proper reward for initiative and ambition, yes. But an opportunity for unbridled greed, no.

The Democratic Party believes in implementing in a practical way the teachings of the Golden Rule. We believe that the coming of man to this planet is a part of the Divine plan. We know that his sojourn on earth is short, and that it is merely a period of preparation for eternity. We are grateful for the bounteous resources of earth which are provided for the sustenance and pleasure of man, and we do not intend that these resources should be dissipated by greed. If man's purpose on earth is to be accomplished as intended, he must learn to govern himself. He must discipline himself or he must be disciplined by society in the light of the common good. The Democratic Party believes this to be the duty of government. It believes in free elections in the formation of all governments. It believes that the preservation of the dignity of man should be the prime objective of government.

All governmental problems (including world stability) could be solved instantly if we could apply the principles of the fellowship of man and the fatherhood of God. The mission of the Democratic Party is to give life and action to these priceless principles. Idealistic, you say. Yes. But we dare not tolerate anything less than this ideal in the most powerful government on earth.

OUR RESPONSIBILITY IN GOVERNMENT

The responsibility of our party in the management of our Government is tremendous. We have a mandate from the people to direct our Government for another 4 years. This will complete a 20-year span of Democratic rule. During this era, we have broken the shackles of isolationism and established ourselves as a great world power, with interest in and obligations to every nation. We manifest a deep concern in mankind everywhere and have become a champion of world democracy: a philosophy which is now locked in a death-grip with communism. The foreign policy of our Government is nonpartisan. It is the policy of the American people. We are merely entrusted with its direction. If we succeed, it will mean peace, contentment, and progress throughout the world.

The adoption of a bill of rights for the world was announced last week by the United Nations. In the words of Eleanor Roosevelt, who for 2½ years has sponsored the movement within the United Nations system, "This is a Magna Carta for the world." It is a glowing tribute to our philosophy of government. It is an accomplishment of the United Nations, the instrument of world order, growing out of the idealism of America.

Our responsibility in the days to come will include all the practical duties of government and the defense of high ideals. It will include the practical problems growing out of industrial expansion, investment profits, prices, wages, and the stabilizing of agriculture and transportation. We have the responsibility of protecting the capitalistic system by maintaining economic equality between all groups. It will be our responsibility to protect and improve all our natural resources, including the land itself.

In maintaining the high ideals, it will be our purpose to convince every person who enjoys the rights and privileges of an American citizen that he has a corresponding responsibility. The right of free speech certainly carries with it the responsibility to listen. The freedom of worship certainly implies that we do worship. Freedom of peaceful assembly would be a dangerous procedure if the public did not discharge its community obligation by taking part in all public meetings. We neglected this obligation but a few years ago and, as a result, many of our citizens were corrupted by the German-American Bund, America First Committee, and the No Foreign Wars Committee.

We must remember all these things—in our hearts and in our actions—as we fulfill the mandate given to us again by the American people.

It is as true today as it was that day 16 years ago when Roosevelt said: "This generation has a rendezvous with destiny."

To keep the faith, we shall require courage and strength, even though, God forbid, the path of righteousness may again lead us across battlefields. It is our responsibility to maintain a government with a soul. The dignity of man at home and abroad must be maintained. Human rights must be protected from those whose greed knows no reason. In this way, and in this way only, can we, by example, prove to the world our fitness to lead. It is the righteous course. It is the will of God and it is the only course that leads to peace on earth and good will among men.

"Tap" Rodgers—50 Years to News

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1949

Mr. WEICHEL. Mr. Speaker, not too many round out 50 years of service in any profession, and I want to pay tribute to a veteran publisher of my district who has completed 50 years of newspaper activity in northwestern Ohio. He began as a newsboy and with faithful devotion he became one of the leading publishers in Ohio. He is a genuine person which his card bespeaks and I want to pay my respects to this veteran of the press on his golden anniversary in the profession which has helped to keep America a Nation of free peoples, I include his card along with the tribute of his fellows of the Advertiser-Tribune, Tiffin, Ohio:

[Card]

E. T. Rodgers, president, general manager, publisher, the Advertiser-Tribune, Tiffin, Ohio, United States of America.

Single-liver; dance; take a drink; no cards; sees everything; tells nothing; call me "Tap."

Have toured:

Countries: United States of America, England, France, Spain, Belgium, Holland, Greece, Germany, Italy, Australia, Turkey, Syria, Palestine, Mexico, Guatemala, Salvador, Panama, Peru, Chile, Argentina, Brazil, Venezuela, Colombia, Canada.

Islands: Cuba, Jamaica, Haiti, Puerto Rico, Nassau, Madeira, Canary, Hawaii, Samoa, Fiji, New Zealand, St. Helena.

African cities: Casablanca, Cape Town, Kimberley, Johannesburg, Dakar, Durban, Mombasa, Nairobi, Omdurman, Khartoum, Port Sudan, Luxor, Cairo, Algiers.

TIFFIN PUBLISHER HONORED AT ANNIVERSARY GATHERING

Business associates and personal friends from Tiffin, many Ohio cities, and from points as distant as Los Angeles and New York joined here Saturday afternoon and evening in complimenting E. Tappan Rodgers, Advertiser-Tribune president and general manager, on the fiftieth anniversary of his entrance into the newspaper business.

The celebration, which began with a reception at 3 p. m. Saturday and was climaxed by a banquet for approximately 120 guests at 6:30 Saturday evening, concluded with a breakfast for out-of-town guests and Advertiser-Tribune executives at 10 a. m.

Sunday. All affairs were held in the Hotel Shawhan.

Guests at the reception and banquet included Advertiser-Tribune employees and their wives, newspaper publishers from many Ohio cities, newspaper service representatives, groups with which Mr. Rodgers has been closely associated, and other personal friends.

Miss Cora B. Fiege, a former newspaper coworker with Mr. Rodgers for many years, was the principal speaker on the program which followed the banquet. She reviewed in most interesting fashion the story of Mr. Rodgers' early life in Tiffin which led to his entrance into the newspaper business as circulation manager of the Daily Advertiser. She also recounted many interesting high lights of his newspaper career. She concluded her talk with a splendid tribute to Mr. Rodgers as a newspaperman, a citizen, and a friend.

ASSOCIATES PAY TRIBUTE

Others who spoke for various groups and organizations with which Mr. Rodgers has been associated were John W. Cullen, Jr., of Cleveland, of the John W. Cullen Co., national advertising representatives for the Advertiser-Tribune; Alva Bachman, Bowling Green, member of the board of trustees of Bowling Green State University of which board Mr. Rodgers is president; Robert E. Hall, cashier of the Tiffin Savings Bank; Howard W. Smith, business associate and companion on some of Mr. Rodgers' trips abroad; Joseph Rawlinson, Toledo member of a group with which Mr. Rodgers has camped each summer for several years at Swimming Deer Lodge in Michigan and who presented Mr. Rodgers with a handsome gold plaque in commemoration of the anniversary; Congressman Alvin E. Weichel, Sandusky; Frederic Ball, Advertiser alumnus and now a prominent Washington attorney; Clarence Seaman, Cleveland, of the Imperial Type Metal Co., with which firm Mr. Rodgers has had business relations for almost 50 years; Paul B. Parkin, postmaster and chamber of commerce director, who nominated Mr. Rodgers as an outstanding citizen; and Miss Julia Rodgers of Los Angeles, Calif.

GIFTS PRESENTED

At the conclusion of this portion of the program, Mr. Rodgers was introduced. He expressed sincere appreciation for the compliments which had been bestowed upon him and recounted some of the outstanding events of his half-century in the newspaper field. He spoke particularly of his entrance into the business and of his acquisition of his first interest in the old Advertiser company. He paid sincere tribute to those who helped him in various ways in his early days in the business.

Following Mr. Rodgers' address, Ivan R. Hesson, assistant general manager of the Advertiser-Tribune, speaking for all of the firm's employees, presented Mr. Rodgers with an appropriately engraved solid silver bowl and gold pen and pencil set.

Guests at the dinner were introduced at the beginning of the program by Ralph H. Keller, associate editor, who was general chairman of arrangements for the celebration, Mr. Hesson, and John H. Thompson, who presided as toastmaster during the speaking program.

Each guest at the dinner received a gold pencil as a memento of the occasion. Cakes which formed a portion of the dessert course were cut by Miss Fiege, Mrs. Ralph H. Keller, Miss Julia Rodgers, a niece of Mr. Rodgers, who flew here from Los Angeles to attend the celebration, Mrs. Victoria Abbott, and Mrs. John H. Thompson.

An impromptu feature of the dinner program was a salute to C. A. Krout, who celebrated his eighty-seventh birthday Saturday.

Music during the reception and dinner was provided by Roland Miller, accordion virtuoso.

Small four-page facsimiles of the Advertiser-Tribune marked the dinner places for the guests.

The tables were decorated with yellow roses combined with acacia, and ivory candles tied with gold. Outlined against the wall in back of the honor guest's table was an anniversary message in gold script. A basket of red roses, topped with golden numerals, and ivory candles in crystal candelabra formed the table centerpiece.

OUT-OF-TOWN GUESTS

Guests from a distance who attended some or all of the anniversary functions included: Mr. and Mrs. Walter D. Wall, Columbus; Dr. Frank J. Prout, president of Bowling Green State University, and Alva W. Bachman, Bowling Green; Carl H. Schwyn, Cygnet; E. F. Schmidt, James B. Watters, George Schoonmaker, Joseph F. Rawlinson, Toledo; A. A. Armbrust, Lancaster; Frederic Ball, Washington; George A. Dickey, Detroit; Howard T. Baker, Clifton Forge, Va.; S. T. Allen, John W. Cullen, Jr., Clarence Seaman, Mr. and Mrs. H. W. Walker, C. R. Borckardt, James G. Hill, Cleveland; James Downing, Columbus; John W. Vermont, Harry B. Gramm, New York City; George Gilbertson, Chicago; Edgar Koehl, Sr., Ashland; George T. Culbertson, Mount Vernon; Will P. McKinney, Frank B. McKinney, Marietta; Frank J. Daubel, Don Daubel, Fremont; Mr. and Mrs. Frank W. Spencer, Newark; Fred M. Hopkins, Edmond Hopkins, Fostoria; R. L. Hemminger, Findlay; E. S. Rutledge, Kenton; Ray Dix, Wooster; Mr. and Mrs. A. V. Dix, Martins Ferry; Mr. and Mrs. C. F. Ridenour, Piqua; Dudley A. White, Norwalk.

TELEGRAMS AND FLOWERS

Congratulatory telegrams came to Mr. Rodgers from friends and organizations in Tiffin, New York, Sidney, Cincinnati, Toledo, Bellefontaine, Warren, Lancaster, Ashtabula, Cohasset, Mass., Phoenix, Ariz., Washington, D. C., Honolulu, Hawaii, and Seville, Spain.

Floral tributes were received from members of Mr. Rodgers' Columbian High School graduating class, the class of 1898; the Republican-Courier of Findlay; Mr. and Mrs. Clark Stoner, the Whitaker Paper Co., Cincinnati; Kenneth Kerr, Lancaster, the Ohio Select List of Newspapers, the Dix newspapers, and the Tiffin Savings Bank.

Belasco Theater—Bring the Theater Back to Washington

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following addresses made at a meeting of the Washington Art Center Association, held at the Smithsonian Institution on March 23, 1949, together with newspaper comment:

ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

BELASCO THEATER—BRING THE THEATER BACK TO WASHINGTON

There has been a legitimate theater in Washington almost since the day our great Government was founded. Back in 1800 when the streets of our city were muddy and unpaved, and travel presented tantalizing problems for the ladies and gentlemen in their coach-drawn vehicles, there was a theater to entertain them. It bore the impressive title, United States Theater. There have been legitimate theaters in Washington all through the years, up until the fall of 1948. When I was first elected and came to Washington, there were, I believe, four theaters producing plays: the Belasco, Poli, National, and Columbia.

It is almost incredible that in this era of enlightenment and discovery, in this city surrounded as it is by some of the greatest expressions of cultural wealth the world contains, that there should come a time when the brilliant world of the theater should have its doors shut in the Nation's Capital. I have heard the concerts given by the Library of Congress compared in superlative terms to the finest chamber orchestras in the world. We have concerts at the National Gallery of Art every Sunday evening, and a concert season each year given by the National Symphony Orchestra. We have recitals and dance performances which play to enthusiastic audiences at Constitution Hall. Architecture and science and art are generously represented everywhere, and the physical beauty of our city brings to us the dignity and distinction which the greatness of our Nation demands. But the living theater, the art which has delighted the peoples of every age and every country, the art which has given us the great plays and the great actors and actresses of the past and of the present—that art has been closed to us.

Looking toward the White House, right on Lafayette Square, the Belasco Theater stands, now a dark, dreary warehouse for Treasury documents, where once Sarah Bernhardt, Eleanora Duse, Otis Skinner, Julia Marlowe, Frances Starr, Helen Hayes, Ina Claire, Katherine Cornell, William Gillette, and many, many other theater great too numerous for me to mention, played their stellar roles. New York, Boston, Philadelphia can witness the pathos of A Streetcar Named Desire, the frustration of Edward, My Son, the sensitivity and earthiness of Mister Roberts. But in Washington they are verboten. Thinking on this conundrum and remembering the years when three and four theaters played to full houses simultaneously in Washington—years when the population was almost half what it is today, I decided that something must be done to right the situation. On writing to the Public Works Administration, in whose safekeeping this property was entrusted, I found a tangle of legal obstacles no commercial producer could possibly be expected to unravel. Because so much damage had been done to the property as a theater, a reconstruction and remodeling process would naturally be necessary. But, and here we come to the impossible strain, no producer could be given a lease that would guarantee him more than 1 year's occupancy under the law. Many theater people have spent months of energy and effort in their eagerness to lease this most desirable property for the purpose of displaying legitimate productions. There has been no dearth of interest and hope that this project should become a reality. Unless, however, a change in the legal process could be granted, it seemed as though the cause were indeed a lost one.

It was at this point that I felt an answer could be found. Since no producer in the commercial field could be expected to take impossible risks, it seemed that the United States Government, proud as it is of its heritage and of its Capital, the center of world thought and progress, should lend a helping hand, and take at least the initial burden of the cost of reconstructing this enormously valuable property, away from the commercial producer. This done, the professional theater could be expected to play out its role. Legislation loomed up as the only answer, and I introduced a bill in the House of Representatives to accomplish this purpose.

The number of my bill is H. R. 3038, and because its text is so short, I am going to take the liberty of reading it to you. It goes as follows:

"Be it enacted, etc., That any law to the contrary notwithstanding, the Secretary of the Treasury is hereby authorized to offer for public letting within 90 days after the enactment of this act the property known as the Belasco Theater on Lafayette Place, Washington, District of Columbia, for the performing arts. The said lease shall be on such terms and on such conditions as may to him seem reasonable, but such terms and conditions shall be consistent with a reasonable profit to be made by the lesee regardless of any loss to the Government.

"The Secretary of the Treasury shall, without cost to the lessee, remodel and reconstruct the said building to permit the performance of theatrical productions and ballet. Nor shall such cost be reflected in the rent to be charged. Said lease shall be for a period not exceeding 5 years.

"The name of the building shall be the Belasco Theater."

Since February 28, 1949, the date on which my bill was introduced, I have been overwhelmed by the support which immediately rallied to it. I want to take this opportunity to thank the theater conference held in New York at the beginning of this month, comprising all segments of the theatrical profession, for its approval and endorsement of my bill. I wish to thank Clarence Derwent, president of Actors' Equity Association for advising me so quickly of that organization's endorsement. I wish to thank C. Lawton Campbell, chairman of the board of directors of the American National Theater and Academy which was chartered by the Congress in 1935, and has been so active in keeping the theater alive all over the country, for its endorsement of my bill. I wish to thank the local District Democratic Central Committee for its promise of support and approval. I wish to thank Mr. Harold Ickes, former Secretary of the Interior, for his endorsement, and my heartfelt gratitude goes to each of the sponsors of this meeting and particularly to Mr. Frain and the Washington Art Center Association, for their constant vigil on behalf of my bill and for their efforts in arranging this splendid meeting at this historic landmark tonight. Also, I wish to thank the many individuals who have written to me expressing their firm hope that my bill will indeed bring the legitimate theater back to Washington. And my humble gratitude goes to the newspapers for their excellent reporting on it. To Father Hartke director of the drama department of Catholic University, who has so kindly consented to act as the chairman of this meeting, may I extend special thanks. I can think of no more perfect choice for such a task.

All of you attest to the truth that our great city deserves the honor and the splendor that the artists of the theater can bestow upon us. I sincerely hope that you will continue your efforts until the end we desire is achieved.

The chairman of the Committee on Public Works, the Honorable WILL M. WHITTINGTON, of Mississippi, to which H. R. 3038 has been referred in the House of Representatives, has informed me that he has requested reports on the bill from the appropriate agencies. That is the beginning of action on the bill in committee. Soon, I trust hearings will be held so that further action can be taken. I urge all of you to advise the members of the committee of your support, and hope that you will use your energies further, as will I, to see to it that the Belasco Theater on Lafayette Square may once again be the center of illumination both within and without, that it has been throughout the years of its admirable life.

ADDRESS BY MELVIN D. HILDRETH, DEMOCRATIC NATIONAL COMMITTEEMAN FOR THE DISTRICT OF COLUMBIA

The commendable effort of the citizens of Washington to bring about the restoration of the Belasco Theater, recalls that for 150 years the windows of the White House have gazed on the drama of Lafayette Square. Even as early as 1793 George Washington, as President, there joined the members of Masonic Lodge No. 15 before proceeding to Capitol Hill for the purpose of laying the cornerstone. In 1814 Dolly Madison dashed across the square, then a cow pasture, with the silver service from the burning White House fired by the British. In 1820 Stephen Decatur, hero of the hour because of his exploits in the war with the pirates of Tripoli, left his house on the northwest corner of this square to fight his fatal duel with James Barron on the famous old dueling grounds at Bladensburg, a few miles from our city; a scene from which he returned to die. From the same house Martin Van Buren commanded the favor of Andrew Jackson and subsequently obtained the Presidency by being friendly to that awful Mrs. Eaton.

So, too, the White House and the square witnessed the tragic end of Philip Barton Key, son of the author of the Star-Spangled Banner, when Gen. Daniel Sickles discovered his wife, a native of Spain, signaling from her home with a handkerchief to the young Washington district attorney.

In the house in which Key died, after being shot by Sickles, William H. Seward, Secretary of State under Lincoln, resided during the Civil War. On April 14, 1865, the night Ford's Theater echoed to a shot from an actor-assassin's pistol that resounded around the world and left Lincoln lifeless, a young man by the name of Payne, co-conspirator with Booth, came on horseback to the home of Mr. Seward, pretending to be a messenger with a package of medicine for the sick Secretary of State. The servant attempted to prevent Payne from going upstairs and in the ensuing struggle young Seward was shot, the nurse wounded, and Secretary Seward stabbed repeatedly in the throat.

And on the site of this home, where so much real drama, romance, and adventure has occurred, a theater was erected. These great events, marking successive steps in the history of the Nation, were real, and now, in the very place where they once attracted world-wide attention, comedy joined with tragedy under a theater's roof; a theater which even today contains several of the original windows of the old mansion that housed Blaine as its last great stateman and after his passing gave way to the present domicile of drama. From out of these same windows for the past 50 years has been witnessed the pageants of a nation, the carriages of kings, queens, and princes passing in review, the inaugural processions of the Roosevelt era, the profound sorrow as the Presidential funeral passed by contrasted with the waves of happy hysteria upon the ending of the world wars, and the gay cheers greeting the Truman inaugural parade.

The same White House windows which looked out upon the drama of Lafayette Square years ago, in more recent times have gazed at the successes and failures of the American stage as the announcements of plays, good and bad, season after season, appeared over the threater portico.

This theater, the only one in the world to have faced the home of a nation's executive and located with an eye for the beautiful, as few indeed were, was first called the Lafayette Square Opera House, and later was known as the Shubert-Belasco Theater. It was erected in 1895 by Uriah H. Painter, a wealthy engineer, and it was notable at that time as being the first fireproof theater to be erected. For many years it was the theater selected by many of New York's leading producers for the premiere of their productions.

It would seem proper that this, the oldest of the Capital's legitimate theaters, ideally located on such a historic site, should be further utilized for the presentation of plays. It was one of America's most beautiful theaters. The walls of old gold were relieved by quotations from the classics and soft-shaded tapestries gave dignity to the boxes associated with those who have made American history for the past five decades. It was a theater of atmosphere. It was a friendly theater.

Little wonder that scores of Washingtonians loved this playhouse. It is to be hoped that the Congress can find a way to relight the electric sign as a nightly reminder that this cherished theater again holds the mirror up to nature; a shining contrast to the world drama staged around President Truman's Cabinet table across the square, whose mahogany teems with thrills known but to a favored few.

[From the Washington Post of March 22, 1949]

ONE ON THE AISLE—BELASCO PROJECT LOCALLY BACKED

(By Richard L. Coe)

Tomorrow night's public meeting to discuss the plan for bringing the Belasco Theater back to life has one facet that deserves strong emphasis.

It is being sponsored by residents of Washington who are interested in the theater, either professionally or as observers.

In endless talks with theatrical bigwigs in New York I've found the criticism that perhaps Washington is not interested in having a theater; that if its residents really want to bring the living theater back they should "do" something about it. "Do" precisely what, the bigwigs have been pretty vague, but tomorrow night's meeting and its sponsors should certainly put our town on record as more than just interested.

The meeting will be held at 8:15 in the Natural History Building of the Smithsonian Institution, Constitution Avenue and Tenth Street NW.

Chief speaker will be Representative EMANUEL CELLER (Democrat, New York), who has introduced a bill providing that the Treasury remodel and reconstruct the Belasco Theater and lease it "consistent with a reasonable profit to the lessee regardless of loss to the Government." Representative CELLER has been in Congress since 1922 and can certainly be reckoned as a Washington resident of long, respectable standing.

The Celler bill is now before the House Committee on Public Works, chairmaned by Representative WILLIAM M. WHITTINGTON (Democrat, Mississippi). One member of this committee, Representative JOHN A. BLATNIK (Democrat, Minnesota), will address the meeting. A veteran of the recent war, Representative BLATNIK is expected to explain how a National Capital without the living theater strikes a man from the Midwest.

Another prominent Democrat will take part, Melvin D. Hildreth, Democratic national committeeman for the District of Columbia. Virtually a lifelong resident of the District and the Nation's No. 1 circus fan, Mel Hildreth knows the story of the Belasco—once the Lafayette Square Opera House—and tells it with a fondness his audience will relish.

NOTABLE RESIDENTS

Chairman of the meeting will be Father Gilbert V. Hartke, director of Catholic University's speech and drama department. A leading figure in the Capital's ecclesiastical and theatrical circles for the past decade, Father Hartke is a man whose words and works command national respect.

Although New York and Chicago have their claims on her, actress Frances Starr is another Washington resident of long standing on the list of rally sponsors. As the wife of the late Robert G. Donaldson, Miss Starr lived here some years as a private citizen and devoted her energies to the more playful ways of social living. Between her plays nowadays, home to Miss Starr is Kalorama Road, and while she'll probably be asked to speak about David Belasco, whose bright star she was for so many years, her true value tomorrow night lies in her role as this city's leading professional actress.

Mrs. Francis Biddle is on the panel, too, the wife of the former Attorney General, a playwright in her own right who last year had the curious experience of having a play running in New York which couldn't find a stage in her home city.

Nelson B. Bell, who for so many years covered the theater for this newspaper, is another long-time resident whose name as sponsor should mean much to Capital residents and the New York theater circles.

Prominent socialites who've missed the theater's relaxing entertainment and cultural stimuli are on the list, among them Mrs. Robert Low Bacon, Mrs. Lawrence A. Baker, Mrs. Louise Noonan Miller, and Mrs. Edgar Ansel Mowrer.

FOR THE FUTURE, NOT THE PAST

The city's leading theatrical figures are all represented—Bess Davis Schreiner, of the Theater Guild; Evelyn Freyman, of the Olney Theater; Edward Mangum, of George Washington University's staff and players; Horton Foote and Vincent Donehue, of Productions, Inc.; Owen Dodson, the poet-playwright of Howard University; Constance Albright Snow, the concert manager; Patrick Hays, her charming rival in the music field; Mary Stewart French, the American National Theater and Academy board member resident in Washington.

Organizing the public meeting has been the Washington Art Center Association, of which Lawrence J. Heller is president and J. G. Frain the indefatigable executive secretary.

One thing I hope about tomorrow night's meeting is that it will confine itself to the immediate problem of reviving the theater in this city. The discrimination issue is a thing of the past. Both the playwrights and the actors have stated they will not work in the National Capital unless all Americans can see their work.

The position has been taken, it exists, and it is up to the meeting not to reopen old wounds but to discuss how the situation as it is can be resolved. This is a chance to look at the present and the future, not the past.

[From the Washington Daily News of March 24, 1949]

THEATER FOR DISTRICT OF COLUMBIA SEEMS TO BE UP TO THE 20

(By Tom Donnelly)

The turnout was small, but the enthusiasm was large. Some 135 Washingtonians met last night in the Smithsonian's Natural History Building to consider ways and means of getting the Nation's Capital a theater.

Several of the speakers warned that in another year or so the city's theaterless condition might be accepted as a natural state of affairs, and since this obviously must not happen a committee of 20 was formed, with instructions to hold a meeting as soon as possible and see what can be done.

Representative EMANUEL CELLER, Democrat, of New York, was the principal speaker, and the talk naturally turned on the hope that something might be done to reclaim the Belasco (where Bernhardt, Duse, and Cornell once demonstrated the bright art of the drama) from its present dark status as a warehouse for musty Treasury documents.

Mr. CELLER cited the damaged condition of the auditorium, and the legal difficulties which must be surmounted, and read his bill (H. R. 3038) which provides that "the Secretary of the Treasury repair and remodel the Belasco and rent it out to the performing arts."

Melvin Hildreth, Democratic national committeeman for the District of Columbia, pointed out the incontrovertible fact that the Belasco is the only theater in the world which looks out upon the same park as the White House.

Actress Frances Starr, who is indelibly identified in the public mind with that venerable shocker, The Easiest Way, admitted she was surprised to discover that the Smithsonian was not in another part of town, as she had always supposed, observed that she had appeared in the Belasco's first play, Rose of the Rancho (or maybe it was her first play), and went on to say that the past of the Belasco is important but that the future is more important still.

Patrick Hayes, head of the Hayes concert bureau, who came up with the most practical suggestion of the evening, thought it might be possible for someone to buy up the lease of the National. In any case, he said, theater-conscious Washingtonians should work on every possible angle at once: the Belasco, auditoriums like the one at Roosevelt High School, and that National lease.

Largely due to Mr. Hayes' urgings, the meeting got down to business and nominated a committee (possibly to be called the Citizens Committee for Theater in the Nation's Capital) which will meet, whenever Mr. Hildreth sets a date, to discuss ways and means, and to examine proposals offered by Representative JACOB K. JAVITS, Republican, of New York, to the effect that Congressmen should be written to, community groups aroused, and so forth.

The Reverend Gilbert K. Hartke, director of Catholic University's drama department, presided. He asked the audience to take a tip from the embattled pyramid clubs, and tell two friends who would tell two friends who would tell two friends to get behind the bring-back-the-theater movement.

The committee members, all connected with the theater or with interested civic groups, are Hazel Markel, Bess Davis Schreiner, Owen Dodson, Lawrence Heller, Mrs. Carolyn Hill Stewart, Mrs. Frances Nash Watson, Mrs. Edgar Ansel Mowrer, Horton Foote, Edward Mangum, Mrs. Constance Snow, George Vivian, Mrs. Edward Sturdevant, Mrs. Doris G. Foster, Miss Charlotte M. London, Richard L. Coe, George Frain, executive secretary of the Washington Art Center Association, Inc., which sponsored the meeting, Mr. Hildreth, Miss Starr, Father Hartke and myself.

[From the Washington Post of March 24, 1949]

WILL FIGHT FOR CELLER BILL—COMMITTEE OF 20 FORMED HERE TO BRING BACK LIVING THEATER

(By Richard L. Coe)

A citizens' committee of 20 to bring back the living theater to Washington was formed last night at a public meeting in the Smithsonian Institution.

The meeting was called to discuss means of getting support for the Celler bill, designed to renovate the Belasco Theater and lease it to private producers.

Representative EMANUEL CELLER, Democrat, of New York, outlined his bill by pointing out the tangle of legal obstacles that have kept private producers from leasing the theater as it now stands. Under its present condition, he stated, no producer could hope to take over the theater. His bill provides that the Government recondition the theater and then "it would be up to the theater people to run it."

By a vote of the audience—of no more than 150—Melvin Hildreth, Democratic National Committeeman for the District of Columbia, and one of the evening's speakers, was elected chairman. Hildreth said he hopes to have the rest of the committee, all elected by last night's spectators, meet formally some time next week.

Speakers included Representative JACOB K. JAVITS, Republican, of New York, and Representative JOHN A. BLATNIK, Democrat, of Minnesota, who told the audience the future of the theater is up to the Washington public.

The Celler bill is now before the House Committee on Public Works, chairmaned by Representative WILLIAM WHITTINGTON, Democrat, of Mississippi.

Others who addressed the gathering and urged that Washingtonians write letters to the committee chairman showing their interest in the Celler bill (H. R. 3038) included Miss Frances Starr, the actress; Patrick Hayes, the concert manager; Louis Simon, executive secretary of Actors' Equity; and the Rev. Gilbert V. Hartke, chairman of the meeting and director of Catholic University's speech and drama department.

Nominated to the committee were Mrs. Hazel Markel, Mrs. Edgar Mowrer, Constance A. Snow, Charlotte London, Mrs. Edward W. Sturdevant, Carolyn Will Stuart, Bess Davis Schreiner, Frances Starr, Frances Nash Watson, Father Hartke, Tom Donnelly, George Vivian, Horton Foote, Lawrence Heller, Edward Mangum, George Frain, Owen Dodson, Patrick Hayes and Richard L. Coe.

Miss Violet Heming, a resident member of Equity, a lifelong actress and the wife of Judge Bennett Champ Clark, was nominated to serve although not present at the meeting, the audience expressing the hope that she will accept the assignment.

[From the Washington Evening Star of March 24, 1949]

GROUP FORMS TO BRING LEGITIMATE THEATER BACK TO CAPITAL

A newly formed committee of Washington residents will meet soon under the chairmanship of Melvin D. Hildreth, Democratic national committeeman for the District of Columbia, to chart efforts toward providing Washington with a legitimate theater.

Suggested by Patrick Hayes, concert bureau head, the committee was named last night at a meeting of citizens in the National Museum, called by the Washington Art Center Association.

After talks and discussion on the question of bringing back a living, professional theater to the District, the gathering decided to charge a committee, to be known as A Citizens' Committee for Theater in the Nation's Capital, with responsibility for promoting legislation and other measures toward that end.

MEMBERS NAMED

Mr. Hildreth announced he would communicate with the members as to the time and place of the first meeting. The members include Miss Frances Starr, the Rev. Gilbert Hartke, Richard Coe, J. G. Frain, Mrs. Hazel Markel, George Vivian, Mrs. Bess Davis Schreiner, Mr. Hayes, Mrs. Carolyn Will Stewart, Owen Dodson, Lawrence J. Heller, Mrs. Frances Nash Watson, Miss Charlotte M. London, Mrs. Edgar Mowrer, Horton Foote, Mrs. Doris G. Foster, Edward Mangum, Mrs. Constance A. Snow, Mrs. Edward Sturdevant and Tom Donnelly.

One piece of legislation the group will work to put over is a bill sponsored by Representative CELLER, Democrat, of New York, to authorize the Secretary of the Treasury to remodel and lease the old Belasco for the theater purposes, consistent with a reasonable profit to the lessee, regardless of the loss to the Government.

SUGGESTS PYRAMID

Father Hartke suggested a sort of pyramid club program for letting the House Commit-

tee on Public Works know of citizen reaction toward the Celler bill, with each citizen interested recruiting two others to write Chairman WHITTINGTON.

But the correspondents should be enlisted for supporting the bill only if they mean it, he stressed, not just to jam up the busy mail box of the Congressmen.

Speakers included Representatives Celler; Javits, Republican, of New York; and Blatnik, Democrat, of Minnesota; Mr. Hildreth; Mr. Hayes; Louis Simon, new executive secretary of Actors' Equity; Miss Starr; and Father Hartke, moderator.

[From the Washington Times-Herald of March 24, 1949]

GROUP WILL SEEK THEATER FOR DISTRICT OF COLUMBIA

Melvin D. Hildreth, Democratic National committeeman for the District of Columbia, last night was named chairman of a citizens' committee to press for restoration of a legitimate theater to Washington.

The Citizens Committee for Theater in the Nation's Capital, a name suggested by Patrick Hayes, District concert bureau head, was formed at the close of a rally held by the Washington Art Center association in the National Museum.

Speakers at the rally, who urged support of the Celler bill which orders the Treasury Department to lease the old Belasco Theater to a private firm for use as a legitimate theater which the Government would furnish and subsidize, were:

Representatives Celler, Democrat, of New York, author of the bill now before the House Public Works Committee; Javits, Republican; and Blatnik, Democrat, of Minnesota; Frances Starr, Washington actress; Louis Simon, executive secretary, Actors' Equity of New York; Hildreth and Hayes.

The Reverend Gilbert Hartke, head of the Catholic University drama department, presided.

Those elected to the citizens' committee were Hayes, Miss Starr, Hartke, Hazel Kenyon Markell, Bess Davis Schreiner, George Vivian, Carolyn Hill Stewart, Owen Dodson, Howard University English professor; Charlotte M. London, Mrs. Frances Watson, Mrs. Edgar A. Mowrer, Horton Foote, Edward Mangum, head of the George Washington drama department; J. G. Frain, executive secretary, Washington Art Center Association; Mrs. Constance Snow, Mrs. Edward Sturdevant, Tom Donnelly, and Richard Coe.

British Medical Program

EXTENSION OF REMARKS
OF
HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mrs. WOODHOUSE. Mr. Speaker, there can be little remaining doubt about the attitude of the British people toward their medical program, despite the propaganda regarding its alleged failure distributed so widely in this country by certain elements in the American Medical Association.

Almost every account from American reporters abroad testifies to the popularity of the British program. One of the most recent reports, written by John W. Vandercook, the well-known American correspondent, appears in the March issue of Harper's magazine. Mr. Vandercook's article dealt with many other issues. Included here is only that part which touches on the British health-insurance program:

The most intense enthusiasm, all but un-British in its articulateness, is reserved for the last, latest, and greatest experiment of democratic socialism, the National Health Service, instituted last summer.

Its working, too, is simple. You choose your own doctor. If he accepts you as his patient, your name goes on his list. (If you don't like him, you can change.) Unless you wish such additional comforts (rather than necessities) of medical treatment as a private room in a hospital, you pay for nothing, except insofar as you are helping to pay your bills and those of everyone else through general taxation.

Both office visits and visits to the patient's home are free. Medicine, surgical operations, anaesthesia, the attention of specialists, X-rays, biological tests—even eyeglasses, hearing aids, and artificial limbs—all are free. Complete dental attention is included.

British dentists are already flirting with nervous collapse from overwork because there are not nearly enough of them to go round. The reason there are too few in that profession is that a literal majority of the British population has previously stayed away from dentists because it could not afford them—and has suffered torture, disfigurement, and infection as a result.

One need only imagine with what a gasp of incredulous relief such a colossal bounty would be met by millions of people of the United States to reckon the even deeper gratitude, the sharper emotion it has produced in immeasurably poorer England.

General practitioners under the scheme may earn as much as $12,800 a year. Specialists may make even more. They now have, they discover, the advantage of having their patients come to them at once, instead, as has too often been the habit of the poor, as a last desperate resort. Hundreds of thousands are seeing clearly through properly fitted glasses for the first time in their lives—and, not remarkably, have overnight become more skillful workmen. Not the least beneficiaries of the scheme have been people of small fixed incomes, for whom going to the doctor used to be an extravagance.

Whether under the plan incompetence will thrive and corruption flourish time must tell. Government, people, and the medical profession are together breaking new ground. The territory is unexplored. Predictions—all but one—are unsafe. The one exception is a prediction that whatever modification may be necessary, the British will never go back to the old way. If you doubt this, you have only to listen, on the underground, in queues:

"* * * You know that 'eadache ma's always 'ad? It was just her eyes. It's gone right away. Bright as a lark, she is."

"George 'asn't been able to chew solid food these 12 years or more. They're making a whole new set of teeth for 'm. Can't think what it would have cost. * * *"

"Extraordinary sense of relief it gives one, doesn't it? I'd always rather opposed the scheme. But to know a great lot of doctors' bills won't wipe out completely everything one's managed to put away. * * *"

For all practical purposes the doctors, after long opposition, have capitulated. Ninety-three percent are cooperating. Hospitals which in a period of rising costs and declining fortunes have, almost impossibly, been trying to live by charity, have cast their financial burdens on the Government; and have promptly seen their costs diminish as free clinic patients have taken their minor ailments where they always should have taken them, to general practitioners.

The Panama Canal and Nuclear Weapons

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. MARTIN of Iowa. Mr. Speaker, for many months I have been studying the Panama Canal proposals which are now before the Congress, especially from the military and national security viewpoints.

Earlier, during this session of Congress, I included, in extensions of my remarks in the Appendix of the CONGRESSIONAL RECORD, informative and authoritative articles on the subject of the atom bomb, the first by Lt. Gen. Leslie R. Groves, at page A169, and another by Maj. Gen. C. F. Robinson, at page A755.

Another similar article, dealing with nuclear weapons, by Lt. Col. A. W. Betts, Corps of Engineers, United States Army, was published in the March-April 1949 issue of the Military Engineer. Under unanimous consent accorded, I am now including its full text in this extension of my remarks.

These three articles, all written by members of the Corps of Engineers, supply a fine background of information that is extremely pertinent to the Canal questions now before the Congress. A study of them—I respectfully submit—must inevitably lead to a single conclusion, viz, that any type of canal at Panama, or elsewhere, will be fatally vulnerable to atomic attack. These papers all emphasize that there is no adequate protection against the atomic bomb short of preventing its delivery.

Under these circumstances, I desire to state again my earlier views that the only security that can be attained for the Panama Canal, or any other similar waterway, must depend, for its strength, on the combined political, industrial, and military strength of the United States and not on its features of construction.

The article follows:

NUCLEAR WEAPONS

(By A. W. Betts, lieutenant colonel, Corps of Engineers)

In spite of the fertile imagination of the cartoonist who pictures the atomic bomb as a tiny box which can be carried in a handbag, it is highly improbable that a bomb of the present basic type can ever be made arbitrarily small. To understand this and appreciate the reasons for it, one must know in general what makes the bomb explode and the meaning of a critical mass.

ATOMIC STRUCTURE AND ASSEMBLY

First, the general structure of the atom and relative size of its components must be visualized.[1] The atom is made up largely of space, not mass. To help visualize the relative amount of space in an atom, picture a magnified atom with a 1-inch-diameter sphere fixed in space representing its nucleus. At a distance of approximately 5,000 inches from this central mass, or about one-twelfth

[1] See Technical Aspects of Atomic Power, by Col. Lynn W. Pine in the Military Engineer for March 1946.

of a mile in radius, picture a spherical envelope of surrounding electrons. Between the central mass or nucleus and the envelope of electrons there is nothing but space. If you assume that this particular atom is adjacent to another similar one, this will place 10,000 inches of space, or about one-sixth of a mile, between the two nuclei of about 1 inch diameter each. Of course, this is an extreme magnification of an atom, which actually is only about one ten-millionth of an inch in diameter, but the relative size of the nucleus to the envelope of electrons is the same.

The most important component of the atom is its nucleus, which is made up of protons, each of which carries a positive charge; and neutrons, which are without charge. The other component of an atom is its surrounding envelope of electrons which has little or nothing to contribute to the understanding of a critical mass. Each electron carries a negative charge. For every electron in the envelope of a given atom there is a corresponding proton in its nucleus. Since the protons and electrons are of equal and opposite charge, lack of charge of an atom can only be achieved by having equal numbers of each.

It was the discovery of neutrons, and the fact that a lack of charge made them most useful as bullets for bombarding the nuclei of atoms, that led to the eventual discovery that these bullets can create fission or splitting of the nuclei of atoms of certain elements. These elements are referred to as active materials. Uranium 235 and plutonium are such materials.

Going back to the picture of the structure of an atom, multiply the number of these atoms to imagine an unlimited volume of mass of active material basically composed of so little mass but of so much space. This should indicate how difficult it would be for a stray neutron bullet to strike the nucleus of any one of these atoms. Since the distance between the nuclei is approximately 10,000 times the diameter of a particular nucleus in a single layer of atoms, comparison of the relative areas will show that a neutron would have about one chance in 100,000,000 of directly striking a nucleus. In other words, a neutron would have to pass through the space filled by 100,000,000 atoms in order to have a probability of directly hitting the nucleus of one of the atoms.

It is this basic concept which accounts for the fact that a considerable mass of active material must be assembled before a nuclear explosion is possible. The energy release of such an explosion comes from the fission of individual atoms that have been struck by a neutron and split into fission fragments, which are merely radioactive isotopes of elements near the middle of the periodic table. In the process of this splitting, more than one neutron is released for each one used in fission. These neutrons in turn fly off and strike other atoms, creating further fission. If, on the average, at least one neutron released in each fission creates a new fission, then a chain reaction will occur.

There are reasons, such as the capture of neutrons in impurities without fission, and the escape of neutrons from the mass of active material, that reduce the assurance that at least one neutron from each fission will create a new fission. It is apparent that a considerable mass of atoms must be present to minimize the escape of the neutrons from the active material to assure the continuance of the reaction. As a mass of active material is built up, a point is reached where the multiplication rate of neutrons (a measure of the number of neutrons being developed by fission for each neutron that induces fission) reaches one and above which point the multiplication rate begins to increase rapidly. From the point of view of a nuclear reactor, or so-called pile, it is the mass that must be developed before sustained nuclear reaction occurs. From a weapon standpoint this is only the beginning. More than such a critical mass is needed for the atomic weapon. Obviously, the larger the mass, the greater the percentage of atoms in that mass that will be struck by neutrons released in its interior. The weight and general size of a critical mass of plutonium or U-235 cannot be disclosed at this time. It is a mass of some magnitude (between 1 and 100 kg., according to the Smyth Report).

This leads to the question: How is a nuclear weapon made? Following the suppositions advanced by the Smyth Report and other releases on the subject, the least cumbersome mechanism imaginable and perhaps the most absurd would be to have a suicide volunteer clap together two subcritical masses that would create something over a critical mass. Not the least among many reasons why such a solution is absurd is the fact that stray neutrons, always available from a cosmic ray background, would start the fission process when the system is just entered and before the material has reached the most advantageous state of assembly. As a result then, the assembled masses would reach a very high heat, expand and lose their shape, thus permitting escape of neutrons and causing a shut down of the chain reaction before an appreciable explosion could be developed. This is called the problem of predetonation, that is, the detonation takes place before the geometry of the critical mass is in the shape desired by the bomb designers.

It should be pointed out that the time factors to be considered are in the order of a small fraction of a second, and whatever assembly methods are devised to create a critical mass must be so rapid that the assembly from just critical to the desired supercritical condition can be completed in a time interval of that order. It is apparent, therefore, that a mechanism of considerable complication must be developed if two very heavy pieces of material are to be brought together in so brief a time interval.

A possible solution of the assembly problem is to place two subcritical masses of active material at opposite ends of a tube with a propellant behind one of the masses. Upon firing the propellant charge, the masses would be brought together with tremendous velocity. The masses are arranged so that when they are assembled in a supercritical arrangement, they are surrounded by a dense tamper or neutron reflector. The tamper turns back into the active material neutrons near the surface which might escape without creating fission. It should be quite possible to make a bomb in this fashion once detonation timing and problems akin thereto have been conquered.

Obviously, the solution or solutions developed by the scientists at Los Alamos may not be disclosed. The procedure suggested should indicate that the bomb is not a simple device that can be delivered by a bazooka or jeep-mounted rocket launcher.

It should not be presumed, however, that it is not within the realm of development possibility to decrease the size and weight of the present bomb; moreover, it is not beyond the realm of possibility to increase its present size. The nature of our delivery problem must dictate whether we design a larger bomb in order to increase its yield or a smaller bomb with decreased yield in order to simplify its delivery. The scientists are capable of solving the problem in either way, but they are not in a position to know what balance should be established between the expenditure of very scarce and valuable active material and the bomb's adaptability to a particular form of delivery. This question can be answered only at the highest policy level.

UTILIZATION OF NUCLEAR WEAPONS

Further consideration of the nature of the weapon raises a second point of interest. Can it ever be made simple enough and be produced in such quantities that these weapons can be issued to each echelon in the field army? Though some day this point may be reached, it certainly cannot be done today. In the first place, active material, plutonium or U-235, is an extremely scarce and expensive item. Because of the difficulties of production and because of the not unlimited supply of uranium ore from which these materials are produced, it can be stated with reasonable assurance that these bombs will not be abundant and cheap in the foreseeable future. Only the highest levels of command should decide when and where to use them.

Nuclear weapons involve materials and sciences with which the average officer, enlisted man, or technically trained individual is not very familiar. Such weapons are neither simple nor inexpensive. Therefore, it is highly probable that these weapons will be issued only to specially trained units. The time necessary to train officer and enlisted personnel is appreciable, and such key personnel must have an extensive technical background. In time of war, it may be possible to shorten the length of this training period by our ability to bring in scientific personnel of considerable civilian experience for this work.

The design problems connected with nuclear weapons are complicated by the obvious need for accurate fusing and firing. The time of the detonation (and assembly) must be extremely exact to assure explosion at the exact altitude computed to produce maximum effect on a particular target. Since the weapon is dropped from a very high altitude in order to permit the delivering airplane to avoid destruction, there are many complications that enter into these problems. These complications are sufficiently serious to demand a team of considerable educational background plus a long training period in this particular operation. We must minimize the possibility of dropping a dud, not only because of the danger inherent to its falling intact into the hands of the enemy but also because of the value of the active material.

PROTECTION AGAINST NUCLEAR WEAPONS

A third point of concern to military personnel is the nature of the protection we can afford troops and civilian populations against attack by nuclear weapons. No specific means of protection are known to have been developed to date. Obviously, dispersal of remunerative targets[2] is the best defense against a weapon of so great a potential destructive power, but the sort of dispersion that would be effective would be highly impracticable in many of our major industrial communities. In Japan, there were almost no survivors in a radius of about a half a mile of the explosion and, in a radius of about a mile, only those who had considerable protection survived. Many casualties were caused outside the mile radius by fire and falling debris.

A possible means of protection might be to go underground with our strategically important industries, but here again the time and expense involved in such a procedure appear beyond our capability at the present time. Moreover, there is no assurance that a nuclear weapon could not be made to penetrate 40 to 50 feet underground, which would probably make untenable any structure that did not have several hundred feet of earth covering, or comparable structural protection.

It is apparent that the best means of protection against this weapon is to prevent its delivery. Here also prospects are discouraging. It should be possible to develop long-range rockets or pilotless aircraft, which

[2] See Industrial Vulnerability to Bombing, by Maj. Gen. C. F. Robinson in the Military Engineer for January–February 1949.

might have nuclear warheads. It must be remembered that during World War II no V–2 rocket was shot down by our forces. Furthermore, it appears possible to deliver this weapon by means of saboteurs carrying the bomb in small pieces and assembling it in some strategic center. Such possibilities give some appreciation of the problem involved in defense against attack by nuclear weapons.

Military medical personnel are presently being trained to deal with the physiological and psychological effects of radiation. They will not be able to prevent the initial damage that would be accomplished by a successfully delivered atomic bomb, but this education, together with proper organization of our cities, should make it possible to reduce the complete disorganization that was present in Hiroshima and Nagasaki, which resulted in a considerable loss of life not directly caused by the blast itself. For example, in both of those cities fire-fighting apparatus was almost completely immobilized by the destruction caused by the bomb. It would appear sensible in the future to locate fire-fighting equipment on the outskirts of a city so that it would not be destroyed by the initial blast. It might also be possible to develop some means of fighting major fires from the air when streets are completely blocked by debris. Planning to cope with the catastrophic effects of nuclear weapons will require a great deal more thought than has been given to disaster control and relief in the past.

Our people should be informed of the nature and extent of residual radiation present after an explosion so that they will realize whether it may or may not be advisable to evacuate the target area. Personnel of the civilian defense organization should have available radiation detectors, such as the Geiger counter and similar equipment, and should be instruced in their use. These problems of protection must be solved, and thought should be given to them at the earliest possible time. Plans should be developed now that can be implemented prior to attack.

FUTURE DEVELOPMENTS

A fourth point of general interest is the possibility in the future that nuclear weapons may be developed in other shapes and for other purposes than that of a bomb.

It will not always be easy to deliver atomic bombs. They do not lend themselves readily to delivery by massed aircraft, unless the mass is sent in at a very great altitude, because of the danger of losing some of the aircraft in the turbulence created by the bomb. Moreover, it should be remembered that our forces had complete control of the air over Japan when the bombs were delivered that ended the war. It is highly improbable that such complete control of the air will be ours in the early stages of a future war—when we should be most interested in making the bomb effective. This leads to the conclusion that every effort should be made to develop either a rocket or a guided missile to carry the nuclear warhead. For defensive purposes, the possibility should be investigated of using this warhead in an antiaircraft rocket which, if successful, might make massed bombing raids a thing of the past, and might itself be a specific defense against the atomic bomb.

The results of the second bombing at Bikini have demonstrated the remarkable efficacy of an underwater explosion of a nuclear weapon. It is not unreasonable to suppose that it should be possible to deliver the weapon to the enemy's harbors by means of a submarine, controlled by a crew who could escape before a time mechanism set off the bomb. A well-placed bomb in some of the more congested harbors might deny the use of that harbor for a period long enough to be decisive in any particular operation. It is also possible, if the targets are sufficiently remunerative, to place this bomb in a controlled mine, although the successful use of the weapon in this fashion is not easy to foresee. It can only be assumed that the problems involved in the use of nuclear weapons are being investigated by the various development agencies concerned. The purpose here is merely to point out that thinking should not be limited to the idea that this tremendous release of energy is only available for use as an aerial bomb.

POWER BY NUCLEAR ENERGY

Though authoritative quarters do not foresee immediate development of nuclear energy for power purposes, it will some day be available, and if the installations needing power can be sufficiently large, this potential use may not be too far in the future. The use of this power for such things as rockets, airplanes, or automobiles, however, is sufficiently far in the future that it need not be of immediate concern. It may be feasible in a relatively short time to develop power sources for battleships or to develop underground central power plants for the production of electricity that would insure unlimited sources of energy in a future war.

The pessimism in this field grows out of two factors which can readily be understood. The first is that fission products formed in an atomic pile do not go anywhere; they remain in the pile and before very long begin to interfere with the fission process. Since they are highly radioactive, the chemical process of removal of this material from the active material that makes the pile work is not a simple matter, and much research will be necessary before this problem can be considered solved. The second factor, a more immediate deterrent to power development, is the fact that there is no known material that will stop neutrons and gamma rays in a very short distance. Present atomic piles are surrounded by concrete masses many feet thick and weighing many tons. Obviously, the power developed in the pile is not sufficiently collossal to overcome this handicap in developing power for a vehicle of reasonable size.

SUMMARY

It is emphasized first that because of the necessity for assembling a critical mass in a time interval of the order of a small fraction of a second, it is highly improbable that a nuclear weapon can be developed which will be small enough to be manhandled. Second, the methods of detonation and the fusing problems of the bomb are sufficiently complicated to demand a level of training higher than that previously required of members of the armed forces. Third, there is at present no adequate protection against the bomb short of preventing its delivery. Fourth, nuclear weapons have not reached their maximum size in the present type bomb, and new types may come into being which will be considerably more powerful than present models; moreover, they are not confined to bombs but, subject to size, may be made as warheads for almost any type of delivery in use today in modern armies; and last, that the development of nuclear power for military vehicles is not "just around the corner."

Honor in Israel

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which will appear in the national Catholic weekly, America, in its March 26 issue, entitled "Honor in Israel":

HONOR IN ISRAEL

(By Edward Duff)

In the spring of 1947 the statesmen of the world were feverishly seeking a solution to the tormenting Palestine problem. Pan-Arabism and Zionism were locked in menacing debate over their conflicting claims to what Hilaire Belloc called "the battle ground" of history. While the statesmen and lawyers and propagandists toiled at Lake Success, the Catholic Near East Welfare Association reminded the Secretary General of the United Nations on May 8 of an almost forgotten factor in any just settlement of the problem. Disputing the claims of neither side, prescinding wholly from all political considerations, its statement, the Christian Factor in the Palestine Equation, outlined the Christian stake in the Holy Land and indicated certain guaranties regarded as indispensable for the protection of Christian interests.

Events seem to have obscured memory of the Christian factor in the Palestine equation. Partition was voted; a bitter war followed; shells desecrated the Holy City; the Zionists triumphed in a determined and resourceful display of arms; Israel was established as a sovereign state, fulfilling the ancient aspirations of the Jewish people. Today an armistice is being discussed and the provisions of the UN settlement are being reviewed.

It is time to assert once again that there are factors that transcend political considerations, issues that must be respected.

There is the matter of justice for the Palestinian refugees. There is the matter of honoring the commitments of the UN settlement that provided, among other things, for the internationalization of Jerusalem and the holy places and the freedom of religious organization.

Both Israel and the Arab states must accept the verdict of world opinion. If these reminders fall particularly on Israel, it is because victory imposes its own restraints. The public policy of the state of Israel must be subject to scrutiny without the easy retort of "anti-Semitism"—a slogan which stultifies discussion and betrays either an utter irresponsibility or an obtuseness to the expectations of the world community.

The Jewish attitude on the refugees was stated, in what can scarcely be less than an official answer, in a letter in the New York Times of March 15 from Mr. Harry Zinder, press adviser of the state of Israel mission. The tide of history cannot be turned back, is Mr. Zinder's ultimate verdict on the situation. Palestine, he explains is a different country since the refugees fled over the borders. What's done, can't be undone. Let them, therefore, migrate to some other country.

The voice of the world's conscience replies to such a casual and even callous solution of the fate of nearly a million persons in other tones and in accents of growing impatience. Whatever the alleged reasons for the hurried exodus of the refugees, they have claims that cry for recognition.

They have claims, first of all, to sheer preservation. At present they are dying at the rate of a thousand a day. The UN's Disaster and Relief Committee, appointed last November, began operations February 1 with a fund of $32,000,000, half of which the American Government is committed to contribute. Even if efficiently administered, the money would underwrite merely the cost of food for the refugees for less than 8 months. Voluntary agencies must be employed to supplement official UN relief. On March 9, Lessing Rosenwald, president of the American Council for Judaism, wrote the leaders of all religious faiths in the United States:

"To avert a major human catastrophe, elementary justice requires that in addition to

adequate relief there must be early repatriation, resettlement and social rehabilitation of 750,000 refugees from the recent hostilities."

It is unfortunate that the UN committee did not see fit to utilize adequately the voluntary agencies composing the American Appeal for Holy Land Refugees. It is particularly unfortunate that UN reports obscured the contribution of the Catholic effort in aiding the refugees. For the Catholic effort in this humanitarian endeavor illustrates the fact that the Palestine problem is not bipartite but tripartite. There is a Christian stake in the Holy Land.

True, only 150,000 of the war sufferers are Christian, and of these only 55,000 are Catholics. On hand, however, to expend their energies in an all-encompassing charity are 2,000 priests and nuns. They came to Palestine many years ago from all parts of the Christian world. Long before governments began to assist in the present emergency, our Catholic parishes were feeding and sheltering many thousands of refugees in their parish halls, in their church yards and schools. The Catholic Church has been associated with all the problems of the Near East since the birth of Christ. The purposes of our Catholic personnel, native and missionary, are nonpolitical. That Catholic missionaries remained through the fighting, that Catholic institutions continued to care for the homeless and helpless, is proof of their nonpolitical purpose. It is proof, too, that they expect their rights to be protected and, where infringed, restored.

There is scarcely a religious house in Palestine that is not sheltering refugees. The officials at Tel Aviv know this. Someone in the office of Moshe Sharrett, Israel's Foreign Minister, might well send word to Mr. Zinder in Washington that Jewish officials are well posted on the job the missionaries are doing. They know of the tireless work of the Sisters of Charity, for example, who care for hundreds of feeble-minded children in an overcrowded home in Jerusalem.

At every Mass on Laetare Sunday, March 27, American Catholics will contribute to the Bishops' Emergency Relief Fund. The whole world's anguish calls upon America for alms. Though irresistible pleas for aid were coming from the needy in Europe and Asia, the bishops last year set aside a portion of that collection for relief in Palestine. Other subsidies sent the missionaries there by generous Catholics throughout the world are being ungrudgingly siphoned off to care for 200,000 homeless and the hungry. The week after Cardinal Spellman blessed a shipment of supplies on February 8, valued at $200,000, the National Council of Catholic Women announced that they had collected 150,000 children's garments for distribution to Holy Land sufferers without reference to race or creed. Monsignor Thomas J. McMahon, national secretary of the Catholic Near East Welfare Association, has just returned from 4 months on the scene, supervising operations. His findings are striking evidence of the third factor, the Christian stake in Palestine.

What is the future of these victims of the Palestinian struggle? With the guns muted in the land of the Prince of Peace, can Israel afford to affront the conscience of the world by sticking to a convenient official assumption that these people do not want to be repatriated? Can Israel win confidence in its political maturity if it suggests that the refugees don't want their preferences discovered in a democratic plebiscite, that the homeless would spurn payment for their land? Whatever the political claims of Jew and Arab, there are requirements of "elementary justice" involved—to use the language of Mr. Rosenwald.

There remains—as UN was reminded on May 8, 1947—a Christian factor in the Palestine problem. Jesus Christ must not be exiled by political maneuver or military coup from the land that bears the indelible mark of His sacred footsteps, from the scenes filled with sanctuaries of His precious life and life-giving death. The Christian world had no partisan position in the partition solution voted by the General Assembly on May 29, 1947. The internationalization of Jerusalem was included in the UN settlement as a dispassionate recognition of the nonpolitical factors in the problem, as evidence of equally historical claims of Christians. While Arab and Jew haggle over the division of the Holy City across the armistice table, the Christian world repeats anew its insistent demand that the decision of the world community, working through the United Nations, be respected. There is, of course, reparation to be made for the destruction and desecration of Christian property. Essential, however, is the guarantee of the freedom of religious organization and the internationalization of the Holy City and of the holy places—Nazareth (in Jewish territory), for instance, and Bethlehem (in Arab hands).

America reported the disappointment the Christian world felt at the proroguing of the United Nations session at Paris last December without coming to a definite conclusion on the future of the holy places in Palestine (America, December 25, 1948, p. 306). The United Nations Special Committee on Palestine in its final report to the General Assembly recommended that an impartial system for preserving the special character of the holy places should be devised. Similar recommendations were made by the General Assembly's partition resolution of November 29, 1947, as America reminded its readers last fall (America, November 13, 1948, p. 145). The encyclical letter of Pope Pius XI, issued on October 23, evoked America's editorial judgment that the internationalization of Jerusalem is the only "feasible escape from this intolerable situation" (America, November 6, 1948, p. 120).

The Christian conscience, nonpolitical in its aims, today renders with larger evidence the identical judgment on the Palestine problem expressed in the statement of the Catholic Near East Welfare Association to UN's secretary general:

"We demand adequate, factual, implemented guarantees to the effect (1) that all our sanctuaries will be respected and continuously and unconditionally accessible, and (2) that the Christian majority will actually enjoy, not merely the vague, frequently distorted and facetiously neutralized right of freedom of religion, but also freedom of religious assemblage, freedom of religious organization in conducting schools, hospitals, orphanages, and other institutions of welfare and mercy, and freedom from civil, social, and economic discrimination."

Anything less will cost Israel and the Arab states the respect of the Christian world.

Mr. Churchill's Visit

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. BURDICK. Mr. Speaker, the present and has-been statesmen of the universe will swoop down on us and make us friendly visits. I have seen this before and I am sure I know what is brewing. These countries want some more money and they are arriving here now in bunches. I see Churchill arrived yesterday and I can guess what he is up to.

During the early part of the last war and before we got into it, Mr. Churchill came here and addressed both Houses of Congress. He wanted war materials and a token force of men to just show the world we were with them. He said they would do the fighting but this token of a small United States force would be a great boost for Great Britain.

When, later, the question of forcing his ministry to a vote of confidence came up, Mr. Churchill made a very short speech. He said in substance, "Through my efforts and mine alone, the great Republic of America came in with us with billions of cash, war material, and 14,000,000 men" (that was his token army) and when he had finished saying this he sat down. The House of Commons roared their approval and his ministry was not further challenged.

Just what he is up to now is hard to figure out, but in a few days it will be plain enough. Maybe he wants us to tighten up on loans to Great Britain. Our money is going into state ownership enterprises, like railroads, banks, telegraph lines, mines, shipping, and all other economic endeavors of a Socialist government headed to Attlee. Maybe Churchill wants to get back in power and head off this Socialist movement. Anyway you look at it he is over here after something. Maybe he sees world war III resulting from the North Atlantic Pact.

France, Italy, Greece, and every other country will be here with their representatives to get money, as we have organized the North Atlantic Pact and of course not a country on the list has a lead nickel except the United States. We are due for another $100,000,000,000 gift loan to every country lined up in that pact, if not more.

We have strayed a long way from George Washington's advice to avoid foreign entanglements. We are tangled up so tight in this European mess that we cannot get out. I hear Washington's Farewell Address delivered here every year and I am wondering why that is done when those who plan this George Washington's Day pay absolutely no attention to what he said. I presume they are determined to show Washington was wrong and since he isn't here to defend his position, they (the opponents of his ideas) rake up this speech every year and hope in time to wear out the effects of it.

When these gift loans come up in Congress for consideration, they will pass with a whoop, as they did before. Compare that with our action yesterday in trying to legislate a pension for needy soldiers. They have carved and cross-carved the bill until there isn't much left of it except the title and we had to have a roll-call vote to save that much of the bill. The whole howl was that it costs too much to pay these pensions. Too much, too much, and those who hollered the loudest of "too much" will vote for foreign armament without one single word of protest.

On this question, as on all others of direct interest to the people, there are no party lines. Democrats and Republicans alike will march down the aisle

arm in arm chatting in the most congenial manner while they give away more billions to foreign countries and unite in a determined stand to let our own people in distress and soldiers of Churchill's token army make their way through their remaining years the best way they can.

Extracts From the Problems of Postwar Monetary Policy

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include extracts from a lecture by M. S. Szymczak, member, Board of Governors of the Federal Reserve System, Washington, D. C.:

THE PROBLEM OF POSTWAR MONETARY POLICY

Since the end of the war, monetary policy has had to cope with more or less continuous inflation. Effective demand, until recently, has consistently exceeded the available supply of goods largely because spending from current income has been substantially supplemented by drafts on accumulated liquid savings and by rapid expansion of private credit. This condition of excessive demand has inevitably placed an upward pressure on prices. Advancing prices accompanied by expanding money income, leading to further price increases, is the spiraling process of inflation with which we are now all too familiar. As a result, between mid-1946 when price controls were initially terminated, and August 1948, wholesale prices rose 50 percent, consumer prices 31 percent, and total personal incomes expanded by 24 percent.

Basically, our postwar inflation is the product of our wartime financial policies. The war cost around $320,000,000,000. This huge volume of expenditures was financed in part out of our current income, tapped through taxation and sales of securities to the public; and in part through expansion of the money supply brought about by borrowing from the banking system.

It was not reasonable to expect our expenditures for war to be financed entirely through taxation. There are serious obstacles, essentially nonmonetary in nature, that place a definite upper limit to the tax burden that can be imposed even in wartime. As the tax burden grows, particularly when it grows rapidly, the interrelated problems of administrative feasibility, equity, and incentives become increasingly difficult to handle. More safeguards against widespread evasion and its generally demoralizing effects have to be devised. Numerous special adjustments are required to maintain a general consistency with the community's standards of fairness, without which no tax system can long survive as an effective instrument of policy. And, finally, a rapid stepping up of the tax bill may, at least in the short run, have adverse effects on effort incentives and thereby interfere with achieving a maximum wartime output.

Just where that upper limit of taxation is, cannot be determined exactly, but it is safe to say that we fell short of it by much too wide a margin. Less than one-half of the funds raised by the Treasury between the middle of 1940 and the end of 1945 came from tax sources.

Not only did we rely much too heavily on borrowing, but we relied on borrowing of the most inflationary kind. Of the total amount borrowed by the Treasury from mid-1940 to the end of 1945 more than two-fifths came from the banking system including commercial banks, Federal Reserve banks, and mutual savings banks. Thus, in our war finance we made the twofold mistake of taxing too little and borrowing from the banking system too much.

As a consequence, then, of our wartime financial policies we entered the postwar period with an economy characterized by an excessive degree of liquidity. Government securities held by commercial banks—their highly liquid secondary reserves—grew from seventeen billion in June 1940 to ninety-one billion by December 1945. They constituted the bulk of total bank loans and investments. It is estimated that over the war period the stock of liquid assets—currency, bank deposits, and Government securities—held by individuals and businesses, including insurance companies, increased approximately threefold while over the same period the gross national product only about doubled. Combined with a heavy backlog of unsatisfied real demands, this high degree of liquidity meant that strong inflationary pressures would inevitably develop, particularly if the wartime controls were prematurely removed.

But our wartime policy of heavy reliance on borrowing held yet another implication for the problem of stabilization in the postwar world. Our national debt grew during the war to a peak of $275,000,000,000, a figure of astronomical proportions by prewar standards. Its ownership was widely distributed and its interest pattern had become integrated into the whole asset and liability structure of our economy. Confidence in the market value of the public debt was almost synonymous with a stable financial organization.

Clearly, no realistic conception of the problem of postwar stabilization could afford to ignore these facts about the public debt. Yet to take them into account enormously complicated the role that monetary policy was called upon to play in our postwar economy. For it means that no measures could be undertaken to control an expansion of credit and the money supply that were inconsistent with the objective of maintaining an orderly and stable market for Government securities at all times.

To maintain public confidence in the stability of the Government security market, the Reserve System undertook the role of residual buyer. This placed severe limitations on the usefulness of traditionally powerful techniques for controlling the volume of credit and deposit expansion. As a residual buyer the Federal Reserve System became a source of reserve funds which commercial banks could tap at their own volition by offering Government securities for sale. Banks also received additional reserve funds involuntarily whenever nonbank investors sold securities to the Reserve banks. And with a fractional reserve banking system, each dollar of reserve funds provides the basis for manifold expansion of private credit and the money supply.

Moreover, because of the abundant security holdings that the banking system acquired through the processes of war finance, commercial banks no longer had extensive need for borrowing funds from the Federal Reserve banks. Adjustments of reserve positions could be achieved instead through security sales in the supported market. As a result, except for whatever psychological impact it might have, the rediscount rate lost its effectiveness as an instrument of credit control.

Finally, sales from their holdings of Government securities offered an easy means by which banks could offset in some measure pressure that might be brought to bear on their reserve position through a rise in reserve requirements. In consequence, relatively small changes in reserve requirements could not be relied on to have severely restrictive effect. And while larger variations in requirements could be an effective weapon, they have not been available to the Federal Reserve during most of the postwar period because of practical exhaustion of statutory discretion on the upward side.

Thus, under the circumstances that have existed during most of the period since the close of the war, the traditional instruments available to the Federal Reserve for influencing money and credit developments in this country were either ineffective, inoperative, or near exhaustion. Meanwhile, the volume of credit extended to private borrowers during this period underwent a considerable expansion. From the end of 1945 to the end of 1948, commercial and industrial loans of all insured commercial banks almost doubled, which represented an absolute increase of approximately $9,000,000,000. Agricultural loans of these banks rose by one and one-half billion over the same period, while real-estate loans increased by approximately six billion. Finally, the increase for the period in the consumer loan category of insured banks amounted to almost four and one-half billion dollars.

I do not mean to suggest that our postwar monetary policy has been a failure. There have been significant elements of restraint, without which the situation would have been decidedly worse.

The most important factor of restraint in the postwar period has been the Treasury cash surplus. For the calendar years 1946, 1947, and 1948, Treasury receipts from taxes and other sources exceeded cash outlays by a total of about $14,000,000,000. This surplus has exerted a powerfully contractive effect directly on the expenditure-income stream and on the supply of credit and money. Without it the upward pressure on prices would unquestionably have been more severe.

Further, a substantial portion of the surplus has been used to retire debt held by the Reserve banks. This disposition of the surplus is the one most consistent with a policy of monetary restraint; for it results in a withdrawal of funds not only from the general income stream, but from the commercial banking system as well, thereby bringing pressure to bear on the reserve position of commercial banks. The Treasury also exerted a similar pressure on bank reserves by drawing down the deposits that had been permitted to accumulate previously in the war-loan accounts of commercial banks.

The System has vigorously used its relatively modern accessories—control over stock-market credit and control over consumer-installment credit. Since the end of hostilities in mid-1945, margin requirements for extensions of credit on listed securities by banks and by brokers and dealers have not been below 75 percent, and for the year ending January 1947 were at the level of 100 percent. Bank loans for purchasing and carrying securities other than United States Government securities amount to only about a billion dollars today.

Regulation of consumer-installment credit, in the periods it has been in force since the war, has also been an influence in restraining the increase in this type of credit. As you know, Congress, in mid-1947, terminated this authority effective November 1, 1947. Subsequently expansion in this credit went forward at a sharply increasing rate. Since September of 1948, when the regulation was reinstated on the basis of authority granted in the special session of Congress, consumer-installment credit has increased only moderately, although prior to that action it had been expanding at a rate of nearly $200,000,000 a month. Only a few days ago, as you know, the Board modified somewhat the

September terms of consumer-installment credit.

The System has also used carefully its influence over interest rates. To raise the cost of reserve funds to the banks, and also to encourage banks and nonbank investors to hold on to the short-term Government securities they own and to buy more rather than to unload them on the System, short-term market rates and Federal Reserve discount rates have been permitted to rise. Rates on Treasury bills have risen from ⅜ of 1 percent in mid-1947 to more than 1 percent today. Yields on 1-year certificates have increased from ⅞ to 1¼ percent, while the Federal Reserve banks have raised their discount rates from 1 to 1½ percent.

The System has applied more vigorously than the banking community has desired available statutory authority to regulate member bank reserve requirements. Prior to the legislation enacted in August, increasing member-bank reserves was a possible course of action only for the New York and Chicago banks, since for all other classes of banks requirements were at their legal limit. In January, and again in June of last year, the Federal Reserve Board raised by 2 percentage points the reserve requirements on net demand deposits at New York and Chicago banks. On the basis of the temporary authority granted by the Congress in August, the Reserve Board raised reserve requirements by 2 percentage points on demand deposits and 1½ percentage points for time deposits early last fall.

Finally, the System has used its informational resources to urge upon Congress and the public the importance of restraint in credit expansion and of the need for a strong fiscal policy.

The American Bankers Association has cooperated in this program by urging bankers to practice self-restraint in their own as well as in the national interest, and some other lenders have taken a similarly enlightened view of the need for self-restraint in lending.

The fact that despite a vigorous application of those powers which could be used under existing circumstances, we nevertheless experienced considerable postwar inflation has, it seems to me, one very clear implication: There is a basic need for strengthening our monetary powers.

Monetary authorities should have at their disposal at all times adequate means for checking growth of the money supply without endangering the Government's credit. To this purpose the System needs to be given authority to prevent or restrain credit expansion by an increase in reserve requirements of banks. By this authority the System could absorb or immobilize additional reserves acquired from a return flow of currency, from gold inflow, or from sales to the Reserve banks of Government securities, either by banks or by their depositors. Furthermore, on grounds of fairness as well as on grounds of making the requirements more effective, the authority ought to be extended to all insured banks.

As a supplement to quantitative controls over bank reserve positions, selective-type controls need to be developed further to strengthen the system's influence over monetary and credit developments. Experience with controls over stock-market and consumer-installment loans has demonstrated the helpfulness of operating directly on the demand side of the credit market. The Board strongly believes in the continued usefulness of both of these controls for achieving greater economic stability, and has recommended to the Congress enactment of legislation which would replace the present temporary authority to regulate consumer-installment credit with a permanent authority.

Recently we have had an interruption of the inflationary course. Indicative of the changed situation are the recent declining prices, the moderate slackening of investment in producers' goods and business inventories, and the increased supplies of goods, many of which were in tight supply a year ago. Though employment has continued at generally very high levels, there have been recent declines.

Notwithstanding these developments, I strongly emphasize the need for making the system's authority adequate to cope with inflation. I certainly hope that there will not be further inflation. My emphasis rather reflects my concern that our system at all times be equipped to cope with whatever monetary problems we may be facing.

The Reserve System today is far better equipped than ever before to help offset deflationary forces should they actually develop. A major deficiency of the banking system that has aggravated business contractions in the past—the inability of the central bank to provide adequate funds when needed by the market—no longer exists. The System has virtually unlimited means of supplying the market with additional reserves through purchase of Government securities. The Reserve banks at present hold $23,000,000,000 of gold-certificate reserves, and, on the basis of existing legal gold reserve requirements, the System could more than double its outstanding note and deposit liabilities. Moreover, as a result of the liberalized lending authority provided by the Banking Act of 1935 advances can now be made on any assets of member banks that are acceptable to the Reserve banks as security. Thus the supply of funds will not be undesirably restricted by the need to adhere to eligibility rules. Further, when other lenders are not available, the System is empowered to make direct loans to business firms for working-capital purposes. Finally, the System can always contribute to monetary ease generally by a reduction in reserve requirements and in special areas through relaxing installment credit and margin requirements.

Monetary policy must also be adequately forearmed to cope with expansive forces in the economy whenever they occur. Only if the System is forearmed can we have the full advantage of the stabilizing potentialities of action in the monetary sphere. It is my conviction that monetary policy, along with coordinative action in the fiscal area, can contribute a great deal to curbing the effects of unstabilizing in our economic life.

In conclusion, I would like to say that my interest in this general monetary approach to economic stabilization is based not only on my optimism with regard to its results. My interest is also based on the conviction that this is a good approach for a free competitive economy. It calls for no great expansion of the allocative powers of Government over the Nation's resources. It calls for no proliferation of Government directives—the mechanism of a regimented economy. Rather, it promises both economic stability—which we somehow have to achieve—and economic freedom—which we dare not give up.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. L. GARY CLEMENTE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a letter addressed to me by Msgr. Henry M. Hald, associate superintendent of Catholic schools, diocese of Brooklyn, N. Y., enclosing copy of a letter he wrote to the Honorable JOHN LESINSKI with respect to Federal aid to education:

CATHOLIC SCHOOLS,
DIOCESE OF BROOKLYN,
Brooklyn, N. Y., March 18, 1949.

Hon. L. GARY CLEMENTE,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: I hope you will be interested in the enclosure which voices our opposition to the Thomas bill and our support of the Fogarty bill.

Truly yours,

HENRY M. HALD.

MARCH 18, 1949.

Hon. JOHN LESINSKI,
Chairman, Committee on Labor and Education, House of Representatives, Washington, D. C.

DEAR SIR: This letter is written to express our disapproval of the Thomas Federal-aid-to-education bill—S. 246—and to urge you and your committee to support the Fogarty bill—H. R. 1570. The Thomas bill is discriminatory against non-tax-supported schools.

We take this stand because—

1. Students in non-tax-supported schools are children of Amercan citizens and they should not be treated as second-class citizens.

2. All Americans, regardless of the schools they attend, should be sharers in welfare legislation.

3. Under constitutional guaranties, parents have the right to send their children to any school, public or nonpublic, provided the school meets State requirements.

4. Nonpublic schools are exponents of knowledge as well as the public tax-supported schools.

5. Parents follow their conscience in sending children to the nonpublic schools and they should not be penalized for such action. The Federal Constitution guarantees them freedom of conscience and freedom of religion.

6. Nonpublic schools perform a public service with a saving to the Government of an estimated $400,000,000 annually.

Trusting that you and your committee will give serious consideration to this protest against the Thomas bill and that you will find it possible to support the Fogarty bill, I am, sir,

Truly yours,

Right Rev. HENRY M. HALD,
Associate Superintendent, Catholic Schools, Diocese of Brooklyn.

Amendment of Employees' Compensation Act

EXTENSION OF REMARKS

OF

HON. EARL T. WAGNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

TIME FOR CHANGE

A few months ago, at Bowling Green, Ky., William H. Osborne, a young substitute mail carrier, lost both hands and the sight of both eyes when a bomb which some fanatic had placed in the mails exploded. If there ever was such a thing as "permanent and total disability," it is the loss of both hands and the sight of both eyes, and this young man

has a wife and baby. Under the present provisions of the United States Employees Compensation Act the maximum compensation that Osborne can expect to receive from the Government is $116.67 a month, which certainly is not enough to sustain a family of three in these days.

Just a few days ago employees of the Cincinnati post office contributed nearly $1,000 as their part of a Nation-wide fund being raised by post-office employees for the Osborne family. If other post-office workers throughout the country are as generous, the completed fund will exceed $50,000. This is a fine gesture on the part of Osborne's fellow workers (who, by the way, are none too well paid themselves), but it is one that they should not be called on to make. This is Uncle Sam's obligation.

And this brings us to the fact that the present Congress has before it a bill (H. R. 1236) which would correct a situation which should have been corrected long ago. The present disability allowances were fixed in 1925, and have not been changed since, although Congress must surely be aware that what might have been regarded as a subsistence income nearly a quarter century ago is no longer sufficient to provide the bare necessities of life.

There will be other tragedies befall Government employees in line of duty such as the terrible thing that happened to William Osborne. When these things do occur, it is the duty of the Government to provide adequately for the victims of these tragedies. The Compensation Act of 1925 surely needs revision after 24 years.

Mr. Speaker, H. R. 1236 has been superseded by H. R. 3191 and improved the version of amendments to the Compensation Act. I understand that H. R. 3191 has the approval of the Bureau of the Budget and likewise the Employees' Compensation Commission. It also has the unanimous approval of all employee organizations within the Federal Government.

Extracts From Contemporary Monetary Policy and Economic Stability

EXTENSION OF REMARKS
OF
HON. BRENT SPENCE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I herewith insert extracts from a lecture delivered recently at the University of Chicago by Hon. M. S. Szymczak, member of the Board of Governors of the Federal Reserve System, on contemporary monetary policy and economic stability:

CONTEMPORARY MONETARY POLICY AND ECONOMIC STABILITY

How to prevent the recurrence of large-scale unemployment was a dominant question in all early discussions of postwar policies. From these discussions it became clear that public economic policy (including monetary or central banking policy) would have to assume a great postwar responsibility for the maintenance of high levels of employment. There is no better testimony to the intensity of concern over this issue than the Employment Act of 1946, which was passed, incidentally, by a conservative Congress.

But the goal of high-level employment was not to be pursued at all costs. For example, "full employment" through inflation was recognized as an undesirable long-run solution. Resort to wasteful, "make-work" projects was considered unacceptable. And, of course, all policy measures were expected to meet the general requirement of consistency with a free private enterprise system.

Not high employment alone, but economic stability at high levels of employment and output, achieved within the framework of a free private-enterprise economy, became the emerging conception of the primary purpose of all public economic policy. The part which monetary policy was to play in realizing this conception was not entirely clear. But that its responsibility was to be a large one there can be no doubt.

I want to state at this point that wartime and early postwar thought regarding the future role of monetary policy was not neglectful of the international aspects of the money problem. The fruit of this thinking, as you are aware, was the international agreement reached at Bretton Woods providing for the establishment of an International Monetary Fund and an International Bank. It was felt that the first of these cooperative institutions—the Monetary Fund—could adequately assure relative stability of international exchange values, and that the second agency—the bank—could contribute to the progressive expansion and balanced growth of world trade.

The new agencies were not expected to be final answers to the international monetary problem. On the other hand, there was a conviction that success in the experiment of continuous international consultation and cooperation through these organized channels would give the world a better monetary mechanism internationally than had been provided by any former gold-standard system.

Such then is the postwar conception of the objectives of policy in the management of money, and, as I have said, the goal of a stable but progressive private enterprise economy puts a very heavy responsibility on monetary management.

COMPLEX STRUCTURE OF THE MONEY SUPPLY

For monetary policy to do its part, it must provide the economy at all times with a supply of money consistent with the needs of a stable and expanding economy. This is easier said than done, for the term "money supply," at least in our own country, is a highly complex concept.

We have currency money issued by the Treasury and the Federal Reserve banks. We have the demand-deposit money created by the commercial banks. We have a large amount of other liquid assets in the form of time deposits and savings accounts, building and loan shares, and the cash value of readily convertible insurance policies. We have an even larger volume of other liquid assets in the form of Government securities, exchangeable into money at par, by redemption or sale. We have still other assets, e. g., corporate bonds and obligations of State and local governments, that are very high in liquidity, and therefore by nature close to money. Some of our money moreover, when lodged in the reserves of Federal Reserve banks and commercial banks, possesses the property of multiplying through loans and investments into still more money. These bank reserves have correctly been called high-pressure dollars.

The significance, from the standpoint of monetary policy, of this complex money structure becomes even greater when we realize that the ultimate concern of monetary policy is not with the money supply itself but with the flow of money through the economy. The active-money flow in the economy bears the impact of changes in the money supply and of the activation or deactivation of existing money stocks. In our complex money system, both of these types of monetary change reflect the independent decisions of many individuals and institutions, as well as the decisions of the monetary authorities.

In view of this complexity of the monetary structure, it is not surprising that the total monetary flow will at times reveal a tendency to become excessive, producing the symptoms of a general price rise, or that at other times it will show an opposite tendency, producing price declines and unemployment.

Ideally, monetary policy should completely forestall either tendency and maintain a total monetary flow that is at all times perfectly adjusted to the stability needs of the community. But the limitations on our ability to forecast economic behavior are themselves sufficient reason to suppose that such an ideal is impossible of attainment in the near future. At present the most that we can feasibly aim for is to achieve an approximation to this ideal.

NEED FOR FLEXIBILITY IN FORMULATING POLICIES

Such an approximation is by no means an unambitious goal. It requires all the foresight, knowledge, and judgment that we can muster. One cardinal virtue to be cultivated is flexibility both in thought and in action. No rigid policy, no matter how well thought out in advance, will enable us to cope adequately with the problems of an uncertain future. Nor can monetary authorities expect to avoid mistakes that will require remedial action. Improvisation and reversibility should be included in a proper concept of flexibility.

We must not overlook the risks of flexibility in the making of public policy, not the least of which is that flexibility can itself become a source of economic instability. A well-functioning private economy requires stability in certain areas of public policy as much as it requires flexibility in others. An important part of wise policy making, as I see it, is to recognize and adhere to the boundaries of each of these areas. The importance of this aspect of policy making is reflected, I think, in the considerable recent popularity of what has been termed built-in, or automatic, flexibility—a concept to which I shall refer again in a few minutes. Essentially, this concept undertakes to compromise the advantages of flexibility and stability in economic policy.

STRATEGIC FACTORS IN THE MONEY FLOW

Major changes in the economy's money flow are heavily dependent on certain strategic forces such as capital formation by private business, consumer expenditures for durable goods and housing, and international trade. To a greater or less degree each of these forces is subject to influence by the monetary authorities through the terms and conditions on which new money is available to borrowers. However, their susceptibility to such influence is qualified by the fact that these forces are in turn heavily dependent on nonmonetary factors.

The volume of business capital formation, for instance, is affected by current expectations of future business activity, and investment plans are subject to expansion, modification, postponement, or withdrawal as the economic outlook changes. Demands for consumer durable goods stem from wants that are deeply imbedded in the American standard of life. The state of international trade is a reflection of world political tensions as well as the product of reciprocal needs among nations for goods and services. In general, policies operating through the cost and availability of money—the major ways in which the monetary authorities can influence developments—are apt to meet with greater success when it is a matter of restraining rather than stimulating monetary expansion.

TIMING OF TREASURY SURPLUSES AND DEFICITS

The monetary flow through the economy is also affected strategically by Treasury surpluses and deficits. Whether considered

within the scope of monetary policy proper or viewed as a separate area of public policy, the fiscal operations of Government cannot be ignored in any consideration of contemporary monetary problems.

A current surplus on a cash basis means that the Government's outlays are running less than its income, and it is therefore having a contractive effect on the total money flow in the economy. A current cash deficit means that outlays are running in excess of income, and that the net effect of Government's fiscal operations is to have an expansive effect on the current monetary flow. Consequently, under a stabilizing economic policy, surpluses should be accumulated whenever there is a tendency for the monetary flow to become excessive, and deficits ought never to arise except when it is desirable to expand the monetary flow.

This principle of fiscal policy is, or ought to be by now, a thoroughly elementary notion. Though I cannot speak with the authority of one who is directly concerned with making fiscal policy, it seems to me that a much more relevant and difficult problem is how to provide for Government surpluses and deficits of the right amount at the right time. In other words, to me, the really crucial problem in developing an adequately stabilizing economic policy is that of providing proper flexibility in Government finance.

FLEXIBLE FISCAL POLICY

A certain amount of flexibility in Government fiscal policy can be provided on an automatic basis, that is, without requiring deliberate and specific action by either the Congress or the Executive. If the structure of tax rates remains unchanged, revenues will rise as the monetary flow expands, tending to reduce a deficit or increase a surplus. As the monetary flow contracts, revenues will fall, tending to reduce the surplus or create a deficit. With no opposing changes in expenditures, this automatic ebb and flow of revenues will itself exercise a stabilizing influence on the monetary flow. Such stabilizing influence may be supplemented, of course, by equally automatic fluctuation in the volume of outlays made on behalf of such items as unemployment compensation.

A stabilizing fiscal policy achieved through automatic devices is an undeniably appealing approach to the problem, and its potentialities are well worth stressing. But I suspect that its potentialities can never be great enough to preclude entirely the need for specific tax or expenditure adjustments as well. Just what tax or expenditure adjustments ought to be a part of a program of fiscal stability, I am not prepared to discuss in detail. In general, my preference is for relying on the tax rather than the expenditure side of the budget.

LONG-RUN "NEUTRALITY" OF FISCAL POLICY

The problem of stability at high levels of employment, insofar as it depends on fiscal policy, may involve resort to deficit financing, but only on a temporary and not on a permanent basis. A belief in the need for a chronic Government deficit to attain stability reflects, it seems to me, a lack of confidence in the viability of our economy. The long-run fiscal objective of budget neutrality—i. e., of a balanced budget—is, in my outlook, entirely consistent with the achievement of stable and high levels of employment and output.

From the point of view of stabilization needs, our real danger may be that we will lapse into an excessive use of deficit finance. If tension in the international situation persists, no retrenchment from a huge military budget will be possible. At the same time a considerable expansion in the welfare activities of the Government is probable. In this situation, the temptation—and the danger—is to slip into a policy of chronic deficit financing. Should we default on our fiscal-monetary obligations in this way, the result may be to create a demand for comprehensive direct controls in order to combat a chronic condition of inflationary pressures.

MANAGEMENT OF SURPLUSES AND DEFICITS

The implications for monetary policy of a stabilizing program of Government finance are not confined alone to the timing of surpluses and deficits. They extend also to the way in which a surplus is disposed of or a deficit is financed. Differences in disposing of a surplus and in financing a deficit will be reflected in different effects on the money supply. Broadly speaking, their significance will depend on such factors as the nature and strength of the demand for investable funds and the reserve position of commercial banks.

To illustrate my point, a surplus might be used to retire debt held by the nonbank public. In this case, the process of accumulating and disposing of a surplus would not in itself result in any reduction in the money supply; it would only shift the ownership of money from taxpayer to security owner. On the other hand, if a surplus is used to reduce debt held by the commercial banks, a portion of the money supply will be extinguished, while the immediately available supply of bank reserves for new money creation will be increased. If a surplus is used to retire Federal Reserve held debt, bank reserves as well as the money supply will thereby be reduced. Clearly, this last disposition of a budget surplus is the one that will make a maximum contribution to a policy of monetary restraint.

A similar type of analysis applies to the financing of a deficit—leading to a similar conclusion, namely, that if the deficit is to make a maximum contribution to monetary expansion it should be financed to the extent that it is feasible to do so through borrowing from the central banks—in our own country the Federal Reserve banks.

OTHER ASPECTS OF GOVERNMENT FINANCE

In addition to the management of budget surpluses and deficits, Government finance affects monetary policy through its management of outstanding public debt. Aspects of debt management, such as methods of refinancing, maturity, distribution, and of course the pattern and level of rates, must all be comprehended in, or related to, modern monetary policy. The principal objective of debt management from the point of view of monetary stability is easy enough to state: During inflationary periods when the monetary flow is excessive, it is desirable to attract investors' funds into public-debt holdings and away from private investment expenditures, thereby reducing the active money supply. During deflationary periods, it is desirable to induce an exchange of public-debt holdings for cash, thereby increasing the active money supply.

In this area of debt management more than anywhere else in the monetary and fiscal field, it seems to me, we are limited in the development of stabilizing policies by the incompleteness of our knowledge. With a debt of the magnitude of $250,000,000,000, with a stable level of long-term interest rates held long enough to permeate the entire asset and liability structure, and with a tense international situation, we do know that monetary policy must maintain orderly conditions at all times in the Government securities market.

But within this limitation, how much can be done? Are there changes to be made, through refinancing operations, in the maturity and ownership distribution of the debt that would improve it from the point of view of monetary stabilization? During inflationary periods, is some flexibility in the prices of Government securities compatible with maintenance of orderly market conditions? What would be the sure effects of such flexibility? Would these effects compensate for the known advantages of certain confidence in the orderliness and stability of the Government securities market?

Firm answers to questions such as these are prerequisite to development of debt management policies. Yet, even with much more intensive thought than this matter has thus far been given, the answer will be slow in coming. We have, after all, only acquired our present huge public debt within the past decade. We will need to proceed cautiously in building up our experience in improving methods for its management.

No ERP Guaranties

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. REED of New York. Mr. Speaker, the racketeers who are selling goods to ERP to be paid for by our taxpayers and given away to people abroad are not satisfied with their high profits. Now they want the taxpayers to finance their foreign investments and have our Government guarantee the investment, which, after all, is another way of having our taxpayers foot the bill if the foreign investment goes sour.

Under leave to extend my remarks, heretofore granted, I am inserting an editorial which appeared in the Wall Street Journal of March 24, 1949, as follows:

NO ERP GUARANTIES

In its drafting of legislation to govern a second year of the European recovery program the House Foreign Affairs Committee has made a serious blunder. It has voted to authorize our Government to extend certain guaranties to American investors in Marshall plan countries. This newspaper has said and insists that if private capital cannot go abroad except on Government crutches, it should not go at all.

The House bill we are discussing only authorizes money action on behalf of ERP. It makes no appropriation. The Appropriations Committees of the two chambers can yet give it a going-over.

As reported out of committee, the House bill provides that, within a total liability of $300,000,000, the Government may protect investors in western Europe not only against blocking of their profits from operation (as the original ERP law did) but also against loss of principal through war, domestic violence, or Government decree—the latter presumably including nationalization.

If such a provision becomes law the Government of the United States will have started out on a road of which it cannot know the route or final destination. These guaranties will either fail to encourage any substantial foreign investment or, if they do succeed, are more than likely to call for a greater commitment than the $300,000,000 the House committee proposes. The original guaranty—of convertibility of profits from local currencies into dollars—was wrong in principle. To extend this insurance over what now look like the most serious hazards to the investment itself aggravates a violation of sound fiscal policy.

Government-guaranteed foreign investments cannot be classed as soberly considered ventures of private capital. If they are made they will be essentially Government loans of public funds. One provision of the House committee bill is that if something

goes wrong with an investment, so as to bring the guaranty into effect, our Government takes title to the profits or property involved. This is said to insure that negotiations at the Government level will follow. At that stage, if it is reached, the erstwhile private capital investment has become an outright and acknowledged Government loan in default, to be salvaged as best it can be.

We think it is simple realism, not cynicism, to believe that Government guaranties extended to putative private investments may encourage some foreign governments in, let us say, careless treatment of American capital invested in their domains. If foreign capital comes in, relying not so much on its treatment by its hosts as on the financial paternalism of its home government, the political authorities of the recipient country may be expected to act accordingly.

Visitors From Moscow

EXTENSION OF REMARKS
OF
HON. WILLIAM T. BYRNE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. BYRNE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

VISITORS FROM MOSCOW

Seven visitors from Moscow are due to arrive at La Guardia Field this afternoon. They are on their way here to attend the Cultural and Scientific Conference for World Peace which will meet in this city on Friday. They are coming to present the argument that world peace is readily obtainable through friendly and trustworthy cooperation, which, of course, is true. But they are also coming to tell us that such cooperation is the objective of the Soviet government of Russia. And this we will not find easy to believe, in the light of the written record of Soviet policy and action: the sabotage of the Marshall plan, the coup d'état in Prague, the conquest of the Balkans, the blockade of Berlin, the thirty vetoes in the United Nations, the defiance of the Security Council in Korea, the slap in the face to the Assembly over Greece, the wrecking of the plan for international control of atomic energy that had the approval of every other nation represented in this undertaking, the tireless fifth-column activities that are directed from Moscow against the stability and authority of every democratic government in the world.

The Soviet propaganda line has become so easily identified and so thoroughly discounted, the Soviet practice of standing words on their heads so that dictatorships become democracies and aggressive moves become peaceful intentions is so generally recognized for the sheer nonsense it is that we do not think these Moscow visitors will make much of a dent upon American opinion. In this respect we do not share the apparent concern of our State Department that if certain prospective visitors from non-Communist countries were also permitted to attend the conference it could be used as a successful sounding board for Soviet propaganda. We would let them all come, and all talk, and all do their best to convince us that counterfeit words speak louder than explosive actions.

There is so little chance of their doing this that we think our Russian visitors are about to waste their time. We wish, in fact, that they were coming for a more worthwhile and potentially profitable purpose. We wish that they were coming here to learn something for themselves instead of to tell us a bedtime story written in the Kremlin. We wish that they were here to see how an average American workingman's family lives, what this worker earns and what his money buys. We wish they were taking in a debate or two on Capitol Hill to see how the two-party system works in practice. We wish they were dropping in on the Federal courts to see how a patient judge leans over backward to give a scrupulously fair trial to a group of their own fellow-Communists. We wish that they were here to take a close look at the whole American scene and that their purpose was to carry back with them to Moscow as accurate and as candid a report on it as possible. For the first condition of peace is understanding. And understanding does not prosper under the censorship of the police state and behind the iron curtain.

Will We Forfeit Self-Government by Default Through Failing To Vote?

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. CRAWFORD. Mr. Speaker, the United States stands in the world today as a lonely symbol of that principle of government embracing free enterprise, free press, speech, and religion; and freedom of the citizens to elect for themselves the officials who administer the affairs of State—the Government under which the people live.

There has been a gradual whittling away of fundamentals incorporated by the founders into our form of government. This unfortunate development has been accompanied by a dwindling of interest, on the part of the citizens, in their Government and the men who run it.

Such a development holds in it the prospect that we will lose our constitutional republican form of government by default. Those interested in sound government need not go beyond their own backyard to learn why our present day social schemers with their nostrums are receiving so much encouragement and political support as they concoct new brews which will eventually, if not checked, make their leaders drunk with power and the citizens slaves of the State.

If, for instance, we, though OPA meddled into the private affairs of the citizens, wait until the bureaucratic quacks get control through socialized medicine and we will see how certain matters of family life, formerly a sacred and confidential trust between the family and the doctor, become a part of the Government records, first here in Washington, and secondly, to be spread out over the country to be used by the local political hacks to influence votes in general elections.

SHRINKAGE IN TOTAL VOTES

Let me repeat that we need not look beyond our own backyard for the fault. A shocking shrinkage in the number of votes cast by our citizens gives the answer to why socialistic visionaries are moving into our Government with the same quack pap that has caused the decline or downfall of other countries. They are seeking to replace the fundamentals which kept our Nation great and sound for over 150 years.

A half century ago—in 1896 we find 83 out of every 100 eligible voters in this country went to the polls to participate in a Presidential election. Twenty years later, 72 percent of the eligible voters took part in a Presidential election. In 1936, with 80,000,000 registered voters, 57 out of every 100 eligibles cast their ballots.

In this last Presidential election it is estimated that approximately 51 out of every 100 eligible citizens voted and then the successful candidate was elected by less than a majority of the total vote of those who participated in the election—this paradox being due to the rules governing the electoral college.

IN THE EIGHTH DISTRICT OF MICHIGAN

Bringing this down to our own back yard in Michigan and the Eighth Congressional District in particular, I find a survey of statistics of the 1948 election proves an appalling lack of citizen interest—if the yardstick of votes is to be used.

In the six counties comprising the Eighth Congressional District there were 13,778 fewer votes cast for all Presidential candidates than in the Presidential election 4 years earlier. Why did these 13,778 persons stay away from the polls and fail to exercise their duty as citizens and thus say how they wanted their Government conducted? And especially, under the most appalling conditions governing throughout the world today.

With 13,778 persons staying away from the polls in the Eighth Congressional District, I find the Republican candidate for President received 10,259 less votes than he received 4 years earlier and this loss for the Republican candidate is not reflected in a gain for any other candidate.

I am not talking partisan politics because fewer Democratic votes were also cast in five of the six counties although the percentage of absenteeism was not nearly as great in that party. Neither are losses of the two major parties reflected materially in figures for any of the so-called third-party groups since they are inconsequential in this district.

The decrease in the total votes cast for all parties, comparing 1948 with 1944, is broken down as follows: Saginaw County 7,669 less votes cast, Shiawassee County, 1,461 less, Gratiot County 1,217 less, Clinton County 793 less, Montcalm County, 1,455 less, and Ionia County, 1,183 less. These are all losses in the total votes cast.

REPUBLICAN ABSENTEEISM

Statistics for the last election for the Eighth Congressional District indicate Republicans are staying away from the polls in far greater numbers than are members of other political groups. The rate in one county is as much as 90 Republicans missing at the polls in 1948 for each 1 absent Democrat.

Losses in total party votes for respective Presidential candidates in the Eighth

Congressional District, arrived at by comparing their 1948 total votes with the 1944 vote for the same office, follow: Saginaw County, 4,366 less Republicans and 3,388 less Democrats; Shiawassee County, 1,224 less Republicans and 440 less Democrats, Gratiot County 952 less Republicans and 501 less Democrats, Clinton County 912 less Republicans and 10 less Democrats, Montcalm County 1,444 less Republicans and 169 less Democrats, and Ionia County 1,361 less Republicans. This last county was the only county showing a gain for either party, the Democrats polling 13 more votes for President than they did in 1944. Of course Republicans carried all of these counties.

With the next Presidential election nearly 4 years away there will be many State and local issues to be settled at the polls in the meantime; while only 2 years until a congressional election will be here.

Good government begins at home and this spring and fall there will be many local elections of importance throughout the country. Unfortunately, the falling off of voter interest in strictly local elections—both partisan and nonpartisan, is much greater than it is in national elections.

LOCAL ELECTIONS IMPORTANT

In the coming weeks many townships will elect their supervisors and other local officers; some cities will elect council members and other officials. Some State officers will be elected too.

It is difficult to answer why so many people are failing to vote, irrespective of party. Thoughtful citizens of all parties must give this serious thought if we are to maintain free elections and rule by majority. The city of Saginaw, Mich., recently witnessed a demonstration of CIO's answer when pickets paraded in front of the office of a State agency of Government in what their leader said was "an attempt to educate the people to vote." It concerned an issue in which the CIO was interested.

Picket lines may be CIO's answer to getting people aroused over elections but voter lines at the polls on election day are actually what count for the results. Wishful thinking will not do it.

Yes, good government begins at home, but it does not begin by remaining home on election day. This means going to the home-precinct polling place and casting a ballot on election day.

Veterans' Pensions

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. MULTER. Mr. Speaker, typical of the communications I have been receiving with reference to the Rankin pension bill is that which came to my desk this morning from a resident of my district.

The following excerpts are apropos:

As a veteran of World War II and a fellow Democrat I was shocked at the display of "statesmanship" in the House today on the pension bill.

A majority of my World War II veteran friends have the same opinions as I, i. e., the proposed pension bill is a boondoggler's dream and a national holdup.

We do not particularly relish the idea of paying higher taxes for 35 years in order to be eligible for a few dollars at age 65. Secondly, a man's life expectancy today is age 62.

The time devoted to the general debate of the bill and the discussion of the various proposed amendments, those we agreed to as well as those we rejected, confirm what I said originally about this bill. That is that it should be referred back to the committee. The committee should conduct full and proper hearings upon the entire subject, giving all persons a full and fair opportunity to be heard, and a proper pension bill developed in committee and then brought before the House for action, where I am sure it will receive the overwhelming support of the Members of this House.

Pensions for Veterans

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. SMATHERS. Mr. Speaker, I want to be on record as a legislator and veteran that in my opinion our vote here today is not a vote for or against a sound pension plan for deserving veterans. Instead, we have before us a bill which never received the proper consideration of the Veterans' Affairs Committee and which here on the floor has been so confusedly amended that the Members are now in doubt as to the exact provisions remaining. The circumstances call for reason and sense so that our country and its veterans will benefit.

I will vote for a pension bill which is reasonable and equitable. I will not support a measure failing to meet those qualifications, for to do so would be an injustice to the veterans themselves and a betrayal of the trust imposed in me.

H. R. 2681 was presented to the Veterans' Affairs Committee one morning by its chairman, Mr. RANKIN, and until that time the members of the Veterans' Affairs Committee had never seen the bill. Approximately 15 minutes of consideration was then given H. R. 2681—15 minutes consideration of a bill involving an estimated over-all cost in excess of $100,000,000,000. The bill was then reported out, not by a majority of the committee, but by a majority of the members present that day—as seven had walked out in protest.

The bill presented to us would give the same benefits to bad-conduct discharges as it would give those who had faithfully served their country and been honorably discharged. A man with a bad-conduct discharge would receive $15 a month more than the widow of a man killed in battle. This bill was written with so many obviously inherent defects that even its proponents have recommended that it be amended from the floor.

Consequently, in the last several days we have seen amendments, motions, and parliamentary maneuvers of every sort as the Members of the House have endeavored to write a just and sound pension bill. But orderly and wise legislative procedure requires that important legislation be written by a committee where there is opportunity for hearings so that some evaluation can be made of the implications and consequences of each proposed provision.

We have arrived at a point in this debate where confusion and chaos have displaced reason and order. We should return this bill to the Committee on Veterans' Affairs so that its members can prepare a fair and just pension plan for the veterans. The obligation which this Congress owes the veterans dictates that the benefits extended them be equitable and on a sound basis. Our veterans deserve more than hastily drawn, unstudied, and defective legislation.

Freedom on Trial

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. PHILLIPS of California. Mr. Speaker, I have read a great deal about the trial and imprisonment of Cardinal Mindszenty. It has been the subject of discussion and protest on this floor. I have not, however, happened to see anywhere an account of a public demonstration such as took place recently in one of the cities of my congressional district. The meeting was a serious and solemn protest against the treatment of the cardinal, and the denial of freedom of religion. It was attended by more than 700 people of all faiths. It was inspired by two articles by Ethel Gillett Whitehorn which appeared in the Desert Sun of Palm Springs. The articles are entitled "Freedom on Trial." I have asked unanimous consent that they be reprinted here, in the CONGRESSIONAL RECORD.

Mrs. Whitehorn is the daughter of James N. Gillett, a former Representative in the Congress and a former Governor of California.

Article 1 appeared February 25, 1949, as follows:

American women are natural crusaders. They possess the intuitive power to recognize attacks on principle, honesty, and justice. They never hesitate to campaign vigorously against a public evil, nor do they fail to act promptly for the good. Oftentimes, women are criticized for applying more emotion than intelligence to public and political affairs. Even their own sex participates in these criticisms. The truth is that women crusade directly from the heart, and where the heart is involved, there lies freedom from pretense or deceit.

An illustration of the aptitude of American women to carry on a successful crusade is the historical campaign to win the right to

vote. This battle started in 1859. It lasted till 1920 when the nineteenth amendment to the Constitution granted Nation-wide suffrage to women. Never once during those 51 years did the suffragettes fail to keep their objective prominent in the minds of both legislators and the public. The leaders were frequently imprisoned; many of them had recourse to a hunger strike. Today, after almost 30 years of participation in governmental affairs, America's women have proved how right they were to take up the cudgels in 1859 and fight for principle.

Now, in this mid-twentieth century, the women of this Nation must open their hearts to a second great crusade which beckons them. This is the battle of freedom of religion versus atheism, the denial of God. Places of atheism have been rare until recently: It flourishes in Soviet Russia and her satellite, enslaved states. Fifty-one years cannot be devoted to the winning of this crusade * * *. Tyranny—ruthless, wanton tyranny—that strikes at the basic fundamentals of all mankind, strikes with the speed of a rattlesnake. The mentality of mankind can outwit the serpent, when and if it is properly used.

The pages of the CONGRESSIONAL RECORD are filled with protests from shocked organizations and citizens in all parts of the country, regarding the ruthless trial and the imprisonment of Joseph Cardinal Mindszenty. And now—to his tragic experience—more will be added. For the attack has been extended against good men of Protestant faith, Congregationalists, Methodists, Baptists, and Lutherans.

What will the President do? What will the Congress do. They will act when an aroused citizenry demands that this war against religion must be brought to an immediate end. Never have the women of American been given a richer opportunity to prove what they can do in time of stress. Therefore The Desert Sun of Palm Springs, California, its publisher, Mr. Oliver Jaynes, and this columnist appeal to all national women's organizations to form and pass resolutions and mail them on the earliest possible date to the President of the United States; to their various congressional representatives, and to the governors of States.

Let us not forget this week we Americans are celebrating George Washington's birthday. It was he who said in an address before the general committee representing the United Baptist Church in Virginia: "I beg you will be persuaded that no one would be more zealous than myself to establish effectual barriers against the horrors of spiritual tyranny, and every species of religious persecution—for you, doubtless, remember that I have often expressed my sentiment that every man, conducting himself as a good citizen, and being accountable to God alone for his religious opinions, ought to be protected in worshiping the Deity according to the dictates of his own conscience."

Article 2 appeared March 1, 1949, as follows:

Thousands of words, sharply condemning the slave philosophy of Soviet Russia and her satellite countries, continue to fill the pages of the CONGRESSIONAL RECORD. Words spoken by horrified Congressmen; editorials reprinted from newspapers in every section of our land; magazine articles written by leading authors; sermons by ministers of all creeds; resolutions passed by State legislatures and national organizations urging the administration and Congress to carry the Hungarian attack against religion directly to the General Assembly of the United Nations—this, as well as many letters from shocked citizens to their Congressmen, reveals that America is on the march against the tyranny of communism.

Last week, Senator MILLARD TYDINGS of Maryland made a brief statement to his colleagues in which he summed up the entire situation. He said: "The trial and sentencing of Cardinal Mindszenty makes one of the darkest spots on the pages of history: It is a throwback to barbarism; to human slavery of both the mind and the body.

"Freedom of religion was put on trial, and one of the world's leading church figures was humiliated because of the exercise of this God-given right.

"Freedom of religion was put on trial, and the prelate was condemned because he would not renounce his God.

"Freedom of conscience was put on trial, and this pillar of the church was humbled because he would not barter away his sense of right and wrong.

"Cardinal Mindszenty made the decision to be a free man of God rather than a cog in an evil machine; to be a proud patriot rather than a slinking traitor; to be a martyr rather than let the dark night, with its human bondage, fall upon his people unchallenged.

"Before the jury of the civilized world, he stands forth as innocent. In the eyes of the world this courtroom in Hungary will be known, not as a temple of justice, but the temple of shame." So spoke Senator TYDINGS.

This question is asked frequently—"How can Hungary be censured by the United Nations when that country is not a member." This is the answer given by diplomats and Members of Congress. There is a Hungarian peace treaty agreed to by the Big Four—the United States, Great Britain, France, and Russia, under which all people are entitled to democratic justice. The freedom-loving people of Hungary didn't break that treaty. Russia has broken it—Russia, one of the signatories, who pledged to all nations their right to foster and enjoy every human freedom. Russia has broken her trust by taking over Hungary, Poland, Czechoslovakia, Rumania, and Bulgaria—body and soul—and placing at the head of these governments Soviet-controlled Communists.

Hungary must carry the brunt of all censure and reproach. But in the final analysis it will be Russia who will pay the bill.

At the meeting a resolution was prepared and signed by representatives of the churches of Palm Springs and the various organizations of the city. It follows:

Whereas Russia-controlled Hungary and Bulgaria have shocked and corrupted the conscience and the moral sense of all freedom-loving people throughout the world because of their imprisonment, trial, and sentencing of ministers of all religious faiths, whose only offense is their God-given right to prevent religion from being crucified on the altar of freedom; and

Whereas it has been revealed that a definite pattern has been set by Russia and her Communist-controlled satellite nations to not only eliminate but persecute all religions; and since the preamble to the Charter of the United Nations pledges "to affirm faith in human rights;" and since Russia is one of the signatories to this charter: Be it

Resolved, That our Government zealously explore all channels through which remedial action may be taken in behalf of the innocent victims of this travesty on justice, and again assure the freedom-loving people of all the world that their human rights as described in the United Nations Charter are a reality and not a mockery; be it further

Resolved, That a copy of this resolution be forwarded to His Excellency, Harry S. Truman, President of the United States; Hon. Dean Acheson, Secretary of State; Hon. John Phillips, Congressman of the Twenty-second Congressional District, California; and the Honorable Senators, Sheridan Downey and William F. Knowland, California.

Signed this 13th day of March, at Palm Springs, Calif.: Rev. Michael O'Connor, pastor, Our Lady of Solitude, Palm Springs; Rev. James Blackstone, Jr., Community Church, Palm Springs; Rev. William Clavin, pastor, St. Theresa Church, Palm Springs; Rev. T. H. Reagans, pastor, First Baptist Church, Palm Springs; Rabbi Samuel Chomsky, National Jewish Welfare Board, Los Angeles; Indian Reservation Church, Palm Springs; Palm Springs Woman's Club; Daughters of the American Revolution; Veterans of Foreign Wars; Veterans of Foreign Wars Auxiliary; Palm Springs Girl Scouts; Junior Chamber of Commerce, Palm Springs; Welfare and Friendly Aid Association; Palm Springs Hotel and Apartment Association; Youth Center Committee; Catholic Altar Society; Masons of California; DeMolay; Palm Springs Business Women's Club; AMVETS; American Legion, Post 519; American Legion Auxiliary, Unit 519; Jewish Community Center, Palm Springs; Oliver Jaynes, publisher, Desert Sun; W. Rashall, journalist; Lee Bering; Ethel G. Whitehorn; James Kehoe, California State Commander, AMVETS; Max Royer, Placentia Rotary Club; J. W. O'Sullivan, past commander Los Angeles County, AMVETS.

It is a good sign when people meet in this way to discuss world situations. It would help prevent those things happening here which we think cannot happen here.

British Health Plan

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. MULTER. Mr. Speaker, on March 23 I placed in the RECORD the second of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 20, is the third of the series:

FREE BRITISH HEALTH PLAN HAILED AS BRILLIANT SUCCESS—PROGRAM OVER ROUGH SPOTS, SAYS BEVAN

(By E. J. Delaney)

(Third of a series)

LONDON, March 19.—Aneurin Bevan, former rugged Welsh miner, now Minister of Health and fighting Labor Party leader, declares unequivocally that the new free British National Health Service is a brilliant success. He brushes aside criticisms of management and cost and says: "Human comfort and happiness are not extravagances we cannot afford."

"Selfishness is not good medicine," the Minister affirms, "and we are eliminating it insofar as is possible. Many people are getting relief and easement from pain and their lives are being transformed from a dull drabness to unexpected happiness."

Recalling the early and vivid clashes with the medical profession when the plan was in process of arrangement, Mr. Bevan pointed out that the "creation and establishment of National Health Service was not easy with the professional hostility to it that prevailed. However, the transition has been much smoother than we thought possible, virtually 100 percent of the people are registered in it, and more doctors are cooperating than we anticipated."

MET UNEXPECTED FACTOR

"We did meet an unexpected factor," he says, "we did know there was a concealed demand for health services, but we did not

know how much. We have learned of a great desire for spectacles and dental treatment, much more than we dreamed existed. To us, all this is clear evidence of the great need that has existed and certainly is not evidence against the health service."

"We are not frightened," he states, "we soon will be over the hump of demand and will settle down to a normal consumption of all the medical aids that so many now are securing through this legislation."

The Minister of Health finds the relationship between the family physician and his patients is on a higher plane than ever. He emphasizes this point because this relationship is one of the prime subjects of debate whenever a popular health service is at issue.

CLASHES ELIMINATED

"We have transformed the relationship between the doctor and his patient, now there is no cash involvement between them," Mr. Bevan remarks. "The doctor now can confine himself wholly to doctoring, he can turn all his attention to the needs of his patients because he is assured of his payment."

The rush of much of the public for some of the benefits has evoked comment here and Mr. Bevan realizes it fully. He admits that everything has not been perfect.

"We do not deny there have been abuses by some people," he says, "but all that kind of trouble can be eliminated by good administration and it is taking place now."

"When something is free," he continues, "there is a human tendency for people to try to get it, but people cease to snatch at things when they come to know they will be there all the time. They really snatch only when they are not certain about the future availability of those things they desire."

The minister is well informed on events in public affairs in the United States and daily receives résumés of proposals, comments, and action on everything pertaining to health that appears in American newspapers. With regard to present proposals for a national health system in the United States, Mr. Bevan says: "Some of my good American friends alarm me by their approach to national health. It will be a mistake to adopt any contribution form. If everybody is in, it is not insurance, it is public welfare."

"I say it is a mistake to put national health on a contributory basis," Mr. Bevan asserts, "because we cannot have first-class, second-class, and third-class operations. If a man is suffering from cancer, we cannot refuse him aid because his contributions are not paid up fully."

In response to a query whether, if he were starting all over again, he would do anything that was not done, or would avoid something which was done, he said:

EDUCATION NEEDED

"If I were to start on this activity all over again, I would proceed on the assumption that the professional man is so preoccupied with his work, so cloistered, that he is cut off from many of the ordinary phases of life. I would commence with a campaign of education of the professional man in the principles of this plan of public service, I would operate such a campaign in a big way.

"We underestimated the sophistication of the medical profession. We found they were being stampeded into opposition to principles that were not present in the plan at all. They accepted the plan when they came to know their fears were not justified.

"You will find in America that they will fight the national health program with the same slogans. The first task there is to educate the doctors themselves and to convince them that their wholly honest fears are not justified."

Turning to the question whether there remains freedom of choice in the health service, Mr. Bevan maintains "the free choice of a doctor is not impaired. Doctors are not made slaves of the state. They are not civil servants. Their professional freedoms are not interfered with in any way. We merely are putting into the doctor's hands the power to use all the apparatus of medicine for the welfare of his patient as he may see fit."

Observing that in the United States there is talk of several ways of paying a doctor under national health, the Minister of Health reviews the experience in England of various systems. He is very strongly convinced that payment of fees per visit is highly undesirable and that the so-called capitation payment is far preferable. Under the capitation system used here, in the main, a doctor receives a fixed annual sum for every patient he treats, regardless of the number of consultations or treatments that takes place.

On this angle, Minister Bevan says: "I must be careful not to attempt to say what America should do. I will venture to state, though, that if they should adopt a system of paying fees per visit, every doctor indeed will have a very fast motorcar. That is not a good way.

FREE WILL EXERCISED

"The capitation fee system is proper," the Minister avers. "Under it a doctor can refuse to have anyone as a patient and a patient can choose and change doctors at will. The doctor will know what his income will be by the size of his list of registered patients and the size of that list will represent the number of people who want that doctor to take care of them. In this way, it is obvious, payment by capitation, on the basis of a list, preserves sufficient competition among doctors to prevent any relapse into slackness."

The Minister finds there must be a distinction between the various kinds of medical practices. The rural and the urban areas offer entirely different problems. Concerning this, he explains, "In the rural areas we have to make up for the disadvantages under which the doctor works by paying him more mileage. His patients may be widely scattered, but this added mileage will make up for him the difference between his income and that of the urban doctor."

CAUSES MUCH CONFLICT

The full-time, entirely salaried medical service has been the cause of much conflict in England. The British Medical Association has fought it fiercely. It is the central point of disagreement in the entire subject matter. Minister Bevan enters into this field of thought in his contemplation of the rural-area physician. He exclaims:

"It may be found that the country doctor's district is so spread out that the only fair and reasonable way to deal with him is through a salary. Full-time salaried medicine is perfectly all right, we have had it in the highlands of Scotland and Ireland and it has worked out satisfactorily.

"A salaried service for the profession is not acceptable at this stage because it would interfere with the choices of both the doctor and the patient. We have given the professions a guaranty that no attempt will be made to impose a full-time salaried status upon the professions in general without an amendment to the Health Act."

AID YOUNG PHYSICIANS

"Of course, you must have a basic salary to help young physicians to live while they are establishing their practices and we do give them $1,200 a year."

Opponents of national health often ridicule the provision that visitors to this country can receive free health service. There has been gossip that people have been crossing the Channel from France and having operations performed and dentures made at British expense. The Ministry says, however, that no concrete proof of such occurrences has been offered by anyone and challenges the statement. It points out that the wait would be so long for services that it would be uneconomic for the patient.

Mr. Bevan, in his interview, takes up the service-to-visitors matter. He declares:

"This service has an international character. We have been criticized because under the National Health Service any visitor can receive free medical care. Our answer is that fundamental medical habits should come abreast of social habits.

"Further, our health depends upon the health of our neighbors and it positively is not wrong to take care of the health of a visitor. If you neglect his health you actually may be neglecting your own health.

"We hope we shall pioneer the way for reciprocal action in other countries, then when our own people are traveling abroad they will be able to secure free medical care, just like at home.

"One European country, whose identity I would not want to disclose at this moment, has approached us to learn what reciprocal action they may be able to take.

"Our over-all primary thought on this public health subject is that selfishness is not good medicine."

Strikes and the Selfish Demands of Organized Minorities

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following letter received from a constituent that will well repay the reading:

Hon. FREDERIC R. COUDERT, Jr.,
House Office Building,
Washington, D. C.

DEAR SIR: I recently received the attached folder and questionnaire from the General Electric Co. Unfortunately, I must confess that the closest kinship I can boast with this concern is the fact that I do own one of their well-known electric sweepers. This fact, I believe, will not brand me as a member of the vested interests. Neither should the fact that I am a salaried employee brand me as being a union sympathizer. As a plain, average, everyday American, I believe that this General Electric folder is an excellent idea and I am checking my views and forwarding them to you in the hope that as a representative of my district, you will know how one small voice feels about this very important matter.

My answers to these questions are based on firm convictions—convictions backed by the following reasons:

Frankly, Mr. Congressman, I am sadly discouraged at the trend that today is spreading through America—the loss of initiative; the loss of pride in individual accomplishment; the loss of teamwork and cooperation that made this country great; the lack of good neighborliness; and the tremendous growth of factional strife and narrow-minded selfishness. The self-starter of man's ambition is today being replaced by a free-wheeling gadget that permits unlimited coasting. And, unfortunately, the free-wheeling is being encouraged by our own Government.

I am alarmed at the way modern legislation is increasingly favoring the loudest, but not necessarily the largest, segments of American population—those who sponsor the slickest, most versatile lobbies, and press-relations men. I think, Mr. Congressman, that it's time that the plain ordinary Joes in this country remind our Washington representatives that our voice—simple and quiet

though that voice may be—is every bit as American and deserves every bit as much consideration as the Shakespearean rumblings of a John L. Lewis or the well-intoned phrases of an Eric Johnston.

It happens that this is the first letter I have ever written to any governmental representative. It will definitely not be my last. It is time, I believe, that individuals like myself—no strong member of any particular party; neither union member nor employer—do something to offset the incessant demands and selfish mouthings of the all-too-vocal organized minorities.

So, Mr. Congressman, while the president of the American Federation of Labor and the president of the American Manufacturers Association get personal invitations to Washington to broadcast their invective, how about letting a plain ordinary fellow express his views, too—a fellow who finds regretfully that the America he lives in today is not the same wonderful America he fought for only a few years ago.

I am sick and tired of opening my paper night after night and reading the same monotonous headline "Strike." Frankly, I don't know who is to blame, but the whole business of strikes is now a pathetic farce—a disgrace to the unions for the foolhardy irresponsible way in which they are carried on—a disgrace to our legislators who tolerate such procedures—a disgrace to the intelligence of the American people. The recent Philadelphia transit strike, for instance, is the perfect example of the will of a few causing unlimited inconvenience and financial loss to millions. That, Mr. Congressman, is not the kind of democracy for which I fought.

I am fed up with that all too typical sight of "goons" and morons parading with picket signs in front of every other shop along the street—pickets who chant crude, disparaging remarks about the institution. It's strange, Mr. Congressman, but if I—a respected citizen—were to make those same remarks, I would instantly be jailed for libel.

I am weary of reading charges and countercharges about the union feather-bedding that is skyrocketing the cost of that home I'd like to buy, or boosting the prices of my railroad ticket. I am disgusted at the thought of a Petrillo who demands that sit-by musicians be hired at fancy salaries to sit twiddling their thumbs—that high-school musicians be kept off the air because they don't belong to Caesar's union. If these charges are true, Mr. Congressman, then don't you agree that the unions need a big stick applied vigorously where it will do the most good? And if the charges are false—if there is no such thing as feather-bedding, and if the unions aren't trying to limit the maximum daily production of their members—then just as assuredly, Mr. Congressman, shouldn't the management executives who spread these false tales also feel the big stick properly administered?

Furthermore, I am disgusted at those shady characters who hide behind the skirts of constitutionality and refuse to answer the question: "Are you a Communist?". Personally, I don't know whether the question is constitutional or not. I don't care. I only know that I am proud and willing—in fact, eager—to proclaim to any and all that I am not a Communist. Any real American should feel the same way.

Those, Mr. Congressman, are my reasons for the answers on the attached form. I repeat—I am not an employer, not a member of a labor union. But I am an American who each month sees a terrific portion of my monthly pay check snatched away by an all-too-expensive Government. In view of our present excessively high tax rate, Mr. Congressman, I don't think I am unjust in asking for greater efficiency * * * greater integrity * * * and a whale of a lot more of the Golden Rule.

Yours truly,

EMORY WARD.

The So-Called Rights of Communists and Atheists Under the Constitution of the United States

---

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. ABBITT. Mr. Speaker, there have been from time to time discussions on the floor of the House of the alleged rights of Communists and other subversive organizations under the Constitution of the United States. Under leave to extend my remarks in the RECORD on this subject, I include the following article written by Charles Hall Davis, a prominent citizen and attorney of Petersburg, Va., in my congressional district, whose views on the question, I believe, will prove of interest and value to the Members of Congress in their consideration of the problem:

THE SO-CALLED RIGHTS OF COMMUNISTS AND ATHEISTS UNDER THE CONSTITUTION OF THE UNITED STATES

(By Charles Hall Davis, of the Virginia bar, Petersburg, Va.)

Query: Does the Constitution of the United States guarantee to safeguard the free exercise of irreligion, or of atheism (or of communism, which is based on atheism) in this country?

Can the Communist claim the right to be safeguarded in his efforts to undermine the spiritual foundations of Americanism and to destroy the American Republic, under the constitutional provision forbidding the Congress to pass any law "Prohibiting the free exercise of religion; or abridging the freedom of speech or of the press"?

The Federal Constitution forbids the Congress to pass any laws prohibiting the free exercise of religion; but Congress is not forbidden to pass laws prohibiting the free exercise of irreligion, or of atheism; and the National Constitution imposes no limitations on the exercise by the respective States of their reserved powers in reference to religion.

THE WORD "RELIGION" APPEARS ONLY ONCE IN THE CONSTITUTION OF THE UNITED STATES

The word "religion" occurs in the Constitution of the United States only once; namely, in the first amendment (the first section of the Federal Bill of Rights) the first clause of which reads as follows:

"Amendment I: Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press."

NEITHER THE WORDS "RELIGIOUS FREEDOM" NOR "FREEDOM OF RELIGION" OCCUR ANYWHERE IN THE CONSTITUTION

Nowhere in the Constitution do the words "freedom of religion," or "religious freedom," or any phrases of similar import, occur. The only constitutional guaranties of freedom of religion are embraced in these words of the first amendment, which do not positively guarantee anything to the individual citizen, their only significance is that they forbid the Congress to do either of two things, namely:

"Congress shall make no law (a) respecting an establishment of religion, (b) or prohibiting the free exercise thereof."

These words impose limitations on the powers of Congress. By reason of these inhibitions, Congress cannot enact any law creating an "established church," such as exists in England where the Anglican (Episcopal) Church is supported by the state; or in many European countries where the Roman Catholic Church is similarly supported by the state. Similarly, by reason of these limitations on the powers of Congress, it can make no law "prohibiting the free exercise of religion."

There is no inhibition on the Congress about passing any laws that it may deem proper and necessary prohibiting the free exercise of "irreligion," or of any belief which, if allowed to be freely exercised, might undermine the spiritual foundations of Americanism, or which might tend to destroy the Republic.

AMERICANISM IS BASED ON A BELIEF IN GOD

The Declaration of Independence, which, as the Supreme Court has said, laid the foundations of American government, declares that "all men are created equal and are endowed by their Creator with certain unalienable rights," and "that, to secure these, governments are instituted among men, deriving their just powers from the consent of the governed." Under Americanism, human rights are the direct gift of God; and being derived from this supreme source, human beings cannot be justly deprived of them by any human institution—government or other—but just government must secure them.

Hence, under Americanism, government cannot prohibit the free exercise of religion, or of a belief in God; but while, under Americanism, a man can believe whatever he pleases, and has the right to believe that there is no God, yet he cannot be permitted to so exercise his disbelief in the existence of a God as to openly attack and seek to destroy the idea that there is a God, and thereby deny the existence of the divinely bestowed rights on which Americanism is based, and on the existence of which rests his right to believe what he pleases.

Americanism forbids the Congress to prohibit the free exercise of religion. An American citizen can worship such God as he pleases, and freely exercise his religion; because God has given him the right to do this. But he cannot deny the existence of any God, and so exercise his disbelief as to wipe out the individual God-given inherent rights of himself and of all other American citizens, and thus destroy the foundation principles on which the entire structure of Americanism has been reared.

American Government is not in any way committed to the protection of any citizen in efforts to destroy the political theory and plan under which he claims the right of individual and political liberty. He cannot assert his right to freedom, and at the same time deny that the being through whom he claims the right, does not exist, and never has existed. Americanism guarantees absolute and unlimited freedom of belief and opinion to all its citizens; but it does not guarantee unlimited freedom of action in the exercise of those individual beliefs, if that freedom of action or exercise is to be used to defeat the very rights which are asserted. Unrestricted exercise of any right is license and not liberty.

The right to believe what one chooses is unquestioned. But the exercise of that right must not be such as to defeat the similar and equal rights of others; nor may it be so exercised as to jeopardize the existence of government and the safeguarding of the equal rights of others, or to undermine the entire structure of liberty on which the existence and protection of human rights is based. Government's duty is to protect and preserve its own existence; and it owes no obligation to protect any one in such exercise of his alleged rights as will destroy the very government under which he claims the authority to exercise those rights.

THE WORD "RELIGIOUS" OCCURS ONLY ONCE IN THE CONSTITUTION

The word "religious" occurs only once in the Constitution of the United States, namely, in the third clause of article 6, reading:

"No religious test shall ever be required as a qualification in any office or public trust under the United States."

When we speak of national guaranties of religious freedom we must therefore understand that there are no positive guaranties of freedom of religion in the Federal Constitution; but only negative guaranties in the shape of limitations or restraints or inhibitions on the powers of the national legislative body (the Congress), forbidding it to do three things, namely:

Under amendment I:

(1) "Congress shall make no law respecting an establishment of religion," or (2) "prohibiting the free exercise thereof."

Under article VI, clause 3:

(3) "No religious test shall ever be required as a qualification to any office or public trust under the United States."

THE SAFEGUARDING OF RELIGIOUS LIBERTIES IS LEFT TO THE RESPECTIVE STATES

As a matter of fact, the Supreme Court of the United States has repeatedly held that the Constitution of the United States makes no provision for safeguarding the citizens of the respective States in their religious liberties; that being left to the respective States.

All that the National Government is obligated to do in this connection is in the shape of certain limitations or prohibitions imposed on the National Congress. It is forbidden to do any of the three things above specified. It is not positively required to do any specific act in the way of a guaranty of individual freedom of religion.

Nor does the Constitution of the United States impose any limitations on the reserved powers of the respective States in respect to their authority over religious liberty (unless some limitations on those powers were imposed by the fourteenth amendment, adopted on July 28, 1868, and commonly referred to as one of the three slavery amendments—about which there is serious question).

Thus, in the case of *Permoli* v. *Municipality of the City of New Orleans*, decided in 1845, and reported in Third Howard, at page 609, Mr. Justice Catron, delivering the unanimous opinion of the Court, said:

"The Constitution makes no provision for protecting the citizens of the respective States in their religious liberties; this is left to the State constitutions and laws; nor is there any inhibition imposed by the Constitution of the United States in this respect on the States."

THE FEDERAL BILL OF RIGHTS (THE FIRST 10 AMENDMENTS) IMPOSED RESTRICTIONS ONLY ON THE NATIONAL GOVERNMENT, AND NOT ON THE STATES

As to the first 10 amendments to the Constitution of the United States (known as the Federal Bill of Rights), the Supreme Court has repeatedly held that these amendments applied only to the Federal Government, and did not apply to the States.

In the case of *United States* v. *Cruikshank* (92 U. S. 542), the Court said:

"The first amendment to the Constitution * * * like the other amendments proposed and adopted at the same time—including all of the first 10 amendments—was not intended to limit the powers of the State governments in respect to their own citizens, but to operate upon the National Government alone."

"* * * The scope and application of these amendments are no longer subjects of discussion here."

"They left the authority of the States just where they found it, and added nothing to the already existing powers of the United States."

In the case of *Brown* v. *New Jersey* (175 U. S., p. 174), decided in 1899, the Court said:

"The first 10 amendments to the Federal Constitution contain no restrictions on the power of the States, but were intended to operate solely on the Federal Government." and the Court then proceeds to refer to 11 other decisions made by it maintaining this view.

In certainly as many as a dozen decisions the Supreme Court has reiterated this opinion, and hence it may be declared that the United States has no authority under the first or under any of the first 10 amendments to control any of the States in their legislation regarding freedom of religion.

In the case of *Bolin* v. *Nebraska* (decided in 1900) (176 U. S., at pp. 88–89), the Supreme Court said:

"This Court has also repeatedly held that the first eight amendments to the Constitution applied only to the Federal courts, and it certainly could never have been intended that these amendments should be imposed upon Nebraska, and thereby a hard and fast rule made for that State that would forever preclude amendments inconsistent with the Bill of Rights of the Federal Constitution, and which this Court has held to be applicable only to the Federal courts."

"As we have repeatedly held, the fourteenth amendment was not intended to curtail the powers of the States so to amend their laws as to make them conform to the wishes of their citizens, to changed views of administration, or to the exigencies of their social life."

"It may be readily supposed that the inhabitants of each State understand perfectly their own local needs and interests, and, with the facilities with which the constitutions of the several States may be amended, it is scarcely possible that any evil which might be occasioned by an improvident amendment would not be readily redressed."

CONCLUSIONS FROM THESE PROVISIONS AND DECISIONS

From these provisions of the Constitution, and from the decisions of the Supreme Court of the United States construing the same, it is evident that:

1. The Federal Constitution does not guarantee individual freedom of religion but only imposes certain inhibitions on the powers of the national Congress—such as that "the Congress shall pass no law prohibiting the free exercise of religion." Freedom of religion is secured to the citizen of a State by his State constitution and by the laws of his State. The inhibitions imposed on the Congress by the Federal Constitution do not apply to the States.

2. Nothing in the first amendment to the Constitution of the United States prevents any of the States from passing laws "respecting an establishment of religion," or from "prohibiting the free exercise thereof."

3. The first amendment does not forbid the Congress to pass laws prohibiting the free exercise of irreligion or of atheism. Nor is there any other provision of the Constitution forbidding Congress to do this.

American personal liberty imports an absolute and unlimited individual freedom of thought and belief; but a restricted freedom in the individual exercise of those beliefs.

Congress can properly impose such limitations on their individual exercise as will prevent any impairment or defeat of the similar and equal rights of others, or any defeat of, or interference with, the administration by government of its entrusted authority to maintain the public safety, health, morals, and welfare.

Personal freedom does not mean unbridled license, but it means ordered liberty under general laws.

THE MEANING OF THE WORD "RELIGION" AS USED IN THE CONSTITUTION

Just what is the meaning of the word "religion" as used in this first amendment to the Constitution?

Webster's New International Dictionary defines religion as:

"The outward act or form by which men indicate their recognition of the existence of a god or of gods having power over their destiny, to whom obedience, service, and honor are due; the feeling or expression of human love, fear, or awe of some superhuman and overruling power, whether by profession of belief, by observance of rites and ceremonies, or by the conduct of life; a system of faith and worship; a manifestation of piety."

In Words and Phrases, volume 7, page 6063, religion is defined as:

"Religion is morality, with a sanction drawn from a future state of rewards and punishments." (*McAllister* v. *Marshall* (Penn.), 6 Bin, 338, 350; 6 American Decisions, 408.)

"In all Christian countries the word 'religion' is ordinarily understood to mean some system of faith and practice resting on the idea of the existence of one God, the Creator and Ruler, to whom His creatures owe obedience and love." In re Knight's Estate (28 Atlantic, 303; 159 Penn. 500).

COURT DECISIONS AS TO THE GOVERNMENT'S POWERS OVER THE FREE EXERCISE OF RELIGION

In the case of *Davis* v. *Beason* (133 U. S. 333), decided in 1890, the Supreme Court of the United States, in construing the meaning of the word "religion" in the first amendment, said in an unanimous opinion delivered by Mr. Justice Field:

"The term 'religion' has reference to one's views of his relations to his Creator, and to the obligations they impose of reverence for His being and character, and of obedience to His will.

"It is often confounded with the cultus or form of worship of a particular sect, but is distinguishable from the latter.

"The first amendment to the Constitution, in declaring that Congress shall make no law respecting an establishment of religion, or forbidding the free exercise thereof, was intended to allow everyone under the jurisdiction of the United States to entertain such notions regarding his relations to his Maker and the duties they impose as may be approved by his judgment and conscience, and to exhibit his sentiments in such form of worship as he may think proper, not injurious to the equal rights of others, and to prohibit legislation for the support of any religious tenets, or the modes of worship of any sect."

"The oppressive measures adopted, and the cruelties and punishments inflicted by the governments of Europe for many ages to compel parties to conform in their religious beliefs and modes of worship to the views of the most numerous sect, and the folly of attempting in that way to control the mental operations of persons and enforce an outward conformity to a prescribed standard, led to the adoption of the amendment in question."

"It was never intended or supposed that the amendment could be invoked as a protection against legislation for the punishment of acts incident to the peace, good order, and morals of society."

"With man's relation to his Maker and the obligations he may think they impose, and the manner in which an expression shall be made by him of his belief on these subjects, no interference can be permitted, provided always the laws of society, designed to secure its peace and prosperity, and the morale of its people, are not interfered with."

"However free the exercise of religion may be, it must be subordinate to the criminal laws of the country, passed with reference to

actions regarded by general consent as properly the subjects of punitive legislation."

In the case of *The Church of Jesus Christ of Latter Day Saints* (*The Mormon Church*) v. *The United States* (136 U. S., pp. 1–68); the Supreme Court fully considered the meaning and extent of the limitations imposed on the power of Congress in reference to religion by the first amendment; and held that—

"The State has a perfect right to prohibit polygamy, and all other open offenses against the enlightened sentiment of mankind, notwithstanding the pretense of religious conviction by which they may be advocated and practiced."

And the Court further held that "since the Church of Jesus Christ of Latter Day Saints has persistently used, and claimed the right to use, and the unincorporated community still claims the same right to use, the funds with which the late corporation was endowed for the purpose of promoting and propagating the unlawful practice as an integral part of their religious usages" the State, through the courts, had the right to take possession of the property of the church which had been devoted to a public or charitable use which was illegal, and to devote that property to some other like purpose that was legal.

DISTINCTION BETWEEN A RIGHT AND THE EXERCISE OF THAT RIGHT

There is a marked difference between a God-given right, which is admitted to exist, and which is admittedly vested in each human being in equal measure as an incident of the equal humanity of each, and the freedom to exercise that God-given right according to the wishes of the individual.

The American concept of individual liberty regards the individual human being as being divinely endowed with absolute and unlimited individual freedom of thought and of beliefs; but with a limited and restricted freedom in the individual exercise of those individual beliefs.

The American theory, as set forth in the Declaration of Independence and the Federal Bill of Rights (and the bills of rights of the several States) is that each human being, by virtue of his humanity, has been directly and equally endowed by the Creator with certain individual and unalienable rights, among which are life, liberty, the pursuit of happiness, freedom of religious belief, free speech, a free press, and many others.

But the individual's exercise of each of these rights must be subject to the condition that through such exercise, he does not defeat or impair the similar and equal rights of all other individuals; and, in a politically organized State, this individual exercise of inherent rights must be carried on in such a way as not to defeat or violate the general laws enacted by the community will in order to safeguard and maintain the public safety, health, morals, and welfare.

The State cannot justly prohibit or restrain the exercise of the right according to the will of the individual, except to the extent necessary to assure that the individual, in so exercising his right along the lines of his own choice, does not defeat or impair the similar and equal rights of other individuals and does not violate the laws enacted by the community for the preservation and safeguarding of the public safety, health, morals, and welfare; which laws must be general laws applicable to all alike. This is what is meant by the orderly exercise of individual rights.

Thus, while each individual has the inherent right to worship such God as he chooses, in such way as he deems proper, he cannot conduct his public worship in the midst of a crowded public thoroughfare, and thereby impede traffic. Nor can he offer human sacrifices as a part of his worship; for to do this would impair the right to life of those so sacrificed. The primary aim of Americanism is to secure an equality of inherent individual rights and an equality of opportunity for the orderly exercise of those rights according to individual choice, to every human being subject to its jurisdiction.[1]

EVERY HUMAN BEING CAN THINK OR BELIEVE WHAT HE PLEASES

In the United States, every human being has an inherent right to worship such God as he chooses, or to deny the existence of any God. He has an inherent right to believe that there is no God—just as he has an inherent right to think that the Government of the United States should be overthrown by force and violence.

He has a right to think what he pleases; and government has no delegated authority authorizing it in any way to control his thinking or his beliefs.

But when he commits an overt act as a result of his thinking or of his belief, and when that overt act defeats or impairs the similar and equal rights of others, or violates any of the regulations enacted by government for the maintenance of the public safety, health, morals, or welfare (provided that such regulations are within the delegated powers of government), then government can interfere with, and restrain, his exercise of his individual rights, so as to safeguard the similar and equal rights of others, and so as to protect the Government in the exercise of its entrusted authority.

If an atheist believes that there is no God, he has a complete and unquestioned right to hold this view. But if he attempts to propagate his faith or lack of faith, to urge others to become atheists, and as a part of their belief that there is no God, to deny the existence of inherent individual rights bestowed by God to each individual in equal measure, and to urge that force be substituted for justice, and that the Government under which the existence of inherent rights is recognized and safeguarded be overthrown by force and violence, then the Government has the right and the duty to prevent his exercise of his alleged individual rights in this effort to impair and defeat the similar and equal rights of others, and to defeat the administration by government of its entrusted authority.

[1] In a "Note" attached at the end of the case of *Davis* v. *Beason* as published in Book 33 of the Lawyer's Cooperative Publishing Co.'s Edition of the Reports of the Supreme Court of the United States, at page 642 of that volume, it is stated:

"NOTE.—The Constitutions of several States, in providing for religious freedom, have declared expressly that such freedoms shall not be construed to excuse acts of licentiousness, or to justify practices inconsistent with the peace and safety of the State.

"Thus, the Constitution of New York of 1777 provides as follows:

"The free exercise and enjoyment of religious profession and worship, without discrimination or preference, shall forever hereafter be allowed, within this State, to all mankind: *Provided*, That the liberty of conscience, hereby granted, shall not be so construed as to excuse acts of licentiousness, or justify practices inconsistent with the peace or safety of this State" (Art. XXXVIII). The same declaration is repeated in the Constitution of 1821 (Art. VII, sec. 3) and in that of 1846 (Art. I, sec. 3), except that for the words "hereby granted" the words "hereby secured" are substituted.

The Constitutions of California, Colorado, Connecticut, Florida, Georgia, Illinois, Maryland, Minnesota, Mississippi, Missouri, Nevada, and South Carolina contain a similar declaration.

The government established to secure the inalienable, individual, God-given rights of all its citizens; to secure the equality of such rights and an equal opportunity to each and every citizen for their orderly exercise; cannot condone or justify any overt acts by any one citizen, designed to destroy the very government which safeguards those rights, or to deny or defeat the very rights which the atheist vouches as justifying his actions.

ATHEISM IS BASED ON A NEGATIVE

Atheism is a negation of the existence of a God. It is not a religion; it is a repudiation and denial of all religion.

Webster defines atheism as "disbelief in, or denial of, the existence of a God, or supreme intelligent being."

He defines an atheist as "one who disbelieves or denies the existence of a God, or supreme intelligent being."

Words and Phrases, volume 1, page 615, defines atheist as:

"An atheist is one who does not believe in the existence of a God." (*Gibson* v. *American Mut. Life Ins. Co.* (37 N. Y. 580, 584).)

"An atheist is one who disbelieves in the existence of a God, who is the rewarder of truth, and an avenger of falsehood. Such a person is incompetent as a witness." (*Thurston* v. *Whitney* (50 Mass. (2 Cush.) 104, 110); (*Commonwealth* v. *Hills* (64 Mass. (10 Cush.) 530, 532).)

"Atheists differ from all other people in owning no religion." (*Hale* v. *Everett* (53 N. H., 9, 154; 16 Am. Rep. 82).)

Communism is based on atheism, on the denial of the existence of a God, and on pure materialism.

Americanism is based on a belief in God and on spiritual foundations.

The Supreme Court of the United States has held that:

"No purpose or action against religion can be imputed to any legislation, State, or nation, because this is a religious people. * * * This is a Christian nation."

Communism and Americanism cannot coexist in the same country; nor can Communist principles be grafted on Americanism without destroying it.

ATHEISM IS THE BASIC PRINCIPLE OF COMMUNISM

As a matter of fact, atheism is an essential element of communism.

Frederick Engel said in his Socialism, Utopian and Scientific, 1901, English edition, at page 19:

"Nowadays * * * there is absolutely no room for a creator or a ruler."

August Bebel, who was one of the leading German Socialists, declared in the Reichstag on September 16, 1878:

"Gentlemen, you attack our views on religion because they are atheistic and materialistic. I acknowledge the correctness of the impeachment. I am firmly convinced that socialism finally leads to atheism."

Karl Marx wrote of socialism:

"We shall have deserved well of it if we can stir up hatred and contempt against all existing institutions. We make war against all prevailing ideas of the state, of country, or patriotism. The idea of God is the keystone of a perverted civilization. It must be destroyed. The true root of liberty, equality, and culture is atheism."

The A. B. C. of Communism, page 37, states that:

"In practice, no less than in theory, communism is incompatible with religious faith."

Leibnecht said:

"It is our duty as Socialists to root out the faith in God with all our might. Nor is anyone worthy of the name who does not consecrate himself to the spread of atheism."

Bebel said:

"Christianity and socialism stand toward each other as fire and water. Christianity is the enemy of liberty and civilization. It has kept mankind in slavery and oppression."

Bakunine said:

"We declare ourselves atheists. We seek the abolition of all religion and the abolition of marriage."

Comrade Yaroslavsky said:

"We are against God, we are against capital. We are for socialism. We are for a world union of toilers. We are for the Communist International."

The Atheist at His Bench, an organ of the Moscow Committee of the All Russian Communist Party of the Bolsheviki, printed at Moscow, in its issue No. 8, 1928, said:

"The central committee of the All Russian Communist Party (of the Bolsheviki) decided that the most important task at hand for the party must be the most attentive consideration of the problems on the program of the VI Congress, and the most important question of the program for the Communist International is the militant demand, the fight against religion."

THE SPIRITUAL FOUNDATIONS OF AMERICANISM

The Supreme Court of the United States, in the case of *Gulf, Colorado & Santa Fe Ry. Co.* v. *Ellis* (165 U. S., 159–60), said:

"The first official action of this Nation declared the foundation of Government in these words: 'We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness.'

"The latter (the Constitution) is but the body and the letter of which the former (the Declaration of Independence) is the thought and the spirit, and it is always safe to read the letter of the Constitution in the spirit of the Declaration of Independence."

In the *Slaughter House Cases* (111 U. S. 740), Mr. Justice Field described the Declaration of Independence as "That new evangel of liberty to the people."

In the case of *The Church of The Holy Trinity* v. *United States* (decided in 1892) (143 U. S., 457), Mr. Justice Brewer, delivering the unanimous opinion of the Court, said:

"No purpose or action against religion can be imputed to any legislation, state or nation, because this is a religious people. This is historically true. * * *

"Many other matters which might be noticed add a volume of unofficial declarations that this is a Christian nation."

Our entire political theory and governmental plan is based on the assertion of the existence of a Creator or God, from whom we derive all of our human rights; and that, as these rights are the gift of God and are equally conferred by Him upon each human being, as incident to the equal humanity of each, it is the primary duty of government to secure these rights equally to all human beings subject to its jurisdiction.

If and when we deny the existence of a God, we thereby repudiate the entire idea that human rights are derived from so supreme a source that government cannot justly deprive any individual of these rights—we thereby abandon the idea of divinely conferred human rights, and substitute therefor the idea that our so-called rights are either concessions from the majority (which majority can at any time withdraw those concessions), or are privileges extended by government, which can at any time revoke the same, so that might makes right, and the people must depend for their liberties on the will of the temporary majority or the whims of their rulers.

We cannot deny the existence of God, or repudiate the idea that individual human rights are a gift from Him, without thereby wiping out our entire structure of liberty. The existence and recognition of a God are essential to the maintenance of human freedom. If there were no God, it would be necessary to assume one, in order to establish a permanent and dependable structure of individual and political liberty.

THE MATERIALISTIC FOUNDATIONS OF ATHEISM AND COMMUNISM

Atheism and communism deny the existence of any God from whom such individual rights could have been secured and hence deny the existence of God-given rights. The Communists are today preaching and spreading this atheistic doctrine in the effort to destroy Americanism to abolish human liberty, and to make the people the subjects and slaves of their rulers.

They boldly claim that they have the right to do this in this country, because the United States Government is forbidden to pass a law prohibiting the free exercise of religion, or abridging the freedom of speech or of the press, and yet they deny all religion. How can the inhibition against passing a law prohibiting the free exercise of religion, confer any authority to anyone to deny all religion? Communism does not desire freedom of religion, but rather demands that our Government protect it in its efforts to wipe out all religion, and thereby to wipe out all claim to the free exercise by the individual of his God-given rights.

WHY AMERICAN GOVERNMENT IS LIMITED IN ITS PURPOSES AND POWERS

The reason why our Government is forbidden to pass such laws is that we hold that these rights to the free exercise of religious belief, to freedom of speech and of the press, are the gifts with which the Creator (God) has directly endowed each human being. Because God gave these rights in equal measure to all human beings, as incident to the equal humanity of each, it is the duty of just government to secure this equality to all alike. To that end, just government must impose on the individual exercise of each and all of these rights such restraints as will prevent the defeat or impairment of the similar and equal rights of others; and as will prevent interference with the exercise by government of the authority entrusted to it by the people for the purpose of securing to every human being subject to its jurisdiction an equality of such rights and an equal opportunity for their orderly exercise along lines of individual choice.

The authority exercised by government must be limited so that its entrusted powers cannot be exercised so as to secure greater rights, or greater opportunity for their orderly exercise, to any individual or group than is accorded to all other individuals or groups. Hence just government must be limited government. There can be no individual or political liberty, where government is granted unbridled power; or where governmental restraints on the exercise of individual rights are not equally applicable to all.

THE ATHEIST DENIES THE EXISTENCE OF GOD-GIVEN RIGHTS

The atheist denies the existence of God, and hence denies the existence of any God-given rights—which are the only rights which American Government was established to secure. Curiously enough, the atheist occupies the position of claiming to have a God-given right to deny that God ever gave any rights to him or to anybody else; and he further claims the right to exercise his alleged rights so as to defeat or impair all of the rights of others and of himself as well.

He denies that there is a God; and hence he must deny that God ever gave to him the right to deny that God exists, or ever gave to him or to anybody else any rights of any kind. In denying that he has any rights received from the Deity, he must claim any rights that he attempts to exercise as having been derived by concession of the majority or by gift from the Government—and yet he resents any attempt of either Government or of the majority to regulate the exercise by him of any rights that he must claim exist by virtue of concessions or grants from the majority or from the rulers.

He claims the protection of government in his exercise of his alleged right to deny that he has any rights which government should protect, and in his claim that others have no such rights as he asserts, and that those others are not entitled to protection in the exercise of similar and equal rights to those which he asserts.

His claim is in itself a contradiction in terms. The atheist asserts a title to rights, while at the same time he denies that any such rights as he claims ever existed, because he denies the existence of the grantor of the rights. He asserts the right to deny the existence of a God, states that he is against God, and that his purpose is to "Root out the faith in God" and that he seeks "the abolition of all religion."

The impudence of the Communist in asking the intended victims of his efforts to protect him in his assaults upon their liberties is equaled only by the gullibility of those potential victims whom he seeks to destroy, in listening to, and even supporting, such specious arguments. Those arguments cannot be justified by reason, logic, justice, expediency, or common sense.

Under the American theory the Communist can think and believe what he chooses. But he cannot claim any part of a heritage, when he denies that the party from whom he claims this heritage ever existed; nor can he use his claimed portion of that heritage to defeat the shares of others in the same. It is a recognized principle of law that a man cannot assert a claim to the title of property, and at the same time deny the existence of the grantor under whom he claims.

There is a lot of nonsense talked about the inherent rights of Communists and Atheists; while little attention is paid to the rights of others which communism seeks to destroy.

Atheism attempts to prove a negative, which is impossible. It thrives on controversy, and hence it welcomes attack; for when the attack is made, it immediately insists that the attacker prove every statement that he makes, while the Atheist does not attempt to prove his claims, but supports his case by criticising and attacking the opposition.

Neither communism nor atheism can justly claim constitutional protection in the exercise of its principles and beliefs; because the exercise of communism and atheism is basically an attack on the entire theory of individual human rights, and is directed to denying and wiping out the very rights which the Communist and Atheist invoke as justifying their attacks.

Atheism is not a religion, but is a denial of all religion.

The Constitution forbids the Congress to pass any law prohibiting the free exercise of religion; but how could a law prohibiting or regulating the free exercise of atheism be construed as a law prohibiting the free exercise of religion, when atheism is a direct negation and denial of religion itself?

Is not atheism (or a denial of the Holy Spirit of God) a blasphemy against the Holy Spirit or Holy Ghost which Jesus described as the unforgivable sin?

Should Americans in any way condone or temporize with any such blasphemy?

THE UNFORGIVABLE SIN—DENYING THE HOLY SPIRIT

There is a striking passage in the New Testament which seems to have a direct bearing on this problem of whether anyone is entitled to protection in the free exercise of atheism.

In Luke 12: 10, Jesus said:

"And everyone who shall speak a word against the Son of Man, it shall be forgiven him; but unto him that blasphemeth against the Holy Spirit, it shall not be forgiven."

In Matthew 12: 32, Jesus said:

"Whosoever shall speak a word against the Son of Man, it shall be forgiven him; but whosoever shall speak against the Holy Spirit, it shall not be forgiven him, neither in this world, nor in that which is to come."

In Mark 3:28–29, Jesus said:

"All their sins shall be forgiven unto the sons of men, and their blasphemies wherewith soever they shall blaspheme; but whosoever shall blaspheme against the Holy Spirit hath never forgiveness, but is guilty of an eternal sin."

Here Jesus states that men may be forgiven for rejecting Him or any other specific God; but they will not be forgiven for denying or speaking against the Holy Spirit (the Spirit of God). They can be forgiven for refusing to accept and reverence and obey a specific God; but they cannot be forgiven for denying that there is a God—for denying and attacking the Spirit of God—the consciousness that there is a God, which consciousness has been implanted in each human being as an incident to his humanity, and as a part of his Godlikeness.

What is blasphemy?

The Century Dictionary states that blasphemy is—

"In Old Testament usage, any attempt to diminish the reverence with which Jehovah's name was invested as the sovereign king of the Jews, or to turn the hearts of the people from their complete allegiance to him."

Blasphemy, cognizable by common law, is described by Blackstone to be—

"Denying the being or providence of God, contumelious reproaches of our Saviour Christ, profane scoffing at the Holy Scriptures, or exposing it to contempt or ridicule."

It is described by Kent as "maliciously reviling God or religion"; and

It is described by Chief Justice Samuel Shaw as "speaking evil of the Deity with an impious purpose to derogate from the Divine Majesty, and to alienate the minds of others from the love and reverence of God."

Words and Phrases, volume 1, page 807, says of blasphemy:

"Blasphemy consists in speaking evil of the Deity with an impious purpose to derogate from the Divine Majesty, and to alienate the minds of others from the love and reverence of God.

"It is purposely using words concerning God which are calculated and designed to impair and destroy the reverence, respect, and confidence due to Him as the intelligent creator, governor, and judge of the world.

"It is a willful and malicious attempt to lessen men's reverence of God, by denying His existence or His attributes as an intelligent creator and to prevent others from having confidence in Him as such."

Blackstone defines blasphemy as denying the Almighty's being or providence (*Commonwealth* v. *Kneeland* (37 Mass. (20 Pick.) 206, 213)).

"Blasphemy consists in maliciously reviling God or religion" (*People* v. *Ruggles* ((N. Y.) 8 Johns 200, 292, 5 Am. Dec. 335)).

SATAN'S REVOLT AGAINST GOD

It is also well to remember that Satan was an angel in Heaven, who revolted against God and was cast down out of Heaven in consequence. (See Luke 10, 18; 2d Peter 2, 4; Jude 6; Rev. 12, 9, 13.)

As an angel, the devil had been endowed by the Creator with the rights of free will and free choice. He had an inherent right to worship the God who created him, or to refuse to worship Him—to obey Him, or to refuse to obey Him. God never questioned the possession by Satan of this inherent right. (Job 1, 6–12.) But God did hold Satan responsible for his exercise of this inherent right of choice.

When Satan exercised his right of choice by revolting against God, the Lord did not withdraw from Satan the power to continue to exercise his power of choice. But God did decree that Satan should be punished for his voluntary and willful misuse of his right of choice. He was cast out of Heaven, sentenced to ultimate defeat and to final punishment. (Rev. 20, 1–3; 7–10.)

MAN MAY REJECT A SPECIFIC GOD AND BE FORGIVEN, BUT DENIAL OF THE EXISTENCE OF THE DIVINE SPIRIT IS UNFORGIVABLE

The God of the Christians desires no followers who can be retained only by force. The Christian must be a voluntary worshipper. Even if a man rejects Jesus, he can be forgiven in the future. But if a man denies the Spirit of God, and blasphemes against that Spirit, if he denies and blasphemes against the existence of any God, then, according to the Scriptures, he has committed the unpardonable sin, for which there is no forgiveness.

God admits that each human being has been endowed by Him with the right of free will and free choice, so that each has the right and the power to deny that God exists, and to thus blaspheme against the Holy Spirit; but He says that, if a man so uses his God-given power of choice, and denies that the Deity has endowed him with a portion of His Divinity—making man in "the image and likeness of God"—then that man has committed the unpardonable sin, for which there is no forgiveness, either here or hereafter. The Communist or Atheist who blasphemes against the Holy Spirit, by denying its existence—who denies that there is such a thing as Holiness or Divine Justice—cannot demand the enforcement and protection of any right derived from the Deity whose existence he denies.

THE GOD-GIVEN RIGHTS WHICH AMERICAN GOVERNMENT GUARANTEES TO SAFEGUARD

Americanism is based on a belief in God, and on an assertion that each human being has been directly and equally endowed with certain unalienable and individual rights, which American Government was established to secure. Every American citizen has an inherent right to deny the existence of a God, if he wishes to do so, because God gave him this right. Each citizen can think and believe what he will. For his thoughts and beliefs he is accountable to the Deity, and not to human government. American Government does not attempt to control or punish free thought or belief.

But, when the citizen attempts to carry his thoughts and belief into action, then the government has the authority and the duty to so regulate the exercise of individual right that it will not defeat or impair the similar and equal rights of others, and will not interfere with or defeat the administration by government of the authority entrusted to it to be exercised to maintain the safety, health, morals, and welfare of the community.

If and when the individual citizen, in the exercise of his attributes of free will and free choice, commits any overt act that defeats or impairs the equal rights of others, or interferes with the administration by government of its entrusted authority, he must be restrained. In that case, he cannot invoke the protection of the government in his unlawful efforts to defeat the ends for which that government was established.

When the citizen exercises his rights of thought and belief in an effort to induce others to deny the existence of a God, and thereby to deny the existence of the God-given rights of freedom of religion, of speech, and of the press; then he cannot claim that he is taking this action by virtue of his rights of freedom of religion, of speech, or of the press; for he is denying that any such rights exist.

It is then not only the right of government, but its duty, to restrain such action by the citizen, for the purpose of maintaining the government itself, and for the purpose of safeguarding the rights of its other citizens.

The government must admit that the individual has been endowed by the Creator with the rights of free will and free choice; but at the same time, the government should restrain any exercise of these rights which will defeat or impair the structure of ordered liberty under which these rights are secured to all citizens alike. It should punish any such exercise of these rights, and should deny to the offender the power so to exercise these rights to the detriment of others and in the effort to destroy the government which guarantees the preservation of these rights.

The Communist or Atheist who so seeks to misuse his inherent rights and to exercise them so as to destroy our entire structure of individual and political liberty, places himself outside of the pale of governmental protection; and those who assist him in such an effort cannot claim that they are entitled to take such action because they are divinely endowed with the rights of freedom of religion, of speech, and of the press.

The Communists and atheists openly proclaim that they have no religious belief, that they are opposed to all religion, and seek to destroy it. They have no religion to be protected by maintaining the principle of religious freedom. They deny the existence of a God, and certainly there can be no religious beliefs where there is no God to be worshiped and honored. Government can no more be expected to safeguard the Communist and the atheist in their attempts to overthrow the Government which was established to safeguard his God-given rights, than could God Himself have been expected to safeguard and aid Satan in his revolt against Him, and in Satan's attempt to seize control of Heaven.

AMERICAN GOVERNMENT DOES NOT GUARANTEE THE FREE EXERCISE OF EITHER COMMUNISM OR ATHEISM

The Constitution of the United States forbids the Congress to pass any law prohibiting the free exercise of religion; but it does not forbid it to pass laws prohibiting the free exercise of atheism; or prohibiting the public denial of all religion, or the public denial of the existence of a God. No government can be expected to safeguard the exercise of any right by any of its citizens, when that exercise of the asserted right is directed toward the undermining and ultimate destruction of the government which is expected to provide the safeguards.

Congress should pass laws prohibiting the free exercise of communism and atheism; because both are being exercised in an effort to wipe out and destroy all the inherent rights of American citizens, including the rights of freedom of religion, of speech, and of the press—to destroy the American structure of human liberty, and to make government the master of the people.

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wapakoneta (Ohio) Daily News of March 17, 1949:

LITTLE DIFFERENCE

Dr. Willard C. Rappleye, dean of the faculty of medicine at Columbia University, recently said that there is little difference between a doctor under socialism and a doctor under fascism. All socialized medical

plans, he added, lead toward mediocrity and ultimate destruction of medical education and practice.

There are wide theoretical cleavages between fascism, communism, and socialism. But, in practice, the end result is the same. The individual is subjected to rigid regimentation and dictatorship. Every calling is bound with bureaucratic red tape. A rule book takes the place of expert judgment.

This is true of medicine as of everything else. Objective reports and experiments with government medicine in England and elsewhere show little variance in the pattern. Doctors are required to treat an impossibly large number of patients, and an inferior system of assembly-line medicine results. An excessive amount of the doctor's time is taken up with filling out reports and satisfying the bureaucratic bosses. There is little money or leisure for research and experiment.

It has been said that under this sort of system the masses of people become second-class patients—patients who get second-rate attention, because of the impossibility of the job confronting the doctor. That accurately sums up the case against socialized or government-dominated medicine.

REA Housing Bill Endorsed by the Cooperative League's Director of Washington Office — Differences Between Pending Housing Bills

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. PATMAN. Mr. Speaker, Mr. John Carson, director of the Washington office of the Cooperative League, in the following letter, has endorsed H. R. 2811, the REA housing bill which I introduced some time ago:

THE COOPERATIVE LEAGUE OF THE
UNITED STATES OF AMERICA,
Washington, D. C., March 15, 1949.

Hon. WRIGHT PATMAN,
House Office Building,
Washington, D. C.

DEAR MR. CONGRESSMAN: When it seems that most of the pressures in our country tend toward the concentration of economic forces, and to the creation of the proletariat, it is encouraging and inspiring to hear your cry for home ownership as voiced in your REA housing bill, H. R. 2811. It is entirely true, I believe, that the greatest protection for our freedoms and our democratic way of life is to be found in ownership, widely distributed among our people, and particularly in home ownership.

You may know that a few of us began some 8 or 10 or 12 years ago to talk about cooperative-mutual housing. You may know that some cooperative-mutual projects were built during the early pre-war days and that the record made in those projects constitutes a challenge to everyone interested in housing developments. Your REA housing bill offers us an opportunity now to extend those programs.

I am writing, personally, and not in my capacity as director of the Washington office of the Cooperative League of the United States of America. Until a matter is presented to our board of directors and it is approved, we have no authority to do anything which would imply that it was the league acting. I can only tell you, therefore, what I think about your REA housing bill and what I shall report to our millions of families throughout the country who are the member-owners of the league. There are some amendments which, I am sure, we would want to present and which I suspect you would be happy to have presented, for discussion, at least. But I cannot think of any reason why anyone who was sincerely interested in cooperative housing would not be enthusiastic about your bill, particularly if they had had any experience in the field of cooperative housing.

Yours sincerely,

JOHN CARSON,
Director, Washington Office.

I am also inserting the following statement prepared by Ivan Carson, former national rent director, concerning the differences in the different housing bills pending before the Banking and Currency Committee of the House:

ANALYSIS OF BILLS PROVIDING FEDERAL AID TO MUTUAL OWNERSHIP AND COOPERATIVE HOUSING PROJECTS

There have been introduced by both Democrats and Republicans in the Senate and the House a number of bills which would extend Federal aid to mutual ownership and cooperative housing projects. From the number of such bills there appears to be a general and bipartisan recognition of the fact that the development of nonprofit housing cooperatives should receive Federal assistance as an effective means for helping correct certain maladjustments in the present housing situation and for producing housing in volume at lower costs.

H. R. 1938 introduced by Congressman SPENCE and S. 712 introduced by Senator MAYBANK, chairmen of the House and Senate Banking and Currency Committees, respectively, contain provisions relating to mutual ownership and cooperative housing projects in addition to suggested amendments to legislation governing the insurance of mortgages by FHA. These bills (H. R. 1938 and S. 712) are Administration measures and represent the thinking of officials of the Housing and Home Finance Agency.

Consideration of S. 712 was included in the hearings recently completed by the Senate Banking and Currency Committee on general housing legislation. However, the report of the committee (Senate Rept. No. 84, 81st Con.) does not discuss S. 712. In other words, the action of the Senate Banking and Currency Committee to date has been confined to reporting out favorably S. 138 with amendments as S. 1070, which was introduced by Senator ELLENDER for himself and a group of 21 Senators, Democrats and Republicans, on February 25. In addition to a declaration of national housing policy, S. 1070 contains titles concerning slum clearance, low-rent public housing, housing research, and farm housing. Apparently, it is the committee's plan to consider separately suggested amendments to FHA legislation and cooperative housing.

The significant differences between various bills introduced as they relate to mutual ownership and cooperative housing projects may be grouped under the following: Methods of administration, the extent and the manner in which Federal aid should be extended in the financing of housing cooperatives, the methods of extending veterans' preference and the limitations placed on the organization of cooperative housing associations within fixed-income groups in order to qualify for Federal aid.

METHOD OF ADMINISTRATION

Three proposals are made for the administration of Federal activities in this field: (1) By a separate constituent unit of the Housing and Home Finance Agency (H. R. 2811 introduced by Mr. PATMAN, H. R. 1973 by Mr. JAVITS, 1833 by Mrs. BOLTON, 1944 by Mr. TOLLEFSON, and 1974 by Mr. LODGE); (2) by the Director of a new division, the Housing Loan Administration, to be established in the office of the Housing and Home Finance Administrator, the Director to be appointed by the Administrator (H. R. 2738 introduced by Mr. BUCHANAN and H. R. 2516 by Mrs. DOUGLAS); and (3) by the Commissioner of the Federal Housing Administration (H. R. 1938 and S. 712).

The proposal to set up the Cooperative Housing Administration, a constituent unit, on a par with other units of the Housing and Home Finance Agency, as provided in the Patman bill, is accounted for by the much broader conception of the job to be performed by the Federal Government which this bill envisions. If developed to their maximum, housing cooperatives can contribute substantially toward overcoming today's critical housing shortage. Through this medium, lower-priced housing in volume can be produced, and many thousands of American families who can't buy homes of their own today will be able to become home owners. The accomplishment of these worth-while objectives will be a full-time job for a Government agency. The potentialities of the program for good are far too great to trust the responsibility for carrying it out to an adjunct of another operation which has many other duties and functions to perform.

REA's success demonstrates that a program of this nature and as broad in scope requires that it be administered by a separate unit set up to do that job alone and charged with the sole responsibility of seeing to it that the program's objectives are accomplished. To make the administration of the cooperative housing program a part-time job of FHA would be unfair to FHA and to cooperative housing.

EXTENT AND METHOD OF FEDERAL FINANCING AID

One group of bills of which H. R. 1973, introduced by Mr. JAVITS, is typical, would authorize direct loans by the Federal Government as the sole method for extending Government aid in the financing of housing cooperatives. FHA mortgage insurance would not be utilized for this purpose. The bills in the other group (H. R. 2811, 1938, and S. 712), on the other hand, contemplate that financing aid will be extended by the Government primarily through the insurance of mortgages by FHA.

It is true that the bills in the latter group would authorize direct loans by the Government to cooperatives. The significant difference lies in the emphasis placed on Government lending. H. R. 1938 and S. 712 provide that direct loans may be made by the Federal National Mortgage Association, and, while not expressly stated, the intent appears to be that direct loans by the Government would not be the chief means of financing. The Patman bill makes this intent clear by stating that direct loans will not be made except where an association presents evidence satisfactory to the Commissioner that private financing is not available. In other words, loans would be made by the Federal Government only if necessary to enable the program to get under way or to keep it from bogging down.

The bills which provide for the financing of cooperatives by the Federal Government provide that interest on such loans shall be "at a rate not less than the going Federal rate of interest at the time the loan is made plus one-half of 1 percent." In addition to this low rate of interest a number of bills in this group, including H. R. 1973, 1938, 1944, and 1974, would authorize Government loans up to "the development or acquisition cost"—100-percent loans. H. R. 2738 and 2516 would fix a ceiling of 95 percent. All these bills would permit the period of the loan to be as long as 60 years. In short, the bills in this group would put the Federal

Government squarely in the mortgage-lending business directly in competition with our insurance companies, banks, and building and loan associations.

While H. R. 1938 and S. 712 do not specify terms, period, or interest rate of direct Government loans made to housing cooperatives, the assumption appears to be warranted that the intent is that such loans would be made on the same terms, at the same interest rate, and for the same period as private loans insured by FHA.

There is no question about where the Patman bill stands on the issue of Government mortgage lending against private mortgage lending. The bill states specifically that the Commissioner is authorized to make loans on mortgages "determined by him to be eligible for insurance." Therefore, in addition to stating that direct loans may be made by the Government only as a last-resort measure, the Patman bill provides that the interest rate, 4 percent, terms, and period shall be the same as private loans insured by FHA.

The objective of the Patman bill is to encourage the investment of private funds in mortgages secured by homes built and owned by nonprofit mutual ownership housing cooperatives and thus produce housing at lower costs and within the reach of the pocketbooks of the great mass of our people. This can be accomplished with the assistance provided in the Patman bill and it is not necessary for the Federal Government to invade the private mortgage lending business.

Development loans: H. R. 1973 (JAVITS) and its counterparts in the House do not grant specific authority to the Commissioner to make preliminary advances in the form of loans to cooperatives. This authority may be read into the language of section 503 (b), "Such loans ('for the purpose of assisting the development or acquisition of housing projects') shall not exceed the development or acquisition cost of such projects." This however is open to doubt. H. R. 2738 (BUCHANAN) and H. R. 2516 (Mrs. DOUGLAS) grant the Commissioner authority to make advances in the form of loans for development purposes; however, no such loan may exceed 1 percent of the estimated development cost. This is too restrictive. The maximum should be 5 percent, which is the customary amount expended for necessary work in the early stages of building projects. The Patman bill would grant authority to make loans for development purposes and preliminary expenses up to 5 percent of the estimated cost of the project when completed. Such loans would be consolidated in the mortgage.

In every building project there are preliminary steps which must be financed, such as securing architectural plans, legal expense, and land acquisition. It should not be necessary in all cases to make advances for these purposes; however there will be cases where some financial assistance in the early period will mean the difference between success and failure. This whole effort is directed toward helping the average American family obtain a home and the Government should stand ready to give every reasonable aid to groups which are serious in their desire to have homes of their own by forming housing cooperatives and which offer substantial promise of carrying their plans to a successful conclusion, but do not have the ready cash to finance the project in its early stages and before mortgage loan funds or commitments can be obtained. Obviously, serious and unnecessary limitations will be placed on the extent to which the program will be able to help thousands of American families become home owners and help solve our critical housing problem unless authority is granted to make development loans and in amounts large enough to accomplish the intended purpose.

VETERANS' PREFERENCE

The Javits bill, H. R. 1973, and its counterparts, and H. R. 2738 and 2516 would extend preference to veterans of World War II only if veterans and their families apply to rent units in a housing cooperative. The bill does not state the extent of the aid to be extended to would-be veteran tenants except that "such corporation in selecting tenants shall give preference, as among applicants eligible for occupancy of the dwelling and at the rent involved to families of veterans and servicemen." No preference is provided for veterans who want to become home owners.

Under the provisions of H. R. 1938 and S. 712 veterans would be granted preference only if 80 percent of the membership of a cooperative consists of veterans of World War II. Under these circumstances 100 percent of the loan would be insured.

The Patman bill, on the other hand, recognizes our debt to the veteran in a much more democratic way. Under this bill one veteran, or a dozen or a hundred veterans, could be granted preference. In other words, preference is granted to veterans as individuals irrespective of the number of veterans who are members of a cooperative. Not only is this plan more flexible but under it we can be certain that the benefits of preference would be extended to a larger number of veterans.

In addition to giving veterans preference in the renting of units, the Patman bill would increase the percentage of loans on units which veterans purchase by 10 percent. In other words, if the value of the unit purchased by a veteran is $8,000 or under the loan percent would be 100 percent; if the percent of loan on a unit sold to a nonveteran is 85 percent—the percent on the value of the veteran's unit would be 95 percent and so on in accordance with the graduated loan percent proposed in the Patman bill.

There does not appear to be any particular virtue or any benefit to be derived from requiring veterans to join together on a fixed percentage basis before they can obtain preference. The veteran earned his right to preference as an individual, and he should be able to exercise it as an individual. Furthermore, it is reasonable to assume that cooperatives representing greater diversification will have greater promise of success. The Patman bill for these reasons does not set up any limitations on the utilization by veterans of the preference granted. A cooperative made up of any number of veterans up to 100 percent, if otherwise qualified, would be able to obtain the benefits of the bill and the individual veteran stockholders would be given preference. Thus, if a cooperative is formed and only one member is a veteran, he would be given preference and would not have to seek out a cooperative made up of 80 percent of veterans.

Aside from the above reasons why the treatment of veterans' preference in the Patman bill is better for the veteran and for the cooperative, the requirement that the number of veterans must be a fixed percentage of the whole is certain to raise many difficulties. Suppose, for example, the proposed cooperative has only 70 percent veterans, or 79 percent. Further, this requirement is certain to encourage evasion by making it possible to use veterans as dummies in order to qualify for 100-percent loans. Such problems will not arise if preference is extended to the individual veteran who becomes a stockholder and the occupant of a particular housing unit.

REQUIREMENTS AS TO INCOME GROUPS

Those bills under which cooperative housing projects would be financed altogether by the Federal Government would limit the scope of the program to lower-income families. Apparently this is done to justify the subsidy granted in the form of Government loans at the going Federal rate of interest. An attempt is made to define "lower income families" in the following language: "This title contemplates that the housing produced with this liberalized credit shall limit admissions to families whose incomes are below the level where they can afford to obtain housing currently made available under the FHA mortgage system or other existing aids to housing undertaken by private enterprise." The Commissioner would be required to review and approve the income limits for the acceptance of families fixed by cooperatives and each contract for a loan must provide that "the families accepted for occupancy of such housing shall be limited to those whose net income at the time of acceptance does not exceed five times the annual rental or housing cost (including the value or cost to them of water, electricity, gas, other heating and cooking fuels and other utilities) of the dwelling to be occupied by such families, except that in the case of families with two or more minor dependents, such ratio shall not exceed 6 to 1."

No attempt to create classes of people either by segregating families into income or veteran groups is made by the Patman bill. The principle on which the Patman bill rests is that American families who want to have homes of their own should be permitted to join together in a nonprofit organization regardless of how much or how little they make and obtain the same aid which the Federal Government extends to speculative builders. Moreover, families who wish to reduce their housing costs and devote their savings to other purposes, such as to insurance or to the education of their children, should be permitted to do so by joining together in a housing cooperative with other families of a like mind. Furthermore, this plan affords greater diversification of risk and for that reason is sounder economically.

Through the Patman bill we can develop a home ownership housing plan on a firm and solid basis. Under its provisions cooperative housing associations can be formed which will demonstrate that they can handle the financial problem so it will not be a burden to the Government. Not only is the plan proposed by the Patman bill based on sound financial principles but it recognizes that any attempt to segregate people into classes is repugnant to our American way of life.

Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. SABATH. Mr. Speaker, ever since I have been a Member of this House, for the past 43 years, I have voted consistently for all pension bills. The only time that I ever voted to pass a bill over President Roosevelt's veto was on the adjusted compensation or so-called bonus bill. A fair, equitable and just bill is what I strive for and expect to support, and I endeavor to see that such a bill receives favorable consideration on the other side of the Capitol as well as by the President.

However, when former Republican leader the gentleman from Indiana [Mr. HALLECK] stated on the floor, and I quote:

There has been a lot of talk and confusion here today. I have seen things called confusion hithertofore in the House of Representatives. This time, however, I think it

ought to be in the RECORD that much of this alleged confusion is the result of nothing more nor less than the attempt by opponents of this legislation on the Democratic side to sabotage its accomplishments.

I started to realize that his interest in this pension bill is far from a genuine interest, for in his shrewd way he attempted to show that the Democrats are not in favor of a decent pension bill. I am satisfied that this statement, together with the general action of the Republicans on this bill, indicates that the sole purpose behind their support of this bill is an attempt to undermine the efforts of the administration and the Democrats to pass a broader social-security law which would extend the scope of the present law to include some 20,000,000 now exempted people.

I feel that under the social-security bill now under consideration by the Committee on Ways and Means of the House, as I have been informed, the veteran will receive special consideration in order to properly recognize the services and sacrifices which they have rendered to our country. In this connection, I wish to embody extracts from a communication which I received from the Director of the Bureau of the Budget, Mr. Frank Pace, Jr., which I am satisfied, contains also the views of the President who has the interests of the veterans at heart always, and who feels that the pension bill, as originally reported, would not be for the best interests of the ex-servicemen or the country:

EXECUTIVE OFFICE
OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., March 8, 1949.

MY DEAR MR. SABATH: This will acknowledge your request for the views of this office on H. R. 2681, the veterans' pension bill. * * *

An appropriate focus for an appraisal of H. R. 2681 was given in the President's recent budget message to the Congress. His statement read in part as follows:

"The program of veterans' services and benefits should reflect the fundamental fact that our primary long-run obligation is to dependents of veterans deceased from service causes and to veterans disabled in the service. In the fulfillment of these obligations we have two basic purposes. The first is to alleviate financial hardship to dependents of veterans deceased from service causes. The second is to help veterans surmount the physical and economic handicaps of their service disabilities. At the same time, we should preserve and stress our basic objective of assisting the recipients of these benefits to be as nearly as possible self-reliant and self-sustaining members of our society.

"The necessity for new or extended benefits for veterans without service disabilities should be judged, not solely from the standpoint of services in our armed forces, but in the light of existing social-welfare programs available to all, veterans and nonveterans alike. In recent years social-security protection, including unemployment and old-age and survivors' insurance and old-age assistance, has been made available to a large percentage of our general population. Prior to World War I the lack of such general benefits was, of course, one of the main reasons for the enactment of special benefits to veterans. At the present time we seek to broaden and extend these social-security programs and to enact a comprehensive national health and disability insurance program for all our people, including veterans, who with their immediate families will soon constitute 40 percent of the population."

Our present programs to which the President has here referred include compensation for service disabilities and pensions and hospital care for veterans who are in need of special consideration, although their disabilities were not incurred in service. These programs will cost approximately $3,000,000,000 in the coming fiscal year, and we expect their cost to exceed or equal this figure each year for the balance of the century. * * *

To provide these new pensions will commit the Federal Government to billions of dollars of expenditures until the end of this century and well into the next. The cost of H. R. 2681 has been reported to be only $62,000,000 for the first year after enactment, but this is an incomplete estimate. It omits the increased cost of survivors benefits. Moreover, the first year would only begin a steeply rising curve. Ten years from now, expenditures due to the bill would reach $1,200,000,000 or more annually as more of the veterans of World War I reach age 65. Expenditures would continue to increase and would reach an annual rate of at least $5,500,000,000 by 1990 when the veterans of World War II reach age 65 in large numbers. * * *

You are no doubt familiar with the main features of the expanded social-security program. It would provide nearly everyone with old-age benefits and insurance against temporary and permanent disability. These proposals include an extensive system of benefits for survivors of insured persons. Since this is an insurance system, benefits would be based, in large part, on contributions by those insured and would be related to the length of time during which contributions had been paid in. In general, the upper limit of benefits would be set in relation to the 5 years of highest earnings by the beneficiary.

Most veterans will have been employed for sufficiently long periods to entitle them to full coverage and to benefits which would compare very favorably with the pensions proposed in H. R. 2681. * * *

Under all of these circumstances, enactment of H. R. 2681 could not be regarded as in accord with the President's program. The President's perspective on this problem, as presented in his budget message, seems to me to furnish the key to the appropriate course for this Government to follow.

Sincerely yours,

FRANK PACE, Jr.,
Director.

It must be admitted that the President is continuing to demand, as he has in the past, beneficial legislation to aid the ex-servicemen in every conceivable way; namely: housing, hospitalization, GI bill of rights, and so forth.

The Veterans of Foreign Wars are not in complete accord with this bill. They favor amendments to the bill to gear the pension program to age and incapacity based on needs. At this point I wish to insert a letter from Omar B. Ketchum, director of the national legislative service of the Veterans of Foreign Wars, which fully states the views of this organization on the pension bill:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D. C., March 21, 1949.

To All Members of the House of Representatives:

DEAR CONGRESSMEN: On Tuesday, March 22, according to announced plans, the chairman of the House Committe on Veterans' Affairs, under a privileged rule, will bring up for consideration a bill identified as H. R. 2681, commonly referred to as the Rankin pension bill. The bill, under the rule, will be subject to amendments. The real issue before the House will be whether the traditional policy of a modest pension for aged and incapacitated war veterans shall be continued or whether that traditional policy shall be abandoned in favor of uncertain benefits under social security.

The undersigned, as legislative spokesman for the Veterans of Foreign Wars of the United States, respectfully urges you to support the traditional policy of a modest pension for aged and incapacitated war veterans rather than leaving them in an uncertain position under social security. If you don't like the Rankin pension bill, please remember that it can be amended.

The Veterans of Foreign Wars is not in complete accord with H. R. 2681 in its present form. We strongly advocate a continuation of our Nation's traditional pension policy, but we have proposed certain amendments to the pension bill which we believe will reserve the benefits to those veterans who are desperately in need of assistance from their Government. The proposed amendments would gear the pension program to age and incapacity, based on needs. The cost, while initially more, would be considerably less over the years.

We are advised that Representatives WALTER B. HUBER, of Ohio, and JAMES E. VAN ZANDT, of Pennsylvania, in a bipartisan approach, will offer amendments to the pension bill which are in accord with VFW recommendations. In effect, these amendments would liberalize pensions now payable under existing laws to non-service-connected disabled war veterans and certain widows. Consequently, the bill would not be a radical departure from present pension laws. Your careful attention and favorable consideration of these amendments are invited.

Whether you agree with these amendments or not, may we count on you to support the traditional policy of special pension consideration for the aged and incapacitated defenders of our Nation?

Respectfully yours,

OMAR B. KETCHUM,
Director, National Legislative Service.

The American Veterans, composed solely of World War II veterans, are not at this time in favor of a pension.

The American Veterans Committee, composed of World War II veterans, is opposed to a pension, and I submit excerpts from various communications on this subject from Gilbert A. Harrison, national chairman of the American Veterans Committee:

AMERICAN VETERANS COMMITTEE,
Washington, D. C., February 23, 1949.

Hon. ADOLPH J. SABATH,
Chairman, Rules Committee,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SABATH: I am informed that no person other than a Member of Congress is permitted to present testimony before the House Rules Committee on legislation before that committee. I therefore take this extraordinary means of laying before you the reasons why the American Veterans Committee trusts the committee will disapprove H. R. 2681, known as the Rankin bill. The provisions of that bill are of so dangerous a character that I would not feel I had performed my duty as chairman of a national organization of veterans of World War II did I not now send to you and to each member of your committee the attached brief explaining our opposition.

Copies of this brief are also being sent to the Speaker of the House, the chairman of the Senate Finance Committee, and the House and Senate Press Galleries.

If professional veterans and their lobbyists suceed in persuading the honorable Members of the Eighty-first Congress to vote for so irresponsible a measure as H. R. 2681, the real interests of the great majority of ex-servicemen will have been betrayed. We

did not help defend our country for a pay-off of this kind which would weaken our entire economic structure and endanger legitimate expenditures which the Federal Government must today meet.

I hope, sir, that you will give thoughtful consideration to this brief and that when the votes are taken in the Rules Committee there will be found more than a bare majority who will vote for the veteran and for the national welfare by voting down H. R. 2681.

Sincerely,

GILBERT A. HARRISON,
National Chairman.

BRIEF TO MEMBERS OF THE RULES COMMITTEE OF THE HOUSE OF REPRESENTATIVES ON THE RANKIN BILL, H. R. 2681, SUBMITTED BY GILBERT A. HARRISON, NATIONAL CHAIRMAN, AMERICAN VETERANS' COMMITTEE

It may be considered strange by some that the American Veterans' Committee, whose membership is limited to the veterans of World War II and whose efforts are devoted to furthering the veterans' welfare, should submit this brief in opposition to the old-age pension provisions of H. R. 2681. We do so after much reflection on the unfortunate effect this measure would have on the entire veteran population.

In summing up our testimony against this bill before the House Veterans' Affairs Committee recently we said, "The average ex-serviceman is not a professional veteran. He is a citizen, interested in assuring that his Government gives consideration to the problems of all citizens who need the protection of government in illness, in old age, in the absence of employment. His reward is a prosperous, free America and a stable world."

We want to underscore these words as a preliminary to this brief. Those who put pension or bonus price tags on the patriotism of veterans dishonor these veterans.

The members of AVC in every State and Territory know, though the fact may be temporarily kept under wraps, that the piper will have to be paid, and that the billions this bill would cost will be extracted in large part in the coming years from the pockets of veterans and their families. They represent about 40,000,000 of the American people. Veterans today are no small class which can profit at the expense of the Nation. H. R. 2681 is as obsolete in its approach to veterans' security as a musket would have been at the Remagen bridgehead. Veterans' benefits in 1949 are not the same problem as they were after the Civil War, the Spanish-American War, or World War I.

The first year's outlay for the Rankin bill would be, in comparison with the total cost, insignificant. The expenses would mount year by year and would, according to our conservative estimates, not fall below $150,000,000,000. It must be remembered, further, that this staggering burden will not be carried, as in the case of social-security payments, by taxes through the years from employers and employees plus a modest contribution by Government. It will be paid for in full by all the people.

AVC does not belong to that jittery band which cries "danger" whenever someone proposes an increase in Federal expenditures. Even so, the costs of this measure are outrageous. Equally serious, however, is the fact that the expenditure involved could not only result in the sacrifice of other expenditures of supreme importance to the veteran. We refer to the priority demand for housing, a minimum wage which can assure younger veterans a reasonable standard of living, national defense, and economic and military aid to free nations abroad.

H. R. 2681 directs itself in part to the problem of old-age benefits. AVC does not disregard the importance of that problem and submits that the answer lies in broadening the present social-security system so that all citizens who have reached the age when they can no longer support themselves receive reasonable assistance from Government.

There have been references in the press to a "veteran vote." We have yet to discover one. AVC would not insult our representatives in the Congress by suggesting that the existence of any so-called block of votes would influence the judgment of Congressmen on any issue such as this which would so directly and disastrously affect the national welfare. But we would be surprised indeed if any legislator permitted his decision to be determined by a "vote" which we are certain is mythical.

We have endeavored in AVC to live up to our motto of "Citizens first, veterans second." We believe that motto reflects the attitude of most ex-servicemen. The average veteran is not standing around with his hat in his hand. He knows he has not been neglected. Over $6,000,000,000 a year is now going for Federal veterans' benefits. Nearly another $2,000,000,000 is being paid to veterans this year in bonuses by the States. We are willing to predict that in any national poll that might be taken of veterans, it would be found that at least 9 out of 10 would prefer to have Federal funds spent first of all on adequate medical care and pensions for those who were disabled by war and for the widows and orphans of servicemen.

Finally, we make this plea to the Rules Committee of the House to stop the Rankin bill because we are convinced that this bill is only the beginning. If any encouragement is given those who are trying to pressure this Congress for unjustified hand-outs for the entire veteran population, they will be back asking for more not long after, and for more after that. The time to say "No" is now.

* * * * *

I do not believe that any person who appeared before your committee is more honestly concerned than AVC over the needs of the aged in our population. We do not think, however, that the problem of security for those who have passed the age when they can support themselves should be confused with the problem of legitimate veteran benefits. We have consistently urged early congressional consideration of extended coverage by social security of all groups in the Nation. The passage of the Rankin bill, I think you will agree, could well jeopardize this necessary, broadened social-security program.

Respectfully,

GILBERT A. HARRISON.

The Disabled American Veterans are interested only in legislation beneficial to disabled veterans and have thus not taken a stand on the present pension bill.

Furthermore, of all the veteran organizations, the American Legion is the only one that is completely in favor of this pension bill. This organization represents about 15 percent of the total 20,000,000 veterans in this country, or approximately 3,250,000 veterans.

I am personally in favor of doing everything possible for the deserving ex-servicemen of America, but I do believe however, that we should restrict the benefits to those who are in actual need and deserving of the same. I voted to recommit this bill to committee with the hope that they will take into consideration the views of the majority of the veterans in order to be fair and just, and at the same time not minimize our aims in passing a broad and liberal social-security program. Of course, the interests represented by the Republicans do not favor broadening the social-security program because they will be called upon to contribute a higher percentage, the same as the employees in order to realize broader benefits. The Republicans would rather unload that burden upon the Government itself in order to satisfy their selfish interests.

Veterans' Hospital Construction

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. CLEMENTE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a letter addressed to me by George A. Mead, director of the New York Department of the American Legion, enclosing copy of a statement offered in opposition to the proposed cut-back in VA hospital construction.

The letter is as follows:

THE AMERICAN LEGION,
DEPARTMENT OF NEW YORK,
New York, N. Y., March 22, 1949.

Hon. L. GARY CLEMENTE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN CLEMENTE: I am enclosing herewith, copy of testimony prepared by Joseph P. Piccirillo, deputy commissioner of public welfare for New York City and chairman of the department rehabilitation committee of the American Legion, and the undersigned on behalf of the members of the American Legion of New York State, in opposition to the cut-back program in VA hospital construction as proposed by the President in his budget.

This program is now being considered and hearings are being conducted by a subcommittee of the Senate Committee on Labor and Public Welfare composed of Senators PEPPER, MORSE, and HUMPHREY. The hearing will terminate on Saturday, March 26, 1949. Mr. Piccirillo and the undersigned appeared before the subcommittee on Monday, March 21, and presented oral testimony in addition to the enclosed.

The officers and members of the American Legion of the State of New York, and especially those charged with the responsibility of seeing that our disabled veterans are properly cared for, will be very grateful to you if you will, after careful perusal of the enclosed testimony, join with us in opposing this cut-back. May I suggest that you file your opposition in writing with the committee secretary, Mr. Philip R. Rodgers, room F-42, Capitol Building, and advise me of your action.

Respectfully yours,

GEORGE A. MEAD,
Director.

TESTIMONY OF THE AMERICAN LEGION, DEPARTMENT OF NEW YORK, IN OPPOSITION TO THE PROPOSED CUT-BACK IN VETERANS' ADMINISTRATION HOSPITAL CONSTRUCTION NOW BEFORE THE SUBCOMMITTEE OF THE SENATE LABOR AND PUBLIC WELFARE COMMITTEE

By order of the President of the United States, the Veterans' Administration is planning to cancel the construction of 24 new hospitals and to reduce the size of 14 others, a total of 16,000 beds. One of the 24 hospitals to be eliminated was to be located in New York City (Queens County), and a 1,000-bed hospital approved for Syracuse, N. Y., is ordered reduced to 500 beds.

At present we have in New York State, for a veteran population of 2,047,000, seven permanent Veterans' Administration hospitals; three for general medical and surgical cases with a bed capacity of 2,217; two for neuropsychiatric cases, with a capacity of 4,025, and two for tuberculosis cases with a capacity of 1,177 beds. In addition to this the Veterans' Administration has two temporary hospitals in operation with a bed capacity of 1,900, and the use of 145 beds in one State and one Federal hospital, total, 2,045. Total bed capacity of all—permanent and temporary—9,368, broken down as follows: General medical and surgical, 4,167; neuropsychiatric, 4,025; and tuberculosis, 1,177.

Under the construction plans approved prior to this cut-back, New York State was allocated seven new hospitals with a total bed capacity of 7,975. This figure combined with the total number of beds now in operation, minus the 2,045 temporary beds, would have given this State a total of 15,299 beds for its veteran population of 2,047,000, which is approximately 11 percent of the total veteran population of the Nation.

The revised plan proposed by the President which eliminates one hospital, reduces another and increases another by 250 beds, if carried out, will reduce the total number of beds in New York State to 14,049, or one bed per 146 veterans. In 1945 with a veteran population of 699,000, the Veterans' Administration had a total of 7,294 beds in operation, or one bed for each 96 veterans. As of January 31, 1949, there were 10,632 veterans hospitalized in New York State by authority of the Veterans' Administration, distributed as follows:

In Veterans' Administration hospitals	9,190
In Federal hospitals	452
In civilian hospitals	791

As of February 3, 1949, there were 3,224 eligible veterans awaiting hospitalization as follows: General medical and surgical, 1,108; neuropsychiatric, 1,644; and tuberculosis, 472. A very large proportion of these are service connected, especially the neuropsychiatrics. In addition to the total of 3,224 there are between 3,000 and 3,500 veterans presently hospitalized in State and county mental and tuberculosis hospitals, a charge on the local taxpayers. We feel that these veterans should be in a Veterans' Administration hospital because many of these cases could and should be classified as service connected.

The Government, after long and careful study by experts in 1940, agreed on a program of hospital construction that would have provided 100,000 beds by 1950 for some 4,000,000 veterans of World War I. That program was approved.

Today, upon the advice of some groups which we question as to their sincerity, the Government feels that 129,000 beds by 1960 will be sufficient for 18,800,000 veterans. We believe that the Government was right in 1940, and that it is wrong today, and that if the proposed program is carried out, the veterans of World War II will be deprived of their rights to adequate care. The fallacy of the Government's policy of cutting back the VA building program on the grounds that additional beds are not needed is shown by the critical civilian sick bed shortage which everyone appreciates, the Hoover Commission report notwithstanding. It is our considered opinion that the President was ill-advised and was given an erroneous impression as to the needs.

Those in favor of the cut-back present a distorted picture showing that the great majority of cases now in VA hospitals are nonservice-connected. According to VA standards in rating cases, this appears correct. But, we who are actively engaged in this work, know that a great many of these cases are of service origin but under present strict requirements, and lack of medical records cannot be proved. Further, the large majority of so-called non-service-connected cases in VA hospitals or awaiting hospitalization are either NP or TB cases, and that because of the length of hospitalization required, must, because of economic reasons, be cared for by the taxpayers, either through local, State, or Federal taxes. As veterans, who, were it not for the striot rating standards, and lack of medical records which in many cases make it impossible to service connect, we feel they should be taken care of by the Federal Government.

The American Legion is opposed to this cut-back and sees no justification for the $280,000,000 slash in the hospital building program of the VA. As representatives of the American Legion in New York State, we strongly urge that the proposed cut-back program in VA hospital construction now before the Congress be disapproved and that the original plans be carried out. Further, it is recommended by the American Legion, Department of New York, that in order to meet the requirements of the veterans of this State for hospital care, that the Veterans' Administration purchase the Halloran Hospital on Staten Island from the State of New York and continue it as a permanent hospital of the VA. It is now used as a temporary hospital by the VA with 1,500 beds available. The capacity of the hospital is 3,500 beds. It is also recommended that the 400-bed hospital located in Sheepshead Bay, Brooklyn, known as Manhattan Beach, be transferred from the Public Health Service to the Veterans Administration for use as a permanent hospital. It is now being used by the VA.

Respectfully submitted.

JOSEPH P. PICCIRILLO,
Chairman, Rehabilitation Committee.
GEORGE A. MEAD,
Department Rehabilitation Director.

Veterans' Pension Bill

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. COLE of Kansas. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the following resolution adopted by the Alonzo F. Dexter Post, No. 101, Department of Kansas, the American Legion, at Clay Center, Kans.:

Whereas the American Legion is a patriotic service organization believing in service to the sick, disabled, and other unfortunate comrades of World War I and World War II and their dependents; and

Whereas it is a matter of history that the United States has in many instances heretofore recognized the justice and equity of the care of its disabled and aged veterans and their dependents; and

Whereas there is at the present time organized opposition to such plans as are advocated by the Veterans' Societies of the United States for the care of aged ex-service persons, disabled ex-service persons, and their dependents; and

Whereas these rights and benefits have been earned by the veterans of the country through their unselfish service to our country: Now, therefore, be it

Resolved by Alonzo F. Dexter Post, No. 101, Department of Kansas, the American Legion, That we call the following situation to the attention of our State headquarters, our national headquarters, our Representative in Congress, our Senators in Congress, and to such other persons and organizations as our executive committee may direct:

1. We believe that H. R. 2681 should receive favorable consideration and should pass the Congress. We could give a very long explanation of why such bill should be enacted, but we particularly refer to report No. 132, submitted by the Honorable JOHN RANKIN, as our argument in favor of this bill.

However, we desire to call to the attention of Congress that section 3, paragraph (c), should be further amended so that a dependent paying burial costs of a veteran would have the right to deduct such expenses of last illness and burial from income and that all life insurance received by a dependent account of the death of a veteran should be excluded and not considered as income, no matter from what source such life-insurance proceeds are received.

It is our opinion that the paragraph abovementioned does not even exclude Government life insurance nor NSL insurance from being counted as income, and that is a step backward instead of a step forward.

2. We are opposed to the idea that there should be one great Federal medical program or plan that takes in medical service and hospitalization for veterans along with the indigent and others.

3. We are opposed to any scheme or legislation that puts veterans—disabled or otherwise—as veterans, under social security for pension purposes and takes them out from under the Veterans' Administration's care and supervision and includes them with indigents and others who are nonveterans, for pension purposes and things of that sort. Of course, veterans, as workers entirely aside from the fact that they are veterans, should have all the rights of any other workers under the laws governing social security.

4. We note that it has been recommended that the Insurance Division of the Veterans' Administration be set up as a separate Government corporation. We are opposed to any such change. It is better that the faults that now exist in the present set-up of the Insurance Division of the Veterans' Administration be eliminated and that all Government agencies (insofar as it is possible) that have to do with the care, hospitalization, insurance, and other matters affecting veterans, their widows and dependents, be kept all in one Government organization. With all its faults, the present Veterans' Administration, as one agency through which veterans can do business with the Federal Government as veterans, is much better than having a set-up that would force veterans to deal with many different agencies. We realize that there are faults in the present Veterans' Administration—but let's correct those faults instead of making four or five different agencies for veterans to deal with separately.

5. We feel so strongly on the matter of income limitation as a bar to pensions for veterans, their widows and other dependents—that we desire again to emphasize that we feel that life insurance from any source should not be counted as income to a veteran, his widow or other dependents, when considering pensions that might otherwise be due.

We feel that if there must be an income limitation, it should be set at not less than $2,000 for a veteran or veteran's widow without dependents, and $3,500 if they have dependents—with life insurance from any source not being considered as income.

These resolutions were authorized, after discussion, at a regular meeting of Alonzo F. Dexter Post 101, Department of Kansas, (The American Legion, at Clay Center, Kans. (composed of 358 paid-up members), with only one dissenting vote.

ELMER ANDERSON,
Commander.
RALPH CHRISTENSEN,
Adjutant,

America Unafraid

EXTENSION OF REMARKS
OF
HON. ANTHONY CAVALCANTE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. CAVALCANTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two newspaper editorials, one from the Morning Herald and the other from the Evening Standard, of Uniontown, Fayette County, Pa., as follows:

[From the Uniontown (Pa.) Morning Herald]

AMERICA UNAFRAID

The State Department's willingness to allow 22 delegates from Russia and other Communist-dominated countries to come here for a Leftist peace conference in New York has been promptly condemned by Republican Senators. Senator MUNDT says the least the State Department should do is insist that American citizens be allowed to attend a similar conference in Russia, and Senator FERGUSON says that we should treat them just like they treat us.

Russia, of course, has consistently turned down requests of American congressional committees and individual lawmakers, including Senator FERGUSON, to observe the Soviet way of life, and there, obviously, lies the whole point in the action taken by the State Department. In granting visas to 22 Sovietized visitors the State Department is proving that this country does not behave like the Russians, and that is a point well worth proving.

The 22 incoming visitors are speaking here as strict adherents of the Soviet party line. Surely the structure of this Republic is strong enough to withstand the effects of whatever they may say. In fact, most enlightened Americans take the attitude that there is little to fear in what any Communist has to say, as long as he stands up and identifies himself—or is identified—for what he really is.

The State Department has turned down Russia's request that its representatives to the conference be given diplomatic visas, which would give them freedom from customs inspection of their baggage and other special privileges, so there is little likelihood that the 22 visitors will be in position to do much except spout their usual propaganda line. And it can be safely assumed that the Government will see to it that all 22 of them adhere to security regulations.

As for the suggestions that the Russian delegates may change their minds about the United States after seeing it at first hand, there is very slim chance that anything of the sort will occur. The Russians will undoubtedly be hand-picked party members and will see this country only in the light of their preconceived notions, just as the visiting Russian newspapermen did a few years back. That is to be expected and should not deter this country from exhibiting its faith in free speech, even though it is bound to be a futile exhibit as far as the Russians are concerned.

[From the Uniontown (Pa.) Evening Standard]

PICKETS FOR SHOSTAKOVICH

If there is any consistency in mass indignation, the people who picketed Walter Gieseking, the German pianist, should now be getting ready to picket Dmitri Shostakovich, the Soviet composer. For Shostakovich's sins seem as grave as those that caused Gieseking to cancel his first postwar American tour and return to Europe without having played a note.

The pickets charged Gieseking with supporting and toadying to the Nazis, and with giving private performances for Nazi officials. He was not charged with taking part in the concentration camp mass murders. But, as a pro-Nazi, he was charged by the pickets with condoning those murders. So their placards linked his name with the name of Ilse Koch.

Shostakovich's public statements and behavior put him down as pro-Communist. He probably has given private performances for Soviet officials.

We don't expect to read that the same people who picketed Gieseking turned out to boycott Shostakovich on his arrival in New York for the left-wing Cultural and Scientific Conference for World Peace. But we shall not be surprised to learn that others took their place. For such action has been threatened since the Soviet musician's invitation to the conference was first announced.

If this were wartime, Shostakovich would get a welcome usually reserved for movie stars. No question about it. Shostakovich, excused from military duty, refused to seek safety during the siege of Leningrad, though he could have done so. He divided his time in the beleaguered city between composing and helping put out the fires set by Nazi incendiary bombs. When the symphony that he began during the siege was finished, there was high excitement in this country. The score was photographed on microfilm and, amid fanfares of publicity, flown to this country for performances attended by cheering audiences.

That was the same Shostakovich who is coming to America now. No doubt he believes all or most of the horrible things he has heard about us. Communism is the only government he has known since the age of 11, and this is his first journey beyond the iron curtain. So he may join in the denunciations of American policy which are expected to feature the leftists' conference.

If he does, why not give him a better illustration of free speech than picket lines? Let Dmitri Shostakovich and the other Soviet delegates look around and discover the falseness of the Kremlin's fables. Let them see that America knows the difference between talk and espionage, and that the country of free speech neither fears nor suppresses talk, even when it is untrue or insulting.

Let them take back an illuminating memory of a free and peace-loving country. Let them understand that our quarrel it not with the Russian people but definitely and firmly with their government's aggressive policies. Shostakovich can read a clearer message of freedom and fearlessness and strength in the American scene about him than he can in any pickets' slogans.

I Support the Traditional Policy of Special Pension Consideration for the Aged and Incapacitated Defenders of Our Great Nation, but H. R. 2681 Not Adequately Considered and Badly Managed

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. DOYLE. Mr. Speaker, I sat through every minute of the proceedings and the debate these 2 days relating to H. R. 2681, commonly known as the Rankin bill, which purported to provide pensions for veterans of World War I and World War II, based on non-service-connected disability and attained age and for other purposes. In connection with this proposed bill and the debate thereon, I desire to state as follows:

Having read the hearings before the Committee on Veterans' Affairs relating to pensions for veterans of World Wars I and II, I have found no reference to this bill or the specific provisions thereof, as set forth in H. R. 2681 for passage by this House of Representatives. Granting that most of the hearings referred to or related to the subject matter of veterans' pensions, I, personally, regret very much and feel it a distinct loss and disadvantage to not have the expressed opinion of any of these distinguished witnesses on the exact language of any of the sections of this bill before us these 2 days. Why was it? Why could we not have the benefit of having the witnesses who testified before the distinguished Veterans' Committee of this House testify on the text or substance of the text of this bill as it is before us? It is one thing to testify on broad principles, and then it is quite another thing to be specific on specific proposals which involve billions of dollars as well as which involve the pension welfare of millions of veterans.

So that I find myself with what I conceive as a very inadequate supply of essential material facts and information which I felt I needed before I can intelligently vote for this pension bill. The fact that the Veterans' Committee itself does not deny that the text of this bill, H. R. 2681, had only about 15 minutes' consideration of the committee is, of itself, concrete evidence of a gross lack of time taken to consider this most important and lasting legislation. Without criticizing the Veterans' Committee of this House, yet, as a Member of the House, I feel the committee did not bring this bill to the floor of the House with sufficient facts and evidence and documents sufficient to enable me, as a Member of the House, to pass informed, intelligent judgment on the bill itself.

This is not good. It is never good to have that condition existing on the floor of the House, and a very large number of my colleagues on the floor expressed the same regret to me. Veterans' pensions is somewhat of a technical subject on which there is a vast volume of information and evidence. At least the substance of that information and evidence, resulting from experience in the past as well as anticipated future, should be concretely and clearly in our hands before we vote. It was not.

Having practiced the profession of law for many years in my home city of Long Beach, Calif., I feel that being a Member of Congress and sitting on a committee to discuss and debate important bills is similar to being a member of a jury in a civil case. And one of the simplest and yet universal rules to be answered as a juryman is that you must have no preconceived notions about the case and must at all times keep an open mind and hear the evidence adduced for or against. This, then, is the attitude of mind which I try to habitually carry with me to the floor of Congress as I listen to the debates

and as I make my decisions. But, in this case there was an almost utter lack of clearly gathered and assembled facts and evidence to help us make a decision.

The RECORD shows that on both sides of the aisle—both Republicans and Democrats—frankly stated they were much confused. It is no wonder, when a bill has so little analysis and consideration in the major committee of Congress bringing it to the floor. Take the statement of the distinguished gentleman, Mr. BATES, Republican, of Massachusetts, who, I believe, has five veterans in his immediate family, wherein he pleaded in the House to send back the bill to the Veterans' Committee for further study. He frankly stated he was confused, and other Members on the Republican side of the aisle agreed with the many Members on the Democratic side of the aisle that they were all confused. I was confused, too, for I found it practically impossible to get at the facts. That is true because the facts were not present in available form on the floor of the House.

For instance, the RECORD will show that, when one of our distinguished colleagues asked a member of the Veterans' Committee a specific question, the member of the Veterans' Committee made a definite answer thereto. Then the Member asking the question frankly told the Veterans' Committee member that he was wrong; that his answer was not founded on fact. This is not good. The member of the Veterans' Committee was evidently in error when the fact is that he should not have been in error when he was undertaking to give the House accurate information. This is one illustration of the sort of confusion and controversy that was ever present.

Then, again, when our distinguished colleague, Mr. VAN ZANDT, of Pennsylvania, presented and argued for his amendment that a veteran disabled to the extent of 75 percent should get $75 a month, and the veteran 100 percent disabled should get $100 a month, Mr. BATES of Massachusetts specifically called attention to the obvious fact that the present law provided that any man arriving at the age of 65 and who is at least 10 percent disabled is entitled to $72 a month if he is unable to follow substantial employment for gain. Nor did any member of the Veterans' Committee disagree with Mr. BATES, Republican, from Massachusetts. It was frankly admitted that it was evident that the members of the Veterans' Committee either did not know what the present law was or overlooked giving the Members of the House the benefit of their knowledge as to what the present law provided. In either event, it caused additional confusion and uncertainty.

All around us was confusion, lack of information, and no opportunity to promptly get information. Under such unhealthy and unnecessary legislative conditions, it is suicide, so far as the best interests of the veterans are concerned, to rush or crowd through this ill-considered, ill-prepared proposed bill.

Several Members, especially on the Republican side of this great House, have made claim that the opponents of this bill are opposed to it because they want to spread out the program of social security. I desire to frankly state that I consider it a compliment to be in favor of the extension of social security. This does not mean I am opposed to veterans' pension legislation, for I am not. I am strongly in favor of it. I call attention to the fact that the platform of the Democratic Party, made at the Democratic Convention at Philadelphia, July 12–14, 1948, had the following provision in it:

> We favor the extension of the social-security program established under Democratic leadership, to provide additional protection against the hazards of old age, disability, disease, or death. We believe that this program should include increases in old-age and survivors' insurance benefits by at least 50 percent, and reduction of the eligibility age for women from 65 to 60 years; extension of old-age and survivors' and unemployment insurance to all workers not now covered; insurance against loss of earnings on account of illness or disability; improved public assistance for the needy.
>
> We favor the enactment of a national health program for expanded medical research, medical education, and hospitals and clinics.
>
> We will continue our efforts to aid the blind and other handicapped persons to become self-supporting.
>
> We will continue our efforts to expand maternal care, improve the health of the Nation's children, and reduce juvenile delinquency.
>
> We approve the purposes of the Mental Health Act and we favor such appropriations as may be necessary to make it effective.

And, if any of my colleagues on the Republican side of the aisle are now claiming that Members on the Democratic side of the aisle are too social-minded when it comes to social security, I call attention to the fact that the Republic National Convention at Philadelphia, June 21–25, 1948, enacted a platform wherein it was provided:

> Consistent with the vigorous existence of our competitive economy, we urge extension of the Federal old-age and survivors' insurance program and increase of the benefits to a more realistic level; strengthening of Federal-State programs designed to provide more adequate hospital facilities, to improve methods of treatment for the mentally ill, to advance maternal and child health, and generally to foster a healthy America.

How, then, can Democrats in this legislative body be justly criticized by Republicans in this legislative body for emphasizing in legislation the national platform of the political party as a member of which they find themselves elected to this House?

Under our system of legislative procedures whereunder we rely upon major committees to study thoroughly and adequately legislation before it comes to the whole House for consideration, there is no other way provided whereby the full membership of this House can intelligently legislate. We simply must be favored with and furnished by the appropriate legislative committee reporting any major bill the fullest available facts and information. In the absence of being thus aided in our legislation, I feel sure we should return the bill to the Veterans' Committee with instructions to bring back to the House a bill supported by more than 15 minutes' consideration of the committee and with direct evidence relating to its provisions and with ample proof to support its recommendations.

Why should a Member of Congress be criticized for having an inquiring mind? I am not afraid of the facts, and I am sure my colleagues are not. Let us then have the facts appertaining to this important major legislation. The past history, the present needs, and the future history and needs of the veterans of our Nation demand that any present legislation enacted should be most thoroughly considered. Anything less than that will be a disservice to the veterans' cause.

Nor are the Veterans of Foreign Wars of the United States, through their national legislative service, complimentary of this bill, nor do they feel it is adequate. They recognize that amendments must be made. Yes, they even recommend a substitute or a compromise bill. To illustrate, on February 26, 1949, I received from the national legislative service of the Veterans of Foreign Wars of the United States, Washington, D. C., a letter which stated, in part, as follows:

> The only advantage of the Rankin bill over the present law which grants nonservice connected pensions to World War I and II veterans is that the Rankin bill would pension a group of veterans who reach the age of 65 and who cannot now qualify for pensions because of good physical condition or substantial income. The Veterans of Foreign Wars has proposed a bill identified as H. R. 2512, by Mr. RANKIN, and H. R. 2379, by Mr. VAN ZANDT, which was a compromise between the most expensive bill which had been introduced, H. R. 1693, on which hearings were held, and the Rankin bill, H. R. 2681, which has been reported favorably.

This great, patriotic organization of veterans who have served our beloved Nation with distinction, as well as the members of all other patriotic units of veterans, one and all, are vitally concerned with this present proposal. But the debate to date clearly shows that there is no concert of agreement or opinion on the effect of many of the proposed amendments.

The bill, as already amended in one instance, would, in my judgment, entirely disrupt the theory of the proposals with which our distinguished colleague, Mr. VAN ZANDT, has concerned himself as being approved by the VFW. I would like to be able to have an opportunity to vote upon a bill of substance and content, approved by due consideration of this great organization along with others.

I have not been and am not now opposed to the fundamental principle of special consideration of pensions for the disabled and incapacitated and aged defenders of our beloved Nation, for I feel that the veterans of our wars are special citizens, for they have risked their lives for our safety and security. Thousands and thousands of them are crippled and maimed for life as a result of their defense of our security. There is no other comparable group in our Nation, for there is no other service in our Nation comparable to serving in its defense. In time of war that might mean death, so I would say it is almost on a par with actual giving of life, for it is the willingness to give life. Thank God not more

have been called upon to actually give life.

Within a few weeks after this bill is recommitted to the Veterans' Committee, I am satisfied the Veterans' Committee could come back to this floor with an adequately considered bill which will have the respect and thorough approval of the Members of this House. Let it be so. And I feel that the expressed interest of the distinguished Chairman of the Veterans Committee in the veterans' welfare, and the other members of the Veterans' Committee will call upon them to forthwith diligently and thoroughly study and settle their differences and compromise the same and bring back to the floor a bill which, if not accepted in its entirety, can be intelligently amended without the destructive confusion and contradiction which has been manifestly present throughout this debate.

The fact that almost 100 percent of the Members of this House who are veterans in their own right express opinion that this bill should go back to the Veterans' Committee for further study is, in itself, to me pretty clear evidence that this bill, as already amended, is not a bill which is in the interests of the veterans themselves. What better proof could we have of this being the case than that these colleague veterans of ours take this frank position and ask that it go back to the Veterans' Committee for further study and report back to the House.

Veterans' pensions are not dead if this bill goes back to the Veterans' Committee for revision and return. It is not true that all of us who vote to recommit to return to the committee this bill are opposed to veterans' pensions or want to kill the bill. I am for the principle of veterans' pensions on the principle which I have heretofore declared, and I am not for the bill being killed, and I believe most of my colleagues feel as I do.

In support of this bill, I have received two telegrams from posts of the American Legion in the Eighteenth District. But that is all the communications from any American Legion post. From several individual members of VFW, I have received written communication, of which the following portions will be illustrative of the total content, to wit:

Congressman DOYLE, my hope is that you will advocate an amendment to the Rankin bill which will include the idea of need as a basis of eligibility. * * * So many veterans take the position that because they spent more than 90 days in the armed services, that our country owes them a living. I am against any plan that gives a veteran a pension carte blanche without any showing of need; however, on the other hand, our hospitalized and disabled veterans are certainly entitled to an increase in the amounts they are now receiving, particularly those veterans that are totally disabled, and I take the position that our country does owe a living to veterans who are totally disabled or nearly so.

And then another:

I have talked to a number of people in many walks of life in the past few weeks in regard to the Rankin pension bill, and they are in accord, in the majority, that the Rankin bill must come to the floor and pass even if not in its present form. We members of veterans' groups are not entirely satisfied with the bill in its present form, but be assured that we, too, feel that if the bill is brought on the floor of Congress that amendments beneficial will be injected in the bill of the type that will be satisfactory to everyone.

I received no telegraph or written communication from any post of the VFW from the Eighteenth District, asking me to vote for the Rankin bill. But I did receive written communication from one of the most distinguished veterans of VFW from which above quotation was made.

But, Mr. Speaker, the unfortunate fact has been and is that this House, in its manifest confusion and contradiction, is not having an opportunity to vote upon any compromise or bipartisan approach to this important problem. On account of the uncertainties, contradictions, and confusion surrounding this legislation, we have not had an opportunity to vote upon any compromise bill which has already had the approval of the Veterans of Foreign Wars and the American Legion and other veterans' groups. The bill now pending before us from RANKIN's committee has already been so badly mangled and damaged by amendments that, in the event of its passage, it could not help but be destructive of the best interests of the veterans themselves and of their families and dependents. I, therefore, ask that the bill go back to the Veterans' Committee and that, as promptly as possible, a bill come from that committee which has been adequately and fully considered; and that with such different bill there come to the floor of this House the fullest possible factual and evidentiary information and content so that we of this House may know what we are voting upon. Nothing less than this will be, in my judgment, determinative of supporting the traditional policy of special pension consideration for the aged and incapacitated defenders of our beloved Nation.

I take pleasure in including in my remarks a splendid letter, dated March 21, 1949, from Omar B. Ketchum, director of the national legislative service of the Veterans of Foreign Wars of the United States, which great and unselfish patriotic organization has been frequently mentioned during this debate:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D. C., March 21, 1949.

To All Members of the House of Representatives:

DEAR CONGRESSMEN: On Tuesday, March 22, according to announced plans, the chairman of the House Committee on Veterans' Affairs, under a privileged rule, will bring up for consideration a bill identified as H. R. 2681, commonly referred to as the Rankin pension bill. The bill, under the rule, will be subject to amendments. The real issue before the House will be whether the traditional policy of a modest pension for aged and incapacitated war veterans shall be continued or whether that traditional policy shall be abandoned in favor of uncertain benefits under social security.

The undersigned, as legislative spokesman for the Veterans of Foreign Wars of the United States, respectfully urges you to support the traditional policy of a modest pension for aged and incapacitated war veterans rather than leaving them in an uncertain position under social security. If you don't like the Rankin pension bill please remember that it can be amended.

The Veterans of Foreign Wars is not in complete accord with H. R. 2681 in its present form. We strongly advocate a continuation of our Nation's traditional pension policy, but we have proposed certain amendments to the pension bill which we believe will reserve the benefits to those veterans who are desperately in need of assistance from their Government. The proposed amendments would gear the pension program to age and incapacity, based on needs. The cost, while initially more, would be considerably less over the years.

We are advised that Representatives WALTER B. HUBER, of Ohio, and JAMES E. VAN ZANDT, of Pennsylvania, in a bipartisan approach, will offer amendments to the pension bill which are in accord with VFW recommendatons. In effect, these amendments would liberalize pensions now payable under existing laws to non-service-connected disabled war veterans and certain widows. Consequently, the bill would not be a radical departure from present pension laws. Your careful attention and favorable consideration of these amendments are invited.

Whether you agree with these amendments or not, may we count on you to support the traditional policy of special pension consideration for the aged and incapacitated defenders of our Nation?

Respectfully yours,
OMAR B. KETCHUM,
Director, National Legislative Service.

Not a Vote Against the Veterans

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. MURDOCK. Mr. Speaker, no doubt there will be some who will ask me why I voted today to recommit the veterans' pension bill known as the Rankin bill. My reason for this vote today was the same as when I voted to recommit it on March 22. Twice this week I have voted to recommit this bill to the Veterans' Affairs Committee for the full and adequate consideration which such a bill needs and merits and which I think this bill has not had, in view of committee dissension on it.

While it is true that a bill once recommitted is sometimes not brought forth in an improved form, it is not necessarily ended by an affirmative vote to recommit. My vote on these two roll calls is not a vote against veterans' pensions, but it is a vote toward improvement of legislation favorable to veterans. It is entirely up to the committee if a recommitted bill is killed. The purpose of recommitting a bill is that more careful analysis of it may be made, and necessary and desirable amendments or changes made. Such amending or changing, involving as it does careful consideration of the significance of each change, cannot properly be made on the floor of the House, as we all know.

I have been distressed that the Rankin bill, H. R. 2681, was brought to the floor under such extraordinary circumstances,

and, according to comments we have heard here on the floor, without what some committee members and others have apparently felt were proper and adequate hearings and due consideration. However, I did not want this bill killed, as my vote of March 22, or roll call No. 41, plainly indicates. On roll call No. 41, a motion to strike out the enacting clause and thus kill the bill, I voted "no."

The bill has been before us 2 days since that other vote to recommit failed, and we have struggled to improve it. However, the bill was terribly confused and muddled at the close of the session yesterday, with contradictory amendments even having been adopted, and it seemed to me that we were not going to succeed in writing a good bill on the floor of the House. Hence, the only thing to do in order to save the bill was to recommit it with the hope that the committee can hold adequate hearings on this momentous measure and bring us a bill that we can support in full confidence that it is what is fair and just for the veterans and for the entire country.

University of Melbourne Confers Doctor of Laws Degree on Myron Melvin Cowen

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. KEOGH. Mr. Speaker, it is always a source of great satisfaction to note the recognition of excellent services of American officials, especially those in foreign service. It was, therefore, particularly pleasing for me to note that a distinguished American and New Yorker who has been serving his country for a relatively short time as our Ambassador to Australia has been recognized by that country. The University of Melbourne recently conferred upon Myron Melvin Cowen, of New York, the honorary degree of doctor of laws. It is my information that it is but the seventy-seventh honorary degree conferred by the university since 1851 and the first conferred upon an American citizen. Mr. Cowen will shortly assume his post as Ambassador to the Philippines where he will in the opinion of those who know him continue to render invaluable service to our country.

The citation of the honorary degree is as follows:

THE UNIVERSITY OF MELBOURNE

Mr. Chancelor, the highest distinction which it is in the power of this university to bestow upon those whom it desires to honor is the degree of doctor of laws conferred honoris causa for distinguished public service.

Both in his person and in his office Mr. Cowen amply fulfills the necessary requirements. He is distinguished as both diplomat and lawyer. During his all-too-brief stay in Australia he has by his particular personal efforts forwarded fulfillment of negotiations between the Australian and his own Governments which will shortly result in the bringing into operation of the provisions of the Fulbright Act as affecting Australia. This will be an important event both in the history of Australian universities and in the history of the relationship between our two countries. We think it very fitting that Mr. Cowen should be honored in this connection, though we wish he could have stayed here to help in working out the detail. We honor him also in his capacity of representative in Australia of the Nation to which we owe so great a debt of gratitude. What we did together in war we must continue to do in peace, for it is only by creating and preserving understanding between our two peoples that we can make our fullest contribution to the future of the Pacific area and, through that, of the world.

Mr. Chancelor, I present to you for admission to the degree of doctor of laws honoris causa, Myron Melvin Cowen.

Public Housing

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial appearing in the Keith County News, Ogallala, Nebr., on March 17, 1949. Much has been said in favor of the reentry of the Federal Government into the business of constructing homes. Too little has been said about the extravagant costs of public housing and in defense of those who must bear the burden. The case for the taxpayer is well stated in the following editorial:

CAN'T AFFORD HALF AS MUCH

No matter how much they might want it, comparatively few families have ten or fifteen thousand dollars with which to build a new home. They won't even attempt to finance building at those figures, knowing they cannot or might not be able to make the payments. They are good citizens and by all standards have good incomes, but they just can't afford it.

These same families, under our fast-changing form of government, however, are being called upon by the force of law to help finance homes for other families. They pay income and excise taxes so the Federal Government will have enough money for public-housing projects. None of this money is returned to the taxpayers, and they get no personal benefit from it. They can't afford to build new homes for themselves, but must help build homes for others.

It is true, generally speaking, that we don't need homes costing from ten to fifteen thousand dollars. The average sales price of homes produced by private industry is about $8,000. That is still too much money for the vast majority.

But when the Government builds homes with taxpayers' money or credit, it's a different story. Even ten and fifteen thousand dollar homes are substandard in Federal planning.

Public-housing officials in the Federal Government currently are asking for the right to spend $17,000,000,000 to construct a million and fifty thousand public housing units in the next 3½ years.

The cost, a little figuring shows, is well in excess of $16,000 per housing unit and that does not include the cost of land, or the architectural and other fees.

And people who can't afford homes costing half as much are expected to help pay the bill.

The Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following communication:

MARCH 22, 1949.

Congressman THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LANE: The Greater Lawrence Joint Board, Textile Workers Union of America, CIO, earnestly requests your support of H. R. 3190 which would improve the Fair Labor Standards Act. As you know, a major provision of this measure, would be the establishment of a national wage minimum of 75 cents an hour for those industries engaged in interstate commerce.

Our organization, representing 14,000 textile workers in the area, feels very strongly on the subject of H. R. 3190. We solicit your outright support of H. R. 3190 and look for you to oppose any weakening amendments that may be offered. We believe that passage of this measure could go far toward ending some of the problems which industry in the North, particularly the woolen and worsted industry, is facing.

Any veteran textile worker in this vicinity can recall the exodus of once-thriving industries from the banks of the Merrimack to the South where for one reason or another their prospects seemed brighter. Today, happily for this vicinity, there is not as great an inducement for industries to forsake these parts. A far greater degree of unionization in the South has narrowed to within a few cents what was formerly a wide differential in the wages paid on either side of the Mason and Dixon's line. We contend that the most imminent threat to the woolen and worsted industry in this vicinity does not come from foreign imports but from the competition of materials produced in the low-wage areas of our own great Nation. In many sections of the South a 40-cent minimum is still the prevailing wage for textile workers. These blights on the Nation's economic picture must be removed and raising the minimum to 75 cents an hour will go far toward this end.

Our contract with woolen and worsted plants hereabouts call for a minimum of $1.05 an hour. That standard, set through years of patient negotiations, must not be allowed to deteriorate because another section of the country refused to come face to face with the facts of economic life. That standard was evolved through the sincere application on both sides to the principles of collective bargaining. In areas where no such standards exist, there is a moral obligation for all of us to create them for the protection of our own people, for our industries and for the future economic betterment of the entire country.

The Fair Labor Standards Act now on the books was passed in 1938. By any present-day criteria it is as obsolete as an automobile of 1938 vintage. The present standard of 40 cents an hour, effective since 1940, is

totally unrealistic as a safeguard against unfair competition from low-wage areas. That minimum is likewise completely inadequate in the light of the unquestioned rise in living costs.

The Textile Workers Union of America, CIO, in the Greater Lawrence area can conceive no more concrete manner in which you can help preserve our present standards and elevate those of millions of others than by your complete support of H. R. 3190.

Very truly yours,

ARTHUR W. BROWN,
Director, Greater Lawrence Area.

Labor Unions in Russia

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, because of the recent tendency of certain labor-union officials to draw American labor unions into the international picture, there is printed herewith an article from the March 26, 1949, issue of Labor, the official publication of 15 recognized standard railroad labor organizations:

LABOR GROUP TELLS WHAT LIFE IS LIKE IN RED PARADISE—NORWEGIANS FIND STRIKES ARE BANNED AND TRADE-UNIONS HAVE NO FREEDOM—WAGES SHOCKINGLY LOW—WIVES MUST WORK TO MAKE ENDS MEET, CLOTHES SHABBY, MEAT IS LUXURY

A graphic picture of what working and living conditions are like in Soviet Russia is contained in a document received this week by the Railway Labor Executives' Association.

It's a copy of a report which a delegation from the Norwegian Federation of Labor made after completing a tour of the Soviet Union. The Norwegians went there at the invitation of Russian trade-union leaders; they were wined and dined, but that didn't swerve them from presenting the facts as they saw them.

Labor recently carried a few high lights of the delegation's findings. These were made available by another Norwegian labor group, which visited this country to get a first-hand view of how workers fare under American democracy.

However, the full report of the delegation that went to Russia carries many more illuminating details.

SPEED-UP SYSTEM, NO STRIKES

For example, the report discloses that the trade-union movement of Russia is largely an appendage of the government and has none of the freedom which labor organizations enjoy in democratic lands.

A typical collective agreement between a union factory committee and works management, the report explains, prescribes the duties of the wage earner to perform as much or more than required under the plan of production; in other words, to turn out what the government agent demands.

The Russian unions cannot engage in wage disputes, the report stresses. That is, they can't strike for higher pay, since the entire wage basis is prepared by the economic planning of the government. Wages are all set on a piecework basis and this produces tremendous variations in earnings.

Having no power to strike, the trade-unions and their funds are concentrated to a considerable extent on social, sanitary, and cultural activities, the report reveals. Real collective bargaining is nonexistent.

HARSH LIVING STANDARDS

"It is clear the general average wage is only sufficient for purchasing the absolute necessities for the maintenance of life," the report adds.

"The ordinary family can hardly live on the wage earnings of the husband alone, and women are driven into occupational life to an extent unknown in Norway. They can be seen in large groups engaged in street and construction work, as heavy workers on building sites, as dock hands, and in the factories."

Rents are low but "the shortage of housing is frightful, and therefore the majority of the population can draw no great advantage from low rents."

FEW EAT MEAT

For food, most workers must subsist on bread, potatoes, and vegetables, since "the prices of meat, meat products, butter, cheese, fish, canned foods, etc., are so high compared to wages that only the very few can include such goods in their daily nutrition." Also, the workers are "badly clothed and their footwear, generally speaking, is poor."

Though Norwegian standards are austere, because of damage and disruption caused by the war, nonetheless the delegation concludes that "if the Norwegian living standards is put at 100, the Russian cannot be put at higher than about 60."

A final point stressed by the delegation is the presence of masses of soldiers and police. "In the large towns," the report declares, "they are to be seen everywhere and in large numbers, at public buildings, on squares and streets, in museums, at every subway station, at the railway stations and even at football matches."

Science and the Spirit of Man

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include a speech made by Mr. David Lilienthal, Chairman, Atomic Energy Commission, which was delivered recently at Lehigh University, Bethlehem, Pa.:

SCIENCE AND THE SPIRIT OF MAN

We meet today upon a campus famous the world over for the men Lehigh has trained, for the additions to knowledge Lehigh has made and has nourished. Wherever science and engineering are known and respected, Lehigh and her teachers and graduates are known and are respected.

Science and technology were once matters that concerned only those with special technical knowledge; today they are front-page news, affecting men's daily lives and daily decisions. Whether millions of human beings shall go hungry or be fed, shall suffer disease or enjoy good health, be condemned to drudgery or use machines to relieve their toil—more and more such human questions are determined by modern technology. Even more than this: technology and the machine have become central figures in the perilous struggle to safeguard the free spirit of man and to establish a peace that is a true peace.

This was made plain by the President in his inaugural address a fortnight or so ago, an address directed to the people of the whole world.

"We must," the President declared, "embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas. * * * More than half the people of the world are living in conditions approaching misery. * * * For the first time in history humanity possesses the knowledge and the skill to relieve the suffering of these people." He continued, 'The United States is preeminent among the nations in the development of industrial and scientific techniques. I believe that we should make available to peace-loving peoples the benefits of our store of technical knowledge in order to help them realize their aspirations for a better life." Such a program as this can greatly increase the industrial activity in other nations and can raise substantially their standards of living. "Democracy alone," the President said, in a challenge to other systems of the left and right basically in conflict with our own, "can supply the vitalizing force to overcome the ancient enemies—hunger, misery, and despair."

Thus did the American people once more assert and strengthen their historic role of maintaining the offensive in the ceaseless contest for men's minds and loyalties, with the most potent weapon ever devised, a weapon that makes the atomic bomb seem a firecracker by comparison: an idea. That idea is this: that technology applied for human welfare can bring not only material well-being but can also nourish the free spirit of man.

The towering place of the machine, of science and the technical skills that create the machine, are among the dominant facts of the turbulent times in which we live. The President's new bold program, the activities in our atomic laboratories, the new advances in medicine, in the production of food by scientific methods, in the design of new scientific weapons of vast destructiveness—these and many other instances can be cited of the predominant position of science and engineering today. And from such facts the great issue of our lifetime emerges. It is an issue with which you and I and all the peoples of the world will be at grips, day in and day out, for the rest of our lives. It is this:

Are machines and science to be used to degrade man and destroy him, or are they to be used to augment the dignity and nobility of humankind? How can men use science and the machine to further the well-being of all men and the flowering of the human spirit?

From this issue no one who lives today can escape. It reaches into the lives of everyone of us, old and young, rich and poor, you who graduate today and you who are freshmen. It concerns the housewife, the librarian, the chemist; it must be faced by the clergyman, the professor, and the physician no less than by the businessman and public official. For this is the kind of world we live in—the world of the machine—and this is the struggle of our time.

Standing always at the elbow of each delegate at the United Nations Security Council meetings, always present at the conference tables of this troubled world is this same issue: how is technology to be used? Cross the seas and the shadow of this question has preceded you—to the valley of China's Yangtze River, to the rising factories of Bombay, to the oil fields of Iran, the tractor-powered wheat farms of the Ukraine. Geography and language differ, but the question and the struggle are everywhere in essence the same.

Men ask themselves: Is our advancing technology good? Is the evermore important machine good? Or are they evil?

To some people modern technology is plainly evil. To them the more gadgets the

more unpalatable is life. The more things we produce, the faster we can travel, the more complex the machines we invent the nearer—they assert—we move to the edge of a bottomless pit. They ask: "Is not scientific warfare the inevitable fruit of technology? Are not evermore devastating atomic bombs the ultimate proof that modern applied science is a curse, an unmitigated blight?" Even great figures are heard to say: "Let us cease learning more of the world, let scientists declare a moratorium in their ceaseless prying into Nature's secrets." They are homesick for that simpler life, before the days when man produced so much and knew so much. They want to flee. But where and how? They cannot say. They cry out against science and the machine and call them evil; but their voices are the voices of despair and defeat.

There are others of our contemporaries who have an almost opposite view of the machine. You will find them all over the world. What they say is exuberant and uncritical. "Of course technology is good," they say, "for it produces more and more things; and isn't production the answer to everything?" They are usually skeptical of God, but they openly worship the machine.

"Of course the machine is good," they say. "When assembly lines cut costs, when production curves are upward or when 5-year plans are fulfilled—those are the important things; let's not agonize over the effect of the machine on the freedom of men."

Technology, they seem to say, is good as an end in itself. If the spirit of man balks, if the yearning to be human increases cost of production or requires coercion—well, man must be redesigned to fit the assembly line, not the assembly line revised for man. The supertechnologists of the world are quite prepared to recreate man in the image of the machine.

I venture to say that neither of these views—of the defeatist or the technolator—will appeal to most Americans.

The machine and technology are neither good nor evil in themselves. They are good only when man uses them for good. They are evil only if he puts them to evil purposes.

The machine can, of course, be so used as to degrade and enslave man. It can be used to exhaust the land and with it the human dignity of those who live on the land; it can poison the air; foul the streams, devastate the forests, and thereby doom men and women and children to the spiritual degradation of great poverty. But it can also open wider—and it has so opened—the doors of human opportunity; it can nourish the spirit of men. Technology can be used to eliminate filth and congestion and disease; to strengthen the soil; to conserve the forests; to humanize man's environment.

The machine can be so used as to make men free as they have never been free before.

We have a choice—that it seems to me is the shining and hopeful fact. If we are wise enough, if we follow our democratic precepts, we can control and direct technology and the machine and make them serve for good.

I believe in the great potentialities for well-being of the machine and technology; and though they do hold a real threat of enslavement and frustration for the human spirit, I believe those dangers can be averted. I believe that through the methods of democracy the world of technology holds out the greatest opportunity in all history for the development of the individual, according to his own talents, aspirations, and willingness to shoulder the responsibilities of a freeman. I believe men can make themselves free. Men can direct technology so that it can carry mankind toward the fulfillment of the greatest promise for human life and the human spirit in all history.

But this result is by no means inevitable. It is equally possible that technology may yield a harvest of bitter fruit.

More huge cyclotrons and nuclear research reactors are not enough. More fine laboratories, more extensive projects in physical and social research are not enough. More use of technology, more factories, more gadgets, whether in this country or in the undeveloped reaches of Africa and Asia and South America is not enough. Those who encourage a contrary belief are playing a dangerous game or are quite blind to the realities.

I say to you that unless the applications of research and technology are consciously related to a central purpose of human welfare, unless technology is defined and directed by those who believe in people and in democratic and ethical ends and means, it could be that the more research money we spend the further we miss the mark. It is like driving in an automobile that is going in the wrong direction; the faster and faster you drive the farther away from your destination you will be.

The guiding of technical activity is safe, in terms of the human spirit, only when it is in the hands of those, in private business and in public agencies, who have faith in the individual human being. It is only safe when it is carried on by methods that are in furtherance of that faith, and methods that insure accountability to the people for the results.

This is not always the case with modern technology. There are times when these matters are controlled by men who lack a faith in people. People, to them, are only a market. They are a market to whom to sell new gadgets; a labor market with which to make the gadgets; a political market to be cajoled and organized and voted and coerced. Technical development under such direction will not further freedom or will do so only by accident, by sheer coincidence.

We know what amazing things applied research can do to increase the destructive powers of armies and navies and air forces—our own, or a potential enemy's. But we still must ask: What can technology do to nourish and strengthen the human spirit? What can technology do to safeguard and strengthen men's freedom?

That modern man can completely change his environment is a matter of common observation. Perhaps as widely known an illustration in other parts of the world is afforded by the development in the Tennessee Valley.

In a single decade the face of a region larger than England was substantially altered, a region comprising parts of seven Southern States. The great Tennessee River has been changed: more than a score of huge dams make it do what men tell it to do. The farming land is changed—millions of acres—and the forests and woodlands. New factories, large and small, barges on the new river channel, and yards building ships; fields once dead and hideous with gullies now fruitful and green to the sun, secure with pastures and meadows; electric pumps in farm yards; new local and regional libraries; State parks and county health facilities—these and many other changes make it a new valley today. The job of development is not done, of course—such a task never is—but it is well on the way. It is one more demonstration that modern technical tools and managerial skills can control nature and change the physical setting of our life in almost any way we choose—there is the point—in whatever way we as a people choose.

These changes in that valley—these physical changes—strike the eye. They are unmistakable evidence of what can be done. Equally impressive are the evidences of increased production of farm and factory, of rising individual income among people who have suffered under shockingly sparse incomes. But most important of all the changes is the change in the spirit of the valley's people. One of Alabama's younger leaders described it in these words: "We can write of great dams * * * of the building of home-grown industry and of electricity at last coming to the farms of thousands of farm people in the valley. Yet, the significant advances have been made in the thinking of a people. They are no longer afraid. They have caught the vision of their own powers. They can stand now and talk out in meeting." And they do.

The real significance to many observers of what has taken place in the valley of the Tennessee is this: This American experiment has fortified confidence that men need not be chained to the wheel of technology. If their purpose is firm and clear, and if they insist upon ways and means to make that purpose effective, man can use the machine in the interest of human welfare and the human spirit.

A great many men and women from foreign countries have come to study the TVA. They have come from more than 50 countries, and in particular from the technically undeveloped regions of the world, and from areas in which unsparing and unwise exploitation threatens their natural resources with utter exhaustion. These visitors have not only seen new life come to a dying soil; they have also seen how a new hope and faith return to people living on that soil, have seen men's pride and their human dignity strengthened as their soil was strengthened. They have not only seen the once wasted energies of a great river turned into electricity but they have also seen the way that electricity has put an end to degrading drudgery in tens of thousands of homes. They have seen businessmen, farmers, laborers—all kinds of men and women—joining together to apply the lessons of science and technology to the building of their region, and in the very act of joining together for that common purpose have seen many of them become better neighbors, kinder and more generous and more cooperative human beings.

These hundreds of foreign visitors see with particular clarity that the new Tennessee Valley speaks in a tongue that is universal among men, a language of things close to the everyday lives of people: Soil, forests, factories, minerals, rivers. No English interpreter is needed when a Chinese or a Hindu or a Peruvian sees these products of a working technology, sees a series of working dams, or a hillside pasture brought back to life by phosphate and lime and an understanding of soils. For it is not really Fontana Dam on a North Carolina stream or a farm in Kentucky that he sees, but a river, a valley, a farm in China or India or Peru.

Because it is an illustration with which I am familiar, I have pointed to the Tennessee Valley as one bit of American evidence that it can be done, that men can use science and technology in the interest of the human spirit. It does not make the demonstration less relevant that only a beginning has been made in that valley, that the people of the valley realize what a long, long way there is yet to travel. And it should surely not be necessary to utter the warning that no one should regard the TVA, or any other one effort in this direction as a single way out. The paths are many, and TVA is but one of the many moving toward the same goal.

We have a choice. We can choose deliberately and consciously whether the machine or man comes first. But that choice will not be exercised on a single occasion, surrounded by spectacle and drama. We will move from decision to decision, from issue to issue, and as I said to you at the outset, you and I and all of us will be in the midst of this struggle for the rest of our days.

We cannot master the machine in the interest of the human spirit unless we have a faith in people. This is the foundation of everything. The rock upon which all these efforts rest must be a deep and abiding faith in human beings, which is a faith in the supreme worth of life. The machine can only add to the dignity and integrity of human existence if it is deliberately used in furtherance of such faith in people. It is the purpose for which the machine is used, and particularly the methods pursued in carrying out that purpose that determine whether technology is likely to further human well-being or to threaten it.

Let me restate: We do have a choice. On the one hand, it is clear that science in the hands of those seeking arbitrary power over men can make us slaves—well-fed perhaps, but more pathetic for that fact. On the other hand, it is plain that men can use technology and the machine to further human freedom and the development of human personality.

How the machine shall be used will be determined by choices made by the people. But those choices are genuine choices only if the people make them with a knowledge of the facts, with a knowledge of the alternatives that are open to them. The means whereby the people make their decisions depends upon a sacred and inviolable process—the dissemination of knowledge.

One such recent choice was the decision of the American people, through their elected representatives, in favor of civilian as distinguished from military direction of the scientific and technical development of atomic energy. After months of hearings and extended public discussion, Congress decided that although atomic energy is of central importance to the national defense, it also holds such broad implications for our health, agriculture, industry, education—in short, our whole way of life—that it must be fitted into the democratic scheme of civilian self-government.

That was an important decision. But many other questions concerning atomic energy are before this country today, and many more will arise in the months and years ahead.

These questions concern every last one of us. They include such questions as these: What kind of Army, Navy, and Air Force do we now require, in the light of these new discoveries? What are safe and what are unsafe methods of international control of atomic energy to prevent its use as a surprise weapon? How extensively should the American people support medical research in this field, and similarly research in nutrition and in increasing the production of food by novel methods opened up by these new developments? What should be the place of private corporations in this brand-new technology, an industry that, unlike anything the world has ever seen before, was a giant at birth, and wholly Government-owned? How do the people see to it that our universities and research institutions shall remain free of Government or military control when it is necessary that such vast sums for research and development be provided to them by the Federal Treasury? How can the people see to it that narrow politics and pork barrel methods are kept strictly out of this huge scientific, industrial, and educational enterprise? How can we maintain essential secrecy without drying up the very well-springs of scientific and technical advance, which flourishes not in secrecy but in openness and free discussion?

The questions are manifold. The answers, the decisions, will affect directly the future well-being of the 145,000,000 stockholders in this atomic enterprise, that is the people of the United States. They will indeed affect every human being on the globe.

Those decisions to be genuine democratic decisions require facts in the hands of the people. Indeed facts and the dissemination of knowledge are the very foundation of self-government, are the very foundation of any effort to direct technology toward the production of the free spirit of man.

Because of its military aspects and the present unhappy international situation, it is not possible to make the whole atomic energy field subject to public scrutiny. But as we on the Commission have studied the matter, we have found that much of what is going on in this strange new enterprise can with safety be publicly reported and publicly discussed. One such report was issued last Monday. More reports, ranging from an atomic primer to an atomic weapons' effects handbook, are in preparation.

Wide dissemination of facts and broad public discussion in this field must continue and must increase. For unless the people have the essential facts about atomic energy they cannot act wisely nor can they act democratically.

It is well that we recall our basic tenet: That this democracy of ours is founded upon a faith in the judgment of the people as a whole. It is founded upon a belief that when the people are informed—honestly and clearly informed—their conscience and their common sense can be relied upon to carry us safely through any crisis. The direction of applied science and the machine by the judgment and conscience of the people as a whole requires that we be an informed people.

Faith in the people must have as its corollaries faith in the facts, faith in the power of knowledge, faith in the free flow of ideas, and hence faith in education and the processes of education. These are the very pillars of our free society.

Strategic Bombing

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following script of a radio broadcast delivered by Chester Huntley, CBS commentator, in Los Angeles on March 3, 1949:

STRATEGIC BOMBING

Good afternoon. This is Chet Huntley with an analysis of some of the day's news.

This may be the point where some beautiful friendships terminate, but with that calculated risk there's something in the news that almost cries out for analysis—for a backing off to look at the situation in its proper context. This reporter has some splendid friends in the Air Force, but there are some strong and impelling reasons why the Nation cannot go along with them, as yet, in their claims of what the Air Force can do.

Yesterday, the Air Force turned in a performance that captured the headlines of the Nation, the applause of a good share of Congress, and the imaginations of most of us. He would be a complete die-hard who would attempt to take anything away from the Air Force or the personnel who had anything to do with the planning or execution of that round-the-world, nonstop flight of the B–50 bomber. It was a great performance. It deserves the applause of the Nation.

However, it does not deserve the slightest tendency on the part of the people or the Congress to issue the Air Force a blank check or to accept the dangerous and fallacious idea that air power alone can give this Nation the military security it wants and which it deserves to have.

When the crew of the *Lucky Lady* climbed out of the plane yesterday morning, Secretary for Air Symington made a sober enough statement. He said this proves that our medium bombers (notice that the B–50 is now a medium bomber) has an international reach and striking power. But you may have wondered if the statement of Gen. Curtis Lemay, Chief of Strategic Air Forces, was either wise or of temperature becoming one with such responsibility. He said the flight proves that we can carry an atomic bomb to any place in the world that needs bombing.

There's a general talking about dropping the atomic bomb again. This question comes up: Just what reputable atomic scientist has told General Lemay that we can drop atomic bombs with such gay and reckless abandon without signing our own death warrants? Does anyone know, for certain, whether or not there's a saturation point for atomic bombs—a point beyond which the atmosphere of the planet becomes lethally charged with radioactive elements?

And then General Lemay made a great to-do about how this round-the-world flight had been kept secret—how the newsmen hadn't found out about it. Well, that's a small thing. But someone might remind the general that during the war newsmen were taken into the confidence of scores of generals, admirals, and Chiefs of Staff and that self-censorship worked with only one notable exception. That was when the Chicago Tribune broke a story that might have tipped off the Japanese that we had broken their secret code. And, furthermore, it's difficult to understand why the general should taunt the newsmen to that degree, because many of the newsmen are the stanchest and most useful allies the Air Force has.

It may be redundant to remind you that a deadly and extremely important contest is going on now between the Air Force and the Navy, in particular. The Army is more or less on the sidelines. There is a certain amount of blame to be laid at the doorstep of each for an unwillingness to compromise and for allowing a spirit of friendly rivalry to creep over into the atmosphere of downright enmity.

That's the chief reason General Eisenhower has been called back to active duty—to act as a chairman of the Joint Chiefs of Staff and attempt to resolve the dispute, which has to do mainly with strategic bombing.

I am here oversimplifying it, to be sure, but for the sake of brevity it goes like this:

The Air Force is demanding that it do all strategic bombing. Strategic bombing, you understand, is that kind which strikes at the enemy's hinterland, at his factories, transport, industries, and cities. The other kind of bombing is tactical bombing, which is employed against enemy troops and in support of our own land or sea forces.

Now the Air Force is saying, in effect, wipe out the Navy with the exception of destroyers for convoy duty, the submarines, and a few other vessels and we'll take care of everything else. The Air Force quite glibly says, in effect, we can deliver bombs anywhere the Navy can deliver them, we can do it cheaper and with better results because we have specialized in long-range strategic bombing.

Now the Navy does not say, in return, we want all the strategic bombing. But the Navy does say that the Air Force can't prove its claims about delivering bombs anywhere, better, and cheaper. The Navy questions the wisdom of putting all our eggs in one basket, lest in the stress and crucial test of battle that basket proves to have a false bottom.

For example, just before the war, the Army Air Force decided that the liquid-cooled in-line engine was the only thing. It decided

to virtually junk the radial, air-cooled engine. But the Navy stayed with the radial engine; spent much of its precious appropriations on research and development of the radial power plant. Well, it's interesting to note that the engines which drove the *Lucky Lady* around the world in a nonstop flight were radial, air-cooled engines. The Navy asks, where would the B–29's and B–50's be today if it hadn't been for the continued development of the radial engine.

I have before me an item from United Press. This is the lead: "American-based heavy and medium bombers could roam the globe at will in a war without much fear of fighter interception or antiaircraft guns. The leadership of the United States Air Force is positive on this point today, following the dramatic flight of the B–50 bomber, etc."

So like that, with a magic wave of the wand somewhere in Washington, all enemy intercepter strength, all enemy jet fighters are swept from the skies to graciously make way for our medium and heavy bombers. True, the jet intercepter may lose much of its efficiency at the 40,000-foot level, but will it continue to do so. And can the Air Force prove that its bombing efficiency is what it should be at 40,000 feet.

On January 23, Marshall Andrews, a reliable reporter, had a byline story in the Washington Post. Andrews says the Air Force has let it be known that it plans to use its funds to build up a strategic air force at the expense of other elements of air power, which it's specifically ordered to maintain. He says the Air Force is doubling the number of B–36 bomber groups while cutting back fighters, troop-carriers, medium bombers, reconnaissance and service units; and he adds that the Air Force has taken this decision arbitrarily and without regard for the needs of the other services or for national security as a whole. Andrews says this may well be a stubborn insistence on going ahead with its own private concepts of warfare and be damned to everyone else.

Apparently the Air Force strategy is to come to Congress at a later date and say, "Look, Mr. Congressman, we went ahead and spent all the money you gave us for B–36's and now we've got to have some fighter craft. So how about it?"

Andrews says that if the Air Force is arbitrarily junking tactical combat, reconnaissance, and transport aircraft then the Secretary of Defense should promptly hand those elements over to the Army and divorce them from the Air Force.

Now there's nothing in the book or the manual or anywhere else by which the need for tactical aircraft, troop carriers, and reconnaissance craft can be minimized. At the close of the war, when Army commanders finally had command over tactical or supporting aircraft, the combination of ground forces and tactical air was devastating. But the Air Force is calmly waving aside tactical air power to concentrate and win its point on strategic air power.

In this last war, it can by no means be proved that strategic bombing was the perfect choice. In lives, resources, and time strategic bombing was costly to the point where its achievements can be questioned. Under strategic bombing German arms production rose until in mid-1944 it was more than three times what it was in 1942. It wasn't until tactical bombing arrived on the Continent that German production began declining.

In the Pacific, troops went in over the beaches, supported by tactical Navy and marine airpower, to take islands from which the Air Force later operated with strategic bombing.

But the Air Force says it doesn't need these bases any more. That it can operate from the continental United States and strike any target in the world. Yet, in four places around the world the *Lucky Lady* had to be refueled. Again the question arises, can strategic air power defend and hold those bases from which tanker craft would operate and refuel the long-range bombers.

Again in the Pacific during the war, strategic bombing can take little credit for the defeat of Japan. Land-based aircraft contributed less than 1 percent to the destruction of the Japanese fleet; 19½ percent to the destruction of the Japanese merchant fleet.

As Andrews points out in the Washington Post, war is an instrument of national policy; and it's entirely possible to win a military victory without having carried out the national policy. For instance, to what extent is our victory over Germany becoming a somewhat hollow victory, when strategic bombing so blasted the nation apart that we have to support that defeated nation for the next generation or so. We should seriously ask ourselves if there isn't some way to make victory less costly.

Have the champions of unlimited strategic bombing ever proved that it was necessary to literally level a German city in order to get at a couple of factories. We know that it didn't do anything to the population; that they still climbed out of the cellars and went to work the next morning with a burning hatred of everything we stood for.

Congressmen yesterday and today frankly declared that the flight of the *Lucky Lady* should make the Russians shiver in their shoes. That's open to question. The Red military is primarily a tremendous ground army supported by tactical air power. Does the Air Force argue that we could defeat Russia blasting her cities? In the meantime what happens to the Red army? Does it end up in Chicago and Seattle while we still bomb Kuibishev and Stalingrad?

Frankly, this reporter has been impressed with the quiet efficiency of the Navy, its surface, submarine, and air arms. The Navy isn't defending battleships and heavy cruisers. But it is defending the principle of varied and multiple approaches to problems so that if one is found wanting the chances are the other will work. It was demonstrated last year that the Air Force can influence Congress and it's about to do it again. The Air Force presents a romantic appeal to the popular and congressional imagination: the business of flying through the wild, blue yonder, the radio program for the Air Force, and colorful spokesmen. But the Navy flies through the wild, blue yonder, too, and actually the question arises should the Navy and the Army have some songs written, retain Admiral Halsey as a spokesman, get a radio show, and compete?

This reporter has purposely taken more or less of a one-sided stand on this issue today in order to provoke your thinking about it. I am certainly no military strategist. But this reporter is aware that this question is too important and too grave for it to be settled without further debate and much deeper thought.

Truth About Spain

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. LYNCH. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the brilliant commentary of my friend, Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, who is known throughout the American Republics for his devotion to truth, freedom, and democracy. Dr. Thorning, in the pages of the national weekly America, was the first scholar in the United States to make a thorough analysis of Hitlerism; he is no less active now in exposing the Soviet maneuvers to use Spain in order to create confusion and chaos in democratic ranks. Fortunately, Dr. Thorning's splendid contributions to contemporaneous history are bearing rich fruit. Not only the general public, but also the Government of the United States are now persuaded that the resumption of normal, friendly, diplomatic relations with Madrid is in the national interest as well as in keeping with the dictates of honor, as wartime Ambassador Carlton J. H. Hayes has frequently emphasized. It was a master stroke of diplomacy that led President Franklin D. Roosevelt to designate Dr. Hayes as the Ambassador of the United States to Spain. It is a tribute to the intellectual honesty and courage of Prof. Carlton Hayes that he continues to exhort all loyal Americans to remember the promises which President Roosevelt made, in writing, to the head of the Spanish State. The statement of Dr. Thorning follows:

Those who edit and write for the Nation are entitled to their opinions about the policy of the United States with respect to Spain. Liberty of thought and freedom of expression, within the framework of truth, are precious American rights. Consequently, when Mr. Robert Bendiner voices his distress that a splendid liberal, Senator JAMES E. MURRAY, should exercise his privilege to insert one of my speeches in the CONGRESSIONAL RECORD, he is merely recording his impression of the propriety of the Senator's gracious action. (The Nation, March 19, 1949.)

On the other hand, Mr. Bendiner has no right to misrepresent me, or anyone else. Neither is he authorized to falsify the record. If he had studied the speech in question, he would have noticed that, nowhere, did I mention the name of the head of the Spanish State. My sole interest in Spain is the welfare and the rights of 28,000,000 people who, for the most part, are now working together for peace and unity. Therefore, I have been the first to advise all true friends of the spanish people not to personalize or to personify the country, when, actually, all the members of the Cabinent, including Foreign Minister Alberto Martin Atajo, share responsibility for the decisions taken in Madrid.

Indeed, I don't believe in identifying any nation with a single individual, although I admit that it would be refreshing, occasionally, to find the editors of the Nation writing about Tito's Jugoslavia, Josef Stalin's Soviet Union, Ana Pauker's Rumania, Georgi Dimitroff's Bulgaria, Jakob Berman's Sovietized Poland, and Klement Gottwald's Czechoslovakia. In that case, one could recognize not only intellectual honesty, a virtue which should rank high in the Nation's hierarchy of values, but also a definite measure of editorial consistency.

Almost every word, suggested by the chairman of the United States Committee on Labor and Public Welfare, was taken verbatim from a communication of wartime Ambassador Carlton J. H. Hayes, an appointee of the late President Franklin Delano Roosevelt, Senator MURRAY, as a friend and admirer of President Roosevelt, has the right to vindicate the latter's honor.

Loyalty to the pledged word throughout the United States is regarded as the most important single virtue for a man in public life. Dr. Hayes emphasized that principle in

the letter which Senator MURRAY recommended for careful study. The same scholar, a most respected former chairman of the National Conference of Christians and Jews, declared that both American honor and American interests were at stake in our attitude of friendship toward the present Spanish Government. The judgment of the gentleman who holds the Seth Low chair of history in Columbia University is one that millions of citizens—Protestants, Jews, and Catholics—will continue to respect. In fact, he is as much entitled to his opinion as Mr. Robert Bendiner.

Inasmuch as the latter, in his article Notes Not in the News, has been a slovenly reporter, I would like to remind both him and you that there is the commandment: "Thou shalt not bear false witness against thy neighbor."

It is demonstrably untrue that virtually every other non-Catholic was hostile to the Nationalist movement in Spain. Among the prominent non-Catholics who spoke and wrote in favor of Rightist Spain and against the Secularists of the Left were the following:

The Honorable J. Ogden Hammond, one-time Ambassador to Spain.

The Honorable W. Cameron Forbes, former Ambassador of the United States and one-time Governor General of the Philippines.

The Honorable Irwin Laughlin, one-time Ambassador to Spain.

Dr. Ellery Sedgwick, former editor of the Atlantic Monthly.

Dr. Alexander Hamilton Rice, of Harvard University.

Mr. Gault MacGowan, of the New York Sun.

The Honorable SCOTT LUCAS, now majority leader of the United States Senate.

The Reverend Dr. Charles MacFarland, general secretary emeritus, Federal Council of Churches, and many other patriotic citizens. They were all members of the Keep the Spanish Embargo Committee. Fortunately, they won the victory in the United States Senate Foreign Relations Committee, by an overwhelmingly decisive victory, 18 to 1. The majority of the committee were non-Catholics. Have the editors of the Nation, Mr. Robert Bendiner, and some others forgotten who the lone Senator was? The individual who could not persuade a single one of his own colleagues to vote in favor of his motion is no longer a Member of the United States Senate, having been defeated for renomination in the next elections. The name of this gentleman may as well be brought to the attention of the readers of the Nation, it is ex-Senator Gerald P. Nye.

At the head of this stationery, you will see the name of Dr. Philip Marshall Brown, honorary president of the oldest peace society in the United States, professor emeritus of international law in Princeton University. During the civil war as well as in the present crisis, Dr. Brown, another distinguished non-Catholic upholder of truth and righteousness, ranged himself on the side of those who refuse to be duped about Spain by the Marxist sympathizers with the Soviet Union. Like myself, Professor Brown realizes that the Red Nazis now in control of Poland are eager to exploit the Iberian Peninsula for the sake of their duel with our own country. Once more, in the General Assembly of the United Nations, we will be treated to the obscene spectacle of a Soviet-dominated Polish delegate raising the question of Spanish relations as a threat to peace. At that time, millions of alert United States citizens, Protestant, Jewish, and Catholic, will point out, for the enlightenment of the Nation, that it was not Madrid, but Moscow, that moved in on Jan Masaryk and Edouard Benes. It was not Spain, but the Soviet Union that enslaved 10,000,000 more people, after a war of liberation. It was not Spain that tried to sabotage the European recovery program, but the Soviet gauleiters in Prague, Budapest, Sofia, Bucharest, Berlin, Warsaw, and Vienna. And the Nazi-minded followers of Karl Marx in the United States seem to be determined to do everything in their power to perpetuate this Soviet system of slavery, against freedom, against democracy, and against all religion.

Fish-Canning Industry of California

EXTENSION OF REMARKS
OF
HON. ERNEST K. BRAMBLETT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. BRAMBLETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following on the effect of H. R. 3190 on the fish-canning industry of California, with particular application to the port of Monterey. The fish-canning industry of California employs about 15,000 people at full production. The bill before the House vitally affects the employment relations of these workers. So impetuous was the rush of the hearings on H. R. 3190 and H. R. 2033 that the California industry was refused any opportunity to be heard. The only witness before the committee who testified on behalf of the business interests concerned was a representative of the National Canners Association, who was also required to cover, in the short period allotted to him, the whole field of agricultural processing as well as fish processing for the entire country.

Various elements of the California fish-canning industry made specific request for an opportunity to be heard. This was denied. They were accorded the privilege of furnishing a written memorandum under a deadline which allowed the employers concerned exactly 48 hours to prepare and transmit from California to Washington a brief statement on the subject.

On the subject of the existing exemption for the taking and processing of fish in the Fair Labor Standards Act there were extensive hearings and debate in the House at the time of the adoption of the original act. Further hearings on the subject were held by the House committee in 1945. As a result, the House committee did not recommend a change. Again extensive hearings were held in 1947. Again the House committee did not recommend a change.

Over a whole decade this House has had before it, in one form or another, the question of the advisability of this exemption. Upon each occasion the conclusion has been reached that there should be an exemption from the Fair Labor Standards Act for fish processing.

It has been widely proclaimed that the bill before the House is primarily the result of the deliberations of the Fifteenth National Conference on Labor Legislation held November 30 to December 2, 1948. A résumé of the proceedings of this conference has been published as Bulletin No. 104 of United States Department of Labor. The report of the committee on wages and hours states the following:

> The conference also supports changes in the Fair Labor Standards Act to bring its benefits to many more workers, by eliminating all minimum-wage and overtime exemptions. By these changes, the minimum-wage and overtime requirements would apply fully to many supervisory and professional personnel; to many employees in retail and service establishments; to farm employees; to transportation workers by rail, highway, sea, or air; to fishermen; to workers processing farm products and fish; to telephone workers in small telephone exchanges; and to many other workers who should receive the benefits of the act.

An examination of the report shows that the only California representative on this committee was the president of the San Francisco Labor Council (AFL). No employer and no representative of the public in California participated in the work of this committee—page 41.

The recommendations of the committee were embodied in Resolution VII of the conference—page 44. The portions of this resolution relevant to the fish-canning industry are as follows:

> Whereas certain industries such as agriculture, food processing, and timber cutting require great numbers of workers during certain seasons of the year and few, if any, at other times; and
>
> Whereas these workers in order to obtain year-round employment must, of necessity, move from State to State with the seasons and the crops; and
>
> Whereas the worker's employment is irregular, his wages low, and he receives no unemployment compensation or workmen's compensation or other legal benefits afforded other types of workers; and
>
> Whereas State labor departments, in general, have not been in a position to take responsibility for these workers: Therefore be it
>
> *Resolved*, That steps be immediately taken by State labor departments and the United States Department of Labor to assume responsibility for these neglected workers whose labor is so essential to our economy, and that laws be enacted or extended to give to migrant agricultural workers the same protection afforded other workers. This would include such laws as workmen's compensation, child labor and school attendance, wage and hour and social security.

An examination of the facts set forth in the preamble of the resolution will show that the recitals are false insofar as they apply to the fish and canning industry of California.

The resolution states:

> Whereas these workers * * * move from State to State with the seasons.

This is untrue with respect to employees of fish canneries. Fish canneries furnish full-time employment to a large number of key workers in season and out; most of the other employees are casual part-time workers and virtually all reside permanently in their communities.

> Whereas the worker's employment is irregular.

This is true with respect to a large number of workers, but the irregularity is determined by the availability of fish and not by the desire of the employer.

The availability of fish cannot be regulated by congressional enactment.

Whereas the worker's * * * wages (are) low.

This certainly is untrue by any acceptable standard. The minimum wage for the lowest class of unskilled workers in the San Francisco area is $1.36 an hour. The minimum wage for the lowest class of unskilled workers in the Monterey area is $1.37. The minimum wage for the lowest class of unskilled workers in southern California is $1.45 an hour. A large group of workers in the Monterey area are those known as cutters. Many of these are paid on a piecework basis and average around $2 an hour for work which can be learned in less than two days. The fish-canning industry is one of the highest-paid industries of California.

Whereas * * * he receives no unemployment compensation or workmen's compensation or other legal benefits afforded other types of workers.

This is false. Fish-cannery workers receive unemployment compensation, workmen's compensation, and are afforded all the legal benefits applicable to other types of workers.

Whereas State labor departments * * * have not been in a position to take responsibility for these workers.

This is untrue with respect to fish canning in California. Fish canneries are intimately regulated by State law. They are subject to constant safety inspections by the Division of Industrial Welfare.

The fact is, that none of the reasons advanced by the President's conference apply to the fish-canning industry of California.

The objectives of the Fair Labor Standards Act would in no wise be promoted by the elimination of the fish-canning exemption which is found in section 13 (a) (5) of the Fair Labor Standards Act. The supposed purpose of the law was primarily to discourage employment beyond 40 hours a week. Whether employment in a given cannery is less than 40 hours or more than 40 hours in any one week would not be in anywise changed by statutory provisions. It is altogether dependent upon the supply of fish available. If the canners are required by statute to pay at premium rates beyond 40 hours per week, the only consequence would be the payment of additional money and the upsetting of established wage schedules. Unfortunately, the sardines do not read the law. The luck of fishermen does not coincide with theories of social reform.

Fish is a highly perishable product. In its natural state it is owned by the public. From the dawn of recorded history all governments everywhere have followed a strong public policy to promote the utilization of fish as a food, to prevent the waste of it, and to conserve its supply. Even now the Department of State is engaged in international negotiations toward this end. Millions of dollars are being spent every year for research and regulation of fishery products in order that our fish supply for the future may be appropriately conserved. This policy is at least of equal importance to that of encouraging a 40-hour week. Yet if the exemption is removed there will necessarily result a wastage of certain fish products and a decline in the production of other fish products, because fish, when taken, must be processed before they are spoiled.

Peculiarly enough, H. R. 3190 preserves the exemption in connection with—

the catching, taking * * * of any kind of fish * * * including the going to and returning from work and including employment in loading and unloading, when performed by any such employee. (Sec. 12 (b) (2).)

Yet the processing of fish must be integrated with the catching of fish or the product spoils and is wasted. It is the sardine which is the largest fish catch in California. The tolerance of time between the taking of the fish and the sealing of the can in this type of processing is about 7 hours. If fishing should be exempted, processing should also be exempted, for without processing there is no sense in fishing. The same arguments apply to processing as to catching. Indeed, the taking of fish may be more subject to control than the processing of fish already caught. The bill says that the taking of fish is exempt and free from hourly control, but the receipt and processing of fish is subject to regulation. This is as much as to say that a man is free to speak, but the audience is not free to listen.

Free collective bargaining exists throughout the fishing industry on the Pacific coast. Hours and overtime can and are controlled and provided by contract. This is as it should be because contracts can be adjusted with changing times. Such a change occurred in recent years. During the war, the fishermen were able to find an abundance of sardines. Commencing with 1946, sardines have almost disappeared from the coast, except in small quantities. This required a complete revolution in methods of sardine processing. The bill now before the House provides for inflexible dictation from Washington.

Apparently it is contemplated by the administration that the fish-canning industry should make application for a seasonal exemption of 14 weeks under section 7 (b) (3). Some fish-canning operations are not seasonal. This includes the vast tuna industry, mackerel processing, and squid.

Moreover, the seasonal exemption, if granted by the dispensation of the Secretary of Labor, is for "not more than 14 workweeks in the aggregate in the calendar year." Under the provisions of California State law, it would probably be assumed that the sardine season commences August 1. Thus, presumably any exemption allowed would necessarily overlap two seasons. The processor would have to guess his 14 weeks' exemption covering two seasons instead of one. Normally, the sardine season is ended February 15. At the beginning of the calendar year the processor would have to guess whether he should take any portion of his 14 weeks at the end of the previous season or whether he should take it at the height of the next season in the following October and November.

At the present time the California Legislature has before it several bills drastically changing the conditions under which sardines can be taken. This is a major design toward conservation and what effect this will have in relation to the seasonal exemption is entirely unpredictable.

Moreover, the amount of sardines caught in a given season varies enormously from year to year. Fish must be canned when they can be caught. In a big year 14 weeks would be entirely inadequate, because the California sardine processing season has traditionally run from August 1 to the following February 15. In a small year the exemption would be meaningless.

Moreover, which 14 weeks shall the processor elect to take? Sometimes many fish are caught at the beginning of the season; sometimes in the middle; sometimes at the end. The only regularity about the catching of fish is its irregularity. Indeed, on a given day, until 7 or 8 o'clock in the morning the processor does not know whether he will have no fish, a moderate amount of fish, or whether his cannery will be going full blast for the next 20 hours. With an operative processing season in sardines in excess of 22 weeks, how is he to pick the 14 weeks which will best utilize the fish available with the least wastage of the public asset of fishery products?

The concept of seasonal industry is obviously taken from agriculture. Here, although the crops may vary in size, the processor knows when they will ripen for processing within a tolerance of a week or more and he knows within what period they will be flowing to his plant. This is untrue in fish processing. He may receive virtually no fish for 3 months and then during the next 3 months find his plant crowded to capacity. The receipt of fish is capable of infinite variation and no one has ever been able to contrive a plan whereby the operations of a fish-canning plant can be controlled or its production directed by season and time.

From the standpoint of the great California sardine industry, the present is the least appropriate time in a quarter of a century to embark upon new legislative reform to assuage the supposed sorrows of man. Sardine processing is now a distressed industry. Prices of canned sardines, fish meal, and sardine oil have declined. The cost of the fish which they buy from the boats has augmented. Worst of all, there has been no adequate supply of fish and the fishermen and processors have been under drastic pressure to utilize all the fish which are caught and by the cheapest methods. It would be inside the truth to say that not one in five of the sardine processors of California has made a profit from this operation over the past 3 years.

Most of the plants are small family enterprises. The number in California which regularly employ more than 200 people in sardine processing can be counted on the fingers of both hands. At the moment the principal problem of the sardine processor is to survive.

Excerpts From United States Steel Annual Report

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following excerpts from United States Steel annual report of February 23, 1949, Irving S. Olds, chairman of the board:

The year 1948 brought no abatement in the Nation-wide heavy demand for steel products. United States Steel contributed its full share toward meeting these pent-up steel needs of the country, and during the year established new peacetime records for the production of ingots and for the shipment of steel products.

United States Steel produced in 1948 a total of 29,300,000 tons of steel ingots and castings, such production averaging 93.8 percent of its rated capacity. Strikes in coal operations, shortages of essential materials, and necessity for repairs chiefly prevented the attainment of full capacity operations. During the fourth quarter of 1948, however, steel production averaged 99.4 percent of capacity.

Shipments of steel products by United States Steel in 1948 amounted to 20,700,000 tons, which exceeded its previous peacetime record by more than 400,000 tons. United States Steel's shipments to foreign countries under Government export licenses equaled 5 percent of its total 1948 shipments.

INCOME AND DIVIDENDS

For the second consecutive year United States Steel, in 1948, established a new high record in total dollar sales, receipts from customers amounting to $2,481,500,000. Income for the year was $129,600,000. Although sales receipts in 1948 were $358,700,000 greater than in 1947, income for 1948 was only $2,500,000 more than for the preceding year. The income for 1948 was equivalent to a profit of 5.2 percent of sales, compared with a profit of 6 percent of sales in 1947. Income in 1948 on the basis of return on sales was the smallest for any year of comparable rate of operations in United States Steel's entire peacetime history.

FACILITIES

United States Steel's rated annual capacity at January 1, 1949, for the production of steel ingots and castings was 31,300,000 tons—representing 32.5 percent of the total steel-ingot capacity of the Nation. United States Steel's capacity is 2,500,000 tons, or 8.6 percent, greater than it was at the end of 1945 following the elimination of certain obsolete and marginal facilities which had been continued in operation during the war.

Following the war United States Steel embarked upon an extended program of additions to and replacements of facilities. This program has been pushed aggressively during the entire postwar period despite constantly increasing costs of construction.

COST INFLATION

The cost inflation that began in the middle 1930's was continued in 1948, and, in fact, was then more rapid than in any preceding year except 1947.

All costs of United States Steel except interest have primarily reflected mounting wage rates. Thus, United States Steel's payments for products and services bought from others are required by such others to cover their mounting employment, purchases, wear and exhaustion, and tax costs. Tax costs, in turn, also represent in considerable measure the mounting requirements of Government to cover its expanding employment of people at advancing compensation rates. Wear and exhaustion costs largely represent past wage costs for facilities that have to be replaced at much higher wage costs.

Employment cost to United States Steel in 1948 amounted to $1.75 per hour per employee. To provide materials and supplies and cover their cost of transportation to plants, and otherwise to furnish employees with the wherewithal to produce, United States Steel bought products and services from others in the amount of $1.70 for each $1.75 of employment cost. Tax costs per employee-hour amounted to 27 cents. Wear and exhaustion cost per employee-hour amounted to 25 cents. Total costs per employee-hour were $3.97 in 1948. After taking care of these costs and after paying the fixed cumulative dividend to the preferred-stock holders, and with such reinvestment of earnings as was deemed necessary by the board of directors to insure the survival and promote the progress of the business, the dividends to common-stock holders for the year 1948 amounted to 9 cents per employee-hour.

PERCENT INCOME OF SALES VERSUS PERCENT OF OPERATIONS

United States Steel's income in 1948 was at the relatively low rate of 5.2 percent of sales. For the same year its ingot operating rate was 93.8 percent. As may be observed from the tabulation shown in the report, when the operating rate was over 90 percent in past peacetime years the income averaged 18.2 percent of sales—or 3½ times as much as in 1948.

Profit or loss is the relatively small difference left over from sales after all costs have been met. Profits or losses are neither good nor bad in nature or magnitude so long as the transactions from which they result are themselves equitably entered into and fulfilled. But one thing is certain, unless costs are kept under what customers are willing to pay in the light of prices at which competing producers are willing to sell, profit is not possible, and loss and unemployment are inevitable. More than that, mere survival of an enterprise competitively requires the purchase of ever more modern tools of production.

The U. S. S. "United States"

EXTENSION OF REMARKS
OF
HON. THURMOND CHATHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. CHATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the follcwing article which appeared in the March issue of the Bureau of Naval Personnel Information Bulletin, All Hands, entitled "New Super Carrier Bears Illustrious Name":

NEW SUPER CARRIER BEARS ILLUSTRIOUS NAME

A proud name—that of U. S. S. *United States*—has been assigned the new 65,000-ton flush-deck super carrier (*CVA 58*), the keel of which is scheduled to be laid next month at Newport News, Va.

Only other ship to bear this title was launched 152 years ago at Philadelphia when the 1,500-ton frigate named by George Washington and sailed to fame by Stephen Decatur slid down the ways.

The vessels represent the earliest and latest built for the Navy under the Constitution. Designed by Joshua Humphreys, the first *United States* was tops in fighting ships of its class and time. The new carrier has the same aim.

U. S. S. *United States*, a 44-gun ship, performed creditably under Capt. John Barry during the undeclared war with France from 1798 to 1800. But it was the fiery Decatur who led the crew to its greatest victory in the War of 1812. With an astonishing display of fire power and accuracy, Decatur's ship overwhelmed the highly regarded British frigate *Macedonian* near the Canary Isles.

A comparison of the old and new *United States* high lights differences in naval arms over a century and a half. Decatur's vessel had a displacement of over 1,500 tons, that of a modern destroyer, and a 43-foot beam. Its over-all length was 200 feet, roughly that of an LSM. The frigate's masthead height, however, equaled that of a *Midway* class carrier. Its cost, protested as an extravagance in the 1790's, was $299,000.

The new carrier's figures show a displacement more than 40 times that of the frigate, an over-all length (1,090 feet) more than five times as great, and a 130-foot beam triple that of the old vessel.

CVA 58 will feature a totally clean-deck operating area for its planes, without the usual island on the starboard side. This arrangement will permit operation of planes so large that their wings may jut out over the ship's side. Planes weighing well over 100,000 pounds can be accommodated, suggesting that number of necessary missions will decrease while striking range of the ship's air complement will be enormously extended.

Far and away the most powerful vessel in modern sea-air warfare, the modern U. S. S. *United States* provides a fitting continuation of the naval tradition of sea control begun by its sister ship in the youth of the country for which the vessels were named.

Mr. Truman Rides Again?

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial from the Boston Post of Friday, March 18, 1949, entitled "Mr. Truman Rides Again?":

MR. TRUMAN RIDES AGAIN?

If President Truman spoke only in jest when he threatened to carry the fight for his campaign promises to the country in a personal tour, events have called him. Control of Congress, which for the moment has been wrested from him by die-hard Dixiecrats, who oppose civil rights, and reluctant Republicans, who ignore November 2, may force him to swing the circuit.

As he remarked, "I know how to do it." He demonstrated that. No other President in history bounded from the depths to the heights of leadership in a few fiery, fighting weeks of personal appearances. Sages will warn that Woodrow Wilson fell on his face in carrying the League of Nations battle to the people. But in that case the League was alien to all prior views of foreign policy. In Mr. Truman's case, the issues already have public acceptance.

Two things would make the Truman task easier. One is that in the midst of his congressional woes, Mr. Lewis has reopened his

personal vendetta. The other is that the American people will have it made clear to them that, right or wrong, the recalcitrance of some GOP Congressmen stems from an abhorrent, unsportsmanlike trait—poor losing. Whereas Mr. Dewey accepted his defeat with good grace, Taftian zealots of his party are wittingly or unwittingly giving the impression that they are not only chewing sour grapes, but also grapes of wrath.

It is understandable why some Republican Congressmen are privately worried about what Washington commentators call the unholy alliance between the Dixiecrats and the McKinley Republicans. They fear that the negative approach is going to hurt GOP resurgence in 1950 and 1952. They are aware of what Russia's reiterated "No" to everything progressive to peace has done to any regard which the world held for the fighting Russia of the early '40s.

Measured in men, they see how Herbert Hoover, most maligned of the GOP, bounded back into national affection when he put country above party to work out a better way of running the Government. They are also painfully aware that Mr. Dewey climbed back into national influence in January when he jumped the fence and presented to the Albany assembly a program for the Empire State which was more than "Fair Dealish."

Again and again and again, Mr. Roosevelt got himself reelected by pointing out to the Nation how a few willful men were endeavoring to thwart his labors for the plain people. With a negative approach and watered-down substitutes for the Truman preelection blueprint for a better America, the GOP may find its victory over the President in time a hollow one. Both Mr. Hoover and Mr. Dewey have come to realize that Archibald MacLeish picked a good title for one of his books: America Is Promises.

Pay the Fiddler

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1949

Mr. CANNON. Mr. Speaker, originally when a bill making appropriations was introduced, it carried with it provisions for raising the money with which to pay the amount of the appropriation. Unfortunately, for purposes of comparison, our appropriation bills today make no provision for raising the money which they propose to spend but leave that to another time and another committee. The result is vast expenditures with no thought of where the money is coming from.

But let us not be beguiled into overexpenditure by the fact that this bill carries no proposal to raise the revenue required to pay for these expenditures. Eventually we must pay the fiddler. Let no one have any illusions about that. And when the day of reckoning comes I want to ask you now where you will get the money to pay for the millions of dollars of obligations we are saddling on the Federal Treasury by the amendments so gaily voted for on this bill over the protests of the committee and over the recommendations of the budget?

Mr. Speaker, the lot of members of the Appropriations Committee is an unhappy one. Theirs is a thankless task. At every hearing we are besieged by a large part of the membership of the House demanding huge expenditures in their respective districts. Any of these Members can show convincingly that the expenditure he requests will be advantageously invested. But that is not the question, Mr. Speaker. It is not a question of whether these expenditures are needed. It is a question of whether we can afford them. And in the present condition of the national finances we can afford very few of them. The result is we must choose the most essential projects and omit the remainder. And then when we bring the bill on the floor there is concerted effort on the part of all who have been denied appropriations—because we simply do not have the money—to force them in the bill. And every member of the subcommittee and the committee which has reported the bill becomes anathema to colleagues whose pet projects have failed to measure up to the very liberal requirements of admission to the bill. Santa Claus will not hand out the candy they want, so Santa Claus is in the dog house. And mob spirit develops and a concerted raid is organized against the Treasury already depleted below actual cash reserves—and deficit spending.

Now where is the money coming from? Under date of March 16, 1949, the Associated Press reports a probable deficit of $1,200,000,000. As a matter of fact, the prospect is that estimates yet unbudgeted will increase the margin between income and expenditures between now and June 30, 1949. The one item of armament of allies in the North Atlantic Pact alone can be expected to add 10-figure deficits to the final totals.

So the money you are adding to this bill in these amendments, rejected by the budget and the committee, must be paid for by either increasing the public debt or by raising taxes. You can take your choice. And the American taxpayers can take their choice—or at least express their opinion in a very substantial manner.

While on this subject, how many are in favor of repudiating the national debt? How many will vote to confiscate the Government bonds which constitute the national debt. We must either pay these bonds or repudiate them. When are you going to pay them. We owe $252,000,000,000. If we started paying them and paid only $5,000,000,000 a year—it would take over a hundred years to pay off the debt.

Instead of paying $5,000,000,000 this year we are here on this floor, in such bills and with such amendments as these, not only failing to leave any money in the Treasury to make a payment on the national debt—but we are adding to the deficit—which is adding to the national debt instead of paying it. Instead of paying the national debt in 100 years, if we continue to spend money this way it will take 101 years to pay the debt, if we start next year.

But it is worse than that. The House voted last Wednesday to build a 70-group air force. The cost will aggregate billions of dollars. Where do you expect to get that money? Where can you get it if we push appropriations above the national income with such home-district expenditures as these?

It is still worse than that. The springs of Federal revenues are drying up. The national income—and with it the Federal income—are dropping. Up to March 15, 1949, Federal receipts were running 8 percent behind the corresponding period last year. We knew, of course, that wartime income and wartime revenues would not be maintained, but the lag is more than has been expected. We can be certain that from now on—while Government obligations, especially in national defense, continue high or higher—the revenues from which such expenditures must be paid will continue to decline. That is the history of the inevitable return to normal following every great war. Instead of curtailing expenditures in this bill to correspond to the reduction in the national income, we are proposing to override the committee on this already too generous bill and by increasing it, thereby increasing the national debt. If Government bonds were not artificially supported, you would see a drop in the quotations on the bond market in tomorrow's newspapers.

The mythical Senator Claghorn, who voted for all appropriations and against all taxes, is represented here by Members who voted to reduce taxes in the last session and are voting for every increase offered to this bill.

Of course, we can always start the printing presses and print all the money we need for expenditures of this character—as many European nations have done in the past decade or so.

And we have not yet taken into consideration all the contingencies for which we must be prepared. What if we have a heavy drop in employment and it is necessary to finance public works as we have had to do in the past? Where will funds be procured to meet the emergency? Unemployment is today at the highest point since 1941. If it continues to grow and it becomes necessary to meet it, where can we expect to raise the money if we have already scraped the bottom dry?

Or if it becomes necessary to support farm prices—in order to prevent the national catastrophe which always follows a collapse in farm income—what will we use for money?

Mr. Speaker, let us not imagine that the people are not alert to the situation. The time has long since gone by when the people at home waited for us to come back from Washington and tell them what happened while Congress was in session. Here are excerpts from some of the letters received by the committee in the last week. The letters are not always officially from the firm whose name is attached but they are all from some official of the firm who wrote on the firm stationery.

PHOENIXVILLE, PA.

We just can't continue to pay out these huge sums of money with no idea as to how the money will be available. The only way we can do it is by inflation and such would lead to the same conditions which they are

now enduring in China. Now is the time when we should be reducing the huge debt which we built up during the war, as everybody seems to be agreed that incomes are at their highest level, and we are due for a leveling off. If such is the case, we certainly cannot continue this spending, as incomes will be reduced and the Federal income will be reduced in direct proportion to them.

S. L. SHANAMAN, INC.

DAYTON, TENN.

The last few years have been remarkable years for this country with respect to the amount of money in circulation and the amount of money the Government has been able to obtain through taxes; however, the high level of business has raised this large amount of money, and I do not believe that it will continue. No doubt the period of recession or getting back to normal competition is upon us.

The idea of continuing to raise taxes to me is ridiculous, and in the face of present conditions of the country it would seem impossible to get more money, as profits from which taxes are obtained are going to be surprisingly low the next fiscal year in comparison with the last few years.

Of course, lots of money in circulation and lots of money to spend should make good business, but the country went into a huge debt during the war and it seems to me that it is necessary that this debt now be reduced. How we can continue to pile it up without going into bankruptcy has never been satisfactorily explained.

GRAYSVILLE HOSIERY MILL, INC.

PEEKSKILL, N. Y.

We realize that each and every agency and department of the Government will fight any attempt to cut their budgets.

Each and every department will tell you that their particular budget should not be touched.

However, we feel that there is only one untouchable item in the Government budget and that is the interest on the public debt.

Uncle Sam hasn't any money to pay any bills except what we supply, and, unless your committee does succeed in making very drastic cuts, the day is soon coming when you will cripple our businesses to a point where we can no longer supply Uncle Sam with the necessary funds to carry on.

R. MACKELLAR'S SONS CO., INC.

TACOMA, WASH.

With Government taxes now taking close to 33⅓ percent of the national income, it is becoming more and more difficult for businessmen to make both ends meet and leave anything for growth of the business. While we have enjoyed a good business for the past few years and have made a paper profit, practically every dollar of that profit has had to be plowed back into the business to keep our business in a solvent state. These paper profits are represented to a considerable extent by write-ups of inventory, but nonetheless this has been subject to the regular rates of income tax. We have not heard that the Federal Government will rebate us for any inventory losses we sustain in the years ahead. From all present indications they are inevitable.

The "gravy train" for most businesses has long since slowed down and will probably come to a dead stop and reverse in probable near future. I, therefore, fully agree with efforts to stabilize and, where possible, reduce the cost of Government.

SHAW SUPPLY CO., INC.

BRADFORD, PA.

We should actually, drastically reduce the spending of money.

BARNSDALL PRINTING CO.

OMAHA, NEBR.

This country definitely had better put its financial house in order as well as individual institutions.

INSTANT PRODUCTS MANUFACTURING CO.

MONMOUTH, ILL., *March 12, 1949.*

It is about time the people of the country realize the Federal Government cannot continue to operate on a deficit financing basis without going bankrupt sooner or later.

BERSTED'S HOBBY CRAFT, INC.

ALBUQUERQUE, N. MEX.

I do not feel, considering the swing business has taken the past 3 months, that corporations, as well as individuals, can at this time stand an increase in taxes to support a larger budget.

JOE HEASTON COMPANIES.

BIRMINGHAM, MICH.

The writer has just returned from a trip through Florida, Texas, Missouri, and Iowa, and talked to many people pertaining to the condition of the country. Without exception all parties concerned agree that it is time that Government expenditures be reduced by whatever means or method is necessary to save the American people.

BIRMINGHAM CONSTRUCTION CO.

MANCHESTER, N. H.

I heartily endorse curtailment of unnecessary and excessive spending in every department of our Government, to the end that it will strengthen our national economy.

FOSTER BEEF CO.

JONESVILLE, MICH.

The writer is not a politician and doesn't think in terms of political strategy or principles. Spending is largely a political expediency and that is the real waste that I believe that you are trying to eliminate. Both parties use it to such an extent that the average man is disgusted with both. When he votes he just picks what he thinks is the lesser of the two evils, as that is the only thing he can do.

So I'd like to say that this little organization, and the writer personally, are solidly behind everyone who is sincerely and unselfishly trying to make our Government one of economy and efficiency without political expediency.

KIDDIE BRUSH & TOY CO.

MORRISTOWN, TENN.

The writer makes no pretense of being an authority on economics. I am not a politician or a statesman. I simply know that an individual or a business cannot continue to spend recklessly more than its income. What applies to individuals in business must apply to the Government. No person, business, or government can spend more than its income without eventually facing bankruptcy.

MORRISON TURNING CO., INC.

WILMINGTON, CALIF.

I am trusting that much of the budget (for fiscal 1950 starting July 1) may be pared to lighten the burden of the man who pays the unbelievable United States of America peacetime taxes.

ROSSMAN MILL & LUMBER CO., LTD.

DETROIT, MICH.

We all know that giving away money is more popular with the general voters than making cuts.

H. J. CAULKINS & CO.

CHICAGO, ILL.

Our Nation in a better financial condition. Eliminate large unnecessary expenditures which only cause taxpayers and others plenty of trouble ahead.

ACME PETROLEUM CO.

NEW ROCHELLE, N. Y.

For some time I have been depressed over the tendency on the part of those in legislative halls to appropriate money for things that seem unnecessary.

Many, many years ago, when I studied our history, I was very proud of the fact that our representatives were elected by the people at large, and felt that the best interests of the people and the country would be the paramount consideration of those elevated to office.

It was a great disillusionment to me to find in quite a number of cases measures were enacted that were fundamentally unsound solely because it seemed politically expedient. I have always felt that on the average those elected to office possessed superior intelligence, and must have known that unless some economy were wrought the country would be gradually ruined, and also that the direct and indirect taxes were affecting the poor as well as the rich.

C. B. MCMANUS.

NEW YORK, N. Y.

There are undoubtedly numerous occasions during the course of a year when corporations as well as individuals should express themselves concerning proposed legislation.

It occurs to us individually and collectively that expenditures should at the moment be carefully screened and a policy of extreme conservatism be applied.

We are forced to this conclusion moreover by reason of the extremely heavy peacetime budgets which are in themselves causing us to arrive at the point wherein the danger signals are definitely obvious and without question a distinct threat to our accepted and known standard of living.

We sincerely trust that there are sufficient expressions from others to warrant continued objections to unnecessary and questionable appropriations.

GUYGNON & GREEN, INC.

HOUGHTON, MICH.

In these times when so many of us look toward the Government for financial aid of all kinds, it must be a great temptation to follow the easy course and acquiesce to all of these demands.

It is an unhappy fact that a large percentage of my generation has grown up under the stress of unusual economic conditions and has been exposed to fantastic Government expenditures both for domestic and foreign purposes. Consequently, these young people feel that the Government is the logical source for most of the wealth which they can obtain. Let me assure you, however, that many like myself believe that the future of our country and its wealth lies not in the spending of money by our Government but in the individual efforts of its people.

I. E. SWIFT & CO.

SAN DIEGO, CALIF.

We endorse reducing the expenditures of the Federal Government. These expenditures have already reached a point where it is almost impossible for a small business to operate, and if they continue as they have in the past, it will just be a matter of not too long a time before there will be no small business.

This, in time, will also effect big business and will mean the end of the American way

of life. It is still the best in the world regardless of the propaganda which is being spread from so many sources in this country.

SAN DIEGO NEON SIGN CO.

KENOSHA, WIS.

Unfortunately, many people think that the Government can create money according to its whims and thinking.

Most of the people believe that the Government has a never-ending amount of money that can be used, and they forget entirely that they—the same people—have to work much harder to supply the large funds which are under consideration at the present time.

DYNAMIC CORP.

MINNEAPOLIS, MINN.

Why should I as a head of a family or as an executive of a business be concerned about keeping the budget balanced if there is no indication that the Government intends to avoid bankruptcy.

WESTERN MINERAL PRODUCTS CO.

NEW HAVEN, CONN.

I among millions of other Americans want to see unnecessary spending eliminated.

There is only one sure way to make a start in this direction and that of course is to cut down on appropriations to a minimum right now.

This country cannot stand continued high spending. It must be curtailed if we are to avoid bankruptcy and which is just what our foreign adversary would like to see happen.

NEW HAVEN VIBRATOR CO.

CLARINDA, IOWA.

Back here in the Middle West, it seems to us that the sensible thing to do during these years of good business is to cut down on unnecessary projects and use the money for reducing the public debt. Within a few years we might have to unbalance the budget and spend to give necessary employment to our people. During years of good business we should economize and pay on the existing debt which is alarmingly enormous, as you know.

Above all things, taxes should not be increased, for they have now reached the point where the businessman says to himself many times: "What's the use?" Why work and save? Why try to make a profit? It will simply be taken away and distributed to those less industrious.

RICHARDSON LUMBER CO.

SHEBOYGAN, WIS.

One of the biggest things to watch is necessarily the lobby of Federal employees to save their skin and to get more jobs for their relatives.

PANTZER LUMBER CO.

YAKIMA, WASH.

Our country may be on its way out and apparently following the same program of political procedure that ruined the Roman Empire, which ruin was based on excessive taxes voted largely by politicians to keep themselves in office.

WEST SIDE INSURANCE AGENCY.

OMAHA, NEBR.

In business and personal life we are at times presented with prospective expenditures for good, worthy, desirable purposes, but which we must forego simply because the expenditure is beyond our means; and, if made, will result in financial calamity. No individual, business, or group can escape this basic law, and neither can our Federal Government. It is my belief that the Federal Government is now exceeding the expenditures which the economy of the country can maintain.

There is consideration at present of increasing the Federal budget. It is my personal opinion that we not only cannot increase it, but that we cannot maintain it at its present level. Business is simply not going to be able to maintain its present top of an inflation earning power, and with the drop in business income, it simply cannot continue to produce as great a tax income to the Government as at present.

I do not suggest too stringent curtailment for defense, which I consider necessary, within our means, and worth its cost; but I do not think a large standing Army, regardless of how well equipped; or an unreasonably large Navy, even if equipped with many oversize multi-million-dollar flat-top sitting ducks, is going to successfully defend us in the next war. I, as a layman certainly don't know all the answers, but I would much prefer to take my chances with an up-to-the-minute, large, and well-equipped Air Force, with a good stock of atomic bombs.

MEAD FARM EQUIPMENT CO., INC.

DETROIT, MICH.

It is high time that we do cut down on spending, and more power to your committee in safeguarding the interests of the majority by critically analyzing each and every appropriation.

FRED J. ROBINSON LUMBER CO.

PORT WASHINGTON, LONG ISLAND, N. Y.

Keep the budget within reasonable bounds. Make a real contribution toward the continuance of our American way of life.

LEWIS COAL & OIL CO.

GREENSBORO, N. C.

Thinking people, who are interested in the future welfare of our Nation, say they realize vast sums must be spent for defense and to maintain our world position. They also realize that our national income is declining and that our indebtedness has carried the Nation close to bankruptcy.

Please curb wasteful and unnecessary Federal spending.

ELECTRIC SUPPLY & EQUIPMENT CO., INC.

LANSING, MICH.

In view of the large debt that is being constantly increased, we feel that your committee should handle this matter on the same basis that we do in our manufacturing plant, that is when it is tough going we refrain from spending money that could be kept in our bank account for future existence.

The way business is going with us at this time we have to watch every corner and how long this recession or slow-up is going to last, we do not know, but until we do know, we are watching our expenditures and you as a Government official should handle the Government affairs in the same manner.

Where we have kicked in in the past few years pretty sizable amounts in the form of taxes, the way we are going now our contribution to the Government is going to be very slim if anything. Therefore, we feel that the Government officials should sense this thing and realize that they may not have the money to do with as they have in the past.

DAIL STEEL PRODUCTS CO.

DES MOINES, IOWA.

I feel that reduction of appropriations for the Federal Government is the key to the whole situation and want you to drastically reduce Government expenditures.

H. E. SORENSON CO.

BAYONNE, N. J.

I feel keenly that the paralyzing excess of Government is pulling us toward a socialist, welfare state, which may well be followed by national bankruptcy, defeat in a future war, or a dictatorship.

As a citizen, I urge you to reduce governmental expense against all the present selfish pressure to receive a Federal hand-out at the expense of others in the present and of all in the future.

BERGEN POINT IRON WORKS.

BUFFALO, N. Y.

It is your duty to safeguard this Nation from wasters.

EUGENE C. KRAUS, BALL & CO., INC.

PORT WASHINGTON, N. Y.

A sane budget in keeping with the times in which we live would be a distinct contribution toward maintaining stability in the economic structure of our country.

WILLIAM H. REICH.

SIOUX CITY, IOWA.

The Representatives of this country, whose citizens enjoy the highest living standards of any people of the world, should restudy our Constitution and Bill of Rights which our forefathers struggled, fought, and slaved to bring into being simply to escape the very dangers that are now being propagandized as being good for us. All history records that every great nation of the world faded into oblivion when the cost of the Government became more than its citizens could bear. With our present staggering national debt plus the billions of dollars requested for our national budget we must guard constantly against that very thing happening here.

I will appreciate your taking a few moments to read the enclosed article by De Witt Emery which will reveal some of the things that we must constantly guard against. There is still time to stop this mad rush down the road to financial ruin, if the members of your committee search diligently all requests for funds and eliminate every unnecessary appropriation, you will be contributing greatly to the benefit of the Nation that stands today as the last great hope for free peoples of the world.

May we count on eternal vigilance in keeping Federal expenditures at the very minimum.

A. U. BLACKBURN.

CHATTANOOGA, TENN.

All of this talk about being unable to reduce the budget as the items are all unreducible is simply not the fact, as the only irreducible item in the budget is the interest on the national debt, and all of the others should be drastically reduced except possibly in a very few isolated cases, and I firmly believe that all of them could be.

Our form of taxation is in itself inflationary, and I consider that the Federal, State, and local taxes is one of the biggest items in our present high cost of living.

RAY-SER DYEING CO.

ALAMOSA, COLO.

Watch the pursestrings and not give away more than we have. We know there must be a stopping point to giving, and think that it is high time that we did something about it.

DANIEL'S FOOD STORE.

BURBANK, CALIF.

We cannot continue to pour out money in unlimited quantities. It is time for some economy in government and we sincerely hope your committee can effect substantial savings in the appropriations for the 1950 fiscal budget.

GENERAL WATER HEATER CORP.

BUFFALO, N. Y.

Small business, which is the economic backbone of the country, cannot survive if it is to be saddled with more taxes.

RAUGH & STOECKL PRINTING CO., INC.

COLEMAN, TEX.

It is hard for me to see how our Government can keep on increasing taxes without smothering and suffocating all business in the final outcome.

CLARK AUTO PARTS SUPPLY.

SAN FRANCISCO, CALIF.

I think if some of the Senators and Representatives would go into an income-tax office along in February and March and see the pain and suffering on the faces of the people who are trying to find ways of paying their taxes, to say nothing of figuring the taxes out, they would feel that something should be done.

For ourselves, we need some machinery to lower the cost of our production, but it will be quite a long time before we can get it with the taxes that we have to pay.

BORDEN DECALCOMANIA CO.

PORTLAND, OREG.

As much as I may be in sympathy with many of the efforts of our Congress to give the people of our Nation economic security, I believe the safest way to achieve this is to have a sound fiscal and economic policy.

I look with a great deal of alarm at the continuous tremendous increases in our budget as time goes by. Somewhere we are going to have to sit down and draw the line and start it going the other way.

PURDY BRUSH CO.

Mr. Speaker, these are only a few of the letters of this character received in the last week, but space will not permit them to be printed here without an estimate. I will include others in tomorrow's CONGRESSIONAL RECORD.

Birth of Prince Kuhio Kalanianaole Commemorated by All Hawaii—Memory of Former Delegate to Congress Honored

REMARKS
OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. FARRINGTON. Mr. Speaker, the people of Hawaii nei—all Hawaii—will join tomorrow, March 26, in commemorating the birth and honoring the memory of one of their most distinguished sons.

He was Prince Jonah Kuhio Kalanianaole.

Today he is referred to in affectionate memory by the Hawaiian people as "Ke Alii Makaainana"—"A Prince of the People."

I call this event to the attention of the House because Prince Kuhio, as he is known among us of Hawaii, served in this House as Delegate to Congress from Hawaii with great distinction from 1903 until his death in 1922.

In this capacity he brought not only great honor to the people of the Hawaiian race, of which he was one of the outstanding members, but to all the people of this Territory without regard to their racial origin.

He not only embraced the principles of American democracy at an early age but fostered among all peoples the friendliness and understanding that is one of the distinctive features of the contribution of the Hawaiian to life in the islands today.

He was not only a great Hawaiian. He was a great American.

Prince Kuhio was one of the most appealing figures in the saga of Hawaii. Born to the purple in 1871, the prince proved, in his more mature years, to be an inspiring champion of American concepts of democracy.

Kalanianaole was born on Kauai, a direct descendant of the last independent ruler of that island. He was a son of High Chief David Kahalepouli Piikoi and the Princess Kinoiki Kekaulike. While still in his teens, the youth was created a prince of the realm by King Kalakaua, his cousin and uncle.

After attending both public and private schools in Honolulu, the prince became a student at St. Matthew's College in San Mateo, Calif. He concluded his formal education by taking a business course at the Royal Agricultural College in England.

RETURNED TO HAWAII

Forced by ill health to return to Hawaii, Kalanianaole served, under the monarchy, as a minor official in the office of the minister of the interior and in the customs service. When the revolution staged by the "haoles"—whites—erupted, Kuhio supported his cousin, Queen Liliuokalani. Shortly after the Republic of Hawaii was established, the unreconstructed prince was arrested, convicted, and imprisoned for conspiring to effect a royalist uprising.

In 1896, following his release, he married Elizabeth Kahanu Kaauwai, daughter of a chief of Kauai. Three years later the couple, despairing of a future in their beloved islands, left for an extended tour abroad. At first the prince determined to make his exile permanent, but after 2 years of traveling, hunting, and observing the Boer War, he decided to accept unreservedly the new order in Hawaii.

BECAME ACTIVE IN POLITICS

Returning to the islands in 1901, Kalanianaole immediately assumed an active part in public affairs. He joined the Home Rule Party, but his affiliation was not a happy one. Disgusted by the bigoted racial views and undemocratic practices of the organization, the prince, now an ardent advocate of the American way, renounced his association and, in 1902, joined the Republican Party. The same year he was named that party's candidate for Territorial Delegate to the Federal Congress. Victorious in his first campaign, Kuhio, with his uniquely devoted following, was never to know defeat at the polls; he served as Hawaii's nonvoting representative continuously from 1903 until his death in 1922.

KNOWN AS PRINCE CUPID

Known affectionately to his constituents and colleagues alike as Prince Kuhio, or Prince Cupid, the affable, able, and untiring Delegate won the hearts of all with whom he had contact. Assigned to the Committees on Agriculture, Coinage, Weights and Measures, Military Affairs, and Territories, Kuhio rendered significant services to his people. In 1919 he introduced the first of a long series of bills to accord statehood to Hawaii. The crowning legislative achievement of his career was his successful sponsoring of the Hawaiian Homes Commission Act.

Aware of the tendency of his people—those of original Hawaiian blood strains—to congregate in urban centers, where, as a result of crowded tenement conditions, the race was fighting a losing battle for survival, the Delegate in 1920 introduced a bill to modify the public-land section of the organic act. The measure was finally approved by the President on July 9, 1921. Under its provisions the Hawaiian and part-Hawaiians were to be given the opportunity to leave congested urban areas and settle on the land as homesteaders. It was hoped that in time a relatively prosperous class of independent citizen-farmers would develop.

200,000 ACRES MADE AVAILABLE

Approximately 200,000 acres of government land, comprising specified undeveloped areas, excluding sugarcane lands, were made available. The land so far utilized is divided into homestead lots of varying dimensions, each leased for 99 years at a nominal rental to those persons whose blood is at least one-half Hawaiian. Every homesteader is granted a loan to permit him to build a house or work a farm. The whole project is controlled by a commission—Kuhio was the first member appointed—and is financed, essentially, by a revolving fund of $2,000,000 accumulated from rentals of public lands and water licenses.

The first settlement under the plan was established on the island of Molokai; operations since have been gradually extended to other islands. By the end of 1946 more than 4,000 Hawaiians were living in homestead communities. Approximately one-fifth of these latter-day pioneers were situated on Molokai; the remainder were scattered among residential homestead sites on Hawaii and Oahu.

PLAN PRODUCED RESULTS

Although the rehabilitation project has not as yet fully justified the hopes of Kalanianaole and other founders, the plan has produced tangible benefits. The act prevented Hawaiian settlers from speculating with their land or disposing of it. Many small residential and subsistence homesteads, moreover, have been set up in the environs of the cities and towns where many of the native Hawaiians are employed.

On January 7, 1922, the prime mover of Hawaiian rehabilitation was called to his fathers. Despite his express desire to have his passing marked only by a simple ceremony, the grief-stricken peoples of Hawaii refused to have it so. The pomp

and pagentry incident to his funeral has never been surpassed in all the annals of Hawaii. He was revered not only as a man of the purest motives, but also as the last titular prince of his line. Hawaiian and "haole" alike acknowledge that he, through his example and influence, was the paramount factor in reconciling the Hawaiians to the loss of their independence, and in converting them to a passionate Americanism. Truly, he was "Ke Alii Makaainana"—A prince of the people.

National Service Insurance Funds

REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. SHAFER. Mr. Speaker, about a year ago during the Republican-dominated Eightieth Congress, which has taken so much abuse, I called the attention of the Members to the huge sums of money veterans of World War II had overpaid for their national service life-insurance funds during the late war, and asked what had become of these funds.

To my surprise, following my inquiry, the Veterans' Administration admitted that World War II veterans had overpaid for their insurance more than $2,000,000,000 and that this money would be returned to them.

This, as most Members of the House will agree, is no small sum. It does not belong to the Federal Government. It belongs to the millions of men who had voluntarily subscribed to national service life insurance during the war.

We who served in the Eightieth Congress obtained assurances for these veterans that these insurance overpayments would be repaid within a reasonable time, but we did not count on the slovenliness, the inefficiency, and, perhaps, the political propensities of those who have charge of the Veterans' Administration.

To my surprise, just the other day I was reading a well-known national weekly magazine and came across an item to the effect that 14,000,000 veterans in the United States have not yet received their refunds. In some cases these refunds amount to $100 to $200, according to my recollection.

Yet, not a single refund check has been mailed out by the Veterans' Administration. In fact, I am led to believe these checks will not be mailed out for some months to come.

In this magazine article it is suggested that these repayments probably will not be made because certain Democrats feel that the economic and political effects of repayment will be greater for them in 1950. I cannot, for the life of me, vision any person in the Veterans' Administration who would consider for one minute holding up these repayments any longer than is absolutely necessary for the amounts to be determined, the checks prepared, and the letters put in the mail.

To me, it is unconscionable to delay these repayments because they may have a great political effect in the elections of 1950. Veterans who have this money due them should raise a storm of protest against such a delay. I cannot believe that the veterans understand that this is their money. It is not Government money, as I said before, but money that the veterans themselves overpaid on their insurance. It is due them now, not just before the 1950 elections. In fact, it was due them a year ago. It should have been paid and forgotten about by now so far as the Government is concerned.

I am told that accounting, bookkeeping, actuarial and other difficulties will hold up the payments. This is a lot of political eyewash. It is a disgrace and the veterans who are not informed ought to understand how they are being treated.

I ask the veterans of this country, do you need $50, $100, or $200 today? I wonder how many of them prefer to have the Government keep their money for another year or two and pay them just before the next election so that they vote Democratic and thank the Great White Father in Washington.

That, apparently, is what the administration has in mind—to let this money draw interest until next year and then pay the veterans their own money back just before election.

If this is the case, and I personally believe it is, then I say it is a cheap politi cal trick that ought to be shouted from the housetops.

With the number of superfluous employees in Washington and the tremendous facilities the Veterans' Administration possesses, there is no excuse for these payments to be delayed any longer.

I am serving notice on the Veterans' Administration right now that they had better get those checks out to the veterans within the next few weeks or months. If they do not, they will not have heard the last of it.

Labor and Milk Prices

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, there is considerable controversy in regard to proposed legislation to undermine the dairy industry of our country.

Imitation butter is the first step. Ersatz cheese, filled milk and synthetic ice cream will not be far behind.

The following facts should be of interest. You will note that where milk is the highest in price, the wages paid to labor are the lowest, and where milk is reasonable in price, labor gets a fair break.

The table, computed from official United States Department of Agriculture reports, is as follows:

State	Average price paid to farmers (per 100 pounds) (1948)	Average wages paid to farm hands, monthly (1948), without board
Alabama	$6.02	$63
Arizona	5.05	178
Arkansas	5.46	80
California	4.89	202
Colorado	4.80	159
Connecticut	6.37	155
Delaware	5.39	110
Florida	7.15	93
Georgia	5.99	63
Idaho	4.15	187
Illinois	4.44	130
Indiana	4.85	117
Iowa	4.49	143
Kansas	4.47	136
Kentucky	4.72	83
Louisiana	6.26	69
Maine	5.59	129
Maryland	5.79	113
Massachusetts	6.17	155
Michigan	4.79	136
Minnesota	3.98	140
Mississippi	5.07	62
Missouri	4.71	105
Montana	4.25	176
Nebraska	4.49	144
Nevada	4.43	169
New Hampshire	5.99	147
New Jersey	5.98	150
New Mexico	6.25	132
New York	5.29	142
North Carolina	5.53	84
North Dakota	4.37	169
Ohio	5.06	115
Oklahoma	4.71	117
Oregon	5.27	192
Pennsylvania	5.33	121
Rhode Island	6.47	155
South Carolina	5.91	58
South Dakota	4.48	154
Texas	6.08	115
Tennessee	5.16	71
Utah	4.38	173
Vermont	5.69	145
Virginia	5.54	94
Washington	4.94	204
West Virginia	5.28	83
Wisconsin	4.15	147
Wyoming	4.50	170

The Threat of Communism

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, March 25 (legislative day of Friday, March 18), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I delivered on the subject The Threat of Communism, in Trenton, N. J., on March 3, 1949.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

PROCEEDINGS OF THE SIXTIETH ANNUAL DINNER OF THE PAST COMMANDERS' ASSOCIATION OF THE STATE OF NEW JERSEY

Chairman THOMPSON. Sir Knights, our guest and principal speaker tonight came to us from our Nation's Capital through an invitation extended to him by Sir Knight George E. Stringfellow. Sir Knight George is a member of my own commandery, Lebanon, No. 31. He has been prominent in Masonic circles for a considerable number of years.

He served Salaam Temple as potentate for 2 years and now he is on his way to higher honors at the next session of the Imperial Council of Nobles of the Mystic Shrine of

North America. With pleasure I present to you Sir Knight George E. Stringfellow, who will introduce our distinguished visitor. [Applause.]

Mr. STRINGFELLOW. Mr. President, distinguished guests, friends, I am deeply honored to be asked to break bread with you tonight, and I consider it a great privilege to present to you tonight one of the Nation's most able statesmen.

To tell you everything about this man that is worth while would take me well over an hour. My problem in presenting him to you tonight is one of selection, not one of inflating the things I could say about him.

He is a farmer, a successful farmer; therefore, he knows something about the grass roots and he knows what makes things tick. He is a great educator. He is an author of a number of well-written and widely read books. He is an authority on criminal law.

The reactionaries in America call him a radical. The radicals call him a liberal gone reactionary. [Laughter.] I call him a great American. The greatest tribute I can pay him, I think, is to quote Aristotle, the great lover of democracy, who once said, "The greatest compliment one man can pay another is to say truthfully that he is a good citizen."

And so tonight I present to you—he needs no introduction—the junior United States Senator from the great State of Oregon, who will speak to you until traintime, and you will like it—the Honorable WAYNE L. MORSE, United States Senator from Oregon. [Applause.]

Senator MORSE. Mr. President, my good friend, George Stringfellow, brothers in Masonry: It is perfectly obvious from the introduction that George Stringfellow has just given to me that he is a biased friend. I appreciate that friendship very much and I want to say here publicly that the many manifestations of it which George has extended to me over the years have been a constant source of inspiration to me.

I mean no flattery when I say to you that in my opinion, George Stringfellow epitomizes and personifies the brotherly spirit of our fraternity. His life is a record of Christian service to mankind. In innumerable ways his service is not only a service to the citizens of New Jersey but to the citizens of the Nation.

Too many people in our country entertain the prejudiced notion that men of some financial means, of high economic position in industry or business, or of outstanding executive success in the corporate life of our economy cannot walk with men and keep the common touch. As vice president of Thomas A. Edison, Inc., George Stringfellow has made an outstanding record of industrial statesmanship among the business leaders of America. His life and work is a complete denial that there is any basis for such a prejudiced generalization. I need cite only one of his many humanitarian activities to prove my point.

I am sure many of you people in New Jersey do not fully appreciate the national recognition which George Stringfellow's work in the cancer-prevention program has attained. You undoubtedly are aware of the fact that here in New Jersey the cancer-prevention program is frequently referred to as the New Jersey plan. However, I wonder if you realize that the New Jersey cancer-prevention plan, in the development of which George Stringfellow was so instrumental, has really become a national plan.

It is impossible for us to adequately appraise the value, in terms of lessening human suffering and increasing human happiness, which the great cancer-prevention program is bringing to many thousands of people across our country. George Stringfellow's indomitable will, humanitarian impulses, and devotion to a social ideal of helping those who need to be helped have left an indelible imprint of personal service on the formation of the national cancer-prevention plan. I only hope that when my days on earth are past I will have left a monument of public service which slightly approaches the monument of public service which George Stringfellow's life is erecting for his fellow citizens. Certainly his contribution in the field of cancer prevention will be an outstanding one among humanitarian works in our generation.

I appreciate being invited to talk to you tonight. At the outset of my speech I wish to thank Brother Cooke and Brother Rowe for the hospitality which they extended to me by chauffering me this afternoon from New York to Trenton. I learned a great deal on that ride about the broad social consciousness of those two men, about their points of views on many of the perplexing problems which confront our social order and about their abiding faith in the survival of the American way of life if only our people will live by the spirit and intent of our democratic system.

In my speech tonight I hope that in at least a small way I can exemplify the spirit which I caught from Brother Cooke and Brother Rowe this afternoon. It is a spirit which calls upon all of us to recognize before it is too late some of the great social responsibilities which confront us in America today.

The subject which I was asked to talk about is the subject: Is Communism a Threat to Our Fraternity? The answer to that question is obviously an affirmative one for the simple reason that communism is a serious threat to our Nation and therefore necessarily a threat to all institutions within our Nation including our fraternity. However, the threat of communism bears a direct relationship to our fraternity because of the inseparable relationship between the principles of our fraternity and its contribution of those principles to the formation of our Nation. As Masons we can and should take pride in the fact that Masonry made significant contributions in the early historical days of our Nation to the great charters of our Government, the Declaration of Independence and the Constitution.

Throughout the ritual of Masonry from its first degree to its highest are to be found the principles of democratic brotherhood which form the framework and governmental encasement of our system of self-government. As Masons we should appreciate fully tonight the fact that if the communistic ideology, which runs counter to all the precepts and concepts of the Declaration of Independence and the Constitution, should ever prevail in this country we will then have lost self-government.

I am afraid that too many people have forgotten that our economic system and our political system are inseparable. We cannot have individual rights and liberties as set out in our Constitution under any totalitarian economy. We cannot maintain the foundation principle of democratic government under a totalitarian economy. Although the foundation principle of democratic government to which I refer appears to many people to be an abstract one I would caution you to remember that it is an exceedingly concrete one measured in terms of your rights.

What is that principle? If I say nothing else tonight that you remember even until tomorrow I hope you will remember and reflect upon this principle of democratic government. It is obvious as one talks to many Americans that more of them need to do much more thinking about this fundamental principle than I fear millions of them are doing today.

This country of ours was founded primarily upon the basic democratic principle that the spiritual value of the individual citizen is the very core of self-government. You cannot read the Constitution nor the Declaration of Independence nor the great debates out of which was born this Republic without recognizing the fact that our founding fathers believed that a society of free people must rest upon a devotion to the spiritual value of the individual person. They considered that the primary purpose of a democratic form of government was to protect the dignity of the individual. They realized that the individual human being is the creature of the Almighty and that to exploit and debase the individual person is a sacrilegious offense. We Masons know that one cannot understand the ideals of Masonry unless it is recognized that Masonry too is based upon a devotion to protecting and furthering the spiritual value of the individual. That is the essence of brotherhood. It is the ideal and record of Masonry.

Therefore, when I talk about communism in relation to our fraternity I would urge you to remember that in communism there is no recognition of the spiritual value of the individual. When you are dealing with the communistic ideology you are dealing with the political philosophy in which the individual life has little or no value.

One only has to study or observe what we can observe even on this side of the iron curtain in the Russian-occupied nations to recognize the fact that under the Russian regime human life is cheap. During my trip through Europe in 1946, although I was unable to obtain from the Russians permission to get behind the iron curtain, I did have a chance to make some observations in some of the Russian-occupied areas of Europe. I talked to a great many Russians and to a great many Europeans who had experienced life under the Communist regime. My observations led uniformly to the conclusion that the Communist ideology is incompatible with the democratic ideal of giving primary importance to the spiritual value of human life.

When we speak in our country about the importance of the principle of self-government which is basic to our political philosophy, namely, that the people are the masters and not the servants of the state, we speak of a principle which rests on the concept that the individual is all-important in our American way of political thinking. On the other hand under the Communst form of government the individual is but an item of human fodder with which to feed the totalitarian appetite of the state. It is very difficult to reconcile in the interest of peace the political philosophies of communism and democracy but we must try to find some basis on which the two philosophies can live in peace in the world. I say that because if we are going to avoid a war which would result in the killing of millions of human beings living under both Communist and democratic governmental systems today we must face the cold, hard fact that some mutually satisfactory understanding for peaceful relationships must be reached.

I am not one of those who believes that the Russian people are being held in complete subjugation or in involuntary servitude by the Russian leaders. The evidence is very much against such a point of view although there are those in this country who are trying to convince us that the Russian people are entirely out of sympathy with the Communist regime. It would be rather reassuring and hopeful if one could believe that the Russian people are anti-Communist. The facts, however, point to the contrary. The facts indicate that the Russian leaders have succeeded with a program of indoctrination and propaganda since the Russian Revolution in convincing the Russian people

generally that the communistic form of government offers the only hope of survival for the Russian people.

We Americans need to remember that the Russian people have been convinced that we intend to make war upon them and that they must proceed as rapidly as possible to prepare for that war no matter what the personal sacrifice and hardship may be. It appears evident that the Russian people are making tremendous sacrifices and undergoing great hardships in carrying out the propaganda dictates of the Russian Politburo.

Part of the Russian strategy is a program of infiltration into the free governments of the world so that in case of another war the Communists will be in a position to do internal damage to those free governments including our own. This tactic of infiltration is characteristic of totalitarian techniques as used by Hitler as well as by the Russians. We cannot ignore the fact that a spread of the communistic philosophy in America is itself a threat to the great spiritual values of our form of government.

Although we must recognize this danger we must be careful at the same time not to become alarmists. We must be careful not to become Red-baiters in the negative sense. But on the other hand we must not close our minds to evidence and proof of Communist infiltration into our American institutions. In discussing infiltration tactics I would caution you to remember that we must try to lean over backward in controlling our emotional attitudes toward communistic activities. Keen perception and cool-headed statesmanship are better weapons to use against the infiltrating techniques of Communists than is the adoption of police-state methods on our own part in an attempt to combat an ideology which seeks to destroy us. It is very difficult to remain coldly analytical of the tactics of Communists but it is only by cold analyses that we can properly appraise the nature and methods of our Communist opposition.

Thus one cannot read the newspapers today as a loyal American and not recoil—yes, recoil emotionally—at the very thought that we have an organization in our country today, the Communist Party, whose leaders have told the American people brazenly that in time of war, if that war were with the Soviet Union, they would not support our Government. The statement carried in the press of our Nation today quoting the American Communist leaders to the effect that a war with Russia would be a Wall Street-manipulated war which should not be supported by believers in democracy is a treasonable insult to our intelligence. It is perfectly obvious from their statement that in the event of such a war the Communist strategy in America would be to engage in activities of sabotage in order to interfere with the successful prosecution of that war. One of my colleagues in the Senate has most appropriately characterized this announcement of the American Communist Party leaders by stating that they have pleaded guilty to treason in advance of the act.

What are some of the American institutions through which the Communists may be expected to infiltrate and spread their insidious propaganda against the spiritual values of democracy? We may be sure that they will attempt to infiltrate into every American institution which offers them any opportunity for the creation of a Communist cell. That they have tried and are trying to infiltrate their propaganda into the educational system of America is self-evident. Under the name of academic freedom they seek to carry out an indoctrination program.

Now I would caution you to watch out for witch hunts in our educational systems conducted by those who do not believe in academic freedom. We will defeat the purposes of democracy if our counterattack on communistic infiltration takes the form of police-state methods which destroy an untrammeled search for the truth in the halls of learning of our educational institutions.

Twenty-one years of my life have been spent in university classrooms, and I know that one of the greatest obstacles to academic freedom is the attempt from time to time, on the part of prejudiced groups to stifle the untrammeled search for the truth in our halls of learning. The great Biblical tenet of American free education, "Ye shall know the truth, and the truth shall make you free," is too precious to be shackled by academic censorship or the right of free minds to search out the truth no matter what shibboleths or existing prejudices must be pierced in finding the truth.

However, academic freedom is not synonymous with license to destroy that freedom. I fail to follow the logic of some of our educators who are arguing these days that the preservation of academic freedom in the colleges of America requires the recognition of a right of teachers to become Communists and retain their teaching positions. I say that I cannot accept that argument for the obvious reason that true Communists do not possess free minds but rather are indoctrinators of a philosophy which seeks to promote revolution and reduce our people to the dictates of a totalitarian form of government. Such teachers are not teachers at all, seeking to lead students through an objective analysis of governmental philosophies. Such teachers do not possess the devotion of the scientists to the findings of the facts but rather such Communist teachers, in order to carry out their indoctrination objectives, must necessarily slant their teachings away from the facts.

Last week I received an inquiry from a very able young citizen of my State, a graduate of one of our institutions of higher learning, who expressed great concern over the fact that in some of our colleges in this country steps were being taken to eliminate professed Communist sympathizers from our college faculties. He wanted me to protest such action on the part of our college administrators.

This young man, a veteran and thoroughly loyal citizen, is not at all friendly to the Communist ideology. He is a man who would be shocked if one even suggested to him that in defending the alleged right of Communists and fellow travelers to teach in our colleges he would be aiding and abetting the Communist program of infiltration against our system of self-government.

I am sure this young lawyer will be greatly disappointed when he receives my reply to his letter because as one who has taught for many years in various universities in this country I cannot agree with him that academic freedom requires that we allow Communists and fellow travelers to hold teaching positions in our colleges so they can indoctrinate the young minds of this country in support of revolutionary propaganda. I am a firm believer in intellectual freedom and a firm believer in the duty of our high schools and colleges and of our teachers to lead young minds into an analysis and a critical analysis of the various political philosophies which have challenged the thought of man over the centuries. But I cannot accept the thesis that in order to present to our students an objective critical analysis of the communistic philosophy it is necessary to employ some Communist teachers on the faculties of our schools.

Thus, in my letter of reply to my constituent who protested the attitude of some college administrators that Communists and fellow travelers should be discharged from their faculties I stated to him as follows:

"On the issue as to whether or not Communists should be allowed to teach on our college faculties, I am definitely of the opinion that they should not be allowed to hold positions of this kind because of the undeniable fact that one of the primary objectives of the Communists is to infiltrate into our educational, economic, and social institutions in this country to the degree necessary in due course of time to bring about a revolutionary change of government here.

"Granted that looking at the problem from the standpoint of an isolated case here and there, the danger does not seem to be too alarming, nevertheless when one looks at the Communist strategy pattern as a whole, it is impossible to ignore the fact that the danger is a very real one. I am not one who believes that students in political science, philosophy, economics, and other courses taught in the social sciences, should not study the Communist philosophies, because obviously we cannot have an intelligent, educated point of view in regard to the dangers of communism if we do not have an informed and enlightened public opinion in regard to the nature of communism. However, that is quite a different thing from taking the position that the taxpayers should pay for the teaching of communism in either a veiled or unveiled form by Communists on our college faculties.

"I see no principle of academic freedom involved in a refusal on the part of university administrations or boards of education to allow Communists to teach on their faculties. To the contrary, it seems obvious to me that we would soon lose academic freedom in this country—as it has been lost in Russia—if a Communist educational policy should ever come to prevail in our school system.

"In other words, I don't think it is necessary to have a Communist on a faculty in order to make certain that the students will be given an opportunity to analyse the Communist philosophy.

"I appreciate the fact that all you seek to assure is that our students will have adequate opportunity to analyze and compare the arguments, pro and con, for the various political systems which are competing in the world today for the support of the people in the various countries in the world. However, I think that assurance can be given by our scholars who are loyal to our constitutional political system and to our capitalistic economic system, without employing teachers who seek to undermine those systems in America."

I agree that our students should be familiar with the doctrines of communism in order to be able to help enlighten our citizenry as to the great economic and political fallacies of communism and as to the dangers of the doctrine of communism to personal liberty in America. However, I do not agree that academic freedom is violated when we refuse to have the analysis of communism taught in our schools by Communists. Likewise, I agree that students should study the political fallacies of fascism if they are to clearly understand the dangers of Fascist propaganda in America. At the same time I do not support the view that academic freedom is threatened by refusing to employ in our schools teachers who are advocates of the Fascist political system.

The fifth-column pattern of both the Communist and Fascist organizations is the well-established technique of subversive groups whose design is to cause trouble in a country in time of national crisis. France and Norway paid the price for tolerating fifth-column activities on the part of German Fascists prior to World War II. The Russian Communist fifth-column infiltration tactics in satellite countries which she has overrun since World War II should at least put us on guard in this country against the infiltration threat of communism. I would be the first to grant that there are tremendous differences—geographical, economic, social, and ideological—between the countries in which Russian communism has successfully infiltrated and the situation here in the United States. Nevertheless, when Communist leaders in the United States brazenly announce to the people of our country that in time of

war with the Soviet Union they would not support the United States I think we have the right and duty to take precautionary measures against any attempt to establish a fifth-column program in the United States on the part of any subversive group be it either Fascist or Communist.

Therefore, it seems to me that any attempt to pervert academic freedom into a license for Communists to teach in our schools should be rejected. I say that fully appreciating the fact that undoubtedly there are some American teachers who are sincere critics of the abuses of capitalism and of social and economic injustices in America and who are falsely accused of being Communists or fellow travelers simply because they present to their students critical analyses of some of the shortcomings of our own system of government. However, false and unwarranted attacks against liberal teachers in our American educational system can be answered and the teacher concerned can be protected in his academic rights without taking the extreme position that academic freedom immunizes teachers from any examination of what they teach or of any consideration of their loyalty to our form of government.

Academic freedom certainly should not become a sanctuary for propagandists. Academic freedom certainly should not become a refuge and protector of indoctrination. It is to be granted that drawing a line between freedom and license is always a difficult one and requires the exercise of tolerant and exceedingly intelligent judgment. However, the difficulty of the task of determining what falls within the realm of academic freedom and what endangers academic freedom by way of perversion through indoctrination does not justify either school authorities or our citizenry generally in throwing up their hands in surrender when confronted by any attempt, subtle or otherwise, of Communists and Fascists to infiltrate into our educational system. Any such challenge to freedom of education presented by indoctrination tactics must be met head on. Thus, I do not share the point of view that the President of the University of Washington, acting through the board of regents of that great institution, violated academic freedom by removing from the faculty any avowed Communists.

I do not take the position that students should not hear speeches by Communists because I do not believe in thought-control tactics or in police-state methods. It must be granted that we do not answer or rebut communistic fallacies by refusing to listen to them. That is quite a different thing from impressing upon students through a teaching position a constant bombardment of indoctrination of Communist propaganda presented in the name of academic freedom. It is one thing for students to go voluntarily to a lecture by a known Communist- or Fascist-minded person out of intellectual curiosity or desire to try to analyze and understand the point of view of the speaker but it is quite a different thing to impose in the name of academic freedom a subversive teacher on the students of any school.

Therefore, it is one thing to take the position, as I take the position, that true academic freedom forbids us from excluding from critical analysis and study in our schools any of the political, social, and economic philosophies which throughout history have contested for the support of peoples and quite a different thing to take the position that academic freedom permits any classroom in our free-school system to become a propaganda rostrum for the indoctrination of totalitarian doctrines. The proposition is unacceptable to say in the name of academic freedom that in order to give students a background and an understanding of the philosophy of communism, for example, we ought to put on our teaching staffs teachers who are seeking to lead them by way of propaganda into accepting the notion that the American systems of political democracy and economic capitalism are a failure in that they deny basic human rights.

As a liberal in American politics I hold to the view that any form of totalitarianism, communistic or otherwise, is incompatible with individual liberty and with protecting the spiritual value and dignity of the person. Our American system of a political democracy combined with a capitalistic economy has advanced human rights and provided for human needs to a degree far superior to that which has been developed under any other political and economic system in all history.

Some people always seem to be a little surprised to hear me, as a constitutional liberal, strongly defend capitalism. Those who take the time to study my record know that it is a defense of capitalism which I have always made throughout my public life including my many years as a teacher. Thus, I repeat, that we cannot have a free society in America in which the spiritual value of the individual is paramount and in which the political liberties and human rights, which are ours under a Constitution, can exist except under a system of political democracy with its capitalistic economy.

Why do I hold to that belief? Because the alternative to a capitalistic society must be some form of statism. History is replete with examples showing that whenever a people adopt some form of economic statism they lose the precious freedom of having the state serve as their servant. Under any form of totalitarianism the people become the servants and not the masters of the state. I do not care how the propagandists for statism gild the lily. I do not care what adjectives or plausible fallacies they use in their propaganda in an endeavor to confuse you in your support of our American constitutional system. I do not care how beautiful the siren call may be to gain, at least at first, your partial support of their propaganda that under statism you can have abundance for nothing. I repeat that a state economy and personal liberties are incompatible.

There are many millions of our fellow citizens working in overalls in America today who must someway, somehow, be made to understand that their standard of living, their rights as free workers, and their independence to enjoy the blessings which exist in America would be unknown to them if they lived under a Communist regime.

Likewise, I would point out to American workers, that any form of statism, such as socialism, if adopted in America, would result in a loss of so many individual and political rights that the standard of living of the American worker would soon suffer a serious decline.

During the last campaign I had several public discussions with representatives of the Socialist Party. I found that their technique was to evade, duck, and hedge issues, particularly the question as to what would happen to the political rights and liberties of the individual person once a state economy were substituted in America for our capitalistic economy.

Thus, in one debate with a prominent Socialist I asked him to join with me on the issue as to what would happen to the economic freedom of the workers of this country if a socialistic state were substituted for a capitalistic economy. I explained that I did not think that this particular Socialist leader would want to destroy our individual rights but I told him I was sure the audience would want to know how it could be avoided if a total socialistic regime came into the control of our Government.

It seems clear to me that under a Socialist regime the Socialist leaders would endeavor to entrench themselves deeper and deeper into our body politic in order to preserve themselves in power. In order to do so they would have to issue more and more controls and regulations upon the economic rights and freedoms of the individual citizen in order to keep in operation the Government-owned and operated economic facilities of the country.

It would only be a matter of time before the individual worker's right to work for whomsoever he pleased, for as long as he pleased, would be abridged. It would only be a matter of time before he would be limited in the wages he sought and the working conditions he demanded. Free trade unionism, as we know it today, would cease to exist under a Socialist regime, at least in respect to many of the rights of independent action including the right to strike, if our capitalistic economy were supplanted by a socialistic economy.

What was the answer of my Socialist opponent in that debate? No answer on the issue at all. He ducked and weaved and tried to paint the usual Socialist picture, appealing to the desire of the average person to live in a society free from want and free from fear of insecurity. He sought to give a glowing account of citizenship ownership of the production machinery of the Nation and subtly left the impression that the individual worker would be the boss of his own economic destiny. He avoided pointing out that under a socialistic system there would be bosses, too, but that these bosses would not be hampered by the checks that exist in our political democracy against the abuses of capitalism. He failed to point out that the abuses of industry and the abuses of government would be one and the same under a socialistic economy and that the danger would be very real that any attempt to check the abuses of bosses would only result in more drastic controls and dictates from the Socialist government.

When I pressed him for a head-on collision with the issue of what would happen to the economic freedoms and rights, to say nothing about the political rights of the workers under a socialistic regime, his rejoinder was by way of a humorous personal remark. Referring to my statements he said, "Wasn't that awful? You know WAYNE MORSE knows better than that. That just shows what the Republican Party has done to him." [Laughter.] "I just can't understand his position on socialism. Oh, yes, on second thought I think I can. I think if I lived in Oregon and wanted to belong to that gentlemens' club known as the United States Senate I would have sense enough to run as a Republican." [Laughter.]

Of course, I enjoyed his rejoinder which is what we call in debate, rebuttal by ridicule; but the fact remains that this Socialist leader, like all advocates of statism, could not deny that economic statism means economic dictation by the leaders of the state rather than economic determination of their economic rights and freedoms by the people of a nation.

Unsound in this regard as the proposals of the Socialists are, even more destructive of our personal liberties, both political and economic, would be a substitution of communism for capitalism. Thus, in the last campaign I debated against many representatives of the Wallace party. I am sure that some of them did not realize that they were following the Communist Party line throughout the campaign but I am satisfied that they were. There were several key questions which I put to them, their answer to which satisfied me that the Communists in America were at least obtaining a great deal of aid and comfort out of the Wallace campaign.

Thus, I would say to a Wallace speaker, "Let the representative of the Wallace party come to this microphone now and tell this audience whether he disapproves of any phases of the Russian foreign policy. Let him tell you if he approves of any phases of American foreign policy. Let him tell you if he approves of the Russian blockade of

Berlin." Then I would point out to my audiences that the Communist Party line in America is to offer no criticism of Russian foreign policy or no approval to any degree whatsoever of any phases of American foreign policy. Therefore, I considered it a fair request to ask a speaker for the Wallace party to talk in specific terms as to the position of the Wallace party on the various phases of Russian and American foreign policy. Not once during the campaign did I hear a single speaker for the Wallace party follow anything but the Communist Party line on foreign policy.

When I asked speakers for the Wallace party to explain to the audience what would happen to the workers if they tried to form a trade-union based upon the principles of American free trade-unionism, or when I asked them to explain what civil rights millions of human beings held in slave labor in Russia are able to enjoy, I would be met with the usual Communist line of evasion.

The line which the Wallace speakers followed in answer to such questions went something like this: "I refuse to be a party to the red-baiting, red-herring, and red-smearing tactics of the Senator from Oregon. It is a shocking and disgraceful thing that the Senator from Oregon, before this audience tonight, has made such a vicious attack against a great war ally of the United States—Soviet Russia; an ally that lost millions of soldiers and civilians during the war fighting German Hitlerism; an ally that suffered thousands of square miles of war devastation on the eastern front, thereby engaging a large portion of the German Army and saving millions of American lives on the western front."

As I listened to the clear evidence of the Communist Party line during the last political campaign in this country, I recognized that if the Communist infiltration should gain a foothold in the social, political, and economic institutions of our country our system of political democracy and capitalistic economy upon which our individual rights and freedom depend gradually would be weakened.

What is the best way to check this infiltration? Certainly the answer is not to be found in the adoption of police-state methods in America. It is not to be found in the adoption of a thought-control censorship law. We will not stop the spread of an ideology by adopting gestapo tactics. All such devices are the tools and weapons of totalitarianism itself. We are not going to check the threat of communism by emoting against it, no matter how irritating we find its false assumptions to be.

I appreciate the fact that we would be less than human if as loyal Americans we did not resent the newspaper announcement today that the members of the Communist Party in America would not defend our country in a war against Russia. We would be less than human if no flush of anger reached our cheeks when we read Communist propaganda in the press today built up around the old cliche that "capitalism thrives on exploitation" and another cliche, "Wall Street and the cartelists are organizing a war against Russian democracy."

Such hymns of hate against the American system which are being sung by the Communists and fellow travelers today within our midst must be answered cool-headedly. We must recognize that part of the Communist technique is to make use of word forms which have come to develop favorable emotional reactions on the part of the American people.

Thus, as I have said so many times in recent years, one of the propagandist strategies of the Communists is to use the words and symbols of democracy in spreading Communist doctrines. Hence, in the press today we see the Communists referring to "Russian democracy" and to the struggle of the "eastern democracies" against "western imperialism." Of course, we know that there is no democracy in Russia, no personal freedom, no civil rights, no freedom of speech, no freedom of religion, and no freedom for the individual. Yet we can fully expect that the Communists as they seek to propagandize dissatisfied groups within our country will talk in terms of the very freedoms and individual rights which the Russian system abhors.

How should we meet their threat? Those of us in the Masonic order who believe so deeply in the personal liberties guaranteed by our constitutional system should join with all other loyal Americans in meeting the challenge of citizen statesmanship in America today. That challenge is to see to it that the capitalistic system is made to work as it can work for the benefit of the common good rather than for the selfish interests of a privileged few.

Most of you in this audience before me are businessmen and as businessmen I say you must be your own severest critics so far as the abuses of the capitalistic system are concerned. The abuses and disjointures of the capitalistic system should not discourage us but make us rather bear the ills we have than fly to other that we know not of.

Our capitalistic system being a human institution, is bound to develop defects. It is the obligation of a representative government, acting through the elected representatives of the people, to pass whatever legislation is necessary from time to time to check, control, and correct the abuses that develop within our economy.

However, I would point out that the greatest strength we have against the threat of communism is derived from the benefits that can and should flow from our capitalistic system for the welfare of our people as a whole. The best way to preserve and advance legitimate private-property interests in America is to see to it that the capitalistic system constantly improves the standard of living, the health, the security, and the happiness of our people.

We must retain the inducements and incentives of our private-property system because without those economic freedoms we cannot avoid economic statism. However, I deny that the capitalistic system necessarily means the exploitation of the weak for the strong. I grant that too frequently too many have confused a laissez-faire economy with a capitalistic economy. I grant that under a laissez-faire economy the economic pattern takes the form of a repetition of a business cycle of a boom and bust. I admit that a laissez-faire economy produces basically a program of exploiting the weak for the benefit of the strong. However, I contend that a laissez-faire economy and a successful capitalistic system are entirely different economic phenomena.

Further, I contend that without the inducements and the incentives of the private-property system, which is the essence of a capitalistic economy, we cannot escape going down the road toward a national economy of statism.

I am not going to take the time to apply this thesis to a great many issues, but I want to apply it to one or two.

The first issue I shall select is considered a very dry issue by many people but it is basic to this whole matter of making the capitalistic system work. It is an issue in regard to which I say most kindly and in a spirit of complete friendliness that you businessmen and thousands of others like you across this country during the last few years have not done all you should do in carrying out your job of citizen statesmanship. I refer to that very dry political subject of taxation reform.

Too many people in America, particularly businessmen, have been making the mistake of discussing taxation from the standpoint of support or opposition to proposals for either tax decreases or tax increases. There has been too much discussion of the taxation problem from the standpoint of personal selfishness rather than from the standpoint of the one great tax need of the country.

What is that need? It is the need for tax revision. It is the need for eliminating from our Federal tax structure the many inequities which are interfering with making the capitalistic system work for the benefit of the common good. It is the inequities in our existing tax structure which are discouraging business incentive and which are preventing the needed investing of millions of dollars of venture capital into new wealth-creating projects so essential to maintaining prosperity in this country. It is only out of new wealth, gentlemen; out of new job-creating enterprises; out of a further development of our economic resources, industrial and natural, that we can ever meet the fiscal problems of our Government.

You will never, in your lifetime or in the lifetime of your grandchildren, meet the fiscal problems of this Government if you try to do it from the standpoint of juggling existing percentage tax rates either up or down. The job of statesmanship in the field of taxation is a job of complete tax revision in order to eliminate the inequities from our tax structure.

You must share part of the responsibility for the failure of the Congress of the United States in recent years to adopt a program of tax revision. I doubt if most of you have been any different from most Americans during recent years in thinking that your tax problems would be solved or at least helped by the adoption of a tax bill by your Congress which would provide for a reduction in tax rates.

Those of us in the Seventy-ninth Congress who opposed the Knutson tax bill, because its chief characteristic was a downward juggling of tax percentages rather than an entire tax revision program, were subjected to a great deal of criticism at the time for our opposition to that bill. In the Eightieth Congress when the Republican Party was in control, it too failed in its responsibility to the people by proposing the Knutson-Millikin tax program, which was chiefly characterized by further juggling of tax percentages.

I finally voted for that law, not because I considered it a satisfactory meeting of the obligations of the Congress on the tax issue but because we were able to secure a few concessions in the direction of sound tax revision principles. We did not secure enough concessions to make it a good bill, however. In my judgment, if the Republican Party in the Eightieth Congress had met the tax issue head-on, adopting a tax revision program which contained the major recommendations of the Committee for Economic Development, we not only would have made a sound contribution to economic statesmanship but we would have demonstrated a political statesmanship which would have won the confidence of several millions of voters who failed to support us on November 2, 1948, due in part to the poor record we made in the Eightieth Congress on the tax issue.

A few weeks ago I was invited to address a very interesting group in Philadelphia, known as the Philadelphia Sunday Morning Breakfast Club—which meets once a month on a Wednesday night. [Laughter.] Maybe some of your were in attendance at that meeting. As you know, it is not an organization of liberal Republicans; but nevertheless they demonstrated to me on that evening that they are a group of business leaders who are devoted to the ideal of making our capitalistic system work in the interest of our country as a whole.

During the course of the evening we discussed the relationship between our tax structure and a successful working of our

capitalistic system. At that meeting, as here tonight, I pointed out that too many businessmen have not given the support they should give to a sound tax revision program. They have been too much interested in percentage reductions, forgetting that percentage reductions in tax rates are not the answer to stabilizing the American dollar.

Thus to you businessmen and fellow Masons tonight I offer what I think is one of the best checks we have against the threat of communism to our capitalistic system. I offer what I consider to be a tax program more sound than any tax program adopted by the Congress in recent years. I am not responsible for the authorship of the program. It has been worked out by a group of businessmen, industrialists and economists who are far more competent in the field of tax economics than I ever hope to be. However, I believe that one of my obligations as a Senator is to be willing to recognize, accept and follow expert advice whenever that expert advice stands up under thorough and critical analysis and examination.

The tax program of the Committee for Economic Development is a tax revision program. It is a program which has been subjected to thorough analysis by tax experts and economists throughout the country. There may be a need for some changes in the recommendations of the CED, but no showing has been made to date—at least of which I have read—that points out any serious holes in the tax program of the CED. I have yet to hear of any group of manufacturers or bankers or industrialists or economists, or even of politicians, who have been able to tear apart the tax report of the Committee for Economic Development and show that it isn't a program which in the main should receive favorable action by Congress.

Therefore I offer to you tonight, for your consideration as one of the checks against communism in America, the tax program of the CED. The tax recommendations of this committee have been available to us for over 3 years. Twice on the floor of the United States Senate I have offered this tax program. In both the Seventy-ninth and Eightieth Congresses I introduced appropriate legislation setting forth the tax recommendations of the CED.

I was not able even to secure a committee hearing on these proposals. Imagine that. Did any leader in the Senate during either the Seventy-ninth or Eightieth Congress point out any reasons why the proposed tax amendments of the CED should not be adopted? They did not. Republican leaders, for example, said in effect that the tax amendments which I had introduced were meritorious and deserving of careful consideration in the future, but because they dealt with tax revision rather than tax reduction they could not be considered in connection with either the Knutson tax bill in the Seventy-ninth Congress or the Knutson-Millikin bill in the Eightieth Congress.

It is my position that the only sound type of tax reduction that is worth having is a tax reduction that is based upon a revision of our whole Federal tax structure. In my opinion, the difficulty with our leaders in Congress on the tax issue has been that they have been playing politics with the issue in the form of trying to give the American taxpayers a percentage reduction in tax rates, thereby misleading the American taxpayer into thinking a reduction in tax rates constitutes a real tax saving.

This problem is similar to the problem of the difference between real wages and wage rates. The only wages which in the last analysis are of importance to the worker are his real wages measured in terms of the purchasing power of the American dollar.

High wages paid with an inflated dollar are very deceiving, as millions of American workers today are coming to realize. Juggling percentagewise tax rates will not produce any real tax reduction, unless and until we eliminate from our tax structure the many types of tax inequities which are pointed out by the tax report of the Committee for Economic Development.

In this Eighty-first Congress I intend in due course of time to offer once again the tax program of the Committee for Economic Development. I wonder if I shall be able to get a committee hearing on it. I think I shall, if business leaders, farm leaders, and labor leaders in this country will wake up, before it is too late, to the fact that it is tax revision which they need as one of the great aids necessary in order to make the capitalistic system work for the benefit of all of our people.

I shall not take the time tonight to discuss the individual amendments to our tax laws, recommended by the CED, but I shall be very glad to send a copy of those proposals to any one in this audience who writes to my office for them. My basic interest in tax reform is motivated by a desire to stabilize the value of the American dollar. You bankers in this audience know that a fluctuating dollar is very disruptive to our capitalistic system and is very discouraging to business incentive and the investment of venture capital.

All of you businessmen in the room know that the American dollar today is only a 45-cent dollar, evaluated in purchasing power terms based on 1939 values. Thus I say that I do not care which one of the amendments proposed by the CED you might select; any one of them standing alone would be more helpful in stabilizing the value of the American dollar than the entire tax program adopted by the last two Congresses.

I do not ask you to agree with me about this point, but I make the point in order to stimulate you if possible into studying the tax program of the Committee for Economic Development. I would rather that you would not agree with me, at least on the spur of the moment, because I believe if you do not agree with me you will be more inclined to think about this problem and more inclined to give careful consideration to the recommendations of the Committee for Economic Development.

If I can get you to thinking about strengthening the capitalistic system through stabilizing the American dollar by way of a thorough revision of our Federal tax structure, I shall have accomplished more good tonight than I could possibly accomplish by your going out of here and saying: "Well, I agree with that guy." I'm not used to very much agreement [laughter], but I am going to keep right on in my fight as a constitutional liberal trying to make the objectives of our Constitution—which rests upon the spiritual values of the individual—work in America.

It seems to me that is the great challenge which confronts American democracy today and if we meet it we shall automatically answer the threat of communism.

The only other issue I shall take the time to mention tonight to illustrate my point as to the necessity of making the capitalistic system work is the hot labor issue. There is no doubt about the fact that I am greatly misunderstood on that issue by a great many businessmen in this country. The reason for the misunderstanding is that so few businessmen will take the time to put on their glasses and read the official record. They are much more inclined to accept, without checking, the slanted information and prejudices presented to them by various employers and manufacturers and businessmen's associations.

As you know, in the Eightieth Congress I opposed the Taft-Hartley bill. However, I am sure that many of you do not know that in the Eightieth Congress, in cooperation with Senator IVES, of New York, I proposed the Ives-Morse labor legislation. In fact, the bill which the Senate Committee on Labor and Public Welfare recommended to the floor of the Senate set forth for the most part the provisions of the Ives-Morse proposals.

This committee bill was changed into the Taft-Hartley bill, by various amendments passed on the floor of the Senate and by more than 25 procedural changes adopted by the conference committee of the House and Senate. I have discovered that when businessmen take the time to study the Taft-Hartley bill in comparison with the Ives-Morse proposals, most of them—at least now by way of hindsight—are willing to express the opinion that it would have been better to pass the Morse-Ives bill in 1947.

In fact, I was greatly encouraged about a month ago when BOB TAFT suggested to me that he thought probably what we ought to do in this session of Congress is to start at least in our consideration of labor legislation with the provisions of the committee bill of 1947 which set forth in the main Senator IVES' and my proposals. I told BOB, good naturedly, I thought that was where he should have stopped in 1947; and he with equal good nature pointed out that he has never taken the position that the Taft-Hartley bill should not be subject to amendment.

Right here I want to pay BOB TAFT a very deserved compliment. In my judgment the objectivity with which he has considered and listened to proposals for drastic modifications and revisions of the Taft-Hartley Act, during our hearings on that legislation these past few weeks, is clear evidence of his desire to adopt fair labor legislation.

If one were to rely upon newspaper accounts in respect to the relationships between BOB TAFT and me, he would be led to believe that we are bitter personal enemies; whereas the fact is we are very good personal friends.

I'm sure our objectives are the same, namely, to vote for those legislative proposals which will help make the capitalistic system work most successfully for the benefit of all of our people. We frequently disagree on whether or not the procedures set out in various legislative proposals will accomplish that primary objective, but we do not disagree in our mutual desire to try to be controlled in our judgments by the facts. As you very well know, however, reasonable men can frequently differ as to what they believe the effects and results of the operation of certain facts will be upon the economy.

In regard to this labor issue, I urge you businessmen to recognize that what we need is legislation which is not unfair to labor or unfair to management; but rather legislation which protects the legitimate collective-bargaining rights of each and thereby protects the public interest.

It is my position that the Wagner Act discriminated unfairly in favor of labor, and that the Taft-Hartley Act discriminates unfairly in favor of management. The result of these two extreme positions reduced to legislative form has been the deepening and widening of the chasm of class conflict separating management and labor in this country. Our capitalistic system will not be safe if labor and management continue to organize into two strong camps of economic opposition and proceed to carry on class warfare against each other.

One only has to look at the results of the election on November 2, 1948, to know that the passage of the Taft-Hartley law had a great effect on that election. In fact, I think the Taft-Hartley law has done more to throw American labor into politics on a class-conscious basis than anything which has happened in this country during the last 25 years. I don't say the political activities of labor

elected Truman, but I am satisfied that the political activities of labor cost the Republicans enough defeats in political races for the Senate and the House of Representatives, so as to change the Congress from a Republican Congress to a Democratic one.

Further, I say that the labor vote combined with the farm vote determined the Presidential election. So far as the influence of the labor vote was concerned, there can be no doubt about the fact that it was motivated primarily by its opposition to the Taft-Hartley law. How anyone in the country can reach the conclusion that a law such as the Taft-Hartley Act, which produces such bitter class-conscious feelings, is a good thing for political democracy and for the strengthening of our capitalistic system is beyond me. What we need is a moderate labor-legislation program falling in between the Wagner Act and the Taft-Hartley Act, namely, a middle-of-the-road bill which gives to American employers the same procedural rights and guaranties against the unfair labor practices of unions which the Wagner Act gave to unions against the unfair labor practices of employers.

In my campaign for the Senate in 1944 I stood for revisions of the Wagner Act. In 1937, prior to the Supreme Court decision declaring the Wagner Act constitutional, I stated at a labor institute on the Wagner Act, held in Portland, Oreg., that I thought the Wagner Act would be declared constitutional; but I went on in that speech to say that holding the act constitutional would not make it a good piece of legislation or a great magna carta for labor.

In that speech I guessed luckily as to the reasons the Supreme Court probably would give for declaring the act constitutional, because when the Court decision was handed down a short time thereafter it stressed some of the very points of constitutional law which I discussed in that speech. However, the Supreme Court decision declaring the Wagner Act constitutional did not change in any way the fundamental weakness of the Wagner Act, namely, that it violated one of the basic rules of the American playground. It failed to provide the same procedural rules for both teams.

The Wagner Act failed to give the same procedural rights and protections to employers which it gave to labor. Thus, in my 1944 campaign for the Senate I said I would propose amendments to the Wagner Act which I thought would be fair to management and fair to labor, thereby correcting the one-sidedness of the Wagner Act.

Hence, in cooperation with Senator IVES, of New York, such amendments were offered in 1947. As you can well imagine, I took a great deal of so-called political punishment in 1947 because of my refusal to vote for the Taft-Hartley law. I insisted that the Ives-Morse bill, which comprised the main features of the bill adopted by the Senate Committee on Labor and Public Welfare, should be as far as we should go with labor legislation in that year. I took the position that the provisions of the Morse-Ives bill should be given an opportunity to demonstrate their workability.

It was not my contention that the recommendations set forth in the committee bill of 1947 should be considered final recommendations and not subject to future change based on experience. However, I warned the Republican Party that if it passed the Taft-Hartley bill with its biased provisions in favor of employers, it would create deep-seated political resentment against the Republican Party on the part of American workers. The election of November 2, 1948, certainly supported my warnings.

I am sure most of you do not know that the Labor Committee of the Senate in 1947, by a vote of 11 to 2, adopted the committee bill which contained the major recommendations of the Ives-Morse proposals. I am sure most of you do not know that employer groups which have taken the time to study the recommendations of the Morse-Ives proposals generally agree that they were reasonable proposals and many such business groups now recognize that it would have been better to try out those proposals in order to see what they could have accomplished in checking labor abuses rather than to pass the more drastic and sweeping Taft-Hartley Act.

Thus, I conclude my comments on this labor issue by repeating what I have said so many times on the floor of the Senate, namely, if we are going to try to make the capitalistic system work in the interests of promoting the common good, both labor and management should stop trying to secure the passage of legislation which discriminates in favor of either group; rather both management and labor should recognize that their own best interests are to be found in the passage of a piece of labor legislation in the Eighty-first Congress which is not slanted in favor of management—such as is the case with the Taft-Hartley Act—or in favor of labor—such as is the case with the Thomas bill offered by the administration in this session of Congress—but a piece of legislation that protects the legitimate rights of both management and labor and which applies the same procedural rules to both sides of the collective-bargaining table.

It is only such a piece of fair labor legislation which will protect the public interest.

I close by suggesting for your consideration the thought that if you really want to live up to the great ideals of our fraternity, then you must recognize that the best way to meet the threat of communism to our country is to take those specific steps which are necessary at all levels of our Government—Federal, State, and local—in order to make the capitalistic system work for the common good.

We cannot preserve and protect the spiritual values of the individual, nor his political rights, nor his economic freedoms, unless we make the capitalistic system work for the welfare of all our people. This means, of course, that we must see to it that the selfish interests of individuals and groups, who would use the capitalistic system as an instrument for exploiting the weak, are checked by sound legislation necessary to protect the weak from the selfish. [Applause.]

Chairman THOMPSON. Senator MORSE, we are honored by your appearance here. We are deeply appreciative of your inspiring and eloquent address. We thank you.

Maryland Day

REMARKS
OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. BEALL. Mr. Speaker, today is Maryland Day, the three hundred and fifteenth anniversary of the settling of the Free State. In my remarks I would like to include a history of our State as compiled by the Hall of Records:

1608, June: Capt. John Smith explores coast of Maryland.

1632, June 20: Charter of Maryland granted to second Lord Baltimore.

1633, November 22: The *Ark* and the *Dove* sail for the capes of the Chesapeake Bay.

1634, March 25: The *Ark* and the *Dove* arrive at St. Clements—Blakistone—Island.

1648: Toleration Act passed.

1694: Seat of government removed from St. Mary's to Annapolis.

1696: King William's School founded at Annapolis.

1729, July 30: Baltimore Town erected.

1763: Mason and Dixon begin survey of Maryland boundary.

1774, October 10: *Peggy Stuart*, laden with 2,000 pounds of taxable tea, burned.

1775, July 26: Formation of Association of Freemen.

1776, July 3: Maryland declares her independence.

1776, November: First State constitution adopted.

1782: Washington College, Chestertown, chartered.

1783, November 26: Annapolis becomes temporary National Capital.

1783, December 23: Washington resigns commission in old Senate Chamber, Annapolis.

1784: St. John's College, Annapolis, chartered.

1788, April 28: State convention at Annapolis ratifies Constitution of the United States.

1791, March 30: Maryland cedes District of Columbia to the United States.

1812: University of Maryland chartered.

1814, September 12: British repulsed at the Battle of North Point.

1814, September 13: Bombardment of Fort McHenry; Francis Scott Key writes The Star-Spangled Banner.

1828, July 4: Formal beginning of work on the Baltimore and Ohio Railroad.

1829, October 17: Chesapeake and Delaware Canal opened.

1844: First telegraph line in the world built between Baltimore and Washington.

1845, October 10: United States Naval Academy opened at Annapolis.

1861, April 23: Maryland, My Maryland, written by James Ryder Randall.

1862, September: Battle of Antietam.

1864, July 9: Battle of Monocacy.

1876, October: Johns Hopkins University opens.

1889, May 7: Johns Hopkins Hospital opens.

Maryland's flag bears the arms of the Calvert and Crossland families. Calvert was the family name of the Lords Baltimore who founded Maryland. Crossland was the family of the mother of the first Lord Baltimore. The escutcheon or shield in the Maryland seal bears the same arms. This flag seems to have been used from the beginning of the colony, although it was not adopted officially until recently—chapter 48, acts of 1904.

The State flower of Maryland is the black-eyed susan and the State bird is the Baltimore oriole. The State tree is the white oak and a magnificent specimen of that tree is the Wye Oak located on the Eastern Shore.

Because the first settlers of our State 315 years ago were tolerant, the first seeds of American democracy were sown in the Maryland charter, which granted each settler of Maryland the right to worship as his conscience dictated. We are proud to be a native of the great Free State of Maryland.

Republican Party Policy Versus Republican Party Principle

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. MASON. Mr. Speaker, the Republican Party during the last 16 years has followed popular New Deal policies rather than sound principles, hoping that by aping the New Deal prophets they could win popular support. Four successive national elections have been lost by the Republican Party on a "me too" platform. One result of 16 years of the New Deal is that our people are less independent, less inclined to stand upon their own feet, and more inclined to lean upon the Federal Government for support. Our people have been persuaded by the politicians that they can eat their cake without earning it; that they need no longer exercise foresight and thrift, because no matter how foolish they are, the Government will take care of them by robbing the thrifty—through taxation—in order to support the foolish. How long will the thrifty continue to be thrifty if they are to be robbed of the results of their efforts? Are we not selling our precious American birthright for a mess of pottage by following vote-hungry politicians who insist upon bartering away freedom and independence for regimentation and a false security?

The Republican Party should get back to sound American principles and quit chasing the tail of the New Deal in quest of votes. A Republican Party that will fight for American principles of government, and fight against the socialistic program of the New Deal, would deserve and receive the support of the majority of American voters—regardless of party affiliation. A forthright declaration of principles and purpose by the Republican Party would halt the growing dissatisfaction within the Republican ranks, and would establish a base around which all virile Americans could rally. Until such a declaration of principles is made and until the Party establishes a rallying point around which real Americans can rally, it does not deserve the support of the majority of our American voters.

Mr. Speaker, under the unanimous consent request granted me I include as a part of my remarks a pertinent article taken from the current issue of the Reader's Digest which is a condensation of an editorial carried in the Omaha World-Herald:

GOD HATES A COWARD

That's gospel truth. If any witness were needed to attest it, the Republican Party of 1936–48 would more than suffice.

For 12 years the Republican Party has been a coward: the worst kind—a moral coward. In consequence it begins to take on the appearance of something the cat dragged in.

It is hard to define as an entity the Republican Party or any other large group of people since, however closely banded together, all cannot think alike in all respects. But, speaking broadly, the Republican Party consists of men and women who in firm conviction are opposed to the swift trend toward the omnipotent state that is sweeping over every section of the earth. Whether it be defined as communism, fascism, socialism, totalitarianism, statism, the New Deal, the insurance state, these men and women regard it as a thing of infinite menace, however cunningly disguised and however ardently supported by good but misguided people.

But the Republican Party has lacked the courage to say what its rank and file believe. Out of hunger for the fleshpots it has lacked the patriotism, the loyalty, to stand up for the free Republic of the founding fathers and to fight for it. Owing to that lack of moral courage, of loyalty to the American creed, the United States, almost the sole remaining bulwark against the advancing tide, finds itself without a spokesman, without a champion to proclaim and battle for its traditional, glorious creed. And it finds the once-so-firm foundations of its temple crumbling.

Here, in our own America, the state is taking control and ownership of the people. It is using the power to tax to destroy their independence and self-reliance. It is converting freemen into vassals and dependents. It is devouring the substance of self-supporting people to render them self-supporting no longer and to establish a condition of universal reliance upon the biased paternalism of a "Great White Father"—a "father" corrupted and corrupting, since great power does corrupt and absolute power corrupts absolutely.

And the Republican Party has not dared resist the tide; it has gone along with it. Not out of conviction but out of cowardice. It has not dared to be a Daniel; to have a purpose and to make it known. Its plea for votes has been the shameful one: Give us the offices, the power, and we'll give you as much of what we believe to be wrong as will the Democrats themselves.

Americans do not respond to any such appeal. They, too, hate a coward. They despise hypocrisy. They hunger for a leadership of good faith. They will accept a brave and fighting leadership tainted even with Pendergastism and absolutism rather than a leadership that crawls; and trails its flag.

What a wonderful thing it would be if Republican leaders could realize how desperately these United States need an honest and brave Republican Party; how true Republicans above all others hunger and thirst for it. A Republican Party to raise high the flag of a loyal opposition. Opposition not alone to a misguided and recreant Democratic Party here at home, but opposition, tenacious and resolute, to all the monstrous wrongs that today menace freedom, self-reliance, the courage to adventure, human dignity, in every land and every clime.

How joyously, with what reborn hope, men and women of the ancient faith of this Republic would rally about such a standard. Proud of it they would be in victory. No less proud in defeat.

Surely it shall not be recorded by amazed historians of a later day that when the black flag of absolutism was raised back in the twentieth century, when the fate of all mankind was involved, there was nowhere, in any land, not even our own, an organized body of men and women who had the courage, the devotion to dedicate their lives, their fortunes, their sacred honor, to driving that foul intruder back into the Dark Ages whence he emerged.

Never has there been sounded such a call to service as rings today in the ears of the Republican Party. The party can keep on crawling ignominiously along the dusty trail of an order it abhors but shrinks from challenging. Or it can rise out of the dust of four merited defeats, stand erect and unafraid, proudly to take up the battle for all that freemen prize.

Propaganda

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. REED of New York. Mr. Speaker, I am inserting in the RECORD a courageous and sound American editorial on the subject of the next blast of propaganda to be expected from the internationalists, interventionists, and one worlders. The Communists have no better friends than those who seek to destroy our economy, deplete our resources, and thus reduce our people to the regimented status of taxpaying serfs.

Under leave to extend heretofore granted, I am inserting an editorial which appeared in the Wall Street Journal of March 25, 1949:

PACT PROPAGANDA

The pattern of the propaganda which will seek in the months to come to identify the Atlantic Pact with the multi-billion-dollar rearmament of western Europe is becoming clear.

The argument, already beginning to appear in the columns of editorialists and commentators, runs somewhat as follows:

An Atlantic pact minus rearmament is worse than no Atlantic pact at all. As a corollary, those Congressmen and others who approve the pact but question—from the viewpoint of American economic strength—the outlay of billions for European arms are potential saboteurs. If their counsels prevail, the disillusioned western Europeans will break away from the pact and seek refuge in the arms of the Kremlin.

The basic assumption here is that the solemn declaration of the United States to take action in the event of an attack on one of the signatories of the pact is in itself meaningless. The Soviet Union will therefore be just as inclined to undertake armed aggression in the pact area as it would if it thought it could count on United States neutrality.

This does not follow. The Soviet Union may attack western Europe regardless of what we say or do, but it is manifestly less likely to do so knowing that it will be immediately tangling with the United States. To suggest that our commitment in the Atlantic Pact does not improve the security position of western Europe is to flout reason and 125 years' experience with the Monroe Doctrine.

The second assumption of the rearmament thesis is that western Europe can in fact be defended against the Soviet Union. Even the rearmament proponents admit that the $1,500,000,000 now proposed is an initial outlay for the first year. Estimates of what reasonably adequate defense would cost make the whole Marshall plan and all other postwar European aid look like chicken feed.

What would be involved would be nothing less than putting the economy of the United States and those of the western European nations on a total-war footing. To create and sustain indefinitely a war economy is to destroy the economy itself and, inevitably, the liberties which western democracy is concerned to preserve.

Even then, you would not have made western Europe impregnable.

In the light of this, is it sabotage to suggest that the military strength of the United States resides where it always has—in a flourishing peacetime economy?

The final assumption is that the western European nations will pull out of the pact and embrace communism if they do not get arms right away. This is scarcely warranted by the struggle against communism which the western democracies have for some time been waging. More particularly, it reduces to absurdity the fact that the Atlantic Pact is the outgrowth of a European alliance—even if there is no Atlantic Pact there will still be the 50-year Brussels Pact of military defense.

But if it were true that, failing American arms, the western European nations would rush to the Kremlin, the United States would be well rid of such dubious allies.

Sale of Colored Oleomargarine

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, March 25 (legislative day of Friday, March 18), 1949

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Reserve Yellow for Butter," published in a recent issue of the Mosinee (Wis.) Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RESERVE YELLOW FOR BUTTER

It's time that both farmers and city folks get themselves riled up for the renewed fight coming up in Congress on the question of oleomargarine and authority to permit it to be sold in a form that resembles butter.

Frankly, we don't care whether or not there is a tax on oleo. We don't care if the manufacturers of it sell it as a substitute for butter. We don't care if it is sold colored or not. But we do care if it is sold in any form that resembles butter. For if that is possible then the public can be hoodwinked into believing that they are getting butter, when all they're getting is a substitute.

We can't for the life of us understand why it is that the proponents of oleo, who claim that it is as good as butter, don't be consistent and sell it on those merits, and not try to color it to resemble butter. Adopt some other color, if color it they must, that will be distinctly an oleo color and reserve yellow for butter. Of course, we know, the answer is that it isn't as good as butter and the vegetable-fat boys want to capitalize on the reputation the dairy industry has built up for their product.

We feel that the farmers must put up a good fight right now, and let their Senators and Congressmen know how they feel about this issue, or they stand to lose a large portion of the market for dairy products. On the other hand the city folks had better get into the fight, too, for if the farmers lose the users of butter are going to be sold down the river and will be on the receiving end of an inferior product whose price will jump as soon as they get the legislation that permits oleo to look like butter.

Senators ALEXANDER WILEY and JOSEPH MCCARTHY can be contacted by writing to the Senate Office Building, Washington, D. C., and Congressman REID MURRAY, who is carrying the battle for the dairy farmer, in Washington, gets his mail in the Congressional Office Building. How about writing to them right now?

United Nations Is Finished

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the current issue of Human Events contains an article by Mr. Felix Morley entitled "What Follows the United Nations?" This is an article that should be read by every Member of the House, and from it the conclusions must be reached that the United States is contributing substantially to the destruction of the United Nations Organization by entering into the so-called North Atlantic treaty. I recommend it to all Members:

WHAT FOLLOWS THE UNITED NATIONS?

(By Felix Morley)

Adolf Hitler is often quoted as having said: "The bigger the lie, the better the propaganda."

There is no documentary evidence that the late unlamented fuehrer ever put it quite that bluntly. But the idea undoubtedly was voiced by him in the chapter on war propaganda in Mein Kampf. There Hitler discusses the effectiveness of English propaganda in World War I, which successfully put over such concoctions as the fable of the Germans boiling down their war dead to obtain essential fats.

Hitler admiringly describes this type of propaganda fabrication as "a lie which by the absolute, colossal impudence of its presentation made allowance for the emotional and always extreme attitude of the common people, and therefore was believed."

The assertion that the biggest lies make the best propaganda comes naturally to mind as one examines the current effort of the administration to prove that the pending north Atlantic treaty "will strengthen and support the United Nations," to quote the words of President Truman.

Mr. Truman may quite possibly believe this. And it is further possible that a majority of the American people can be made to believe this. But it is certain that nothing is further from the truth.

II

Human Events, which is not interested in trying to fool anybody, could never force itself to be optimistic about the United Nations. On May 16, 1945, during the San Francisco Conference, we predicted that the unqualified right of veto would eventually wreck the Organization. On July 4, 1945, when the Charter was finally completed, we called it a constitutional monstrosity.

It would be more honest, and therefore more promising, if the Truman administration would say courageously that the United Nations is now regrettably a demonstrated failure and that the United States is therefore building a military alliance against Soviet Russia as a temporary alternative. Nobody who has actually read the Charter of UN can really believe all this hypocrisy about the proposed treaty being merely a regional arrangement of the type which the Charter contemplates.

And for the very good reason that it completely undermines the State Department case, Secretary Acheson must be very careful not to quote article 54 of the Charter, which says:

"The Security Council shall at all times be kept fully informed of activities undertaken or in contemplation under regional arrangements or by regional agencies for the maintenance of international peace and security."

The shrewd Mr. Vishinsky, now in complete charge of Soviet foreign policy, is in a position to have a good deal of fun with article 54 of the Charter, by placing it in conjunction with article 7 of the projected treaty, saying:

"This treaty does not affect, and shall not be interpreted as affecting, in any way the rights and obligations under the Charter of the parties which are members of the United Nations, or the primary responsibility of the Security Council for the maintenance of international peace and security."

If words mean anything, and if there is any sincerity in governmental actions, it follows from these two articles that we must report to the Russian representative on the Security Council all the military measures in contemplation against Russia, as these are developed under the North Atlantic Treaty. It will be interesting to note the extent to which that solemn obligation is observed.

Article 5 of the proposed treaty is superficially clever. That is the article which contemplates a Russian attack on one or more members of the North Atlantic Alliance and provides for collective action in response. The second paragraph of this article says:

"Any such armed attack and all measures taken as a result thereof shall immediately be reported to the Security Council. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security."

This paragraph, of course, anticipates a Russian effort, in the Security Council, to veto measures taken against Russia by the North Atlantic Alliance. The plan is to nullify the Soviet veto by declaring that this consideration by the Security Council is insufficient. The members of the alliance, though they are members of the United Nations, will pay attention to the supreme organ of the UN only to the extent that the latter takes necessary measures.

This can only be called direct effort, sponsored by the Government of the United States, to undermine the United Nations as it is established. There is no attempt to define necessary measures, or to say who shall decide what constitute necessary measures. Again it appears that our Government shamelessly intends to be judge in its own cause.

But in spite of this plan to circumvent the Charter, as approved by our Senate on July 28, 1945, with only two dissenting votes, there is plenty of scope for Russia to raise awkward questions about the projected treaty, through the machinery of the United Nations. There is now even less probability than before that Russia will abandon its membership in UN. And the nuisance value of that membership is greatly increased by the establishment of UN headquarters in the United States, a most factuous accomplishment for which our Department of State can also claim full credit.

III

All this is not said in criticism of the projected treaty. Since it will presumably be approved by the Senate, though without enthusiasm, it is desirable to say all that can honestly be said in favor of the pact. Measured against the succession of almost incredible blunders made by American diplomacy under Roosevelt and Truman, this treaty can be regarded as the only immediately practical way of saving something out of the wreck. But the treaty cannot be advocated on the basis of any other argument.

If the American people are wise they will view this awful situation with all the reason-

ing power which they can concentrate. Then we shall realize that we are asking for war with Russia, and that only restraint on the part of the Politburo will keep us from getting that war. Just as lend-lease meant war with the Axis, unless Germany and Japan were unwilling to accept our challenge, so this treaty means war unless Soviet Russia decides to knuckle under. The Communists, however, may for a long time refuse to pick up the gantlet, because they have ways of waging war which are a great deal more subtle than those of military force.

As the cold war continues it would therefore seem practical to consider policies less crude and costly than this old-fashioned military alliance, in which practically all the bills will be paid by that patient beast of burden—the American taxpayer.

Since this alliance clearly seeks to circumvent the United Nations, and will be hampered in operation by the parallel functioning of the United Nations, it would seem logical to admit this, officially and frankly, at some early date. Secretary Acheson says that the understanding support of the American people is essential to the success of his policy. The only way to get the understanding support of people is to be honest with them.

IV

When the United Nations has been scrapped—in name as well as in deed—a plan for some more promising form of international cooperation should be ready to take its place. The proposed alliance is certainly not that plan. It is at best an undesirable, unsatisfactory, and uninspiring stopgap. But the alliance can be developed into something more promising.

One basic trouble with this alliance is that by its terms the American people abandon all control of their own destiny. If Russia and Norway go to war, we also go to war, regardless of whether or not Norwegian mistakes helped to provoke the conflict. As a long-range proposition that sort of situation is intolerable.

The only sure way to improve the arrangement, as matters stand now, is to begin to build some sort of federation out of the projected treaty. The American people cannot be expected indefinitely to finance, arm, and support these bankrupt European states without to some extent controlling their policy. The only proper way to exercise that control is by establishing a representative form of international government, in which the American and western European people alike have some say as to the disposition of their lives, their fortunes, and their sacred honor.

Luxemburg is to the United States about like Rhode Island to the Union as a whole; Norway may be said to compare with Maine; Belgium with New Jersey; England with New York; and France with California, Pennsylvania, or Ohio.

Federation with western Europe on the basis of enlarging the American Union by bringing in these additional States would be in accordance with the material importance of the various sovereignties involved. And it would have the incidental, though enormous, advantage of immediately vitalizing the doctrine of States' rights, which is so basic to the preservation of our republican institutions. If France were a member of a North Atlantic federation it would properly insist on a large degree of autonomy in its domestic affairs. That would encourage Virginia, for instance, more resolutely to oppose the encroachments of centralized government. A larger federation could readily mean more home rule.

In his broadcast of March 18 Secretary Acheson asserted that similarities between the United States and its proposed allies in western Europe are not superficial, but fundamental. That may be questioned. But if the argument justifies a military alliance it also justifies a more satisfactory form of union, under which the power and arrogance of centralized bureaucracies would be reduced, not further increased.

A Global Blueprint

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. REED of New York. Mr. Speaker, there is no end to the drain on our taxpayers from abroad. Have we not been told that the trade-agreements program would eliminate trade barriers and that the United States would be the first to remove such barriers?

Yet now the Truman administration leads in creating one of the greatest cartels in modern times.

Our taxpayers foot the bill.

Will this raid on our people never end?

Under leave to extend, I am inserting an article which appeared in the Wall Street Journal under date of March 25, 1949:

A GLOBAL BLUEPRINT

A second attempt to set up an intergovernmental wheat cartel has been launched. Five exporting countries, including the United States, and 37 importing countries have drafted a plan to stabilize among themselves the production and marketing of wheat at restricted prices.

A similar plan failed to pass the Senate last year. This year the wheat-buying countries have higher hopes that we will agree to it. Their enthusiasm for the plan is understandable.

This proposed world wheat agreement provides that the United States will supply 168,000,000 bushels annually to the importing countries at a price not exceeding $1.80 a bushel. However, the importing countries are not required to pay more than $1.50 a bushel the first year, and this minimum price declines each year thereafter until it reaches $1.20 a bushel.

That this is a good deal for the 37 wheat buyers is evident.

The present cash price of wheat in Kansas City is $2.22 a bushel. The current rate at which the Government will loan to wheat farmers who prefer not to sell their wheat is $2.24 a bushel. This loan rate, which has nothing to do with the supply of wheat, puts a floor under the price the Government will pay for its wheat.

Now, so long as the price of wheat remains above $1.80 a bushel, the 37 importing nations have an excellent buy. They pay the United States Government not more than $1.80 a bushel for wheat which the Government must buy at the going rate. The difference between the market price and the $1.80 fixed price is paid out of the taxpayers' pocketbook.

Here, as in the European recovery program, we have a direct subsidy to the world paid by the citizens of the United States, a redistribution of income on an international basis.

But here, unlike the ERP, the subsidy is hidden under the guise of market stabilization, and it has not even the excuse of helping former allies. Included among the beneficiaries are such diverse countries as India, Lebanon, Ceylon, and Guatemala.

These beneficiaries, of course, risk nothing; they cannot lose. If world prices are above the contract price they get a subsidy. If world prices should drop to the contract price they are even Stephen. In the unlikely event that prices drop below $1.20 in the next 4 years we have a contract that is unenforceable. They can play two major wheat exporters—Russia and Argentina—against us, for those two are not members. So far as the importing countries, such as Great Britain, are concerned, it is a case of heads they win, tails we lose.

But even more disturbing than the cost of this particular program is the point of view upon which it rests. Secretary of Agriculture Brannan, in listing the advantages of the proposed agreement, says that it will set a pattern for action on other commodities. We are later to follow the same principle with regard to corn, cotton, or any other commodity that the planners think needs world stabilization.

The principle is supranatural economic planning. And if we here have to bend to these noble plans and accept a dictated economy and a lower standard of living to support the plans for other countries—well, that is supposedly meet and just, if regrettable.

We cannot embark upon these plans to dictate prices and marketing throughout the world without dictating, too, what shall be sown and what reaped here at home.

This implication has not escaped Secretary Brannan. He thinks it would seem reasonable that farmers should agree to regulate their production to fit the planners' supply and demand blueprints. That such dictation lies at the end of the road should not escape the rest of us, either.

The Merchant Marine

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. BLAND. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial from the St. Louis Globe-Democrat of Sunday, March 20, 1949, entitled "The Merchant Marine." The article is as follows:

THE MERCHANT MARINE

One of the important issues before this Congress is the adoption of a postwar policy on the American merchant marine. This question is not simply one of lending governmental approval to a legitimate private enterprise. The fact is that this country cannot have a merchant marine adequate for its peacetime needs and capable of contributing to national defense without Government aid.

The problem is graphically illustrated by the current controversy between ECA, the administrative agency for the Marshall plan, and the shipping interests. Paul G. Hoffman, as head of ECA, wants to use a large proportion of foreign vessels to move Marshall-plan goods to Europe because their rates are cheaper. By the accepted rules of business, he is right. The fallacy lies in the fact that the American merchant marine cannot keep afloat under the ordinary rules of business.

It might be argued that if other maritime nations, which are for the most part the countries we seek to aid through the Marshall plan, can provide ocean transport at lower rates, the United States might well turn the job over to them. This attitude, however, ignores the need for a merchant marine for national defense.

Twice in this century this country has been forced to build at huge expense a wartime merchant marine. In the last war we were fortunate enough to have the plans and the shipyards ready to build the Victory and Liberty ships that bridged the gap from the arsenal of democracy to the battlefields.

There are other factors now which make our need for a strong American merchant marine more urgent. Some of them were pointed out by Vice Adm. E. L. Cochrane in his address at the Mississippi Valley Association convention here recently. This country's depleted natural resources make us dependent on overseas imports in both peace and war. America's role as an exporting nation is constantly expanding and American-flag ships are our best salesmen for our goods abroad. The experience of the last war has shown that the merchant marine, with ships, port facilities, and personnel, is an essential fourth arm of the armed forces.

Out here in the Mississippi Valley we have an added interest in the development and maintenance of a strong merchant marine. The Gulf ports are the natural gateways to world markets for the valley. They are the logical ports of entry for the raw materials we need from abroad. We need the assurance of adequate and regular ocean services operating out of the Gulf ports. There have been in the past attempts to discourage the Gulf lines in order to benefit the Atlantic seaboard. Such attempts should have no place in the adoption of a national postwar policy for the merchant marine.

In formulating a new national merchant marine policy, Congress must recognize the shipbuilding and operating differentials which are essential to maintain a strong merchant fleet. Congress must also make provision for the maintenance of adequate shipbuilding facilities and encourage construction of new-type ships, capable of meeting the stern competition of the postwar years.

A Philosophy and a Fact

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article taken from the editorial page of the Christian Science Monitor, Wednesday, March 9, 1949. The title of this article is "A Philosophy and a Fact" written by a former Governor of Colorado, John C. Vivian.

In this article Governor Vivian analyzes with considerable logic and sound reasoning the peculiar and unusual type of government that was organized and set in motion by the adoption of our Constitution. Of course, every school child understands that we are not a democracy and many of our historians relate that our founding fathers never intended our country to be a democracy. The article is worth a careful reading.

A PHILOSOPHY AND A FACT

(By John C. Vivian, former Governor of Colorado)

No word in the English language has been dealt with more carelessly or interpreted more loosely than the word "democracy."

The fact is, we do not have a democracy in America. In a strict sense of the word, we never have had. Ours is a republic, as set forth by the Constitution of the United States. The two forms of government are very different. In a democracy, the people govern themselves without representatives. In a republic they are governed by elected representatives, as we, in America, have been ever since 1776.

George Norlin in the Quest of American Life says:

"The word 'democracy' appears to have as many meanings as there are patriots who mouth it on the platforms and is commonly thought of as being what we have rather than as a process of becoming what we want to be."

It is interesting to note that the word "democracy" does not appear in the Declaration of Independence or the Constitution of the United States.

Historian Charles Beard in the Republic says the Constitution's framers considered it a word "to be dreaded rather than encouraged."

Today, too many people use the terms "republic" and "democracy" interchangeably. The town meetings of colonial days were examples of a democracy in action. If history correctly depicts the situation, practically all of the people gathered at regular intervals and transacted the public business themselves, not by delegated representatives; as in a republic.

Thus, if the people operate directly, they have a democracy. If they delegate their authority to representatives elected by them, they have a republic. Democracy as a philosophy involving equality of opportunity, dignity of the individual, and ultimate popular sovereignty, has a real application to American society. But there is danger in confusing a republican for a democratic form of government.

It is difficult to visualize any national government today as a pure democracy. It would be interesting to learn if there are any sovereignties which actually employ such rule. It would be even more interesting to know how, in detail, they are operated.

Madison says in the Federalist:

"The true distinction between these forms is that in a democracy the people meet and exercise the government in person. In a republic they assemble and administer it by their representative agents."

Down to the time of Woodrow Wilson, the United States was seldom described as anything but a republic. The word "democracy" occurs rarely in State papers. Nearly always the country is "the Republic." Thomas Jefferson was the founder of the Democratic Party; but in his first inaugural address, though he refers several times to the "Republic" or the republican form of government, he does not once use the word "democracy" or any derivative of it.

The pledge long used in our schools is a pledge of loyalty to the flag, and to the Republic for which it stands. Julia Ward Howe did not write the Battle Hymn of the Democracy.

Former Governor Lehman, of New York, a Democrat, in his first inaugural message in 1933 did not once use the word "democracy." In his message of 1935 he used it twice. But in his message of 1939 he used democracy or a derivative thereof 25 times; and in his annual message to the legislature, January 3, 1940, he used it no less than 33 times.

But there is another respect in which the United States is a republic in contradistinction to a democracy. This is in the division of powers into legislative, executive, and judicial—our well-known system of checks and balances. This division recognizes that if the same man or men make the laws, interpret them, and execute them, despotism results. The Constitutional Convention, by working out the principle of the separation of powers, gave us the freedom on which we built our country.

The republican form was not chosen by accident, but deliberately. This was the form sought by statesmen and philosophers throughout centuries of history, but not found until the American Constitution established the American Republic. This was done deliberately along with the more perfect union, described by the French patriot Lamartine and by the English statesman Pitt as a model republic.

It is worth remembering that when the sessions of the Constitutional Convention in Philadelphia in 1787 had ended, Benjamin Franklin, a participant in the deliberations, was asked: "Well, Doctor, what have we got, a republic or a monarchy?" Franklin replied: "A republic, if you can keep it."

The Late Honorable Sol Bloom

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert, in memory of my dear friend, the late Honorable Sol Bloom, the text of two radio programs by Galen Drake. These programs are about the autobiography of Sol Bloom, which was published a few months before his death. It seems to me particularly fitting at this time to glance back over the long and distinguished career of our late colleague and my very good friend, Sol Bloom. Mr. Drake selected some of the interesting little incidents from the autobiography and broadcast them on two successive programs over radio station WJZ. The first program was presented at 3:30 p. m. on Friday, December 3, 1948, and is as follows, with Mr. Drake speaking:

You know, a friend of mine who works in a big public library was telling me the other day that more people read biographies than any other kind of book. I was kind of curious about it. Personally, I prefer biographies, but I would have guessed that maybe adventure stories, or something like that would have a more general appeal.

But this librarian said, "No; biographies."

Now, it kind of reminds me of the saying that the proper study of mankind is man, which is right.

Right after talking with this librarian I picked up the Autobiography of Sol Bloom. There's a very rich piece of reading. I don't know whether you've read it, or not. It's just out now. If you have read it, I think probably you liked it.

Now there are lots of books on the history of the last 70 years in America, and there are lots of books about a poor boy who became a great national figure, but in this book you've got both of them at once.

I'm not going to try to tell the story of Sol Bloom's life in the next few minutes; of course, I think you're probably familiar with his name, the man who is one of America's

great elder statesmen. He's been counselor to four Presidents, a long-time Congressman who's seen wars come and go, who is chairman of the House of Representatives Committee on Foreign Affairs, and who incidentally, drafted the preamble to the Charter of the United Nations.

Sol is 78 now, I believe, and he still puts in as many hours a day as he did when he was 40, which is a little tip-off to some of these youngsters who get very tired when they get about 45, and start thinking about retiring.

Now, when Sol Bloom was a young man he was working for himself. He was a big-time theatrical manager, and real estate operator, but now he works for the good of other people.

As a kid he used to sell violets on the streets of San Francisco. There's a beginning. But now he's selling that faith in America that he feels so strongly about.

He's one of those guys who can use words like faith and love and truth, and sound like he really meant it, because he really does.

Here's a little story which you might call in the nature of a scoop. This isn't in the book. Here's something that—well, it's not in the book in so many words, anyway. But if you like this you might want to read the rest of what he has to say.

I got a friend of mine who knows Sol Bloom to go over and see him and ask a couple of questions. That's what I want to tell you.

The first question was: "What's the difference between a politician and a statesman?" You know, that's a good question. Kick that around in your mind a while, see if you can explain it.

Well, Sol Bloom said, "That's very easy, A politician is a vote-getter. He's interested only in his own district, because that's the district that elects him. A statesman is interested in his whole country. Suppose some legislation came up which benefited his district 75 percent, the country 25 percent; suppose there was other legislation which would benefit the district 25 percent and the country 75, you could tell by the way he votes if a fellow's a politician or a statesman."

Personally, I think that's a kind of a neat way to put it.

And the next question was: "Do you have any advice to a young man who plans to go in for public service?" And Sol said, "Yeah, but first the man has to make up his mind whether he wants to become just an officeholder or whether he wants to get out in the ranks and work for the good of the people, and try to do what's right, and teach them what's right."

And he went on to say that to become an officeholder is comparatively easy for any ambitious young man, but to become a real servant of the people, that's something else again. There are too few of those.

In the first place, as a young boy either in college or in the knockabout school of life—that's the one Sol Bloom went to, by the way—if he wants to become a servant of the people the kid has to leave all fanaticism behind him. He must keep a clear mind on the subject that he learns about. He must never let isms and no bright clever arguments divert him from the path he chooses.

He's got to keep in front of him the foundation of what's real; the truth, and faith, and love, and so forth on which this country is built.

Then he pointed out that the young man must specialize. In these days no man can know everything; that's impossible. So let him become an expert in some one thing: Agriculture, foreign affairs, airplanes, economics, doesn't matter what, so long as he becomes expert in some one field. And he don't have to be a lawyer, either. He don't even have to be a lawyer to understand the Constitution. Lawyers are a dime a dozen in comparison with real experts in say, foreign affairs.

Incidentally, the guys who wrote the Constitution weren't lawyers, either. Well, they had a few of them mixed in there some place.

But he does have to be honest with himself. I think one of Sol Bloom's favorite sayings is this: One with God is a majority. That, I like.

Then he says, if the lad really wants to go into public service, he can't afford to be afraid. Let him get on one side of an issue, and as long as he knows he's right, or feels deep in his heart that he's right, that's where he belongs.

If somebody in the press takes a whack at him, or friends turn away from him; those things should mean nothing to him if he's convinced that he's on the right side of the fence.

And he shouldn't let anybody tell him that he has no right to do such and such. No one has the right to do a thing if it isn't the right thing to do. Likewise, if it's the right thing to do you have a right to do it, and don't let anybody stop you. Go ahead and do it. You'll get kicked around once in awhile, sure. But you're going to get that anyway. You're not going to please everybody, no matter which way you jump.

And finally, to be a great American statesman, you must first be a great American. Think first of all what's best for your country, and go along with them only if they meet your ideals, the people who want to come up with other ideas.

And when you get along in your own career, remember that everybody has a right to a chance, and give a word of encouragement to some of the young boys who are starting on the first rung of the ladder.

I think those suggestions for the making of a true public servant are worth giving some thought to. And we got that right out of the feed bag, and kinda proud to be the one who put it out for the first time.

I'll get back to some of the other things in the Autobiography of Sol Bloom one of these days, because there are some yarns in there that will make you chuckle even if you have a little catch in your throat once in a while, too.

But this stuff we asked about the difference between a politician and a statesman, that I had to get off the griddle while it was hot. I liked that.

On February 2, 1949, at 11:45 a. m., Mr. Galen Drake again broadcast a program about the Autobiography of Sol Bloom. This program was also presented by radio station WJZ and is as follows, with Mr. Drake speaking:

You know, maybe you remember back a few weeks ago I talked a little about Congressman Sol Bloom, who is one of the most popular, and best loved public servants today. He was an adviser to four Presidents, and still going strong at the age of 78, as chairman of the Committee on Foreign Affairs, in the House of Representatives.

And I suggested at that time that his new book the Autobiography of Sol Bloom is not only good reading, but if you're interested in some very fine history of what's been going on in America for practically the last 75 years, through the eyes of a guy who's seen and heard practically everything worth seeing, from the age about five, by the way, when he was selling violets on a street corner in San Francisco, right up to today, you ought to read the book.

I've read it a couple of times and I liked it the first time, and I liked it better the second time.

But some of the—some of the early jobs that Sol Bloom held kinda bugged my eyes out a little bit. The kid never did have any time to play, I guess, because every minute of his time was employed trying to get an extra penny, or so, to bring home, because the family sure needed pennies. And a penny meant something.

He didn't go to school because at that time the public schools were free, but the kids had to furnish their own books, or else they had to acknowledge the fact that they were too poor to get any books, and they had to accept school books that had a stamp on it, and the stamp said, donated by charity. And they had to carry those books around.

Well, Sol, age 5 years or so, wasn't going for any of that charity routine. He was toting no books that said charity on them. So, he cut out of school after 1 day, and snagged himself off that violet-selling job. Of course, as you might suspect, he sold papers, too, and sometimes he helped his father sell sponges from door to door.

And not being behind the door when the brains was passed out, Sol finally discovered that if he would set his pack of sponges down with a long sigh, like it was almost more than he could stagger under, and then looked up at the lady of the house with a kind of a wan sweet smile, like as not she'd come through with a slice of cake, or something.

Already he was catching on to diplomacy. No wonder he's in the Foreign Affairs Committee today.

Well, Sol was working in a brush factory for a buck and a quarter a week. He was about—oh, he was about 8 years old at the time. On his way home one day he lingered to look at a play bill in front of a theater, and a young man called him inside and asked him if he'd like to earn four bits. The young man happened to be David Belasco, who was then just starting out in the theatrical world as a call boy.

It seems that one of the child actors got sick, or something, and they needed a little kid about Sol's age and size to do a kind of a walk-on for 2 nights, four bits, 50 cents. That was close to half a week's pay at the factory, and from that time on the kid was busy with brushes all day and hanging around the stage door waiting for a walk-on every night.

Maybe he was only 8 years old, and maybe he'd known great poverty for all his brief life, but from the age of 8 Sol Bloom always had money to take home, more money than his family ever saw before.

When he couldn't get a part he sold programs, when he couldn't sell programs, he swept up the aisles, and by the time he was 14 he was doing pretty good.

One yarn I like, you'll find it right in the first part of his Autobiography of Sol Bloom, about the time when Adelina Patti came to San Francisco in a private railroad car, trimmed with gold, lined with satin, wood and stuff, and got an ovation from the people the like of which had never been seen in those parts. Of course, the boys were asking some fantastic prices for tickets for her performance. I think Traviata was the first thing she was to sing in.

Well, Sol Bloom, age about 14 then, didn't see why he couldn't get in on the profits of some of those tickets they were getting so much dough for, so what he did, he went around very quietly taking orders from people standing in line, and since he'd already fixed it up with the watchman to let him in the back door, why he knew he could skin in and come out with a fistful of tickets and then dispose of them before the suckers could get up to the window where the speculators were charging these very weird prices.

Well, of course, the kid was going to make himself a healthy profit, but even at that he was doing them a good turn, because those speculators had no mercy.

The only trouble was that after he collected his orders, and got the dough to buy the tickets, so to speak at wholesale from the manager or something, whoever he had a contact with in there, the watchman, or somebody crossed him up by bolting the back door on him—his only way of getting in

without letting the speculators know what was going on.

And he said that it wasn't the money that he lost on the deal, that was bad enough—that wasn't what threw him, though—it was the disgrace of having to go back to that line of people and acknowledge that he wasn't such a big shot as he thought he was, that's what hurt.

That's a good lesson you know. Maybe more of us should learn one like that.

Well, I'm not going through the whole routine of the success he made of more jobs than you can shake a stick at, at an age when most kids are still making with the school books.

But there's one more yarn here I can't resist in this story.

I don't know what one of the modern better business bureaus would have to say about this, but nevertheless it happened, so we'll do it.

It seems that in connection with selling sponges, and feather dusters, and so on, young Sol Bloom had a thriving little wholesale business in window screens, so one day he called on one of his stores which usually gave him a fat order for screens, and the storekeeper told him right now the joint was full up of window screens, and they couldn't handle another screen. They didn't want any more of them. And the guy said, besides, I don't like the color of the screens you've got out there in the wagon. Who ever heard of bright green window screens; don't make any sense.

Seems that Sol was trying to unload some bright green screens he got some place. So, thinking quick like a bunny, Sol said, why, what do you mean? He said, you ought to thank me for offering you these screens. You don't have anything like this in the store. These screens are medicated.

Well, he sold this guy a bill of goods, and to the effect that he could have bright green screens especially treated to keep out flies for the same price as just old, ordinary, plain, everyday, black screens.

Storekeeper beamed all over, bought a gross, and the next thing Sol Bloom was in the Bloom's medicated-screen business, and they were in such demand that he couldn't buy enough green paint to keep them in stock.

He explained it by saying that they gave the users a sense of comfort and security, like when you take a daily vitamin pill, you know, you feel that you can do anything to your health then, because you're safe. But he says he doesn't attempt to justify Bloom's medicated screens at all, but he still thinks he made a great contribution to domestic morale, up and down the Santa Clara Valley, where he sold them to every retail store and practically every householder, too.

Well, anyway, that'll give you just a taste of a few of the jobs that a successful man holds down, and is successful at, before the world knows about him.

The autobiography of Sol Bloom is chockfull of yarns like that, I wish we had time for more of them, but we've got to get on to something else. You ought to read it.

Santa Clara Valley War Veterans

REMARKS
OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. ANDERSON of California. Mr. Speaker, a serious situation has arisen in the Santa Clara Valley in California which endangers the health and welfare of three or four hundred veterans and their families.

Veterans' homes constructed with GI loans through FHA have apparently been built in an area where septic tanks and sewage-disposal systems will not work properly. Recent heavy rains in the Santa Clara Valley have backed up sewage into yards and homes of the affected veterans, and they are threatening to strike on their loan payments unless the difficulties are promptly remedied.

I have requested the chairman of the Veterans' Affairs Committee to conduct a prompt and thorough investigation but am advised that the committee lacks the necessary authority and funds. I am, therefore, today introducing the necessary resolution, and I trust that prompt and favorable action will be taken thereon.

The attached newspaper clipping explains the situation to which I refer:

VETERANS THREATEN TO CALL STRIKE ON LOAN PAYMENTS

(By Joel Y. Rickman)

Prompt Federal action out of Washington was promised 300 embattled GI's in the sewage-saturated Vollmer and Hillview terrace tracts yesterday as the GI families called a strike for April 1 against paying on Veterans' Administration loans with which their homes were purchased. The veterans' drastic step, which promises to bring the turbulent East San Jose situation to an early showdown, was precipitated by new rains which flooded the suburban neighborhoods with a fresh layer of sewage.

Affairs moved rapidly in the face of the new crisis, and as nightfall came, accompanied by the throb of small gasoline engines as home owners pumped fetid, contaminated sewage from their basements and yards, the following events had transpired:

Congressman JACK Z. ANDERSON, in a long-distance telephone conversation with Robert M. Bartholdi, chairman of the Veterans' Housing Committee in San Jose, promised he will have a representative on the job early this week. He asked Bartholdi to urge the veterans to take no precipitated action before the representative arrives.

2. The veterans, in no mood to heed caution in view of the desperate health situation, met and decided to strike April 1 against paying installments on their GI loans, until effective relief is provided them.

Pursuant to this action they prepared and started obtaining signatures to formal notices of their intended action. The notices will be forwarded to the finance companies through which the loans were obtained.

3. They dispatched a telegram to the State board of health and Gov. Earl Warren requesting that the resources of the State health authorities be thrown back of County Health Officer W. Elwyn Turner in staving off another threatened epidemic.

In the meantime, the veterans met at the home of Mr. and Mrs. Lloyd Gable, 1794 Margaret Street, and voted to send a representative to Monday's meeting of the board of supervisors. Their spokesman was instructed to demand that something be done about the open sewer which starts near the barnyard of a large dairy south of their tracts and bisects both neighborhoods.

Congressman ANDERSON, talking from his place of residence in Chevy Chase, Md., assured Bartholdi that he has already been in touch with the chairman of the House Committee on Veterans' Affairs and that quick and effective action will be taken.

Bartholdi had previously telegraphed the Congressman advising him of what Bartholdi termed "evidence of possible fraud" in the financing and construction of GI homes in the Vollmer and Hillview Terrace tracts.

Anderson told Bartholdi he expects to have a representative in San Jose by the middle of the week. He urged that the San Jose veterans keep their heads until he has had time to act through official channels.

The veterans were in no mood, however, to condone further delays. The notices of their intentions to default in their GI-loan payments will advise the lending agencies that their action is being taken because of existing condition of their properties. They pointed to the fact that their septic tanks were installed in soil wholly unsuitable for such purposes, and until such time as effective remedial steps have been taken they will continue to default.

The GI's, many of whom fought in the same units in the South Pacific and through Germany, also served notice that if the need arises they will defy the Veterans' Administration, FHA, or any other agency to dispossess them.

They claim they were defrauded when they were sold homes whose septic tanks not only failed to function but created a dangerous health hazard. They said they are ready and willing to abide by the terms of their loan contracts when adequate steps have been taken to right their wrongs.

Both the VA and the FHA have warned that if the veterans default in their payments, their properties will be subject to foreclosure. In the event the foreclosures were carried through and the GI's evicted from their homes, the veterans would lose whatever equity they have invested in their properties, and would also lose any future rights to GI loans, the Government agents said.

However, the State American Legion has the affairs of the veterans in the two districts under investigation. State Commander Rex Whittemore has already declared that if the State Legion finds evidence of fraud in any of the transactions involving the veterans, it is prepared to assign the Legion's own attorneys to the cases.

Decision of the veterans to appeal to the State board of health and Governor Warren for support to the program already inaugurated in the contaminated areas by Health Officer Turner was reached late yesterday. It was taken at a meeting of the Vollmer-Hillview Terrace tract committee. Joseph Malone is chairman.

The young home owners praised Dr. Turner for the prompt and sincere efforts he has made to handle the emergency, but expressed the belief that the new rains had created a situation beyond his control.

Their telegram to the State health authorities and to Governor Warren follows:

"The undersigned, representing nearly 300 home owners, most of whom are veterans, in Vollmer and Hillview Terrace tracts of East San Jose urge your immediate intervention here to assist our county health officer in controlling health crisis created by failure of septic tanks installed in soil unfit for sewage disposal.

"Heavily populated district presently required to dispose of human sewage in open pits in backyards. Highly contaminated effluent from septic tanks now run through open sewage ditches in yards. Local health officer cooperative but handicapped in controlling project.

"We feel immediate steps imperative to avert epidemic. Copy of this telegram is being sent to Governor Warren."

Chairman Malone, who signed the telegrams in behalf of the committee, emphasized that the veterans wished to cast no reflection on Dr. Turner.

"Dr. Turner has caused chlorination tanks to be set up along the open sewer that taps the barnyards to the south, but the open sewer pits we are forced to maintain in our backyards are a constant threat of a deadly epidemic," said Malone.

"Equally dangerous are the small lateral ditches that run from our brimming septic tanks into the larger ditches that connect with the main sewer canal threading its way through the neighborhood."

Many of the homes in the area also have been without heat, due to the flooding of furnaces, since the beginning of the rainy season.

The Red Cross moved into the area yesterday to provide emergency relief for one family when it installed an oil heater in a home at 1913 Margaret Street.

Complaints of heavy damages to property in the area are commonplace. Peter Piazzi, 1759 Vollmer Way, said he had invested upward of $2,000 in improving and landscaping his premises. His work is now a total loss, he said, including the gold fish in the fish pond in his backyard. They were killed, he said, when his septic tank overflowed, filling the fish pond with sewage.

Union Policy Sometimes Lessens Jobs, Curtails Opportunity for Employment

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, those labor leaders who are asking for the repeal of the Taft-Hartley Act, the re-enactment of the Wagner law, the denial of free speech to employers and a blank check of power to certain union officials to call and maintain strikes which injuriously affect the public health, safety and welfare, should read the following articles from the March 26, 1949, issue of Labor, the official publication of 15 recognized standard railroad labor organizations.

REPORT TELLS WHY AMERICAN PLANTS MOVE TO SCOTLAND—CITES LOWER WAGES, NO LABOR TROUBLE, RECIPROCAL TRADE AGREEMENTS BILL

There is even more than meets the eye in a report from Glasgow, Scotland. "More than a dozen United States firms are expanding in the European field and have set up factories in Scotland since the war," the report says.

"Skilled labor is a third cheaper in Scotland than in the United States, and Scotland has had no major labor-management trouble for many years.

"Strictly unofficially, some observers say labor conditions in the United States influenced the decision of some of the firms to move to Scotland."

In short, the report says in fairly plain words that many American manufacturers are moving their plants to Scotland to take advantage of lower wages and frustrate American labor unions' demands for improvements in wages and working conditions

Among these concerns is Remington Rand, large manufacturer of typewriters and office equipment, which has an extremely bad record of antiunionism.

The report also refers briefly to some other reasons for the moves to Scotland. These reasons, which were more fully explained in the recent House debate on the reciprocal trade agreements bill, are:

After that bill is passed, American manufacturers expect to be able to ship more products from their Scotch plants into the United States; furthermore the American plants in Scotland will be making products for world markets which formerly bought products made in factories in the United States.

The reciprocal trade bill was passed by the House but has not yet been approved by the Senate.

BELT CONVEYOR CALLED THREAT TO RAIL JOBS IN OHIO—REPRESENTATIVES OF STANDARD UNIONS LOOK INTO PROJECT BEFORE STATE LEGISLATURE

Thousands of railroad jobs in Ohio are facing a new threat which may be even more serious than the Lake Erie-Ohio River canal which has long been opposed by standard railroad labor organizations.

H. B. Stewart, Jr., president of the Akron, Canton & Youngstown Railway, announced that the Ohio State Legislature is being asked to charter a new private corporation to build and operate a 103-mile "conveyor belt" system between Lorain on Lake Erie and East Liverpool on the Ohio River. Branches of the system would run to Cleveland and Youngstown.

WOULD AFFECT 15,000

Moving belts, operating in weatherproof steel tubes, would carry huge quantities of iron ore, coal, and limestone between the terminals.

In addition to Stewart, big steel companies are behind the scheme. They prefer it to the proposed canal, according to a statement by Kenneth Lloyd, executive secretary of the Mahoning Valley Industrial Council.

Representatives of the rail labor unions are looking into the proposal to see that the interests of the railroad workers are protected.

After preliminary study, the cooperative legislative committee of the railroad brotherhoods in Ohio issued a statement saying that 15,000 rail employees will lose their jobs if the conveyor project goes through.

The carriers are also fighting the project.

These two articles show that sometimes union policies drive industry abroad, sometimes, by forcing wages up, compel employers to seek labor-saving methods.

Small Business Against Basing-Point Change—Identical Prices Exist as a Result of Complete Understanding—Basing-Point System Glaring Example—Collusion Is Necessary in Operation of Basing-Point System

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. PATMAN. Mr. Speaker, only where a complete understanding exists between members of an industry, or where an industry is completely integrated, can prices be controlled to the fraction of a cent.

Such an understanding produced identical prices in the cement industry through the use of the basing-point system. Uniform pricing prevailed to all classes of customers, whether dealer, contractor, or Federal, State, and municipal government. No one, however alert, could break through the tight ring of understanding which prevailed in the cement industry. This fact has been demonstrated many times through information assembled by the Federal Trade Commission and other Federal agencies. This practice is detrimental to small businesses everywhere.

Not only, as in the case of the cement industry, were prices controlled, but the establishment of additional manufacturing facilities was likewise controlled. This control of prices and facilities resulted in the creation of the Cement Trust. Free capital and free enterprise were thwarted in attempts to bring cement, a basic commodity, close to the consumer, thereby saving the public millions upon millions of dollars in actual transportation charges—yes, many millions of dollars in actual transportation charges and many, many more millions of dollars in phantom freight charges.

No matter how small or how large the quantity of cement to be purchased, the result was always the same. As an illustration, I include a table, Federal Trade Commission Exhibit 373–A, Docket No. 3167, on a relatively small quantity—500 barrels—for the United States Industrial Reformatory at Chillicothe, Ohio, on which bids were opened June 12, 1936. The table follows:

Name of bidder:	*Price per barrel*
Alpha	$2.02
Green Bag (West Virginia)	2.02
Southwestern	2.02
Standard	2.02
Universal	2.02
Medusa	2.02
Pittsburgh Plate Glass	2.02
West Penn	2.02
Bessemer	2.02
Lehigh	2.02
Superior	2.02
Louisville Cement Co	2.02
Diamond	2.02
Wabash	2.02

All bids were subject to 10 cents per barrel discount for payment in 15 days.

It will be noted that 14 cement mills bid at the exact price of $2.02 per barrel with the usual 10 cents per barrel discount for payment in 15 days. Fourteen widely scattered cement mills with varied transportation charges, some real and some phantom, all bidding the same price to the penny. Certainly no unanimity of thought prevailed here, but, rather, unity in purpose and understanding. This identical bidding practice has been going on since long before 1936 and also since that time.

Since the abolition of the basing-point system in the cement industry as a result of the Supreme Court decision, there seems to be a pattern of refusal by certain cement plants to supply all comers. This pattern of refusal, to my mind, is for the sole purpose of creating dissatisfaction among cement dealers and users in order to create a demand upon Congress to restore the basing-point system by way of a moratorium. Any new law enacted under the guise of a temporary expedient will give the monopolists more years to operate illegally, while the courts are engaged in the process of defining and understanding new words and phrases. A moratorium is a loophole through which the cement and steel industries can drive through toward the goal of great and even greater profits.

It is my belief if the basing-point system is eliminated, small fabricating and manufacturing plants will be revitalized and small business generally will be freed from at least one of the tentacles of the octopus of monopoly.

Free Speech Plea Gets Visas for Reds To Attend Propaganda Parley Here

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by Dorothy Thompson:

FREE SPEECH PLEA GETS VISAS FOR REDS TO ATTEND PROPAGANDA PARLEY HERE

(By Dorothy Thompson)

The State Department granted visas to 23 delegates from Cominform countries to attend a Cultural and Scientific Conference for World Peace, beginning in New York tomorrow on the ground of "unswerving devotion to freedom of information and free speech."

That statement confuses the issue. This New York conference has nothing to do with culture, science, or free speech. Sponsored by the National Council of the Arts, Sciences, and Professions and called by Prof. Harlow Shapley, of Harvard, the conference is intended as a platform for anti-American Soviet propaganda. It is a Cominform invasion of America and a tactic in the cold war. And its convocation insults the very idea of free speech.

There are, in this country, writers, scientists, and members of the learned professions from Cominform countries who barely have escaped with their lives, precisely for free speech. Will these be heard? Will the conference invite Ferdinand Peroutka, Prague's most distinguished journalist? He served 6 years in Buchenwald for Nazi hatred of free speech. He escaped by a hair's breadth from forced labor because of Communist hatred of free speech.

Of course, he will not be permitted to speak. And what can he, and others like him, think of the State Department's reasoning?

MESSAGE DISTORTED

Will two Nobel-prize writers, Sinclair Lewis and Eugene O'Neill, have the platform?

Sinclair Lewis sent a message to the Breslau conference, of which this is merely a follow-up. The message was utterly distorted. A letter from Albert Einstein was read, which was largely forged.

The distinguished philosophical professor, Dr. Sidney Hook, asked to be permitted to present a thesis on three points, precisely pertinent to the scientific attitude:

1. There are no national truths in science.
2. There are no class truths or party truths.
3. The cause of international scientific cooperation and peace has been undermined by doctrines that uphold the notion that there are national or class or party truths in science.

But Dr. Hook is refused a hearing, though supported in a strong letter to Professor Shapley from Dr. Anton J. Carlson, famous physiologist, former president of both the American Association for the Advance of Science and the American Association of University Professors.

The upholders of free speech and free scientific inquiry are kicked out by the persecutors of both.

Alexander Fadeyev, general secretary of the Soviet Writers' Union, heads the Moscow delegation. He got this job for cooperating in purging the cultural life of Russia of all cosmopolitans and antipatriots, and sending his most distinguished colleagues to the dog house. Why didn't we invite Dr. Goebbels to a cultural conference?

PURGE LEADER INVITED

This conference begins with a purge.

Prof. H. J. Muller, American Nobel-prize winner, one of the world's greatest geneticists, former honorary member of the Russian Academy of Science, who resigned when distinguished Russian geneticists were purged, is barred from the conference; but Alexander Oparin, who took the lead in the purge which sent some of his colleagues (Professor Vavilov, for instance) to death, is invited.

Nor can I understand the distinguished American musicians who welcome Dmitri Shostakovich, after the repeated mea culpas he has sworn before Soviet gestapos.

Shostakovich probably would like to escape the Soviets, but they hold his wife and children as hostages.

Gieseking merely came here to play, but the State Department put him on a plane—after giving him a visa—while Shostakovich is here on a political (totalitarian) and anti-American mission.

Toscanini has refused to join the Shostakovich claque, though he made the Russian's war symphony famous in this country. But Toscanini knows how to keep his categories clear.

Now that the Department has issued the visas, it owes something to American upholders of free speech, namely, insistence that all sides should be heard—not in a rival conference but in this one.

Veterans' Hospital Cut-Back

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. BRYSON. Mr. Speaker, for some time a special committee of the Senate has been holding hearings on the proposed cut-back in the construction of veterans' hospitals. Yesterday the Governor of South Carolina, the entire congressional delegation, veterans' organizations, and other leading citizens appeared before this committee in opposition to the proposed cut-back.

The chairman of this special committee, Senator PEPPER, of Florida, requested that we assist him and his colleagues by emphasizing two points: First, the need for the proposed additional veterans' hospital beds; and, second, the availability of doctors and nurses to staff the hospitals. I presented an argument which I believe answers both of these questions in the affirmative.

The proposed hospital beds for South Carolina are greatly needed. Even with the additional beds, we will be far below the national average. Under present conditions, we have scarcely half the required beds. Hundreds of veterans have filed requests for hospitalization and have been approved, but many of them have to wait as long as 40 to 60 days before gaining admission. The large number of veterans who have been processed for hospitalization does not reflect the need for additional beds. Many veterans in need of hospitalization refrain from asking for the service because they know how difficult it is to get favorable action. There can be no question but that the need is great.

Since the contemplated additional beds for South Carolina are to be for general medical treatment, I should like to point out there appears to be no acute shortage of general medical doctors and nurses. Proof is evident that we can staff the hospitals.

I speak with special reference to the authorized veterans' general medical hospital for Greenville, S. C. This project was approved by the Federal Board of Hospitalization, the Director of the Bureau of the Budget, the Director of Veterans' Administration, and the President of the United States.

As we seek to economize let it not be said that the ax of economy struck first at the disabled veterans. I sincerely hope that the veterans' hospitals heretofore provided for may be constructed without further delay. As a part of my remarks, I herewith attach a statement I made before the special Senate committee:

STATEMENT OF HON. JOSEPH R. BRYSON, OF SOUTH CAROLINA, ON VETERANS' HOSPITAL CUT-BACK, MARCH 24, 1949

Mr. Chairman, I should like to make a statement concerning the cut-back in the veterans' hospital construction program which was announced by the Administrator of Veterans' Affairs some time ago and which is currently under investigation by this committee. This program involves the complete elimination of 24 projects and an alteration downward of 14 others. The facilities for a total of approximately 16,000 hospital beds will thus be eliminated, including 11,000 in the projects completely abandoned and 5,000 in the projects which are scheduled for reduction.

After a study of the available facts and data I am opposed to this cut-back. Neither the interests of the veterans nor the country as a whole will be served if this concellation of the construction program is allowed to stand. In my own State of South Carolina there is at present only one veterans' hospital in operation. This hospital is located at Columbia and has a standard bed capacity of 606 beds. According to available figures there are 167,000 World War II veterans in the State and an additional 34,000 veterans from other wars, making a total of 201,000 veterans. With the standard bed capacity of this hospital being 606, that makes an average of 332 veterans for each bed. However, the hospital has made use of 94 emergency beds to expand the facilities to a total of 700 beds, 670 of which are currently in use, and the remaining 30 are being held in reserve for emergencies. Even with this use of emergency beds, there is still available an average of only 1 bed per 290 veterans. This figure shows that available facilities are only one-third those of 1945 and the ratio is even lower if the standard figure of 606 beds, which is the maximum available over a long period of time, is used.

This situation was to be remedied considerably by the expansion of the hospital at Columbia to a standard operating capacity of 800 beds, an increase of 194 over the present facilities. There was also to be constructed at Greenville a new 200-bed hospital. Both of these projects are among those to be eliminated. Even with the addition of these 394 beds the ratio of veterans to beds in South Carolina would remain at 200 to 1. The national figures, which are considered far too high for the safety of our veterans' health, are in the vicinity of 178 veterans for each bed. It is obvious from these figures that the average in South Carolina would still be above the present national average even with the addition of the 394 beds. That these beds are sorely needed is evidenced by the waiting lists. As of January 31, 1949, there was a total of 964 veterans who had been cleared for admission through the former branch office at Atlanta, Ga. This office was headquarters for South Carolina and for other Southern States, so the figures as to how many were waiting for admission to the hospital at Columbia are not available. Nevertheless, the number was substantial, probably running into the hundreds. Of these 964 veterans awaiting admission to hospitals, 370 were forced to wait up to 20 days, 191 waited from 21 to 40 days, and 403 were waiting over 40 days. These are appalling figures. Almost two-thirds of these veterans had to wait over 20 days, and almost one-half had to wait over 40 days. As alarming as these figures are, they still do not tell the whole story. Often only veterans with emergency non-service-connected afflictions are being admitted because of the bed shortage, and when the veterans or their representatives learn this fact, they do not even apply for admission. These facts are incontrovertible evidence that more veterans hospitals are urgently needed in South Carolina.

In explaining the reduction of the hospital program the Veterans' Administration officials stated that, while more hospitals may be needed, there are not enough doctors to staff them. I am not prepared to discuss this aspect of the question as a whole for the country at large, but I am familiar with conditions in South Carolina. In Greenville the hospital under construction was to be of the general medical type. There does not appear to be a great shortage of general medical doctors in this area, at least not a sufficiently great shortage to warrant the cancellation of the project.

An additional reason to continue building the hospital at Greenville is to prevent a large sum of money from being wasted with no benefits accruing to anyone. A total of $303,000 has been spent on the project so far. All of this money will be lost if the project is not finished. I am not one who believes in throwing good money after bad, but that analogy will not hold in this instance. This hospital is badly needed, and it is needed now. We owe it to the veterans on the waiting lists to see that it is completed. Nothing that Veterans' Administration officials say can change the following facts: First, that although the number of veterans has jumped from 66,000 to 201,000, the number of authorized hospitals beds is being maintained at 606; the fact that 94 more beds have been temporarily made available by the use of porches and corridors is no argument at all, since the standard figure is still 606. Second, that hundreds of veterans are awaiting admission and the average number of beds available in this area is far below the national average, which is itself too low. Third, that plans have been laid, hundreds of thousands of dollars spent, and that facilities and personnel are available to run this hospital upon its completion. Any arguments against the completion of this hospital seem spurious if we are sincere in the belief that our veterans must be protected.

Now let us examine the national picture concerning this cut-back. I do not pretend to have as much knowledge about the national situation as about my home State. However, many of the general facts have been made available to me, and it is not difficult to draw conclusions.

It was the Veterans' Administration which originally recommended the construction of the hospital facilities which have now been ordered canceled. Before the cancellation, this recommendation had been approved by the Federal Board of Hospitalization, the Director of the Bureau of the Budget, and the President of the United States. The cancellation order affects construction in 18 States and the District of Columbia. While it is evident that certain sections of the country need additional hospitals more than others, available figures show that more hospitals are needed everywhere. On January 31 of this year there were 16,188 veterans who had had their applications approved and were awaiting hospitalization. The number who did not apply because of the long waiting lists is naturally not known, but such number is undoubtedly huge. From a moral standpoint, this is a sad state of affairs, but from the practical viewpoint, it seems even more foolish. Failure to hospitalize veterans promptly will in many cases result in aggravation of injuries, not to mention the suffering, and these injuries may some day result in added claims against the Government. If this program of reduction is being promoted in the interest of economy, its authors had better think twice. In the long run it will cost the Government far more than the cost of completing the hospitals.

The national ratio of hospital beds per veteran is today 1 to 178. That figure is supposed to drop to 142 when the construction now under way is completed, but it would drop to 124 if the canceled projects are restored. In 1940, less than 10 years ago, the Federal Board of Hospitalization approved, and the President approved in principle, a construction program which would have made a ratio of 1 bed per 40 veterans available within 10 years. Any figure which is three times that amount seems high. Any figure more than three times as high seems entirely out of reason if the interests and the welfare of the veterans are to be protected.

As I previously stated, I am not entirely familiar with all of the special problems concerning the veterans' hospitals in other sections of the country, but every section has a problem of some type. In certain sections of the far West hospitals are so far apart as to be almost inaccessible. In my own section of the country there is such a scarcity of available beds that veterans in direst need must often wait long periods of time before being admitted. Just when a partial solution to these problems was in sight, the solution suddenly vanished. We must not allow this to happen. In spite of the argument advanced that doctors are not available to staff these proposed hospitals, several of the cities in question have submitted evidence that the medical talent is available.

In view of these facts and figures, I am of the firm opinion that the cancellation of the hospital program must not be allowed to stand. In the case of my own State a particular hardship will be visited upon the veterans, who have, and will continue to have, facilities so far below the national average that the situation is almost disgraceful. I sincerely believe that a restoration of the program for 16,000 additional beds is desirable and necessary for the veterans and that the whole country will be benefited by this program.

Expansion at Oak Ridge

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following editorial which appeared in the Cincinnati Enquirer of March 23, 1949:

HERE YOU ARE, MR. LILIENTHAL

Some time ago David Lilienthal, chairman of the United States Atomic Energy Commission, complained that there was not enough public discussion and criticism of the Commission's work to give it the guidance it needs from the Nation. There now is an occasion for criticism. It follows:

The Atomic Energy Commission has announced that it is contracting with the East Tennessee Natural Gas Co. for up to 60,000,000 cubic feet of gas daily, to be used at Oak Ridge for generating steam—in the heart of the Tennessee coal fields. With plans for expansion of Oak Ridge installations, this would step up to perhaps 80,000,000 cubic feet daily.

It is difficult to believe that the Commission is serious in taking this step. For it would be an absurd, uneconomic, and wasteful use of natural gas. It would jeopardize the fuel supplies of hundreds of communities in five States. It would whittle down the Nation's reserves of gas, which are none too plentiful at best.

Whatever its cost, natural gas is a premium fuel. It should be used for domestic heating and cooking and for heating water in homes and offices—uses to which it is ideally adapted. It should not be used extensively by industry, save for a few special types of ovens and furnaces. It should never be used on a large scale for generating steam, when coal is available, unless at a slack season in which gas otherwise would be wasted.

We have coal reserves in the United States for hundreds, and probably thousands, of years, at the current rate of consumption. It is the logical fuel for steam generation, whether for electric power or other uses. Our natural-gas supply probably will not last more than 25 to 30 years, at the present rate of consumption and wastage. The Atomic Energy Commission's proposal to use gas reflects a callous indifference to the Nation's future welfare. It is so striking an example of extravagance and of contempt for the public interest as to raise doubts about the reliability of the Commission in its main subject matter—atomic energy.

The Oak Ridge plants must operate continuously. And they must operate. That is agreed on all sides. But the fact of continuous operation is precisely the reason why gas is not the right fuel. The demand for natural gas varies greatly with the season and the weather, because as a premium fuel it is used so largely for domestic heating.

Gas distribution companies can and do sell to a few industries, in order to level out their demand curves. But they cut off their industrial customers in bitter winter weather when shortages threaten. The Oak Ridge operation could not be so treated. It would take its 60,000,000 cubic feet through any shortage. It is the wrong kind of user.

Yet it is proposing to buy enough gas, replacing its present excellent coal supply, to supply almost 150,000 average homes with space heat, cooking, and water heating. In other words, the Atomic Energy Commission would abandon coal as a fuel, although

we have it in overabundance, and take away from domestic users enough gas to supply all the households in Cincinnati with all their heating needs.

This doesn't make sense. And if the Atomic Energy Commission wants the confidence of the American people, it should itself show more interest in the welfare of the American people. It also should show a more intelligent grasp of the Nation's serious plight in respect to depletion of natural resources.

You asked for criticism, Mr. Lilienthal. There it is.

Correction of the Record

EXTENSION OF REMARKS
OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. ANDERSON of California. Mr. Speaker, under date of February 21, 1949, I placed in the CONGRESSIONAL RECORD an article containing excerpts from a communication which I received from one of my valued constituents in California. Certain paragraphs of this article reflected on the Marine Corps, and I have received information from General Cates which I wish to include with my remarks. I also include a communication from Glenn E. Rathbun which will be of interest.

Those of us who are aware of the splendid record made by the United States Marine Corps in World War II have no desire to in any way disparage their fine record.

The letters follow:

DEPARTMENT OF THE NAVY,
HEADQUARTERS, UNITED
STATES MARINE CORPS,
Washington, D. C.

Hon. JACK Z. ANDERSON,
House of Representatives
Washington, D. C.

MY DEAR MR. ANDERSON: There has come to my attention an article which you read into the CONGRESSIONAL RECORD of February 21, 1949. Certain portions of that article, which you indicated had been written by an ex-soldier, a Lieutenant Colonel Rathbun, discuss an alleged controversy between the Army and Marine Corps over the adoption of the M–1 (Garand) rifle, and in doing so disparage the Marine Corps.

The passages in question are the following:

"A good example of lack of coordination in standardization between services can be seen in the case of the Army-Marine controversy over the adoption of the new semiautomatic rifle just before the war. A marine developed a new semiautomatic rifle and at the same time Garand developed the now famous Garand M–1. Many tests were made, and it was eventually decided by the General Staff to adopt the Garand M–1 as the primary rifle for all the services. Top Marine and Navy officers objected loud and long, claiming graft, foul play, and conspiracy, but of no avail. The new rifle was adopted, and used throughout the Army with great success. It is claimed that it gave the American forces enough added firepower to be able to make successful attacks with only half the number previously required. For all of this, the Marines refused to accept or use the new rifle even after the weapon had been proven in war. The prejudice was limited strictly to the high brass.

"On the battlefields of the Pacific, where both marines and soldiers were fighting side by side, marine riflemen would discard the old 1903 bolt-action rifle every time they could find an M–1 dropped by some Army casualty. Some even went so far as stealing M–1's before they went into combat. The effect of the Marine high command's policy can be seen in a study of casualty figures in battles where both soldiers and marines were involved; an excessive loss of life was the reward of such foolish prejudices."

These passages are completely at variance with the facts. The facts run as follows:

In October 1935, the Ordnance Committee of the Army approved a recommendation that the M–1 (Garand) rifle be standardized. As a result of the committee action, the M–1 rifle was classed as standard for the Army. The Marine Corps was represented on the Ordnance Committee, concurred in the committee's action, and expected to procure the M–1 rifle for its own use if the production articles proved satisfactory in tests. The Marine Corps had been buying its rifles from the Army for at least 50 years, and expected to continue to do so as long as the Army continued to put out a satisfactory product.

The M–1 production line started in late 1937 at a rate of 10 rifles per day, and reached a production of 20 per day in the spring of 1938. In 1939, the Marine Corps purchased 400 M–1's, putting most of them in the hands of rifle units, and the remainder in the Marine Corps schools. The purpose of this procurement was experimental, and experience soon showed the new rifle to be unsatisfactory in some important respects. The Army, meanwhile, had reached similar conclusions, as a result of which the rifle was partially redesigned. The redesign was standardized by the Army in October 1939.

In 1940, the Marine Corps procured 50 of the redesigned rifles and conducted further tests. These tests included comparative tests with the M1903 rifle, the Johnson rifle, and the Winchester rifle. (The Johnson rifle had been developed by a nationally prominent ordnance expert who was also an inactive member of the Marine Corps Reserve. The Marine Corps was under no obligation to Johnson, however, and his rifle received no special consideration or treatment in the Marine Corps tests.)

In March 1941, as a result of the comparative tests just referred to, the Marine Corps notified the Army that the Marine Corps had adopted the M–1 rifle, and asked that the Army commence deliveries not later than April 1941, at a rate of not less than 3,000 per month. The enlisted strength of the Marine Corps at that time was approximately 46,000.

The Marine Corps received its first shipment of 3,000 M–1 rifles in May 1941. Between that date and September 1943, the Corps received a total of 132,000 M–1 rifles. The only M1903 rifles received by the Marine Corps during this period were some obtained from existing Navy stocks, and these were requested only because the Army could not supply the Marine Corps with M–1 rifles at a rate sufficient to keep pace with Marine Corps expansion. The M1903 rifles obtained from the Navy were used only for training and for security purposes within the United States.

The First Marine Division was committed to the Guadalcanal operation before the Marine Corps had received sufficient M–1 rifles to completely arm the Fleet Marine Force. It therefore fought the Guadalcanal campaign with M1903 rifles. Replacement drafts sent to Guadalcanal were equipped with M–1 rifles, however, as well as some units of the Second Marine Division which also saw service on Guadalcanal. In all other landings and battles in which marines participated, the marines were equipped, except as noted below, with the M–1 rifle. Marines fought with M–1 rifles at Bougainville, Cape Gloucester, Tarawa, the Marshalls, Saipan, Tinian, Guam, Peleliu, Iwo Jima, and Okinawa.

After the Guadalcanal operation, the only M1903 rifles used by marines were those fitted with telescopic sights and used as snipers' rifles. The Army also made some use of the M1903 for this purpose.

When several paratroop battalions were organized by the Marine Corps, these units were permitted considerable latitude in their choice of equipment because of the newness of their specialty, and because of special operating conditions which were expected. The Johnson rifle was authorized for these special units because it possessed certain features which marine parachutists considered worth while, and which were not to be found in any other available arms. When these battalions were later disbanded, the personnel were issued M–1 rifles.

The foregoing makes it plain, I think, that contrary to the assertions and implications of the Rathbun article, there was no "Army-Marine controversy over the adoption of the semiautomatic rifle." The Army and Marine Corps both sought the most effective rifle obtainable, and their views coincided remarkably.

I am inclined to believe that Lieutenant Colonel Rathbun's motives in making his allegations were not malicious, and that he simply fell into the common error of accepting barracks gossip at its face value. Such errors, however, can be very unfortunate, particularly at a time when so much effort is being spent to create and reinforce interservice harmony.

Knowing the reputation you enjoy, I am sure you will want to set the record straight on the points I have covered in this letter.

Sincerely yours,

C. B. CATES,
General, United States Marine Corps,
Commandant of the Marine Corps.

PALO ALTO, CALIF., *March 21, 1949.*

Hon. JACK Z. ANDERSON,
House of Representatives,
Washington, D. C.

DEAR MR. ANDERSON: Thank you very much for both of your letters, dated March 8 and March 10; the former of which included General Cates' letter to you. I am returning this letter with my answer as requested.

General Cates' comments and references to supporting official reports are very interesting and more than a little formidable to answer. I can well appreciate his position in this matter and feel sure that I would have reacted in precisely the same manner if I were in his place. Admittedly, he has all the documentary evidence on his side, and I am in no position to dispute his assertions. Even so he has made one point that I feel is very important. It is that this is not the time to arouse any controversy among the branches of the service, when harmony is of the utmost importance.

This point leads me to believe that the general wrote his letter for two reasons. First, to have had answered a claim that he felt was in error, and secondly, to advise as to the facts as he sees them. The first point reflects his strict adherence to duty and devoted loyalty to his branch of the service. The second amplifies his admirable trait of forthright honesty, so characteristic to his profession. He has made his views known in the most direct manner he knows, rather than a public display of superior knowledge. His approach and implied attitude to the problem increases my admiration for the general and leaves me little grounds for dispute.

Even so, I feel that some statement in defense of my own remarks is expected. My personal observance of the marines in action was limited, so I was forced to rely on the

next best evidence, that is, information gained from interviews with officers who had actually seen front-line service in the Pacific theater, and from the various accounts published just prior to the war concerning the alleged controversy. As I stated in my report, I cannot divulge the identity of those interviewed, because many are still on active duty or in the Reserve Corps of Army, Navy, and Marines. Since I can see no reason why they should tell me false tales, I am inclined to believe that the general is unwittingly a victim of one of the most common practices in all branches of the service. This practice being that those in the lower brackets when put on the spot to report compliance with a directive, will report what they think the higher officers want to hear. The variance between cold facts and what is stated or implied in the report is often amazing.

An example of this is the actual case of a general who made an inspection of an infantry division. He reported the division was fully equipped and ready for any action, when in actuality he had inspected several pieces of equipment more than once and the division was not as fully equipped as it appeared. His report as far as he knew was as accurate as he could make it and yet it did not contain actual facts. This is only natural, men will always try to cover discrepancies in their compliance to duty simply because they always feel they can correct the shortage before the truth is known.

This in no way reflects discredit upon the general but merely a fault in the system. I speak of this fault reluctantly because I have no constructive suggestion to offer. I hope that you can see there are many times wide variations between what is stated in an official report and the actual conditions existing in the field. In this particular case I am representing the facts as I have learned them while the general is presenting his facts from his point of view.

I wish to again state that I share the general's viewpoint and do not want to stir up any friction between the services. Such a condition could only have an adverse effect upon the goal which we have set. It is my opinion that it would be best to drop the issue.

I would enjoy and appreciate it very much to be able to be in Washington as a witness. Thank you very much for considering the idea.

Sincerely,

GLENN E. RATHBUN,
Lieutenant Colonel, Infantry, Retired.

What Other Countries Think of Oleo

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following is from Mr. Milton D. Button, director of the Wisconsin Department of Agriculture:

OLEOMARGARINE CONTROLS IN OTHER COUNTRIES

The following regulations pertaining to oleomargarine are enforced in the countries listed under each heading:

1. Artificial color prohibited: Cuba, France, Uruguay. Hungary permits use of approved dyes. Ireland prohibits use of specified coloring materials.

2. Artificial flavor: Prohibited in France. Greece permits artificial flavor in exclusive grade only.

3. Mandatory ingredients: Certain proportions of sesame oils, unrefined cottonseed oil, or starch required in Union of South Africa, Brazil, Chile, Cuba, Austria, Belgium, Finland, Greece, Ireland, Sweden, Peru, Uruguay, and Venezuela. The purpose of these ingredients is easy identification. Hungary requires chemical identification.

4. Specified size or shape of container required: Union of South Africa, Chile, Austria, Belgium, Finland, Greece, Iceland, Poland.

5. Special container markings required: Chile, Austria, Belgium, Finland, Norway, Poland, Uruguay.

6. Specified labeling required: Union of South Africa, Belgium, Chile, Cuba, Austria, Brazil, Finland, Iceland, Ireland, Norway, Poland, and Sweden.

7. Use of dairy terms prohibited: Poland, Sweden, Denmark.

8. Artificial preservative prohibited: Ireland, Norway, Iceland permits salt only.

9. Fortification: Advertising of vitamin fortification prohibited in Sweden and Denmark.

10. State monopoly: Norway controls include regulations of production as well as complete control of ingredients used.

11. Taxation: Sweden and Norway.

12. Price control: Norway, Sweden, and Denmark.

13. Manufacture and sale prohibited: New Zealand, Mexico.

14. Imports prohibited: Trinidad, New Zealand.

15. In the Union of South Africa manufacture of oleomargarine permitted only under emergency control law expiring July 1, 1948.

Sources: Compiled from reports of Foreign Service officers of the United States to the United States Department of Commerce. Some of the reports have been published in Industry Reports, Fats and Oils, and World Trade in Commodities; others were consulted in the offices of the Foodstuffs Division, Office of International Trade, United States Department of Commerce.

Published: Hearings on oleomargarine tax repeal before the Committee on Agriculture, House of Representatives, Eightieth Congress, second session, pages 280–283.

O. B. Grimley, the New Norway (Oslo, 1939), pages 86–89.

Supplementary information on Norway and Sweden, by Rolland Von Euler, office of Scandinavian area studies, University of Wisconsin, February 18, 1949.

This product was first made in France in response to a prize offered by Napoleon. However, you will note that France does not allow artificial coloring nor the use of artificial flavoring. Many countries do not permit the use of artificial preservatives.

In the United States, as permitted by Mr. Paul V. McNutt, artificial flavoring, artificial preservatives, and vitamins from fish oil are allowed.

Wheat Shipments to Marshall-Plan Countries

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. Ted Hopkins, district vice president of the American Federation of Grain Millers, International, A. F. of L. I am placing this letter in the RECORD since it very fairly and objectively states the viewpoint of a sound A. F. of L. labor leader who is concerned with certain harmful practices either now being performed or contemplated by officials of the ECA.

AMERICAN FEDERATION
OF GRAIN MILLERS,
Minneapolis, Minn., March 4, 1949.

Hon. THOR C. TOLLEFSON,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN TOLLEFSON: Our organization, the American Federation of Grain Millers, an international union, comprising 35,000 members, affiliated with the American Federation of Labor, represents the vast majority of the production employees in the American milling industry. Our union is charged with primary responsibility in maintaining and uplifting the employment standards and economic opportunities of these workers and insuring continuity of their employment at decent wage levels.

As a spokesman for these workers our union has a profound interest in the congressional determinations with reference to the Economic Cooperation Administration law.

The Eightieth Congress provided in the Economic Cooperation Administration Act that 25 percent of wheat shipments to Marshall-plan countries must be in the form of milled flour. Cogent reasons and compelling statistics submitted in 1948 by the management and labor representatives of our industry persuaded the Eightieth Congress that such a congressional mandate was fair and reasonable.

Even with the effectuation of the 25-percent flour mandate, hours of work in the flour-milling industry have steadily declined during the past year. The take-home pay for the average member of our union has been drastically cut by the decreased demand for milled food products.

In the face of this decline, ECA Administrator Hoffman and the State Department now propoose that the 25-percent flour mandate be deleted from the Economic Cooperation Administration law.

Spokesmen for our industry have made statistical projections concerning the effect upon the milling industry of mandate cancellation. We believe that these projections are accurate. We are advised that the dropping of the mandate will curtail available man-hours of work in our industry. Based upon present pay-roll averages, the total annual price of mandate cancellation in earnings to the milling-industry employees will be $7,794,000. Total annual man-hours of work lost would be 6,388,200, the equivalent of annual employment at 40 hours per week of 3,070 workers.

The only reason which Mr. Hoffman and the State Department can give for their request for cancellation of the mandate is a potential saving in food-purchase prices of $7,200,000. The total pay-roll loss alone to the members of our union will exceed this amount by $594,000.

As a constituent unit of the A. F. of L., our union has stanchly supported the principles underlying the European recovery plan. As a vigorous foe of communism and Communists we joined with the American Federation of Labor in supporting a program that would enable Europe to recover from the disasters of war without recourse to totalitarian methods. However, we do not think that it is or should be the congressional intent to meet the threat of communism abroad by promoting unemployment and wage losses in a basic American industry.

We must stress that in urging retention of the ECA flour mandate we are not soliciting for ourselves or for our employers any advantage which we did not enjoy in normal times. We ask only that the same flour export ratio be maintained in connection with each of the Marshall-plan countries as prevailed prior to 1941.

The Congress must recognize that to do otherwise would be to destroy the employment continuity, earnings, and job opportunities of thousands of American workers. These workers were induced to pursue careers in the milling industry because of a given economic prospect which the cancellation of the flour mandate would seriously disrupt.

We do not and cannot purport to speak for our employers. We believe, however, that the examples they cite of additional losses of State and national tax revenues by unwarranted discrimination against the American milling industry and its employees should be additionally compelling and persuasive in the formulation of a congressional policy against mandate cancellation.

We reiterate: as members of a democratic society, and as general taxpayers, the members of our union wholeheartedly support American foreign policy as embodied in the Economic Cooperation Administration law. But we think that it is unfair and inequitable to expect us to additionally subsidize the Marshal plan by a reduction in our own general earnings or by the forfeiture of our jobs in the milling industry.

May we respectfully request that you give full consideration to the retention of the 25-percent mandate.

Very truly yours,

AMERICAN FEDERATION OF GRAIN MILLERS, INTERNATIONAL,
TED M. HOPKINS, *Vice President.*

House Builds the Man

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. JONES of Alabama. Mr. Speaker, under leave granted me to extend remarks in the RECORD, I include the following editorial carried in the April 1949 issue of Southern Agriculturist entitled "House Builds the Man":

HOUSE BUILDS THE MAN

A city dweller whose income is no greater than his country cousin's usually lives in a much finer home. Why is this?

The answer is simple. A man in town can finance an expensive house without gambling on his entire business. A farm man, if he must borrow money, risks not only his new home, but his entire farm.

There is another reason. A man on a salary can fairly well predict the installments he can afford on paying off his mortgage. But a farmer can't accurately predict his income any more than he can predict next year's weather. By obligating himself to make regular future payments of a specific amount, he places himself in a precarious business position and his farm in jeopardy.

Therefore, many farm families with production capacity to justify a $10,000 home, end up with one much less attractive and adequate. Most farmers do not hesitate to obligate themselves by purchasing machinery, equipment, or fertilizer—with a goal of improved production and greater long-range income. But they understandably hesitate to take the perilous step of investing in a home much beyond their usual cash reserve.

And private institutions cannot usually lend a farmer money for home construction and let him fit his payments to the irregular pattern in which he receives his income.

Rural housing legislation now being considered in Congress would allow the farmer to repay a loan according to the ups and downs of his farm income. After a good year he would be expected to make a sizable payment. After a year of low return his payment would be reduced and carried over to the next year. In certain extreme cases he could delay payments for as many as 10 years.

Money lent to a farmer for building a home should be a strict business proposition, of course. The ability of a piece of land and its operator to eventually pay for a home should be closely figured before a loan is made.

If Government loans are kept on a business basis at fair rates of interest, we can see little reason for opposition to the program.

The farmer produces most of the Nation's children as well as its food. The farmer is the backbone of the Nation. He is the salt of the earth. He is lots of other flattering things. But to keep the best farmers—and their children—on the land, there should be home-making opportunities which are equal to those available to the man who moves to town.

We feel that the last good reason for moving to town will be gone when the man in the country can provide his family a home that will compare favorably with homes in town.

"It takes a heap o' living to make a house a home." But the type of houses in which we dwell determines the level of our living and, in a large measure, determines our character and the extent of our contributions to society.

Operation Snowbound

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. STEFAN. Mr. Speaker, the mission of operation snowbound was accomplished to the great comfort and convenience of many thousands of Nebraskans, as well as other thousands of citizens of neighboring States. Grateful acknowledgment of the assistance received by Nebraskans is shown by the following testimonials that have been sent to me so that the Congress may hear of them, and that are hereby made a part of these remarks:

Whereas the blizzard conditions of this past winter, from November 18, 1948, marooned and isolated Knox County, Nebr., from the rest of the State with a blanket of 71 inches of snow on our 1,800 miles of roads, 2,500 farms, and 9 towns; and

Whereas the repeated and unprecedented high winds accompanying our nine blizzards caused huge drifts to envelop the highways, towns, farmsteads, and haystacks, which conditions made it impossible for traffic to move, and thereby brought about the acute possibility of human suffering to 18,000 or more persons, as well as to 200,000 or more head of livestock; and

Whereas the enormity of the task of clearing the snow from the highways, farms, and towns was far beyond the financial means of the county, and, in addition, the necessary volume of snow-clearing equipment, to do the task, was unavailable locally; and

Whereas such conditions prompted us to appeal for aid; and after our urgent appeals were answered, we were able to clear our highways of snow and make available to our citizens access to the much-needed feed, food, and medical attention to alleviate the desperate conditions that existed; and

Whereas the measures made available to us to relieve our disastrous predicament were swift and complete, the cases of human tragedy and livestock losses were slight; and

Whereas the people of Knox County feel a deep sense of appreciation to all of those persons and governmental agencies who made "operation snowbound" available to us; and

Whereas the County Board of Supervisors of Knox County, as the local governmental body representing all the people of our county, desires to express for all of our citizens appreciation of the splendid work done: Now, therefore, be it

Resolved by the County Board of Supervisors of Knox County, Nebr., That those persons and governmental agencies responsible for "operation snowbound" be informed of our appreciation of their efforts in our behalf, and, as a token thereof, that a copy of this resolution be delivered to each of the following persons and governmental agencies, namely: The President of the United States, Harry S. Truman; the Governor of the State of Nebraska, Val Peterson; the Congress of the United States; Gen. Lewis A. Pick; Corps of Engineers of the United States Army; the Fifth Army of the United States; the National Red Cross; the National Guard; the Legislature of the State of Nebraska.

Dated at Center, Knox County, Nebr., this 21st day of February 1949.

COUNTY BOARD OF SUPERVISORS OF KNOX COUNTY, NEBR.,
JOHN D. FORSYTH, *Chairman.*
P. T. MALONE,
T. E. TIKALSKY,
AUG. BOELTER,
ALFRED HARM,
RUEBEN E. ANDERSON,
ERIK RIISNESS,
Supervisors.

Attest:
[SEAL] GEO. W. PETERSON,
County Clerk.

To the President of the United States, Harry S. Truman; the Governor of Nebraska, Val Peterson; the Congress of the United States; the Legislature of the State of Nebraska; Gen. Lewis A. Pick; Engineer Corps of the United States Army; the Fifth Army of the United States; the National Red Cross; the National Guard; the Knox County Board of Supervisors:

We the undersigned have been authorized by the Bazile Creek District No. 4, an Indian community of the Santee Sioux Tribe, to write you a letter of appreciation for the aid given during this winter. Our gratitude goes out to the above-named persons and agencies for the time and energy spent to alleviate suffering to members of our community and their livestock. Special mention is made to the operators of the caterpillars and others with whom we had personal contact. Only in our country do we find people who will go to aid of suffering in this world. We are indeed grateful.

PAUL ROBERTSON,
PATRICK J. FRAZIER,
THEODORE ROBERTSON,
Committee.

NIOBRARA, NEBR., *February 28, 1949.*

Whereas the President and Congress of the United States made it possible for the Fifth Army to move into Nebraska to use whatever money and other resources are appropriate to relieve storm-stricken areas to isolated humans and farm animals; and

Whereas Gov. Val Peterson declared Platte County as part of Nebraska's emergency storm area; and

Whereas at the request of this board of supervisors, Maj. Gen. Lewis A. Pick, United States Army engineers, Omaha, Nebr., sent into Platte County Government dozers and set up an area substation in Humphrey, Nebr., to assist in the opening of roads and clearing operations; and

Whereas the Platte County Board of Supervisors have adopted a motion declaring the emergency completed at 6 p. m., February 21, 1949; and

Whereas in accordance with the reports turned into the county clerk's office, by the respective board members and their representatives in the townships, the following are the results of the road opening and cleaning operations:

Name of township in Platte County:	*Miles of road opened*
Creston	58
Sherman	0
Grand Prairie	26
Bismarck	0
Granville	51½
Humphrey	33
Burrows	36
Walker	80½
St. Bernard	59½
Woodville	27½
Joliet	31
Monroe	12
Shell Creek	20
Lost Creek	26
Oconee	0
Loup	23½
Butler	4½
Columbus	0
Total miles of road opened in county by Government dozers	489
Total miles retracing by reason of snowfall and drifting	98
Total number of people liberated by Government dozers	2,289
Total number of cattle liberated by Government dozers	11,571
Total number of other animals liberated by Government dozers	10,404

Now, therefore, be it

Resolved, That the Platte County Board of Supervisors express their appreciation for the Government dozers and other resources sent into Platte County during the emergency to assist in the opening of roads and clearing operations, and to relieve the need of food for humans and feed for farm animals; be it further

Resolved, That a copy of this resolution be mailed by the county clerk to President Harry S. Truman, Senators KENNETH S. WHERRY and HUGH BUTLER, Congressman KARL STEFAN, Gov. Val Peterson, Maj. Gen. Lewis A. Pick, and Col. Louis W. Prentiss.

ED. WOLLBERG,
EDWARD ASCHE,
HERMAN W. MEYER,
JULIUS RUDAT,
JOHN BRANDL,
ERNEST A. KORTE,
E. E. JOHNSON,
Platte County Board of Supervisors.

Necessary Gamble

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Daily Evening Item, Lynn, Mass., Tuesday, March 22, 1949:

NECESSARY GAMBLE

The first apparent objective of a North Atlantic security pact is the creation of a plan of mutual defense among the western European nations, Canada and the United States. The second apparent objective is a program of assistance from the United States which would do for Europe militarily what the Marshall plan is doing economically.

The bulk of western Europe's military equipment was lost in the war's general destruction. What remains, outside of Great Britain, must be outdated, since the armies of France, the Low Countries, and Norway were knocked out of action in 1940. So the problem is to restore Europe's armed strength as well as its economy to the prewar level.

The American Government has now let it be understood, however, that economic aid will have priority over military aid. This should quiet some unfounded rumors of a big-scale arms expansion program and reassure all concerned that American aid is proceeding on the right track.

A North Atlantic defense alliance is something of a gamble, although a necessary one. No one outside the Communist sphere knows definitely when or if the Russians are planning to start another war. But the probability of the if is strong enough to demand joint preparations for defense.

There is no gamble connected with economic aid as far as Russia is concerned. The Soviets are openly making economic war by such means as closing trade channels and stirring up industrial and political disturbances in non-Communist countries.

It stands to reason that Russia is just as anxious to dominate Europe without going to war as we are to assure Europe's freedom without going to war. This is reason enough for giving the European recovery program first call on money, materials, and men.

But success of the recovery program carries its own risk as well as its own victory. If Russia is thwarted in its bid for European domination by economic war, the Soviet leaders may risk a shooting war when they feel they are ready.

If this should happen there is little doubt that the Russians would win some important early victories, defense pact or no defense pact. As James P. Warburg pointed out in a recent speech, a really adequate preparation for defending Europe would involve either the rearming and remilitarizing of Germany or a big American force stationed in Europe before a war began.

We are committed not to rearm Germany, as Mr. Warburg recalled. And even if the American people would sanction the sending of an American army to Europe in time of peace, its presence might provoke rather than prevent hostilities.

Strategists of the western European governments are reported to agree that the Rhine would be their natural line of defense in a war with Russia, but that it would be years before they would be strong enough to defend it. Even with American aid, perhaps their best hope would be to slow up the speed of a first Russian blow and protect the channel ports until the full strength of American power could be applied.

One thing seems certain. If we should attempt to build up our own and Europe's military strength to match Russia's, the economic recovery program would fail. We should dangerously weaken ourselves and our friends in an effort to make ourselves strong.

This Government has surely chosen the wisest course in deciding to concentrate on building up a productive and rewarding strength in Europe while at the same time giving Russia notice that the free world is not blind to the threat of a war which, in the end, Russia would lose.

The World Struggle

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, Alfred Kohlberg's writing in Spiritual Mobilization on January 29, 1949, pointed out the struggle that is now going on in the world, especially as China goes down under the impact of Chinese Communist armies. Under leave to extend my remarks, I am including the article in question:

THE WORLD STRUGGLE

As China slowly succumbs to the triumphant march of the Russian commanded and advised Chinese Communist armies; as the "battle-fatigued" Chinese people turn in exhaustion from the war for their liberty to an acceptance of peace without liberty; as the iron curtain slowly descends over the nearly one-quarter of the human race that makes up China, the time approaches when America must examine its own will for freedom.

Today we speak for peace everywhere. Not peace with justice; not peace on the principles of the Atlantic Charter; not peace with the "four freedoms"; not the peace of the Moscow Declaration, or the Cairo Declaration, or the UN Charter, but just "peace." And what a peace it is, as we spend nearly $20,000,000,000 a year to slowly replace the armament we destroyed so thoughtlessly in 1945.

We have forgotten the promises we made when we called our allies together on January 1, 1942, and all of them, including Russia, solemnly signed the Atlantic Charter.

Of the nations who signed this solemn document on that great day, Poland, Estonia, Latvia, Lithuania, Czechoslovakia, and Yugoslavia, with our approval, have been turned over to their Soviet-directed Communist minorities, or actually incorporated in the Soviet Union. In solemn treaties we signed our enemies Hungary, Bulgaria, and Rumania into the same slavery in spite of the promises of the Atlantic Charter, which were made to them as well as to our allies.

At Cairo, on December 1, 1943, Roosevelt, Churchill, and Chiang Kai-shek agreed:

"That all the territories Japan has stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores, shall be restored to the Republic of China."

Yet 14 months later, at Yalta, China not being present, we gave Manchuria to Russia.

Then by pressure on a war-weary and war-wrecked China, first using General Hurley and then General Marshall as our ambassadors of ill-will, we attempted to force the Republic of China to accept its Communist traitors into controlling positions in a so-called coalition government. To gain our ends we destroyed the lend-lease arms and ammunition en route to China, embargoed further shipments and forced truces for nearly 18 months, during which the Russians armed the Communists with captured Japanese and German arms as well as surplus American lend-lease shipped by us to Siberia. Having destroyed the wherewithal for Nationalist resistance against the Communists, we wring our hands as we see the iron curtain descend and regret it is now too late.

Following China behind the iron curtain in due course will go all southeast Asia, leaving the Philippines (no longer our ward) and inadequately occupied enemy Japan, both untenable and unfeedable, the only white spots in a Red western Pacific. Meantime

we hope to feed and arm unwilling allies in western Europe, who want no part of our struggle with world communism, if they can keep out of it, and who do not know whether to trust us not to sell them out in the name of peace, as we did our former allies.

No wonder they don't know; we don't know either. One day our President breathes defiance of communism, the next he proposes a Supreme Court Justice to make terms with Stalin. To our European allies this can only mean another country or two sold out for more worthless promises of peace to a President who, on the next day, exclaims "the Russian Communist Government never keeps its word."

Even this statement, taken literally, is a calumny. It is true that the Soviet Union never keeps its word to us or the western nations. It considers us its enemy. It keeps its word, however, to its agents and fifth columnists everywhere, whom it considers its only friends and allies.

Communist propaganda everywhere promises every variety of pie-in-the-sky to everybody. To increase disaffection everywhere it plays on the wrongs, real or imaginary, of every group and every minority. Wherever it gains control, it destroys freedom and delivers none of its promises except to its own fifth columnists. We, who are the heirs of freedom and the inheritors of the Judeo-Christian faith in the worth of the individual as the child of God, seem in danger of forgetting our faith and its precepts and seem inclined to compromise with, instead of opposing, the Devil in his modern totalitarian garb.

Our elder statesmen privately denounce acts of stultification and warn of the growing danger to our very freedom as a republic, while publicly remaining silent. Our spiritual leaders either do not understand or hesitate to risk unpopularity by denouncing our truck with the slave state. Meantime we wash our hands of the hundreds of millions of human souls whom we could so easily have aided to save themselves. While the great Christian leader of China, our steadfast friend and ally of the dark days of World War II, abandons a hopeless struggle because his wife reports no aid may be expected from us, and there is left to them only the solace of prayer, our leaders chloroform our consciences with "too late" as we see another few hundred million human beings sold into the totalitarian slavery of body and mind, if not of soul, as a result of the American victory in World War II.

Missing are the Patrick Henrys, the William Lloyd Garrisons, and the Wendell Phillips of today to recall us to our heritage and to lead a new crusade for freedom to release the nearly 1,000,000,000 people now held in chains behind the iron curtain.

We must take our stand in the struggle for the world—a struggle not between right and left, but between right and wrong.

ALFRED KOHLBERG.

NEW YORK, *January 29, 1949.*

Importance of Atomic Weapons

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD two articles discussing the vital subject of dissemination of information to the public on the importance of atomic weapons.

The first article appeared in the Christian Science Monitor of March 15 in the column of Mr. Roscoe Drummond. The second article appeared in the Twin Peaks Sentinel, a neighborhood paper in San Francisco, Calif., and is written by Mr. Ridgely Cummings.

The insertion of these two articles, one from an international daily newspaper published on the east coast, and the other from a neighborhood weekly published on the west coast, demonstrates the wide range of interest in this important subject.

[From the Christian Science Monitor of March 15, 1949]

STATE OF THE NATION

SOME ARMY SECRETS TO BE TOLD

(By Roscoe Drummond)

WASHINGTON.—Both military and research experts in the field of mass-destruction weapons are known to have reached the decision that the American people deserve to have and need to have more information on their use in case of war.

Such information can be expected to be forthcoming from Washington in the near future, and it will be all to the good.

It is an ironic fact that more often than not it has been uninformed or overtimorous civilian officials, not the military authorities, who have stood in the way of equipping the public with a fuller and franker statement of scientific developments. It would be accurate to say that in many ways public opinion, schooled in recent years to be ultrasensitive to military security, has resisted rather than demanded the publication of military information which the military itself was prepared to release.

Even the press has often accepted uncrtically the extreme hush-hush about mass-destruction weapons, and sometimes the public reaction has been that those newspapers which were urging full knowledge were looking more for sensation than for public service.

There may be truth in that reaction, but the result has been that the very absence of authentic information has increased sensational speculation and fears. Such speculation has gone uncorrected because some people somewhere in the Government were sitting on the lid of restricted information which didn't need to be restricted.

Government officials at the highest level now are getting ready to take the people into their confidence on three main categories of scientific information, the use of which and the defense against which vitally affect the civilian population. These are:

Developments in the field of biological warfare, a preliminary report on which was issued by Secretary of Defense James Forrestal this week end.

Fuller information on the Bikini atomic bomb tests.

Reports on various phases of atomic energy which, in the words of one member of the Atomic Energy Commission, will "unlock new knowledge about life and matter so great that wholly new concepts of human life will follow in the wake of this new knowledge."

Obviously, the press is not asking, and the Government is rightly not releasing, secrets bearing upon the means of producing or the stockpiling of scientific weapons. Mr. Forrestal's statement on biological warfare simply underlined the alertness of the armed services to developments in this field and their confidence that there is no basis for jittery alarm.

The next report due for early publication is the heretofore confidential analysis of the Bikini tests which a civilian-military board of specialists made for the Joint Chiefs of Staff. There have been repeated demands for release of this evaluation, including an article which appeared in the December Atlantic Monthly by one of its members, Bradley Dewey. At the time, all President Truman would say about the article was to quip that people called Dewey usually were wrong, and the serious case which non-Presidential candidate Bradley Dewey made temporarily went up in much-too-ready press conference laughter.

In any event, it deserves to be put into the record that at no time was it a decision of the Joint Chiefs of Staff which kept this report under lock and key. The military leaders have shown themselves aware that a calm, poised, and informed state of mind on the part of the Nation as a whole can be a vital source of military strength and security. Hence, the Joint Chiefs are desirous of not making such a fetish out of secrecy that the effect is to leave the whole civilian population so uninformed that it is the easy target of propaganda.

The effect of extreme secrecy is to breed either undue alarm or heedless indifference. The Joint Chiefs, who certainly are not going to be reckless with their information, are sensitive to the fact that there are risks in an underinformed democracy just as there are risks in an overinformed enemy.

[From the Twin Peaks Sentinel, San Francisco, Calif., of March 11, 1949]

MASS HOMICIDE AND MR. HOLIFIELD

(By Ridgely Cummings)

Civilization has survived countless other wars but that was in the days before Hiroshima and Nagasaki. The question today is, can our culture survive an atomic war?

If the answer is "probably not," then the next question is, how can we prevent an atomic war?

One of our California Congressmen has some ideas on the subject. He is Mr. CHET HOLIFIELD, Democrat from the Nineteenth Congressional District, which is part of Los Angeles.

Mr. HOLIFIELD took the floor of the House of Representatives on February 24 last to warn that the American public has not been told the real meaning of atomic discoveries.

A few weeks ago in one of these columns I criticized the then Secretary of Defense Forrestal for not telling you and me and the man next door that the $400,000,000 worth of new ships to be built this year could quickly be put out of commission by radioactivity.

That was before Mr. HOLIFIELD made his speech. The California Congressman was much more blunt about it. He said:

"The full report of the Joint Chiefs of Staff on the Bikini tests, shorn of legitimate military secrets, has not been given to us.

"Defense Secretary Forrestal has preferred not to worry us with the bothersome details."

Now that Forrestal has been replaced by Louis Johnson, perhaps this deficiency will be remedied. In the interest of world peace it should be.

Mankind is jiggling on the brink of destruction. A few technicians here and probably behind the iron curtain hold in their hands tools for mass homicide on a scale previously undreamed of.

So long as the peoples of the world are kept in ignorance of the consequences of an atomic war, the possibilities of such a war increase with the daily delicate negotiations of the gentlemen in striped trousers.

Mr. HOLIFIELD says the same thing in more polished form. Let me close this essay by allowing the Congressman to put it in his own way:

"I believe the American public is entitled to know the amount of radiation released by the Bikini bombs.

"This fact will provide a key to determining possible damage to cities and other targets in the event of an atomic war.

"This, I hold, is knowledge which will help prevent another war. The truth about atomic warfare is perhaps the only real defense we have today against the possibility of such a war breaking out."

Rent Dilemma

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article in the Washington Post of March 25, 1949, by Marquis Childs entitled "Rent Dilemma":

WASHINGTON CALLING
(By Marquis Childs)
RENT DILEMMA

It is like seeing an old newsreel played over again. History does repeat itself and in a strikingly exact sort of way.

Unless the new rent-control bill is drastically rewritten in conference between the two Houses, which at this moment seems unlikely, President Truman is going to be faced with a tough decision. The question—to veto or not to veto—is like the one he faced when Congress passed and sent to the White House in 1946 a bill cutting the heart out of OPA.

The President vetoed the first bill renewing OPA in such an enfeebled fashion that, as he said in his veto message, it was worse than nothing. The second he signed when his leaders in the Senate and House told him he could get nothing better and it was sign or let OPA die.

That, it will be recalled, was when the enemies of OPA were insisting that decontrol would inevitably mean lower prices. For 18 days, before the second emasculated measure became law, there were no controls. They were never effectively restored and the cost of living began to soar upward.

A lot of the same kind of double talk has come out in connection with rent control. The President's chief advisers are supplying him with facts which they believe show (1) that the net effect of Senate and House decontrol amendments is to shatter rent control and (2) that the shattering of rent control will further throw the Nation's economy out of balance.

Under the various concessions made to landlords, many of them justified in a great number of instances, rents have been slowly creeping upward during the past year. Rents were at an all-time peak for the most recent month—January—for which figures are available.

The index on rent for January of this year was four points higher than in January of 1948. From November to December of last year the index jumped almost a point. This, mind you, was under present rent control.

The analysis reaching the President's desk shows that this rise has tended to wipe out the slight drop in the cost of food that occurred since the all-time peak in the cost of living last August. Rent is 15 to 20 percent of the budget of the average householder.

The net decline in the cost of living since the peak has been only 2 percent. It is still 73 percent above the prewar base.

It requires no genius in economics and statistics to see what will happen if rent control is shattered or abolished. Estimates are that it would advance from 5 to 9 percent a month over a period of several months to a year. This would mean an advance in the cost-of-living index of 1 to 1½ percent a month.

Again, neither a genius nor a crystal gazer is necessary to forecast what would happen under such an advance. It would touch off new wage demands which could very well start the inflationary spiral upward. This would come at a time when a number of low-income families have already been priced out of the market. In short, it would encourage the kind of inflation-deflation that invites depression.

The gimmick the White House advisers are most fearful of is the amendment tacked on in the House, of which Representative PAUL BROWN, of Georgia, was author. That has an innocent enough sound, assuring the landlord a reasonable return on a reasonable investment.

In actual practice, the Brown amendment would create an almost hopeless administrative tangle. The big landlords with large resources of wealth would be able to stop any tenant protests in the courts. The little landlord, not having such resources and in many cases really needing relief, would not get it.

Faced with the March 31 deadline, when rent controls expire, the administration has shown extraordinarily bad timing. Bringing up the civil-rights issue at the start of the session precipitated the southern filibuster. That was ready-made for the persistent, powerful, tireless real-estate lobby.

Millions of families are watching anxiously to see what Congress does about rent control. They may not understand the talk about States decontrolling or cities decontrolling. But they will certainly understand when the landlord hikes the rent 10 percent or 25 percent. They will know that postwar history is repeating itself in a peculiarly grim and unpleasant fashion.

Luxemburger Sees West Relaxing Control in Ruhr

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 22, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the Christian Science Monitor under date of March 24, 1949:

THE LITTLE PEOPLE LOOK AT PEACE—LUXEMBURGER SEES WEST RELAXING CONTROL IN RUHR

(The chief of the United Nations news bureau of the Christian Science Monitor recently made a brief swing around western Europe to study the impact of United Nations developments upon popular thinking. Articles from his tour have appeared under the title: "The Little People Look at Peace." His dispatch, written from Luxemburg, today completes this series.)

(By Homer Metz)

LUXEMBURG.—Henry Weber is a native of Luxemburg and a highly skilled mechanic. He has little regard for Germany or Germans; quite the contrary. His family home in Luxemburg, just across the frontier from the former Reich, was for 2 years a billet for Nazi officers, and he and his parents lost everything they possessed in the war.

Because it is difficult, if not impossible, for him to work at his trade in his own country, he has entered Germany and obtained a good paying job in a factory in Neuss in the Ruhr.

Mr. Weber has seen much of what is going on in the Ruhr, and he doesn't like most of it. He argues cogently that the Ruhr is on the way to becoming once again a tinder box which endangers Europe's hard-won peace. His opinion is a representative one; it is shared by hundreds of other non-German workers who have found employment in the Ruhr since the end of the war.

SAME OLD BOSSES

Says Mr. Weber: "The western allies are supposed to be exercising strict control over the Ruhr. But we foreigners who work there can assure you it is the same old Ruhr—the German Ruhr. Most of the old bosses and managers are back, and if there has been any noteworthy change in their thinking since the days of the Nazis we can't find any evidence of it."

Interviews with responsible American and British military men in the area bear out the basic truth of Mr. Weber's observations. The Ruhr once again is a beehive of industrial activity, and the old German bosses, because of their technical skill and tongue-in-cheek subservience, are enjoying positions of rapidly growing influence.

OFFICIAL POSITION

The official Allied position in western Germany is that no former bosses or managers should be barred from jobs as long as they were not openly active in Nazi affairs.

"That is all well and good as far as it goes," declares Mr. Weber, "but the Allied authorities forget that before and during the war no one could hold a position of responsibility in the Ruhr without being willing and psychologically able to cooperate closely with the Nazis. In other words, one had to be a Nazi mentally, if not actively."

Such men do not change overnight, adds Mr. Weber. They have nothing but contempt for the western occupation authorities. With each passing day, they become bolder and bolder in adopting the same methods of operation that enabled the German army to harness the full might of the Ruhr for two World Wars.

DANGER SEEN

It might be argued that the danger in this has been exaggerated by Mr. Weber, because the Ruhr is relatively unimportant as an industrial center compared to what it was before and during the war. But this is not true. Both in the United States and western Europe there is a surprising ignorance of the extent to which the Ruhr has come back in the few short years since the end of hostilities.

A few statistics gathered from British sources in Germany should help to make this point clear.

In spite of damage done by bombing and Allied dismantling, the steel-producing capacity of the Ruhr is at present more than 12,000,000 tons a year. At the peak of war production in 1938, the area's capacity was 15,000,000 tons.

As a result of currency reforms and other measures undertaken by the Western Powers, the Ruhr's industries are operating at roughly 70 percent of their output in 1936, when German war preparations were moving into high gear.

STEEL RATE RISES

In the production of steel, the annual rate of the Ruhr has risen from 1,164,000 tons in

December 1945 to 7,300,000 tons last December.

Under Allied control plans, the Ruhr will be permitted to have a steel production capacity of 13,500,000 tons, with a target rate of 10,800,000 tons a year.

The Ruhr's mills are producing only peacetime goods now, but Mr. Weber points out that under their old bosses and managers they can be refitted for military purposes almost overnight.

The area's coal fields are almost fully recovered from the damage done by Allied bombings and have kept apace of the mills in the march back to normalcy. For example, the Ruhr's coal output has risen from nil at the end of the war to more than 325,000 tons a day at the present time. In 1938, the daily peak output was never more than 448,000 tons.

"Take it from me," says Mr. Weber, "in 2 years the Ruhr will be just as powerful a factor in the industrial life of Europe as it was before the war, and unless the Western Powers are extremely careful their control over it will grow less and less."

NO GOOD REASON

Mr. Weber can offer no good reason why the Allied authorities have become so lax, as he sees it.

"It was not necessary to put these men back in their old jobs," he asserts. "It is true that they have had invaluable experience and that their technical skill is in a large part responsible for the swift recovery that has been made by the Ruhr. But equally proficient and equally experienced leaders could have been found elsewhere in Europe—in France, in Belgium, in the United Kingdom.

"Even if the Western Powers can continue to exert tight controls over the Ruhr—which I doubt very much—the presence of these bosses and managers in their old positions is having a disturbing effect on public opinion in Europe which may prove far more serious than anyone foresees now.

"When the average Luxemburger, Frenchman, or Belgian sees these former servants of the Nazis strutting around in their old positions of power and responsibility, he hardly can be blamed if he suspects that perhaps the Western Powers are not so honest and so pure in their intentions regarding Germany as they represent themselves to be.

"In any case, he is bound to wonder about the judgment of the Western Powers and ask himself if he seriously can trust his security against the German menace to them."

Are We on the Right Road?

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 24, 1949

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks, I am inserting a speech delivered by the Honorable Charles W. Spear, former county senator from Burlington, Vt., which reads as follows, and is fairly indicative of what Vermonters are thinking:

ARE WE ON THE RIGHT ROAD?

Today we are living in fast-moving times.

The speed at which we are traveling is not so important providing that the guiding hand keeps to a well defined highway and does not attempt to travel roads that lead to we know not where.

It behooves us, as free Americans, to pause and analyze our present status and compare it with the pattern laid down by our wise and far-seeing founding fathers.

It was because of their existence for nearly 200 years under a government directly opposed to their ideals that led the colonists to hope for and foster a government designed to give them the maximum of personal liberty and allow the greatest amount of community freedom consistent with a recognition of the rights of their neighbors. To prevent encroachment on these rights, they prescribed strictly limited central government.

It was inevitable that men living under a despotic government that had been guilty of a long train of abuses and usurpations should eventually seek to throw off the yoke of oppression that had become unbearable. The colonists declared their independence in 1776 and later established their Constitution for the express purpose of getting less government. They declared that their individual and inalienable rights of life, liberty, and the pursuit of happiness existed before government, therefor government was and should be their creation and that government, being creature, could not be greater than its creator and its function was primarily to protect their rights and not to curb or restrain them.

The colonists wanted no tyrannical central government over them and their community government, for it was apparent to them what harmful results would surely manifest themselves from a despotic government even though said government were kindly disposed. Their Declaration of Independence stated clearly and simply the evils of such a government.

And afterward they established their own limited central government, so they thought, and, with great stress, they wrote "No" after "No" into their Constitution to guard themselves and their posterity against the evils of a despotic central government.

Today we count among our most precious heritages the Declaration of Independence and the Constitution of the United States. Reading them now, many will see not only a recital of past governmental wrongs, but in some cases a warning to posterity, that posterity may be on its guard to prevent a repetition of the evils they were casting aside.

Today forces are loose in our land, as well as elsewhere in the world, that seem determined to bring into being a tyrannical central government, against which the colonists rebelled and which they sought to banish forever from the United States at least.

In some countries these forces have already overcome the individual, deprived him of his rights, and ground him into a mass. In other countries, the citizens, by continually seeking to get from the government more than the government of freemen could give them, have so weakened the government that they crash with slight provocation.

In spite of the warnings of our forefathers, in spite of the pitiful examples of other countries, we are falling more and more into the habits of thought and habits of action practiced by some of the unfortunate countries afore-mentioned, and if we persist in this conduct, the vitality of the Declaration of Independence and the safeguards of the Constitution might as well never have been written.

After we have dined on this expensive bill of fare we shall have nothing left but vain regrets and rude awakening.

We must not forget that our strength is in ourselves as individuals and the strength of our Government comes from identically the same source.

If we, as individuals and as groups, continue to demand special privileges from our Government and it has been established that the Government has the power and authority to grant these privileges by taking rights from one of its citizens and conferring them on another, then democracy as set forth in the Declaration of Independence and the Constitution ceases to exist.

This practice of individuals and of groups to seek special favors is not new, but it has increased to the danger point. This is the logical result of yielding to the first demand, and since that time demands have become so increasingly frequent that soon it will be impossible to meet all the demands made upon the Government.

This vicious yielding to groups produces corruption, not only in the Government, but in the groups themselves as well as in the individuals.

The individual during this process gradually relinquishes, perhaps unthinkingly, his guaranteed rights, his individual liberty and dignity. He is no longer a freeman in a free country. He is a creature of his Government—the Government he created. This is seemingly impossible but it is actually true.

The average American, due to the necessity of providing food, shelter, and clothing for himself and his family, fails to take time to think these problems through and understand the results of this practice on himself. Instead he prefers to think of himself as a member of a pressure group to which he thinks it most advantageous to belong. And each group tries to feed on the Government, in effect on each one of us.

Today, we find many positions of trust in our Federal Government filled not with free Americans as free Americans, but allotted to certain Americans who happen to be members of certain pressure groups. By this I mean that so many positions on this board are allotted to industry, so many positions on that board are prescribed to be filled by labor, so many on the next go to farmers, etc. There seems to be no place for the unattached free American. He does not qualify for positions of national scope any more.

As a result of the system under which our Federal Government is functioning today, we have added thousands upon thousands of Federal officeholders. We have sent them into every city and village in our broad land to mingle with every conceivable affair. This has been done by the descendants of those who, in preparing their indictment against the King of Britain, entered as one of their principal counts that: "He has erected a multitude of new offices and sent hither swarms of officers to harass our people and eat out their substance."

There are other counts in that indictment that we might scrutinize and compare with conditions as we see them today. For instance, the charge that the King had subverted the judiciary, that "he has made the judges dependent on his will alone." Could it be that we have some cause for complaint along this line at the present time?

Another count I find in the Declaration is, "He has taken away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our government." The forms of our State government, which existed before our Federal Government and which the Constitution was to protect, have been basically altered and changes are continuing. Many purely local matters that should be left to the State are now being regulated by the Federal Government.

The same inducements that were effective in influencing the individuals to yield their liberties have been practiced against the States and the States have accepted their meager pittance. They will end, unless they change their course, by destroying themselves.

While it is true that our rights cannot be taken from us, we can give them up and many have already yielded. Those who sacrifice their right to protest in minor matters are not likely to offer strong resistance to major aggression.

A former President, James Madison, once said: "It is proper to take alarm at the first experiment on our liberties."

Today there is a tendency in thought and action to veer away from some of the basic principles of a democracy on one pretext or another. We would do well to reread our Declaration of Independence and our Constitution, and for their support mutually pledge to each other our lives, our fortunes, and our sacred honor.

It is right and proper that we Americans pause and consider the question: Will the road along which we are traveling today lead us to peace and prosperity or to trouble and ruin?

Address by Senator Stennis Before Independent Bankers' Association Meeting

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. STENNIS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD excerpts from an address I delivered before the national convention of the Independent Bankers Association, at Biloxi, Miss., on March 21, 1949.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS OF SENATOR JOHN STENNIS AT INDEPENDENT BANKERS ASSOCIATION MEETING, BILOXI, MISS., MARCH 21, 1949

Just after accepting your invitation to speak at this convention I talked with members of the Federal Reserve Board and its staff in order to familiarize myself in a general way with such proposals affecting the banks as are likely to come before this session of Congress. Specifically, there appear to be three proposals of importance that probably will be presented to the Banking and Currency Committees, one dealing with bank reserves, a second with regulation of consumer installment credit, and the third with bank holding companies.

It is not possible at this time, of course, to tell with any certainty whether all of these measures will be reported favorably to the Senate or in precisely what form they will be reported if they are approved in committee. I wish to keep an open mind on any legislative proposal and to withhold final judgment until I have had a reasonable opportunity to hear all of the facts and arguments pro and con. My own judgment will be based on some very simple but fundamental standards to which I am sure the members of this association would subscribe. For one thing, I share with you the strong conviction that banking, as well as industry or any other field of endeavor, should be protected against the dangers of monopolistic practices. I would oppose, as I am confident you would, any legislation that failed to meet the test of fostering or preserving healthy competition. I would favor, as you would, legislation that would protect and promote sound banking enterprise in the general public interest. I think the tests of what that overworked expression means are likewise simple and fundamental. The yardstick I would apply to any given piece of banking legislation would necessarily measure the need for it, the adequacy of the proposal itself, and its implications in our free-enterprise economy.

I would welcome expressions from you at any time about these matters, and I would particularly appreciate having your critical judgment of any legislative proposal measured in terms of public necessity and interest. I am aware, as you are, that the banking fraternity has too often been blamed for economic troubles that were not of its making. Bankers have been the victims of misunderstanding of the function they perform in the community. I was therefore interested to have Chairman McCabe of the Reserve Board say to me the other day that he thought the bankers in general today stood far better in popular opinion than at any time in more than half a century. He was recalling that in William Jennings Bryan's time and recurrently since then, including the days of deep depression in the early thirties, the banker was frequently singled out to be the scapegoat for most of our economic ills. Notwithstanding the fact that the banker is as much a victim of bad times as the farmer or businessman, somehow the banker seems to be a convenient man to blame because his stock in trade is money or credit, and it is hard to think of any economic trouble that is not money trouble in one form or another. Speaking as an industrialist, not as a banker, Chairman McCabe said that in his judgment the bankers today stand better with the public and with Congress than they have in generations. I should like to think that this is due in part at least to the kind of leadership that has been exhibited in your profession in recent years—leadership that looks ahead and looks realistically at national problems and strives to find the right answers based on public need and welfare. The independent bankers can justly lay claim, I think, to that kind of leadership. You in this organization have stood for something. You have not been in the negative position of mere opposition. You have tried to face up to problems of common concern and to find reasonable and appropriate remedies. That, I believe, has been a vital factor in demonstrating to the general public and to Congress that bankers are more keenly aware today than at any time, of their public responsibilities. The preservation of private banking depends in large measure upon the continuance of alert, vigorous leadership in the broad public interest.

The present high esteem in all segments of the public for the banking profession is an asset to be highly prized and not lightly regarded. It offers an opportunity for continued, expanding, constructive leadership on the part of members of the profession.

This opportunity for leadership carries with it grave responsibilities. The people must be given sound advice, not only about their immediate financial problems, but about the affairs of their community and their government. The advice must be sound, but it must not be backward-looking. In the complicated economy of our present age, there are various service and welfare functions which can adequately be supplied to the people only through the agency of their government. Unless there is intelligent, progressive leadership to direct the demand for these services through the channels of sound, constitutional government, the people may fall victims to unthinking, demagogic excesses that will take us completely away from our basic traditions of local self-government built around constitutional precepts. There has already been far too great a tendency in this direction.

Local bankers who create a positive program of affirmative leadership will continue to earn a position of respect in their communities that will be a great bulwark against extremism in any form. The world is not going to stand still—your job and my job is to help direct this movement along sound lines that will provide the greatest permanent benefit to all the people.

Undoubtedly the position which you enjoy today is better than ever because the banking business was never in better shape than it is now. I am sure that no one can successfully challenge the statement that our banks are in a sounder position than they have ever been in the history of this country. The commercial banks have about 114 billions of loans and investments, and more than half of this total is in Government securities which are in turn the best investment in the world today. In fact, nearly two-thirds of the assets of all commercial banks are cash assets and Government securities which are for all practical purposes the equivalent of cash. I am satisfied from the conversations I have had with responsible officials that this fortunate situation is secure and that the policy of maintaining the market for Government securities is not subject to change.

It is apparent that the banking business is not vulnerable today, as it has sometimes been in the past, to downswings in the business cycle. Apart from the bulwark of insurance of deposits, and the ready liquidity of the major part of banking assets today, there are almost unlimited resources available to the banking system in case of need. For example, the Federal Reserve System is in a position today to supply the money market with virtually unlimited additional reserves through purchase of Government securities. The only limitation on this authority would be gold reserves, and I am informed that the Reserve System at present holds twenty-three billions of gold certificate reserves, or enough on the basis of existing legal gold reserve requirements to double—or more than double—the System's outstanding note and deposit liabilities. Furthermore, because of the liberalized lending provisions of the Banking Act of 1935, advances can be made on any assets of member banks that are acceptable as security to the respective Federal Reserve banks. This is a very broad and reassuring authority which is sometimes overlooked. Also, I am advised, the Reserve System would reduce bank reserve requirements and otherwise ease credit conditions, including installment credit and stock market margin requirements, if the need were to arise.

All these aspects of the banking picture today are reasons for satisfaction but not for complacency. Banking needs continued, enlightened leadership, and the defects in the structure that need repair should be attended to when the economic weather is good. Let me say here that I am as thoroughly in favor of maintaining our dual banking system as I am sure you are. In my very small way, as a one-time director of a small and independent bank, I have grown up with the dual system and I am fully aware of the contribution it has made to the development of the country. It represents the kind of competitive enterprise that has been the basic reason for the unrivaled progress which our Nation has made and will continue to make. It is the opposite of monopolistic practice and performance. It is the very essence of small business which it primarily serves.

In connection with our efforts to preserve the dual system, let me make clear at this point that I am opposed to any effort to curtail or restrict the individuality or integrity of the Federal Deposit Insurance Corporation. The FDIC has served us well in its present form, and it should not be merged with any other agency or otherwise consolidated under the Hoover Commission Reorganization program.

I take it that the support you have given to legislation designed to remedy existing defects in regulation of bank holding companies is motivated fundamentally by the

desire to protect the dual system and independent banking enterprise. I assume that any given legislation which has your indorsement will be designed to prevent the holding company device from being used to foster monopoly and to encroach upon independent banking. You are far better informed than I am as to the details of the bank holding bill which was favorably, and unanimously, reported to the Senate at the last session by the Banking and Currency Committee, as well as with such improvements in that measure as have been worked out in consultation with the banking authorities since then.

I merely wished to assure you that this legislation will have my most sympathetic interest when it again comes to the floor of the Senate. My prejudice against monopolistic developments will predispose me in its favor, even before I am acquainted with the specific provisions of the bill, and your indorsement will carry great weight with me. I cannot, of course, predict the action of the respective Banking and Currency Committees or of the Senate and House on this measure during the present session, but certainly the matter will not be neglected if you have sufficient interest in keeping it alive. It is my understanding that a great deal of time and thought has gone into trying to improve the bill without weakening it or its objectives, and that drafts of the measure will be forwarded probably to the chairman of the Senate and House Banking and Currency Committees in a short time.

We in the South, and those of you from the West, have come to take a virtually inherent position against monopoly. We have seen the concentration of economic power restrict the growth of our own local enterprises—leaving us with virtually colonial status in many fields of economic endeavor.

The tide has been turned in our long struggle to achieve greater economic and financial independence, but it must be a never-ending fight if we are to continue to make progress and achieve eventual success. Count on me as your ally in the war against monopoly.

Elimination of the monopolistic barriers to free enterprise will do much to increase the productive power of our Nation, but there is an even broader field for achievement in which bankers can play an expanding role at all levels, but most importantly, on the community level.

I refer to the conservation and development of our natural resources. To my mind the youth of our land are our greatest natural resource. We can best protect and develop this resource by providing our youth with the best possible educational system and by maintaining stable economic conditions that make for the best home and religious training.

All of our material wealth has its origin in our soil, and if the riches of the earth are not conserved and replenished, it matters not how sound the outward appearance of our economic structure. Through the coaperative endeavor of our local, State, and Federal Governments, we are today engaged in a highly meritorious soil-conservation program that reaches down to the individual farmer. These programs will be greatly limited in value if they do not enjoy the support of bankers and other business leaders at the community level.

The independent bankers of America occupy a position of prestige and influence today that is without parallel in our history. The challenge which this opportunity for leadership affords is one that is already being widely accepted, and I am confident that it will result in even greater achievements to the credit of our American system of private initiative and enterprise.

Washington County Soil Conservation District Report

EXTENSION OF REMARKS
OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. TRIMBLE. Mr. Speaker, the Washington County Soil Conservation District made great progress in 1948. Under leave to extend my remarks in the RECORD, I insert their report:

ANNUAL REPORT OF THE WASHINGTON COUNTY SOIL CONSERVATION DISTRICT, FAYETTEVILLE, ARK.

SUPERVISORS' ANNUAL REPORT, 1948

An election of supervisors for the Washington County Soil Conservation District was held in May 1948 with the two appointed supervisors in charge. Mr. J. H. Pyeatt and Mr. C. E. Shafer, both of whom have soil-conservation-district agreements, were elected as new supervisors and Walter D. Ramey was reelected. Messrs. Pyeatt and Shafer took their oaths of office and attended their first supervisors meeting in June.

The board of supervisors held 11 monthly meetings with a quorum to perform any business at all meetings but 2 which were January and February. Mr. C. D. Griscom held the record for the year in attending all of the 11 meetings and the secretary, Mr. M. G. Lewis, was next having attended 10 of the 11 meetings. There were 5 of the 11 monthly meetings where all supervisors were present.

The annual tour of farms under district agreement was attended by four of the five supervisors on two successive days. Details of the tour will be carried under a separate heading.

The supervisors planned the annual group conservation leaders training day for March 11 but the weather man gave us 11 inches of snow the day and night before and the meeting was canceled, being so late in the year that no further date was set. (See exhibit A.)

In keeping with conservation week, May 2–8, 1948, the supervisors wrote letters to some 20 to 25 ministers in the district urging them to cooperate by delivering conservation sermons on soil and soul, Sunday, May 2. Enclosed with each letter were the following pieces of material for use in preparing the sermons: "No Man Layeth It to Heart," "The Lord's Land," and "The Earth Is the Lord's." Some very favorable results were reported.

The annual soil conservation field day which had been held for five consecutive years at Lake Weddington as a joint occasion with the supervisors of the Benton County Soil Conservation District was postponed on account of the shortness of SCS technical personnel assisting the district.

All five of the district supervisors attended the State association of district supervisors meeting at Little Rock on December 3. This meeting was of value and interest and Kent Leavitt, president of the National Association of District Supervisors, made a very fine talk to the group of supervisors. The forum attended in the afternoon was instructive and interesting.

The supervisors at their October meeting discussed the possibility of running some feature conservation sound films.

The county school supervisor, Mr. J. R. Kennan, is an enthusiast on conservation. He was contacted and is to place in the schools conservation material consisting of the following: 100 copies, Bibliography—Available Literature on Conservation for Schools; 75 copies, An Outline for Teaching Conservation in Rural Elementary Schools; 25 copies, An Outline for Teaching Conservation in Junior High Schools; 20 copies each, Conservation Education Reports Nos. 1, 2, and 3; 80 copies, the Use of Our Soil; 80 copies, Soil Conservation—Commercial Department; 80 copies, Our American Land—the Story of Its Abuse and Its Conservation.

The above material is to be given to the teachers of the schools of the county and much good will come from such teaching to the youths of the district.

SCS technical service

The personnel service has been reduced to our district due to the lack of funds for personnel and also due to more soil-conservation districts having been organized and requesting technical assistance from the Soil Conservation Service for the State. In 1948 there were 831 days of personnel service rendered the district which was 25 percent less time than was given in 1947 and only 51 percent of the technical time which was rendered the district in 1946.

Seed harvest

Farmers within the district are realizing more and more the great need for vegetative cover to prevent erosion. This increases the demand for grass and legume seed. With the shortage of seed on the market, the supervisors have encouraged the harvesting of seed on farms of the district to help meet these demands. During the year 1948 the following seeds were harvested in the Washington County Soil Conservation District:

	Unit	Cooperators	Noncooperators	Total
Korean lespedeza	Lb	200,000	800,000	1,000,000
Sericea lespedeza	Lb	21,000	18,000	39,000
Red clover	Lb	7,500	5,000	12,500
Hop clover	Lb	1,000	500	1,500
Vetch	Lb	15,000	10,000	25,000
Balboa rye	Lb	25,000	12,000	37,000
Winter oats	Bu	12,000	30,000	42,000
Spring oats	Bu	10,000	25,000	35,000
Soybeans, Laredo	Bu	600	400	1,000

The seed harvested is becoming a benefit to the conservation program and is very profitable to the farmers who are raising the seed.

Conserve the soil—it pays

We supervisors spent 2 days last fall viewing the results of soil-conservation practices which were to be applied in the county and find the farms where soil-conserving practices have been carried out are in much better condition, growing crops of better quality, and greater quantity, than those farms where no conserving practices have been applied.

We find where terraces have been built from top of hills down, springs are still flowing flush, beneath same. Those where there are no terraces above are dry or dwindled to a trickle.

In localilities where a number of ponds have been built, above fast falling streams, we find they do not overflow with every small downpour, as previously, carrying away our precious soil. Only those who are over the soil as we farmers are can realize how fast our soils are wasting away.

We find where legumes and grasses have been combined and left for early winter grazing, it eliminates the expenses of harvesting hays and spreading barnyard fertilizer, while the vegetative cover is holding the soil and adding humus.

We are persuaded this program could be more fully carried out by more education through the schools, and from the theaters,

by picture shows, and if more suitable machinery were available for such work as sodding our pasture land with Bermuda grass if the individual farmers like Bermuda grass.

We consider our soil the most important thing to the welfare of our Nation. It is both our wealth and our food. Let's conserve it.

CECIL E. SHAFER,
Member, Board of Supervisors, Washington County Soil Conservation District.

Board of supervisors: Walter D. Ramey, chairman, Winslow, Ark.; M. G. Lewis, secretary, Farmington, Ark.; C. D. Griscom, Lincoln, Ark.; J. H. Pyeatt, Canehill, Ark.; C. E. Shafer, Farmington, Ark.

BENEFITS OF OUTSTANDING COOPERATORS WITH THE WASHINGTON SOIL CONSERVATION DISTRICT

ORCHARD GRASS VERSUS CORN

Four years ago 8 acres of orchard grass and lespedeza on the J. R. Kennan farm began to be watched and studied by Raymond, as he is known to his many friends, and Jim Clark, the operating partner of the farm, spoken of in Tuttle community by his friends as Jim.

Raymond took the 8 acres of orchard grass and Jim took 8 acres of corn as the best crop. The orchard grass furnished 30 days grazing for 21 head of cows plus 21 calves during the fall and spring, thrashed 80 bushels of orchard grass seed valued at $196, followed by 10 tons of good hay valued at $200. The total value of the orchard grass mixture was $396 for the 8 acres, or $37 per acre.

The corn made 35 bushels per acre with corn $1 per bushel at that time, making $280 worth of corn, as compared with $396 value for orchard grass, in addition to 30 days of grazing for 21 cows and 21 calves. Jim thought about this difference of $116 plus 30 days good grazing in favor of the orchard grass. Then he remarked, "We would do well to have all of this farm in an orchard grass mixture." These partners agreed and started according to their conservation plan with the Washington County Soil Conservation District. The next field of 14 acres started under their conservation plan formerly grew only 16 bushels of barley per acre. It was phosphated, seeded to lespedeza leaving the growth on the land for 2 years with only light grazing. It was then limed, phosphated, worked with a spring-tooth field tiller, leaving all the lespedeza residue on or near the surface, and seeded to Fayette barley (2 bushels per acre) and orchard grass (2 bushels per acre) in early October 1944. The method of preparation left an abundance of lespedeza seed on the land.

The following summer Jim harvested 22 bushels of barley per acre, followed by a hay crop of 56 bales per acre that averaged 70 pounds. The hay was sold at 60 cents per bale and barley at $2 per bushel, making the cash value of $77.60 per acre return from the meadow for the first year. Now after four good crops of orchard grass mixture this meadow is still in excellent condition. The original 8-acre orchard grass meadow has now given 10 crops and still going good.

Today this farm has 99 acres of cropland in orchard grass mixed with red clover and lespedeza for meadow and temporary grazing in the fall and early spring. They also have another 25 acres of the above mixture strictly as pasture development, making a total of 124 acres now seeded to orchard grass mixture.

These fields are slightly gullied and taking a heavy loss of soil through sheet erosion while being farmed to grain. The gullies and natural drains were shaped to permit easy mowing, heavily fertilized and double seeded with this orchard grass mixture. Today what water leaves the fields of orchard grass is clear enough to drink.

Every other year each meadow receives 400 to 500 pounds of 4–12–4 complete fertilizer. Lime is added as needed, usually once every 4 or 5 years.

The farm was supporting only 12 cows and a bull before this program started. It now carries 30 Hereford cows and their calves with so much forage left that it becomes necessary to bring in more cattle every fall for a temporary period to utilize the extra forage. The barns are filled with hay and 17 stacks scattered over the meadows. Everything about the farm reflects the fact that Jim and Raymond were right in their determination to get all the land possible into an orchard grass mixture.

ORCHARD GRASS MIXTURE—IMPORTANT ON CECIL SHAFER FARM

In the fall of 1947, 28 acres of land much too wet for alfalfa was seeded to orchard grass, red clover, and lespedeza on the Cecil Shafer farm. Cecil, as he is known to his friends, cut 50 bales per acre of good hay the following summer, followed by 75 days of good fall grazing for 27 cows and 28 yearling calves.

This field had many large spots where even wet land vegetation drowned out year after year. It was drained as the first job after receiving a conservation plan on this farm with the Washington County Soil Conservation District. The next steps were: (1) Leaving some good vegetative growth of lespedeza on the land for 2 years, (2) phosphating, (3) liming. Now Cecil looks forward to 5 years of good meadow crops, maybe more, from this one seeding. He plans to add about 400 to 500 pounds of 5–10–5, or other complete fertilizer, about every other year to maintain the meadow in good shape and possibly lime about once every 4 or 5 years. A complete analysis of the soils is being made by Soil Conservation Service technicians for this field in order to know exactly what minerals must be added to hold orchard grass and red clover as long as possible.

In the summer of 1948 many people decided Cecil was going to wear out his 29-acre field north of United States Highway 62. He broke it following spring oats and started disking. The weather kept raining and disking continued but when dry early fall set in there was a fair amount of moisture when most fields were too dry to break. Then when our first rain came in September, Cecil got this field seeded. During last December it was one of the few fields in the county with a good start of orchard grass and alfalfa. The out-of-pocket expense on this crop now runs $34.11 per acre, without considering gas and oil and use of machinery. It includes tractor operator's time, lime, 600 pounds of 0–14–7 fertilizer per acre, seed, and inoculation. Many people are watching this field with great interest and the prospects look good today.

This last field gives Cecil Shafer a total of 48 acres of orchard grass mixture on the farm.

G. A. LANGHAM, A LEADER IN CONSERVATION

Seventeen years ago G. A. Langham, known to his friends as Garland, moved to the present farm of 180 acres with Mrs. Langham and two small children. People told him he would starve to death—that no one had made a decent living on this place since they could remember.

He and his wife were determined to make a go of the place. They started by plowing under crop after crop, terracing and depending on income mostly from timber. The fields had deep gullies and a heavy loss of topsoil before he started.

In the fall of 1943 the Washington County Soil Conservation District program reached Goshen community at the request of the people of the community. They selected Garland as their community leader stating that his leadership had already been proven by what he had accomplished with his place.

He had carefully supplied known mineral deficiencies of phosphate, lime, potash, and boron. Everything possible has been turned into the soil as green manure crops such as hairy vetch, cowpeas, lespedeza, and other legumes. Manure from 21,000 broilers per year, 12 cows and 2 mares has helped wonderfully, too. Now he and his son, Warren, have a broiler capacity of 13,000 with three broods a year planned. Garland says he can now get a good application of manure on all his upland fields and pastures each year.

Every crop goes in strictly on the contour.

Five acres of strawberries look very promising for 1949. Four irrigations held them through last spring's dry weather and gave quality on the 1½ acres of old berries picked last year. When average berries were bringing $6 per crate, his irrigated berries brought $9 per crate. The old berries yielded 157 crates on 1½ acres with a net income of $6 per crate after deducting all costs including fertilizer. "The extra quality with irrigation means a lot to us," says Garland.

Mr. Langham has 9 acres of Wonder oats from which he threshed 94 bushels per acre last year; upland corn on 2½ acres of his poorest land made 60 bushels per acre; 8 acres of wheat made 20 bushels per acre; 5 acres of tomatoes grossed $350 after over 50 tons rotted in the field due to the wet summer; 5 acres of alfalfa is yielding 3 tons of hay per acre; and last but not least, Garland now has 10 acres of Bermuda base pasture with 3 additional acres planned for spring sodding. He sodded 1 acre last fall and makes it a practice to get a few more acres in this manner every year.

All the upland is planned for irrigation if and when it needs it. Weather report statistics reveal a need for at least four irrigations per year as normal for the average crop.

The two Mrs. Langhams are just as interested in all that goes on over the farm as the men. It has been teamwork and a will to do that brought about the wonderful conservation program on the Garland Langham farm and causes people to say, "That is one of the most profitable farms in Washington County."

Mr. Langham's farm consists of 180 acres with 60 acres in cultivated land, 18 acres in meadow, 43 acres in pasture land, 56 acres in forest and 3 acres in farmstead.

TOUR MADE BY WASHINGTON COUNTY SOIL CONSERVATION DISTRICT SUPERVISORS, SEPTEMBER 2 AND 3, 1948

On September 2 and 3 a tour of inspection of farms under agreement with the Washington County Soil Conservation District was made.

On September 2 Thomas P. Lee, work unit conservationist, and J. E. Critz, district conservationist, with Walter D. Ramey, chairman of the board of supervisors, left the Soil Conservation Service office about 8:45 a. m. and stopped at Farmington where the other supervisors, namely, M. G. Lewis, secretary-treasurer of the board, Claud D. Griscom, and Cecil E. Shafer, were picked up. Mr. J. H. Pyeatt was unable to attend.

From Farmington we proceeded on to the first farm, that of M. E. Shinn. This farm, consisting of 203 acres, was formerly under agreement with and owned by W. B. Pettigrew. On this farm we saw a combination of orchard grass and alfalfa which was 3 years old on terraced land. This field was in good shape to prevent erosion to the minimum. We supervisors were of the opinion that there was a little heavier stand of orchard grass than might be practical and beneficial. He had planted 1 bushel of orchard grass with 20 pounds of alfalfa seed per acre. His red

clover was doing well with almost gold dollars running on it as he had 11 registered Hampshire sows and 118 pigs. His Bermuda pasture was outstanding and his herd of white-face cattle is a splendid example of what this State can do in the production of beef with satisfactory vegetative cover and proper fertilization. Mr. Shinn is doing a splendid job of conservation.

Next we visited the farm of Lewis J. Johnson consisting of 66 acres. Mr. Johnson has an outstanding meadow of orchard grass and alfalfa and is preparing to extend his acreage of this crop. He has a nice plan and is progressing cautiously with his application. He has pasture development and other meadow development that has yet to be completed.

The next stop was at Bob Tucker's farm. Mr. Tucker has alfalfa which has been cut three times and was ready for the fourth cutting. He has a nice pond constructed according to district specifications and is preparing and developing further pasture work with Bermuda as his base grass.

In most of these alfalfa fields it was evident that there was need for additional potash and from an examination of the alfalfa there was some evidence of a lack of the trace element, boron, which makes the plant healthier. In most of these cases the farmers had planned to apply 10 to 20 pounds of commercial borax per acre during the early fall.

The Brooks Lewis farm was visited next. His outstanding sericea and annual lespedezas were of interest and his Bermuda pasture was making fine progress. For further development it would be beneficial to fertilize and cultivate the thin spots where there is very little Bermuda grass. This may be done next spring as it would not be advisable to do it this winter.

Having our lunches with us and there being a fine spring on Mr. Lewis' farm near his home, we all ate our lunches and, since there was no meter on the spring, we drank all the cold water we desired.

After lunch the first stop was at W. M. Hutchison's farm and his black locusts are now nearing 6 years old and will soon be large enough for cutting posts. Three acres of corn planted on the contour and sodded to Bermuda grass was of interest. His terraces are in good shape and his alfalfa will receive a complete fertilizer in the near future consisting of 3-9-18. The only thing Mr. Hutchison lacks in completing his program is some additional pasture work. He is doing a very creditable job. He is a veteran of the First World War and is being assisted by the Farmers Home Administration in financing his farm and if he has not paid it out already, he does not lack but little.

The next stop of the afternoon was at the R. E. Jackson farm. Mr. Jackson was formerly a Little Rock businessman. He now owns a 60-acre farm and has a splendid pond which has been stocked with fish and is being fertilized. He also has some fine acreage of alfalfa and orchard grass. One of his cash crops is turkeys. He raises two varieties—a large body type and a small body type—and has become nationally known for his smoked turkeys which are shipped practically all over the United States.

Mr. C. E. Shafer's farm was the last one visited on the first day of the tour. Mr. Shafer is doing some very remarkable meadow and pasture development along with a fine herd of Black Angus cattle. His volunteer crop of red clover was very interesting and his alfalfa was also good. His meadow on the creek bottom land consists of red clover, lespedeza, and orchard grass. This was a heavy vegetative cover. He was debating whether or not to pasture this meadow and then attempt to cut it for hay. We are expecting an outstanding piece of conservation work from Mr. Shafer, who is a new district supervisor. He has some very fine land and a good herd of beef cattle. Upon reaching the house, Mrs. Shafer served fruit drinks which were enjoyed by all as we were pretty much whipped out for the day had been hot and the roads dusty.

We adjourned at about 4 p. m. until the following day. The above tour was over the western section of the district.

On Friday, September 3, the same group made a tour of the eastern section of the district. We left the office at about 9:15 a. m. going first to the farm of Mr. Walter B. Pettigrew on White River. Much of his land is bottom land and one of his big problems is drainage. He had a fine crop of alfalfa and is preparing additional land for alfalfa where grass was over his head. His young grandson, Jack Hall, was handling the tractor in master form. They also had a mowing machine on another tractor where they had cut off the drainage way. You could see the drainage way after the mowing. It is V-shaped and doing a good job. Mr. Pettigrew has a crop of oats followed by alsike clover which is a sight to behold. His hybrid corn will make near 75 bushels per acre, and his Guernsey herd is a picture to see. "It is possible that no conservation practice will pay as quick dividends as drainage on wet lands," Mr. Pettigrew said. We did not go over the entire 203 acres in Mr. Pettigrew's farm. Mr. Pettigrew, who is a conservation leader in his community, joined the supervisors' tour for the remainder of the day.

The next cooperator we visited was Raymond Kennan, who is the Washington County school supervisor. He went into the conservation program on his 263-acre farm a few years ago and is doing one of the most commendable jobs in the county and making money at it. His orchard grass and red clover along with lespedeza is doing a splendid job. He cuts hay, saves seed, and pastures these fields. His herd of white-face cattle is outstanding in the production of calves. He sold approximately 30 calves last year which brought more than 28 cents per pound on foot at the farm. Mr. Kennan is very enthusiastic over his program and has a just right to be because he has done a swell job. He went over the farm field by field telling us what he had done the last 4 years. Every month out of the year he has something to sell—pigs, calves, hay, or seed. It is interesting how Mr. Kennan converted his tenant and partner in the job to conservation. When the tenant moved on the farm he had his old ideas of raising corn up and down the hill, etc. Mr. Kennan was shrewd enough to let him farm his part of the acreage according to his ideas but insisted "farm my acreage according to the conservation program." At the end of the year he said that Mr. Kennan produced so much more that he wanted to follow the conservation program.

We stopped for lunch at the community store, getting the drinks there and had our lunch in the shade of the trees.

We then proceeded to the G. A. Langham farm, where we saw irrigated strawberries on the contour that were outstanding, and he said that these strawberries netted him $890 per acre last year. His hybrid corn on the contour was outstanding and will possibly make 60 to 70 bushels per acre on upland. His pasture was good, it needs some brush removed but will really carry some cattle during dry as well as favorable years. His pond has been stocked with fish and is being fertilized, and he also irrigates from his pond. It is only about 100 feet down to White River. He plans to run a pipe from the river in order to irrigate additional acreage. All in all, Mr. Langham is doing an outstanding job.

We also visited others not included in the itinerary. One of these was L. B. Langley, who had just finished constructing a pond, as we wanted to see some newly constructed practices. This pond will be 10½ feet deep when the water is going over the spillway. He has a young Jersey herd and is progressing with his program but not as fast as is desirable.

The last stop we made was at Ira Oliphant's farm, but he had not been able to advance his program as he had planned, and since it was late and the supervisors had to complete their business session, we only hesitated on the highway for a brief review of this farm and drove on to the Soil Conservation Service office in Fayetteville for the regular meeting.

RESOLUTION

Motion was made by C. D. Griscom and seconded by J. H. Pyeatt that the foregoing material as herewith presented be adopted as the annual report of the Washington County Soil Conservation District for the year 1948 and that copies of the report be forwarded to all agencies and individuals that are deemed wise and necessary to the full acknowledgment and cooperation by district supervisors of those individuals and organizations that are assisting the district supervisors.

Respectfully submitted.

M. G. LEWIS, *Secretary.*

Results of McGregor Poll on National Issues

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. McGREGOR. Mr. Speaker, under permission to extend my remarks, I am pleased to make known the replies to the questionnaire, which in January 1949, I attempted to place in the hands of as many citizens of my district as possible. I regret it was humanly impossible to send a questionnaire to each citizen, but I believe the replies received represent the opinions of the majority of the people of the Seventeenth Ohio District.

My district might well be considered the main street of our Nation. We have approximately 50 percent urban and 50 percent rural population; all labor and farm organizations represented, as well as large industries and small business, two colleges and two universities.

The questionnaire was sent to each committeeman and committeewoman—both Democrat and Republican—laborers, farmers, attorneys, barbers, housewives, public officeholders, salesmen, and educators; those engaged in business and industry, newspaper and radio work, and professional persons, including doctors and dentists. A total of 3,000 questionnaires was sent and the number of individual returns received—approximately 2,000—proves to me that the people are anxious to express their views on issues which are before the Congress for consideration.

It was very gratifying to me that the legislative issues set forth in the questionnaire were the basis for study, discussion, and vote in numerous civic organizations, women's clubs, government classes of high schools, colleges and uni-

versities, local study clubs and veterans' organizations in the Seventeenth Ohio District. The total returns from this group voting indicate that approximately 690 persons participated in discussions and submitted their votes on the issues included in the questionnaire.

The questionnaire and results are as follows:

QUESTIONNAIRE FROM HON. J. HARRY MCGREGOR, MEMBER OF CONGRESS, SEVENTEENTH OHIO DISTRICT

1. Do you favor the continuation of the Marshall plan as recommended by President Truman? (Giving or loaning $6,000,000,000 to foreign countries for the next 12 months, including the giving or loaning of money, food, and military equipment direct to foreign governments.) Yes ___ No ___.

2. If voting "Yes" on question 1, should distribution be made direct to the people or to their governments? People ___. Governments ___.

3. Do you favor—

(a) Outright repeal of the Taft-Hartley labor law? Yes ___. No ___.

(b) Amending the Taft-Hartley labor law? Yes ___ No ___.

(c) A closed shop which requires an employee to be a union member in order to retain his job? Yes ___. No___.

(d) A requirement for both labor and industrial leaders, in contract negotiations, to sign a noncommunistic pledge? Yes ___. No ___.

4. Do you favor legislation giving Federal aid to schools (allocation of Federal funds to assist in operation)? Yes ___. No ___.

5. Do you favor any type of Federal legislation placing the medical and dental profession and operation of our hospitals under Federal control? Yes ___. No ___.

6. Do you favor an immediate return to Federal price control (such as OPA)? Yes ___. No ___.

7. Do you favor the continuation of rent control? Yes ___. No ___.

8. Do you favor the President's demands that he have Federal control over production? Yes ___. No ___.

9. Do you favor the President's demands that he have Federal control over wages? Yes ___. No ___.

10. Do you favor Government support prices regardless of supply and demand? Yes ___. No ___.

11. Do you favor repeal of the Federal tax on oleomargarine? Yes ___. No ___.

12. Do you favor the repeal of the veto power in the United Nations even though it might mean severing our relations with Russia? Yes ___. No ___.

Address_____

Occupation_____

(Please write on the back of this page your comments on the above questions and any suggestions which might aid me in giving better service as your Congressman.)

Please return this questionnaire to me, House Office Building, Washington, D. C.

You will note, Mr. Speaker, that I asked my constituents to sign their names and give their occupations and this information enabled me to secure the opinions of individuals according to occupation. Following is the percentage distribution of replies to the questions, according to occupational classifications:

PERCENTAGE DISTRIBUTION OF REPLIES TO QUESTIONNAIRE

Question 1: Do you favor the continuation of the Marshall plan as recommended by President Truman? (Giving or loaning $6,000,000,000 to foreign countries for the next 12 months, including the giving or loaning of money, food, and military equipment direct to foreign governments.)

Public Health and Vocational Education

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made before the Labor-Federal Security Subcommittee of the Senate Committee on Appropriations in reference to H. R. 3333.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PUBLIC HEALTH AND VOCATIONAL EDUCATION

STATEMENT OF SENATOR JOHN STENNIS BEFORE THE LABOR-FEDERAL SECURITY SUBCOMMITTEE OF THE SENATE APPROPRIATIONS COMMITTEE—MARCH 25, 1949

Mr. Chairman, I appreciate this opportunity to appear before your subcommittee in respect to what I believe to be one of the most important items contained in the appropriation bill for the Department of Labor and the Federal Security Agency for the coming fiscal year. I refer to the matter of assistance to States in public health work and to the vocational education services which are provided under the terms of the George-Barden act.

First, I would like to discuss the appropriation for assistance to States in the establishment and maintenance of public health services. The Bureau of the Budget saw fit to recommend $24,408,000 for this purpose. The House of Representatives saw fit to reduce this sum by nearly $11,000,000. I appreciate the problems of the gentlemen who made this decision, but I feel that their action was an unwise economy in view of the general picture of public health services now being developed in the various States of our Union. The figure approved by the budget would involve a very sharp program of expansion in this field of assistance to the States, but I submit my belief that the budget made a very careful analysis of the opportunity and necessity for expansion before this increase was approved.

The House Appropriations Committee in its report on this appropriation bill, H. R. 3333, stated that no concrete facts were available as to how the additional money would be allocated, and no definite showing was made that the States and other political subdivisions would be in position to take advantage of the additional grants. Naturally, Mr. Chairman, I am not in position to report upon the conditions in all of the States of the Union in this respect, but I can report in detail about my own State of Mississippi, and with some degree of knowledge about all the States of the South. I am in the midst of a general study of the progress which has been made in the field of education and public welfare in the entire South within the past few years, and one of the items which I have studied very carefully has been the development of the public health service. I can say very conclusively as a result of this study that this additional grant proposed by the Budget Bureau can very adequately and properly be used in the Southern States with no waste or inefficiency.

To provide details about the situation in Mississippi, let me review some of the accomplishments of the public health service in that State within the past few years. This is necessary in order to present the evidence as to how these additional funds will be used, for in virtually every case, the funds will be used to expand and broaden sound, thoroughly planned programs which are already in effect and producing wonderful results reflected in the increased health of our citizens.

The public health program in Mississippi is administered by Dr. Felix J. Underwood, executive officer of the State board of health, and the program has been widely recognized as one of the most efficient and beneficial in the entire Nation. Dr. Underwood and other responsible officials of our State have assured me that Mississippi will have no trouble in matching its pro rata share of the grants curtailed in this reduction made in the budget recommendation. I can best describe what will be done in Mississippi by telling you something of the progress that has been achieved during the past several

years. For instance, here are some figures in regard to reduction of deaths that are preventable: typhoid fever and paratyphoid deaths have been reduced from 1.6 per 100,000 population in 1941 to 0.3 in 1947, a figure which is below the national average; 80.2 percent of the rural population in Mississippi has been supplied with safe water supplies and other sanitation services. Deaths from malaria have been reduced to 1 per 100,000 from 1.8 per 100,000. Deaths from diphtheria have been cut in half. Deaths from diarrhea, enteritis, and similar ailments have been reduced to 2.7 per 100,000 in comparison to a national average of 7.2 per 100,000. Deaths from syphilis have been reduced from 19.7 per 100,000 to 12.16 per 100,000.

This reduction in deaths from syphilis is due to an intensive case-finding program by the venereal disease investigators, and to the public-health rapid-treatment centers which have been developed on a very ambitious program in every section of the State.

Deaths from tuberculosis have been reduced from 45.9 to 31.8 per 100,000 as compared with a national average in 1945 of 39.7. In 1947 the maternity death rate in Mississippi was the lowest on record, 2.6 per 1,000 live births. In the 6-year period which I am reviewing here, there has been a reduction of approximately 50 percent in deaths at childbirth for both the white and Negro races.

Even this reduced rate, however, is very high in comparison with other States that have a pronounced advantage over Mississippi in per capita income. The progress that has been made along all of these lines is attributed by all students of the problem in the State to the fine work of our public health service on both a State and local level. Failure to expand this service means nothing more than acknowledging satisfaction with the present status quo in this field. This money means the direct saving of lives of our citizens.

According to the most recent appropriation of per capita expenditure of all official State agencies for health activities, health progress made on the dollar expenditure in Mississippi is most commendable. The per capita expenditure in Mississippi, however, is only 98 cents in comparison with a general average of $1.90. We can increase this per capita expenditure in Mississippi only by an increase in the Federal grants and aid. Our tax resources in the State are being pushed to the limit, but we can take care of the increase to meet the available grants.

I have dwelt at length upon the improvements that have been made in Mississippi recently but there are similar accomplishments which can be pointed to in other Southern States. In Florida the mortality rate among Negroes is decreasing four times as fast as among whites. In Alabama the maternal death rate has been greatly reduced by a fine program of prenatal clinics. Ninety percent of expectant mothers helped by these clinics have been Negroes. Florida alone has more organized county health departments than all of the Eastern States north of Maryland and east of Ohio combined, and I understand that most of the other Southern States can make this boast.

We hear a great deal of criticism about the treatment of Negroes in the South and the alleged lack of facilities which members of that race receive. I submit the fact that the Negro is the greatest beneficiary of our public health service, and failure to take advantage of any sound expansion for these facilities results in a direct disadvantage to that race.

The great progress which has been made in the South is, I am sure, parelleled to some degree in all other sections of the country. If this much progress has been made through the agency of State and local public-health services, why cannot we expand their program to a greater degree? There are still 17 counties in Mississippi without county health departments. I have been informed that some of the increased funds which Mississippi would receive through the budget recommendation would go toward extending facilities to these counties in the form of State aid. It will be a tragic loss to the people of my State if this proposed program is not adopted. I ask the most earnest consideration of this matter on the part of you gentlemen of this committee.

As further substantiating exhibits on behalf of the necessity of this expansion, I have several documents which I would like to be incorporated as part of the record at this point, if there is no objection.

The program for vocational education in public schools has in recent years become recognized as one of the most important functions of our school systems in meeting the educational needs of the youth of the country. The Congress in 1946 provided full recognition of this fact when it passed the George-Barden Act, authorizing a detailed program of expansion for assistance to vocational education. Since that act was passed, however, the Congress has not seen fit to appropriate the full amount authorized. Perhaps because of this failure to make the full appropriation the Bureau of the Budget has this year recommended only $19,842,760, the same amount appropriated under this act last year. The George-Barden Act authorizes a total of $28,500,000 for the support of vocational education. I believe that this full authorization should be met. Unless it is met, no expansion of the present program can be made. Increasing instructional costs will make it difficult even to maintain the present program.

I am sure that it was the intent of Congress to ultimately make available the entire amount authorized in this law when the States could show the need for the service. If the need in my State of Mississippi is any criterion, all of the States of the Union can show a very definite need for these funds. The officials in charge of the program assure me that requests are piling up for additional programs, vocational agriculture, home making, trade and industrial guidance services. All of these various types of vocational training have contributed immeasurably to the great progress which my State has achieved in the past few years. If we are to remain sincere in our protestations of belief in the continued progress along these lines, we should carry out the directive of the Seventy-ninth Congress when it passed the George-Barden Act.

I have been informed by the State director of vocational education in Mississippi that 130 new projects in public schools could be established if the State were to receive the full benefit of the original appropriation for vocational authorization made under the George-Barden Act. Fifty-nine of these schools are for white students and 71 are for Negro students. In addition to these new projects, expansion could be made of existing programs in other schools, such as the adult-education program which gained a firm foothold in the State during the war and is now widely supported as a peacetime proposition. In 1948, 81,905 people, whether in school or out of school, received organized instructions in some phase of vocational education financed by Federal, State, and local funds.

My greatest interest in vocational education in Mississippi is in the program of the Future Farmers and Home Makers of America. I am sure that all of the members of the committee are in some degree familiar with the work of this organization, but I would like to emphasize my great admiration for the various benefits toward producing a better way of life in rural areas that the Future Farmers and Home Makers of America have developed. This program works in full cooperation with the 4-H Clubs of the extension services, and both are vitally necessary for the economic and cultural welfare of our rural areas.

One of our great problems in this country is to interest our rural youth in remaining on the farm and bettering our general agricultural conditions. We could do this only if we teach them how to take advantage of their opportunities, and there is no better way to do this than through such organizations as the Future Farmers and Future Home Makers of America. In the past few years much has been made of the threat to our American way of life that is offered by the philosophy of communism and other subversive doctrines. I believe that this type of alien philosophy will never gain a foothold in our rural areas if we have such wholesome programs for our youth as that provided by the Future Farmers and Future Home Makers.

At this point, I would like to submit as a substantiating exhibit a chart showing the progress of the vocational education program in Mississippi since 1920 and also showing the expansion of the program which could be put into effect if the maximum authorization provided by the George-Barden Act were appropriated. I would also like to submit a letter which I received sometime ago from two young officers of the Future Farmers chapter at Caledonia, Miss., which gives just a brief suggestion of the great work accomplished through this program.

The problem that you gentlemen of this committee face in determining what funds can be appropriated for the various services provided in this bill is a very difficult one, but I would like to emphasize again to you my very strong belief that no wiser use of Federal funds could be made than in appropriating the full authorization of the George-Barden Act for vocational education, and increasing the appropriation for health grants to States to that approved by the Budget Bureau. In each case very careful and deliberate study resulted in this authorization and recommendation. The Congress approved the George-Barden Act with the thought that a contribution would be made toward the better development of our rural life. The Bureau of the Budget certainly must have had strong substantiating evidence that the Public Health funds would be wisely spent. I hope that the committee will see fit to grant the requests that I have made with reference to this bill.

Veterans' Hospital Construction Program in Pennsylvania

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before a subcommittee of the Senate Committee on Labor and Public Welfare, in which I objected to the

proposed curtailment of the veterans' hospital construction program in Pennsylvania, as recommended by the President.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

No more sacred obligation rests upon the American people than the care of the veteran who by reason of his war service is disabled or otherwise incapacitated.

We have been most generous in providing benefits for the veterans who are in good physical condition and in good health. We have made available to them educational advantages, vocational training, preference in government employment, and many other proper rewards in grateful recognition of their service to their country. Numerous other benefits have been proposed.

But to my mind we could adopt no more shameful course than to neglect the man who wore the uniform of the armed services and now faces a life of suffering and hardship because of injuries or other physical or mental impairment.

For many years I have been a firm and active advocate of economy in government. I have resisted unwarranted spending on countless occasions. But I shall never support any proposal in the name of economy which would deprive the disabled veteran of adequate hospital care and the best possible medical and other professional skill.

The proposed curtailment of the hospital construction program as it applies to Pennsylvania is to my mind a glaring example of disregard of the needs of the veterans.

It is another step in a policy which has discriminated against Pennsylvania and has failed to provide hospital facilities in the same proportion to its veteran population as has been provided in many other States.

Long waiting lists of veterans needing hospitalization in Federal tubercular and mental institutions are a tragic story in Pennsylvania.

The Commonwealth of Pennsylvania, by taxing its facilities to the limit, has been able to admit into State institutions a small percentage of those whose need is greatest.

As a result, 1,173 veterans are in State mental institutions and approximately 100 veterans have been admitted into State tubercular sanitariums. Others are in municipal and county institutions.

Bear in mind that these veterans are properly the wards of the Federal Government. They are entitled to and should receive from the Federal Government the best in professional and institutional care.

The revised construction plans of the Veterans' Administration call for the complete elimination of a proposed 200-bed general medical hospital at Harrisburg. A proposed 1,000-bed hospital at Philadelphia has been cut to 500; another medical and surgical hospital at Pittsburgh is reduced from 1,200 to 750 beds; and a mental hospital at Pittsburgh, planned for 1,250 beds, has been cut to 1,000.

This means that 1,400 beds are to be eliminated, or more than one-third of a total of 4,455 beds allocated to Pennsylvania in the new construction program.

Apparently this was based on a straight, across-the-board reduction in the whole program.

I contend it was a totally unrealistic approach to the problem. In my opinion it was done without taking into consideration the imperative needs of Pennsylvania veterans.

Apparently the cut-backs were applied only where actual construction had not yet been started.

In other words, in States where hospital construction was under way, no cut-backs were made. States in which delays had been encountered were penalized, even though the delays were caused by revision of plans or other circumstances that may have been unavoidable.

Pennsylvania's share in the building program had advanced to a point where sites had been acquired and all plans completed so that construction could have been started in a short time.

I will not take the time of the committee to repeat the figures which reveal the desperate situation with regard to veterans' hospitalization in Pennsylvania.

But I assure you that the statistical information that has been assembled and will be presented here will show that Pennsylvania has been made the victim of unfair discrimination.

I earnestly hope that this subcommittee will review the situation and will restore to Pennsylvania the hospital-construction program as originally planned to meet the pressing and immediate needs of our veterans, whose care, as I said before, is our most sacred obligation.

Development of the National River Systems

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a very able discussion of the theory underlying the planning and construction of multiple-purpose dams and the development of our great river systems in the interest of the general national welfare.

I have reference to the column "Washington Calling" by Marquis Childs, which appeared in the Washington Post, Saturday, March 12, 1949. The article is entitled "Hoover Commission Boomerang."

There being no objection, the article was ordered to be printed in the RECORD as follows:

[From the Washington Post of March 12, 1949]

WASHINGTON CALLING

HOOVER COMMISSION BOOMERANG

(By Marquis Childs)

Behind the hydroelectric dams that have been built on several of America's great rivers since 1933 is a concept of the general good. Specifically, they were intended to provide flood control and navigation for all the people of the region.

For that reason part of the cost was charged up by instruction of Congress to benefits which would not directly return any revenue to the Treasury. This is a fact that private-utility propagandists either refuse to recognize or deliberately distort. Utility propagandists are constantly holding up the cost accounting of TVA alongside that of private utilities, although in the broader sense they are not comparable at all.

This same implication runs through the task-force reports of the Hoover Commission on public power. As was told in this space, those reports, not yet released, have stirred deep differences among Commission members.

That is unfortunate, since the detailed and lengthy studies contain many suggestions for improving the operation of these vast Federal enterprises. The danger is that the good will be lost sight of in the heat of argument over what are essentially political issues. Some Commission members have expressed the fear that the controversy may cut across all the valuable work that the Hoover group has done in trying to prune and pare down the luxuriant jungle growth of Government.

In a report prepared for the Commission by A. B. Roberts, consulting engineer of Cleveland, Ohio, it is estimated that multiple-purpose river-valley projects will cost $40,000,000,000 in the next 20 years. The report suggests that the total cost may be even larger because of "extensive shipments of steel, power-plant equipment, and supplies for aid to Europe." Then the author of the report says:

"In view of the continuing burden of taxation indicated by the trends shown above, it is believed that now is the time to reappraise the accomplishments to be anticipated from multiple-purpose projects. Once under way they are almost impossible to eliminate. Unless the Congress and the taxpayers consider carefully the implications of these trends of Federal expenditures, they may, without even realizing it, throw upon themselves and their children a continuing and perhaps an ever-mounting burden * * *."

Millions of Americans paying their income tax this week feel strongly about the volume of Government spending. But it is doubtful that the place to begin cutting is on projects that are in considerable part self-liquidating and that contribute so largely to the wealth and welfare of the Nation.

Only in an economy that is expanding and growing can the burden of taxation for European aid and to maintain a strong America be sustained. Once you stop expansion, you run the risk of mounting unemployment and further curtailment in a downward spiral.

This is a lesson some people never seem to learn. As was shown in the controversy between TVA and the private utilities, private operators would never have built TVA's dams and power projects. Equally clear is the fact that without TVA power the country could never have produced the aluminum for 50,000 planes a year in the war.

The great new projects in the Pacific Northwest are providing employment for thousands of newcomers who were attracted by jobs in war plants. Without this resource of power, there might be serious unemployment.

As the specialists for the Hoover Commission point out, there is much overlapping and duplication in the Government approach to flood control, navigation, and power. The Army engineers, the Bureau of Reclamation, the various power administrations, the Department of Agriculture, all have a hand in it.

Senator JAMES MURRAY, of Montana, has now introduced a bill to create a Missouri Valley Authority which would have as its province the great basin of the Missouri and its tributaries. That river valley is now being developed on a sort of share-the-work basis by the Army engineers and the Bureau of Reclamation.

Perhaps the valley authority is the correct way to get the most out of every Government dollar spent. But the argument should be primarily one of method and means. We are too rich, or, if you will, too poor, to let our assets or soil and water go wasting to the sea.

Missouri Valley Authority—Article by Former Representative Jamieson, of Iowa

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief column taken from the weekly news sheet called "The Window Seat," of March 30, 1949, edited by former Representative W. D. Jamieson, of Iowa.

In his introduction to his weekly comments on national affairs he says:

As I sit in my law office window in the Southern Building and look out (in my mind's eye) over the White House toward the balance of the country things occur to me of passing interest.

Because of his prior experience as a national legislator and continuing study of American economic puroblems, Mr. Jamieson is in a position to give his readers sound advice on public questions. This particular column has to do with the proposed establishment of a Missouri Valley Authority for the control and development of the Missouri River Basin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACCUSED

A splendid lawyer friend in the Midwest (who doesn't read the Window Seat) says I am accused of being for the establishment of the MVA. He says: "I refuse to believe this as I think you regard a law that requires honest and efficient administration, with a reservation of sovereignty in the people, too much to be guilty."

My law friend of near a half century standing, if you had been reading the Window Seat for the last 10 or 15 years you would know I am red hot for MVA, and have been.

AND HERE'S WHY

Because, being patterned after the Tennessee Valley Authority, to be run the same way, it will—

1. Be as honestly and efficiently handled as any other Government agency I know, and more so—in the interest of the people—than any private utility I know.

2. Be more under the complete sovereignty of the people, in cooperation with the State, county, and community governments, than it could be under State or private control.

3. Be zealously concerned with all phases of the benefits to the public—flood control, power, drainage, irrigation, conservation, recreation, fishing, and in making the whole Missouri Valley blossom like a rose.

4. Cooperate with all interests of the local communities for their benefits.

5. Save consumers untold millions in money—TVA now charges domestic consumers 1.56 cents per kilowatt-hour, while the average charge by the private utilities, all over the United States, is 3.01 cents per kilowatt-hour.

TVA now does all these things and more.

Another point—th people have to put up the billions upon billions of dollars to do it, so they should get the benefits.

Enough reasons for one sitting?

AM I RIGHT?

I'll leave it to you to judge. If I'd leave it to $65,000 a-year-plus Lobbyist Smith, who is paid by the private companies and who works here trying to do everything possible to kill MVA, and who will see this article never fear—he would say I'm as nutty as this fellow the officer arrested for being tanked up:

Judge: "Tell me, officer, just what made you think this man was drunk?"

Officer: "Well, judge, he staggered out of Ryan's bar, walked to the fire-alarm box on Elm Street and put a penny into it; then he looked up at the town clock and exclaimed, 'My sakes, I'm 10 pounds overweight.' "

Should We Build a "Wall" of Radar?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Walter Angrist which appeared in the Minneapolis Morning Tribune of January 25, 1949, entitled "Defense vs. Economy."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFENSE VERSUS ECONOMY—SHOULD WE BUILD A "WALL" OF RADAR?

(By Walter Angrist, of the Minneapolis Tribune editorial page staff)

Nations have been building walls between themselves and outlander enemies for centuries. The Great Wall of China was erected to repel raiders from the Asiatic heartland. The Maginot Line rooted its "wall" into the earth as a concrete series of bastions facing Germany.

But history has proved in every case that more than the strength of a wall was needed to face and turn away invasion.

Now it is proposed for the United States that a "wall" of radar be established along both our coasts and across the Arctic top of the Americas.

In his annual report as Secretary for the Department of the Air Force, W. Stuart Symington has asked top legislative priority for a continent-wide radar warning system to supply that element which he says is so sadly lacking in the American defense picture.

Just what did Secretary Symington have in mind when he outlined this air raid warning program?

Basically, it would consist of a network of land-based radar units, interconnected and linked with radar-equipped picket vessels far out to sea.

In the Arctic wastelands of north Alaska and Canada only land-based units would operate.

Also sought by the Air Force chief to round out his warning system are air defense control centers linked with Canadian and American civilian defense watchers as well as with the radar "wall."

Disregarding cost in terms of matériel and personnel and considering only military expediency, Symington's plan has great merit.

Since his Air Force is assigned the duty of defending America in the air, as well as carrying the offense back at any attacking enemy, he reasons properly that some warning system must be operating in conjunction with his defense plans.

But what of the economic expediency of Symington's program?

How much will his plan cost? Is the cost justified in terms of the over-all needs of the defense establishment?

Can the Nation's economy stand anything beyond what the President has indicated as the defense limit ($15,000,000,000) for fiscal year 1950?

The exact costs involved can be determined if and when Congress gives the Symington proposal consideration.

With the present range of a radar unit limited to about 300 miles, the number of units which would have to be in operation 24 hours a day to cover two coastal lengths and the northern continental fringe would run the cost into staggering billions.

And we as a nation are not able to maintain a reasonably healthy peacetime economy if the Nation's budget suddenly skyrockets by the billions for added defense features.

Then what is the solution? How can the need be met without dangerously increasing the budget load?

Symington's chief, Secretary of Defense Forrestal, will do well to weigh the Air Force proposal against severe strain on national economy and production.

Forrestal, others concerned in the military high command, and Congress will be employing sound over-all planning techniques if they refuse to shop for the most elaborate solution to air-raid defense.

A relatively few strategically located radar bases, plus similarly limited picket vessels, plus other alert at-sea Navy units could be a less expensive but fairly effective application of Symington's ambitious requests.

Such a set-up would be lifted beyond the fairly effective stage by adequate overseas intelligence.

As an added element of air-raid defense in times of strained world relations, all American and Canadian planes, commercial as well as military, should be required to carry IFF (identification, friend or foe) equipment.

These devices automatically indicate on radar plots whether approaching aircraft are friendly or presumed enemy.

This, linked with filing of commercial-flight plans, would complete the picture of a minimum, but functional continent-wide warning system.

Where Is the Money Coming From?—Editorial From the Pittsburg (Kans.) Headlight

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Where, Oh, Where?" from the Pittsburg (Kans.) Headlight of March 23, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE, OH, WHERE?

Legislatures, including our own here in Kansas as well as the National Congress, are

continuing to provide for the spending of money. Busy statesmen have been finding new functions to be carried on new additions to government, new welfare ideas, and increased compensation, all of which calls for money by the millions of dollars.

Once again, we desire to ask where is the money going to come from? Is there to be no limit to the amount of money our legislative bodies are arranging to spend? It is not that many of the things involved are not desirable. It is not that some of the beneficiaries are not entitled to more pay. It is not that extensive repairs are unnecessary here and there in governmental structures. If it is granted that every dime spent by the Kansas Legislature, for instance, will be wisely spent, we still have a paramount question that legislators everywhere seem to be overlooking and for why we know not. That question:

Where is the money going to come from?

We are not asking an argumentative question. We are asking for information. Why do not our statesmen, national and State, rise in their wisdom and fairness and advise the people how they expect to get all the money they are arranging to spend?

The men and women who are trying to operate business enterprises and industries and others who are working for salaries and wages and running farms have a deep interest in the money that is being spent by statesmen. They have a right to be interested. They have a right to be informed. They are putting up the money that the statesmen are spending.

Reduction in Prices of Petroleum Products—Resolutions of Board of Directors, National Oil Marketers' Association

EXTENSION OF REMARKS
OF
HON. GUY M. GILLETTE
OF IOWA
IN THE SENATE OF THE UNITED STATES
Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted by the board of directors of the National Oil Marketers Association in Washington, D. C., March 24–25, 1949, on the subject of reduction in prices of petroleum products.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED AT SPRING MEETING OF BOARD OF DIRECTORS, NATIONAL OIL MARKETERS ASSOCIATION, MAYFLOWER HOTEL, WASHINGTON, D. C., MARCH 24, 25, 1949

I. *Resolved,* That the public interest requires a general reduction of prices of petroleum products at all levels, beginning with the price of crude oil, and any governmental action that seeks to maintain present prices of crude oil is an attempt to enrich a few oil producers at the expense of the general public.

II. *Resolved,* That the action of the Texas Railroad Commission in reducing the production of crude oil in order to maintain high crude oil prices is an unwarranted interference with the natural laws of supply and demand by government.

III. *Resolved,* That the almost simultaneous increase in gasoline prices and reduction of fuel oil prices does not indicate that prices to the public are governed by the natural laws of supply and demand.

IV. *Resolved,* That a copy hereof be sent to the Attorney General of the United States for investigation as to possible violations of the antitrust laws in the manipulation of petroleum prices.

A Threat to Child Care

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. CURTIS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement of the Right Reverend Monsignor John O'Grady:

A THREAT TO CHILD CARE IN THE UNITED STATES

(Statement of Rt. Rev. Msgr. John O'Grady, secretary, National Conference of Catholic Charities, before the Ways and Means Committee of the House of Representatives, considering H. R. 2892, the Public Welfare Act of 1949, March 10, 1949)

For more than a hundred years the care of dependent, neglected, and delinquent Catholic children has been the basic concern of Catholic charities in the United States. In the early days of the church in this country large numbers of Catholic children were reduced to dependency by the premature death of their parents. Most of the child-caring institutions of the church were built in order to save these children to the faith. In most of the large centers in the United States local governments were willing to contract with Catholic institutions for the care of Catholic children. They recognized that the care of children away from their own homes is a very serious responsibility. The agency that assumes this responsibility is really taking over the responsibility of parents. The same type of child-care programs that were developed by the Catholic Church were also developed by other religious denominations.

In many of the larger communities in the United States it has been a recognized principle for a century or more that Catholic children should be turned over to Catholic agencies for care, that no other agencies can provide the type of religious care that they need. In communities in which Catholic agencies were not developed, large numbers of Catholic children were turned over to governmental or other agencies and were lost to their faith.

Catholic and other religious organizations set up for the care of children away from their own homes have made far-reaching contributions to the welfare of orphaned and neglected children. They have constituted a large sector of American charities and social welfare. They have saved millions of dollars to the taxpayer by their devotion and self-sacrifice. Any effort or movement that undermines the great work of our religious organizations and institutions engaged in the care of orphaned and neglected children would be a serious threat to all the best traditions of American social welfare.

PROPOSED LEGISLATION A SERIOUS THREAT TO CATHOLIC CHILD WELFARE

The Ways and Means Committee of the House of Representatives has now before it a bill (H. R. 2892) which is a serious threat to Catholic child welfare in the United States. If the bill is passed, it will mean that large numbers of Catholic children now under the care of Catholic agencies will have to be turned over to public departments. These children are in Catholic institutions and Catholic foster homes. The church has expended millions of dollars in developing facilities for their care. Government has nothing to gain and everything to lose by discontinuing the use of these facilities and developing purely governmental programs. Such programs would cost the taxpayers several times the amount that is expended in the care of the children at the present time, and would offer no guaranty that the children would receive comparable care. We know the difficulties that governmental agencies now endeavoring to take care of Catholic children experience in finding Catholic homes. In these agencies we almost invariably find a considerable number of Catholic children being cared for in homes not of their own religious faith.

WHAT AMERICAN COMMUNITIES WILL LOSE BY THE WEAKENING OF RELIGIOUS AGENCIES

Proposals for turning over to governmental agencies children now under the care of Catholic charities would mean the weakening of Catholic charities in a large number of communities in the United States. The same is true of other religious child-caring agencies. The work of Catholic and other private children's institutions has been the basis of the powerful appeal made by voluntary social work in the past. If the work of caring for these children is turned over to government it will mean that all private child care in the United States will lose a very large part of its appeal. We know very well what this appeal has done in keeping the spirit of Christian charity alive among all citizens. How can we maintain our spirit of Christian charity, our spirit of brotherhood, without the appeal of the great charitable institution for the care of children.

HOW H. R. 2892 WILL INJURE CATHOLIC SOCIAL WORK

The bill before the House of Representatives will injure Catholic work for dependent children because:

First, it proposes to set up a public program for the care of children in every community in the United States. This program will replace a Federal program that was designed to provide governmental assistance to child-welfare programs in rural areas and areas of special need. When legislation for the present program was being discussed in 1935, the thought was that the large centers already had well-developed child-care programs and that it was unnecessary for the Federal Government to interfere with these programs; that the Federal Government should confine itself to areas that were not reached by existing programs, namely, rural areas and areas of special need. The bill now under consideration would bring the Federal Government with all its rules and regulations into every community in the United States to set up governmental programs for the care of children.

Secondly, the bill provides that the States must formulate complete State-wide plans for child care, but it really tells them what kind of plans they must have. If, for instance, as happens at the present time in a number of cities, a juvenile court has been committing children to Catholic agencies, this plan will have to be discontinued because the bill says that in every community there must be one agency that has entire responsibility for the care of children. In certain communities the care of children is under a different civilian agency from that charged with the administration of public assistance. Under the proposed legislation this agency would have to become part of the public-assistance agency. If a community has decided to use voluntary organizations for the care of children, it will have to set up a public program.

The proposed legislation, H. R. 2892, provides that each and every State must contribute State funds to programs for child care. Now in a number of States it is questionable how far State funds can be used to purchase from religious organizations services for the care of children. This is very clear in the State of Pennsylvania. All funds for the care of children in Pennsylvania are now local funds. Under the proposed legislation Catholic and other religious child-care programs in Pennsylvania would be practically wiped out. While this problem has been solved by constitutional amendments in New York and by court decisions in some other States, it will still be difficult to maintain the purchase of service for the care of children with State funds in a considerable number of States.

The proposed legislation will affect not only the work of local voluntary agencies in the care of children to whose support local public funds are being contributed; it will affect the entire program of Catholic and other religious agencies. It envisages a complete governmental program that will virtually take over the entire field of child welfare. It proposes that governmental agencies take over the care of unmarried mothers, the placement of children for adoption, day care for children, all types of counseling service for both families and children. It really presents to the American people a false picture of the actual reality. We have already had a considerable amount of experience with the work of governmental agencies in dealing with families that are receiving aid to dependent children. Very little social service is being done in this field. Now it would seem more appropriate if the governmental agencies would achieve effective work in the areas in which they are now engaged before entering into new areas.

The enactment of H. R. 2892 would really be an announcement to the American people that the Federal Government now proposes to enter into the entire field of child care in the United States. The broadcasting of this news will in itself do a great damage to voluntary child welfare under religious auspices. The Government will be virtually announcing that it is ready to undertake a program for which it does not have the necessary facilities.

GOVERNMENT MIGHT CONCENTRATE IN AREAS TO WHICH IT HAS ALREADY BEEN COMMITTED

Under the Social Security Act the Government provides assistance to the States for the care of children in their own homes and in the homes of close relatives. The purpose of this aid to dependent children program is to assist in the maintaining of family life. But in spite of the vast sums expended by the Government for the care of children in their own homes we find that more and more homes are being broken up and that the facilities of agencies engaged in the care of children away from their own homes are overtaxed. When Federal assistance was first granted to the States for the care of children in their own homes it was expected that there wouldn't be as much need for the care of children away from their own homes. What has happened, however, is that the governmental agencies engaged in the care of children in their own homes are not providing any program of service for the children or their families. It would be more desirable for the governmental agencies to concentrate in this field rather than to seek a wider field. If they have not developed the necessary competence in caring for children in their own homes how can they expect to develop the necessary competence for the more delicate task of caring for children who have been deprived of care of their own parents

The Social Security Act provided assistance to the States for child care in rural communities and in communities of special need. But after 13 years we do not yet have any adequate programs of child care in rural communities and in many of our mill and mining towns. After 13 years this field still remains to be cultivated. It is more challenging now than it was 13 years ago.

THE FEDERAL GOVERNMENT AND GENERAL RELIEF

In his message to the Seventy-fourth Congress in 1936 President Roosevelt said: "The Federal Government must and shall quit this business of relief. Work must be found for able-bodied but destitute workers. I am not willing that the vitality of our people be further sapped by the giving of cash, of market baskets, or of a few hours of weekly work cutting grass, raking leaves, or picking up papers in the public parks. We must preserve not only the bodies of the unemployed from destruction but also their self-respect, their self-reliance, and courage and determination."

At the time that President Roosevelt spoke, the social-security program had just gone into effect and this program was designed basically to protect the workers against the hazards of life by a series of benefits based on rights. This was in harmony with the report of the President's Committee on Economic Security made in 1935: "The measures we suggest all seek to segregate clearly distinguishable large groups among those now on relief or on the verge of relief and to apply such differentiated treatment to each group as will give it the greatest practical degree of economic security. We believe that if these measures are adopted the residual relief problem is apt to be diminished to a point where it will be possible to return primary responsibility for the care of the people who cannot work to the State and local governments." The measures that the President's committee recommended included old-age insurance and unemployment compensation—which were to provide the foundation-stones of a social security program—and supplementary programs including aid to the states for old-age assistance, aid to dependent children, and aid to the blind.

THE PROGRAM AFTER 13 YEARS

The programs recommended by the President's Committee on Economic Security have been in effect for 13 years. We recognize that old-age and survivors insurance has not developed as rapidly as might have been expected. In the meantime, the public assistance programs have expanded at an enormous rate and as they have expanded the problems of administration have become more and more complex. Anybody who believes that the basic problems of administering aid to dependent children under the Federal-State program has been solved, is really not looking squarely at the facts. Some of us have reserved our criticisms of local administration because we were afraid that it would lead us into a worse situation. We had always expected that aid to dependent children would solve many of the problems of child dependency and delinquency, but we have been disillusioned. We have been disillusioned by the lack of service in families receiving aid to dependent children benefits. On the local level we are endeavoring to get our Catholic groups to participate more actively in the administration of aid to dependent children. These volunteers have to keep constantly calling the attention of the workers in the public agencies to the wholesale neglect of the children in families receiving aid to dependent children. We hear well-founded complaints about mothers who call up the officers of local agencies to ask how much they could get if they divorced their husbands. Sometimes they find that they can get more in the way of public assistance than they can get from their husbands.

Many people all over the country are asking: How soon are we going to find a substitute for this program of aid to dependent children? People have asked me: Why don't you study the Canadian family-allowance system and promote it in the United States—something that is more consistent with the dignity of the individual and the family than our present program? It was our hope that the extension of old-age and survivors insurance would take up an increasing number of mothers with dependent children. And it has taken up a considerable number. At the present time, 570,592 children are receiving survivors' insurance benefits. On the other hand, a total of 1,176,198 are receiving aid to dependent children. It was hoped that under aid to dependent children child dependency would decrease, but we find that the problems of child care confronting our agencies are increasing rather than diminishing.

I have talked rather frankly during the past 6 months to many county officials charged with the administration of aid to dependent children in various sections of the United States. I have found very few among them who were satisfied with the program. They told me that they were bound by rules and regulations coming to them from the Federal Government, and they presumed from Washington. Among the ordinary citizens in these countries I found great dissatisfaction with the administration of the program. I am honestly convinced that year by year the program is going to become more expensive and more demoralizing to American families. I feel that it is necessary to speak thus severely at the present time, when it is proposed to carry the same program into much larger areas. I feel that the farther away we get from the present public-assistance philosophy in serving the needs of American families the better it will be for all concerned. What was back of this statement that the late President Roosevelt made to the Congress in 1936 that the Federal Government must and shall quit the business of relief? I talked to Harry Hopkins and his associates many times about this question. Why did the Federal Government get out of the business of direct relief? The answer was: Costs kept on increasing; standards kept going down.

OLD-AGE ASSISTANCE CONTRASTED WITH OLD-AGE AND SURVIVORS INSURANCE

According to the latest figures, we have some 2,469,000 persons receiving old-age assistance in the United States as compared with 2,254,000 receiving old-age and survivors insurance. I know that generally speaking the people receiving old-age assistance get more than those receiving old-age and survivors insurance, but does this mean that they are satisfied? On the contrary, I find very few people receiving old-age assistance that are really satisfied. It has been our hope that more and more of the aged will be covered by old-age and survivors insurance as much more economical and much more in harmony with the dignity of the American citizen. Here we have a benefit to which the individual has contributed. He considers it his own and in accepting it he feels no loss of dignity and respectability. One cannot fail to note, however, that the ordinary aged person who has been self-supporting all his life is very sensitive about receiving old-age assistance.

The ordinary workers and the ordinary farmers receiving old-age assistance are really products of the depression, but I do not believe that the ordinary middle-class citizen of our country is going to be satisfied with old-age assistance as a means of protecting himself against the hazards of old-age dependency.

A GUIDING PRINCIPLE OF THE FEDERAL SECURITY AGENCY

Implicit in the whole thinking of the Federal Security Agency is the principle that the Federal Government is fundamentally responsible for getting to every American family everything that it needs on the basis of a careful and detailed budget analysis.

Apparently the Agency does not accept the guiding principles of the Social Security Act. It is leading us more and more toward the concept of needs in contradistinction to a certain minimum protection against the basic hazards of life.

Let us think for a moment what this basic responsibility for supplying all the needs of American families on a budget basis would mean for the National Government and for the people of the United States. It would mean an analysis of the resources and needs of every family that needed assistance. On the basis of this principle several million wage-earning families would have to be included. As a matter of fact, at the present time many families receiving Aid to Dependent Children are getting more than their neighbors who are working for wages. Of course one can see that these families are in need. They can't supply all their budgetary requirements. This again assumes that they are bankrupt, that they do not have any initiative left. One might ask, what will this general subsidizing of the wage system do to wages? Will it not encourage lower wages? Again, what will it do to families? How far will it tend to demoralize family life in our country? How far, moreover, is it practical to apply the type of needs test indicated, to four or five million families. The resources and needs of families change from time to time. We would have to have a continuous study of families in order to apply the needs test effectively. It would require an army of workers to carry out the principles of the needs test.

MOUNTING COSTS OF PUBLIC ASSISTANCE

I am sure that the Ways and Means Committee of the House of Representatives will want to understand something of the costs of an enlarged public assistance program. For the fiscal year 1945–46 Federal grants in the amount of $439,132,000 were certified for these programs; for the fiscal year 1946–47 Federal grants in the amount of $613,831,000 were certified, for 1947–48, $775,602,000 was certified. The estimate for 1949 is $842,961,114 and for 1950 it is $1,078,000,000. It should be remembered that these increased expenditures have been made in a period of relatively full employment. One can readily appreciate what will happen if the Federal Security Agency extends its effort to the larger fields contemplated under H. R. 2892. One can readily hazard a guess that the relief expenditures of the Public Assistance Division will exceed $2,000,000,000 a year, and they will not stop at this point. They may well be increased by another billion within the next 5 years.

NATIONAL CONTROL OVER FAMILY LIFE IMPLIED UNDER H. R. 2892

I would like for a moment to examine another very important implication of the responsibility which the Federal Government assumes under H. R. 2892. Under this proposed legislation, the Government is virtually going to guarantee every family what it needs on a budget basis. Every family that receives assistance under this formula will virtually be taken over in bankruptcy. What does this mean from the standpoint of national control over family life?

I know that the Federal Government has been trying to get away from this responsibility and it has been trying to get the State and local governments away from a serious consideration of its implications. Charges and countercharges have been made in community after community in the United States that the funds given to families have been abused and that the money given for the support of chilren is not used for their benefit. I have heard these charges made in one city after the other, but the agents of the Government keep saying, "We are not responsible for the way in which families live. We have no responsibility for the way they spend the money we have given them." This certainly is a new concept in the administration of relief. I suppose it is an effort to get away from trying to control the lives of the families, but what are we going to do about the situation? We cannot overlook charges of neglect of children in large numbers of families that are supported by Government funds.

The difficulties to which we have pointed will be greatly multiplied if the Government should take over the larger part of the relief field.

When the Social Security Act was passed by the Congress grants-in-aid were provided to the States for certain well-defined areas of public assistance, including the aged, dependent children, and the blind. It was assumed that as the insurances developed the need for these categories would decrease. Nobody envisioned the expanding program that has been developed, especially through years of full employment. From the way in which the program is developing now it is beginning to look as if the Federal Security Agency wants to change the entire pattern; that it wants to give us a relief program rather than an insurance program. Many people have been raising this question. They have stated also that most of the thinking about social security has been done by a few people in the Agency. If one disagrees with them, he is supposed to be very unorthodox, to say the least.

Some of the advisers of the Federal Security Agency on the outside do not make any secret about their desire to substitute a complete public-assistance program for a social-insurance program. This, indeed, would be a great tragedy for the American wage earner and for the American people as a whole.

I know some of our conservative brethren believe that relief is less expensive than social insurance; they believe that relief will be governed largely by local standards, but once we get the program envisaged by H. R. 2892, I doubt if assistance administration will be any longer determined by local thinking.

VARIATIONS BY STATES IN THE NUMBER OF PERSONS RECEIVING OLD-AGE ASSISTANCE

There is a great variation in the number of persons receiving old-age assistance in the States. Of every 1,000 persons over 65 years of age in Louisiana, 791 receive old-age assistance; in the District of Columbia, 47; in Oklahoma, 593; in Delaware, 58; in New York, 97; in Colorado, 464. This must mean that there is a great deal of variation in the needs test as it applies in the States mentioned. The needs test as interpreted by the Federal Security Agency means a complete study of the resources and needs of the individual and the making of a definite budget. However, the legislatures in States having a large number of persons receiving public assistance write a good part of the needs test. They try to define what resources are. They say that an insurance policy of a certain amount should not be considered; that a house valued at less than a certain amount should not be considered; that cash of a certain amount should not be considered. In other words, there is a struggle on between these States and the Federal Security Agency. The States want a pension; the Agency wants assistance. Now in the program envisaged by H. R. 2892 all the Federal grants are based on a general-assistance category. It would be very interesting to watch the reactions of the States that have set up what is virtually an old-age pension. Would they be satisfied to return their old-age assistance recipients to a general-assistance category where they would receive only the same consideration and have to pass the same needs test as the recipients of general relief?

PROVISIONS FOR MEDICAL SERVICES

H. R. 2892 would set up a system of grants-in-aid to the States to provide medical assistance which is defined as medical services for needy individuals, provided by the State agency through payments to persons, agencies, or institutions furnishing or procuring such services, but does not include medical services for individuals living in a public institution except as patients in a medical institution * * *.

This would bring the Bureau of Public Assistance of the Social Security Administration and the State departments of welfare into a very large sector of medical care in the States. It is based on the assumption that medical services in the States at the present time are very inadequate and that grants-in-aid are necessary to enable local agencies to secure medical care for relief clients.

On the whole, medical care in communities in which there are adequate facilities, is fairly good. In the communities that I visited in Wisconsin, Iowa, Nebraska, and Illinois during the past 6 months, I found that medical care is looming very large in local expenditures. The greatest difficulty I find in other areas is the lack of adequate facilities for medical and hospital care in local communities. The hospital facilities are inadequate; the medical facilities are inadequate. Assuming there is an unmet need, there is a question whether this need should be met by adding to the responsibilities of State and local welfare departments. Isn't this definitely a health problem? We already have two divisions of the Federal Security Agency now interested in health, namely, the Public Health Service and the Children's Bureau. They are working with the States on health problems. Will this put a third division in the health field? Moreover, it is fairly well recognized today that our first step in any health program is to provide more adequate local facilities. We need more hospitals, more nurses, more doctors. We need more health centers in areas in which there are virtually no hospitals and no facilities for medical care.

One may very well ask today, in view of the general debate on a national program for medical and hospital care, whether the best approach from the standpoint of the Federal Government in dealing with the medically indigent would not be to concentrate for the time being on providing more facilities. I believe that it can be said that in the ordinary communities in the United States, outside of certain areas that do not have facilities, the medically indigent are receiving better medical and hospital care than the ordinary wage earners.

GENERAL PUBLIC ASSISTANCE ON THE FEDERAL LEVEL UNNECESSARY AT THE PRESENT TIME

At the end of 1948 some 33,000,000 people were covered by unemployment compensation. This number of people, therefore, with their families, were protected against the hazards of temporary unemployment. In three States—California, Rhode Island, and New Jersey—we have provision for temporary disability due to ill health. The chances are that before the adjournment of their present sessions a number of other State legislatures will have made provision for temporary disability. We have also in the States, rehabilitation programs which take care of a sector of the physically handicapped. We have some 15,000,000 people included in veterans' benefits of one kind or another. We have the prospects of larger coverage under old-age and survivors insurance to cover the permanently handicapped. We have the prospect of a large housing program that will help to improve the standards of life of large numbers of people in the United States. We have voluntary health protection of one kind or another covering 53,000,000 people. There is no reason therefore why the Federal Government should embark on a greatly expanded program of public assistance which will cost the people of the United States another billion dollars.

I am sure that nobody is looking ahead to public assistance as a means of protecting the workers against the hazard of continuous unemployment. We do not need to look ahead to any continuous unemployment during the next year. Even if we should have a large volume of unemployment, public assistance would be the poorest remedy we could devise for it. We learned that from our experience in the early 1930's.

It will be much sounder for the Federal Security Agency at the present time to look ahead to ways and means of improving the administration on the Federal level of the various benefits committed to its charge. A great deal of improvement is needed especially in the administration of aid to dependent children. There is general dissatisfaction throughout the country with this program as it is presently administered. The Federal Security Agency should devote itself to studying ways and means of preventing the abuses that have arisen, of providing more adequate service for the families receiving aid to dependent children, and of preventing that process of deterioration which is affecting the lives of so many of these families at the present time.

Under title V of the Social Security Act, the Children's Bureau is charged with the administration of child-welfare services in rural areas and areas of special need. The Children's Bureau might very well now study its experience during the past 13 years. Why is it that there is so little constructive social service in our rural communities? The Children's Bureau is expending considerable money at the present time in the training of workers in the field of child welfare. How many of these workers are qualified to deal with the programs with which the Children's Bureau is charged? How many of them are qualified for work in the country? If this work in the country is not undertaken by the Federal Security Agency through the Children's Bureau, it may be that the people of the United States will have to devise other means of providing welfare programs for the large number of families that need service in our rural communities. We cannot go on without a more adequate social-work program in the country. The Farm Security Administration made an excellent beginning in this field but its operations have been restricted and now there is nothing to take its place.

I am sure that our American wage earners look to a social-insurance program that is in harmony with their dignity, that gives them a certain amount of protection against the major hazards of industrial life. They do not want a needs test. They do not want to admit that they have to be taken over in bankruptcy. They have a great deal of initiative and resourcefulness on their own. They want to be able to walk into the social-insurance office and secure the benefits that are coming to them as a matter of right; benefits to which they and their employers have contributed; benefits which are really a continuation of their wages during the periods in which they can no longer work.

Co-Ops and the AMA

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the March issue of the Pacific Northwest Co-Operator entitled "The Right To Face a Problem."

There being no objection, the article was ordered to be printed in the RECORD as follows:

CO-OPS AND THE AMA—THE RIGHT TO FACE A PROBLEM

(The American Medical Association has received the following statement from the Cooperative Health Federation of America. Pacific Northwest Cooperative Health Federation is represented on the national board by D. A. Northrop, of Seattle)

There exists in most of the States legislation of a nature which permits the medical profession to sponsor and operate prepayment plans and denies the same right to our organizations.

Generally speaking, these State laws permit only physicians to organize a plan, or provide that the governing board must be controlled by a majority of physicians, or provide that no plan can operate unless with 51 percent or more of the eligible physicians in a given area participating.

In one fashion or another, these laws of various types are an effective bar to formation of plans by our groups. We believe that the American Medical Association and its affiliated bodies should cooperate with us in the removal of these legal barriers, which, in the first instance, were sought and obtained by medical societies.

These legal barriers place the medical profession in the position of saying, in effect, to the people: "You may have prepayment plans but only upon our terms; you may have a common pool of funds provided by your payments which will aid you in a medical crisis, but you shall have nothing to say about the management of these funds; you may budget for the cost of a limited type of medical care, but you shall have nothing to say about the rates you will be charged."

We doubt that the medical profession realizes the full implication of these restrictive laws and the reaction which they engender among large numbers of people in all the organizations which are attempting to solve the problems of paying for good medical care. We doubt whether the profession has considered that those medical society plans which are operating under an exclusive privilege enjoy a position not given to any other segment of the American economy.

In most of these plans there are none of the checks and balances which apply to other forms of enterprise through the usual application of free competition, democratic choice, or Government regulation.

In short, these plans enjoy a monopoly for all practical purposes, and their management, with few exceptions, is not subjected to the voice or vote of the investors or to effective supervisory control by a governmental agency, such as State insurance departments exercise in the control of rates, benefits, and investments of insurance companies in the interest of the public.

As the full implication of the monopoly feature of these medical society plans is becoming understood by the consumers of medical care, their increasing resentment is understandable. This type of monopoly is obnoxious to our sense of democracy and contrary to the American concept of free enterprise.

It cannot be said that these plans are nonprofit in the common meaning of that term (as distinguished from the legal meaning) because the physicians are the sole recipients of the funds and at the same time sole determiners of the rates.

We feel strongly that the medical profession must come to realize that we laymen have had successful experience in business administration and possess the ability to operate these plans on a sound basis. We need only point to our record in the administration of hospitals and other allied institutions.

While we insist on our right to organize for the useful purpose of forming prepayment plans and operating their business functions, we are equally determined to have the professions assume full responsibility for all professional and technical aspects of administration and the maintenance of the physician-patient relationship.

A barrier, second only to restrictive legislation, exists in the form of restraints imposed by medical societies against physicians to participate in our plans. These restraints take several forms.

Some of these physicians, although duly licensed and well qualified, are denied admission to the local medical society or are expelled from it for the sole reason that they are participating in one of our plans. The result of this drastic action is to deny to the physicians free access to hospitals and consultative services, as well as the usual privileges of his profession.

This reacts against his professional security and his social standing. His effective application of medical science having thus been partially destroyed, his patients (who have freely chosen him) are deprived of the full medical services which the licensing laws were designed to afford them.

Another type of discrimination on record is the denial of the right of a fully qualified physician-applicant to take his specialty board examination solely because of his affiliation with one of our plans.

These and other forms of restraints are being practiced in sections of the United States. An over-all survey of this situation shows that these restraints are not isolated instances, but follow a pattern which appears to us to be national in scope.

The resentment on the part of some consumer groups has reached the point where criminal and injunctive actions have been sought. Recent examples are the injunction actions now in process in Oregon and California, both of which are based upon the law resulting from the conviction of the AMA by the United States Supreme Court in 1941.

We feel strongly that in our democratic system there should be freedom of experimentation for all types of voluntary prepayment plans, of whatever sponsorship, so long as they adhere to acceptable standards.

We believe that the medical profession as well as all of our groups have arrived at the point where there is mutual agreement that prepayment is a sound basis for the budgeting and paying of the cost of medical care. There may be some differences as to the method and control.

However, we believe that it should be readily agreed that none of us has a blueprint we could call an ultimate goal. We are yet in the pioneering stages of a worth while and publicly acceptable idea. The medical profession, we feel, would agree that their plans are not a fully satisfactory answer.

Our groups are sponsoring and operating many types of plans, none of which completely satisfies us as the final answer. In this situation, the historical American approach is to experiment. As the years pass, public acceptability will ultimately give us the best answers.

Just as we feel that medical-society plans should be free to develop and seek public acceptance, so are we demanding that the consumer-sponsored plans should have the same opportunity, free from the artificial restraints imposed by class legislation and professional discrimination which now stifle free experimentation.

How a Bill Makes Its Way Through Congressional Mill

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. ELLIOTT. Mr. Speaker, the Post Office Clerk, official magazine of the United National Association of Post Office Clerks, has in its March 1949 issue a most interesting and readable article on how laws are enacted by the Congress of the United States. The article perhaps contains some minor inaccuracies, but its clarity and brevity commend it. I include it as a part of my remarks:

HOW A BILL MAKES ITS WAY THROUGH CONGRESSIONAL MILL

During the opening months of the Eighty-first Congress a record number of bills have been dropped into the hopper.

But only a tiny fraction of all of the bills introduced will ever get on the statute books.

For example, during the first 75 Congresses, covering 150 years, 726,933 bills and joint resolutions were introduced. Of this number, 60,142 became law. That is a little less than 8½ percent.

In this session as in all others, too, a heavy proportion of the bills passed will be so-called private laws, dealing with individuals, and also one-shot acts for public monuments, holidays, park lands, and the like.

PITFALLS ARE MANY

It's a long course, strewn with many pitfalls, that a bill takes before it gets congressional approval and becomes a law of the land.

Where does a Congressman get all the bills he introduces in the course of a session?

Well, he gets them from a lot of places. Actually, he may initiate very few himself. And one paradoxical fact is that many of the bills which Members of the House and Senate introduce come from sources which often are most vocal in declaring that there are too many laws. It all depends, it seems, on what kind of laws.

Anyway, bills sometimes are initiated by Members, and they are either written by them or, more frequently, by that branch of the Capitol's highly competent permanent professional staff which specializes in legislative drafting.

Then there are bills which Members introduce at the request of Federal departments and agencies. And there are still others, in most sessions the greater proportion of all, which Congressmen introduce at the request of individuals and organizations, and for purposes incredibly varied. Some of these proposals are sound and eventually become law. Some which are not sound also become law if sufficient pressure is exerted in their behalf. Still others reflect seemingly unlimited imaginative flights on the part of their hopeful authors. But the good and the bad, the big and the small, all follow the same course.

There is a different procedure for introducing a bill in each branch.

In the House, a Member takes his bill and literally drops it into the hopper. That's a wooden box located on the clerk's desk in front of the Speaker.

A Senator rises and waits for the Presiding Officer to recognize him. Upon being recognized, he announces that he is sending the bill up to the desk.

The first thing that those who run the legislative machine have to decide is what committee shall handle the bill. In most cases that isn't a difficult decision since the rules afford a clear guide; but occasionally there are close questions and these are decided by the Speaker or by the President of the Senate.

THE JOURNEY BEGINS

Clerks record the title of the measure and give it a number. After each day's grist is collected and prepared the bills are delivered to the Government Printing Office. The printed copies are returned to the House and Senate document rooms.

In committee most bills first go to a subcommittee. Here, in due course, or not, as the case may be, the bill is considered and its pros and cons given preliminary thorough investigation. Many, but not all, of the hearings so widely publicized are actually subcommittee rather than full committee hearings.

The subcommittee goes over the bill and on the basis of what it has learned it either changes, approves, or kills it. The latter result it can achieve simply by taking a very long nap on it; and thousands of bills every session never get beyond subcommittee reference, either by failure to act or by direct negative vote.

On relatively rare occasions action will be taken to force a bill out of committee. It is possible for House Members to take a bill away from a committee by petition and bring it on the floor for action. A Senate committee can be discharged from consideration of a bill through a motion passed by a majority of the Senators present.

If a bill is given a subcommittee O. K. it then goes to the full committee where the same things can happen. If the committee gives its approval, also, the bill then goes to the House.

UNANIMOUS CONSENT

There's a quick way to get action, used chiefly on minor bills. They're put on a separate calendar for action by unanimous consent. There is only one drawback to that method, and it's a serious one, namely, that objection by a single member can upset the applecart.

In the case of all major legislation there is still another hurdle, the Rules Committee. However, the Eighty-first Congress in one of its first acts took away from that body a good deal of its erstwhile life-and-death power over legislation. Now, if the Rules Committee fails to report on a measure within 21 days or does so adversely, the bill can be called up for House consideration by the chairman of the committee in which it originated. And the Speaker is required to regard such a request as a point of highest privilege.

If the Rules Committee gives the green light, it comes out with a resolution which states the conditions under which the bill is to be handled on the floor—length of time for debate and the like. That resolution then is acted upon.

In the Senate there now is no limitation on debate. Thus, the filibuster is practicable only in the Upper House. Speeches on the floor do not, in general, have great influence on the course of legislation. Most important determining factor is the decision of the majority party to support or oppose; and facts brought to light in committee.

As soon as a bill is passed by either House or Senate it becomes technically an act. But it is still commonly referred to as a bill.

NOW IT'S AN ACT

When the House has passed a bill it achieves a new dignity. The version as finally approved—and it may have gone through dozens of transformations in the process, often being completely revised with the single exception of the enacting clause—it is printed on fancy light blue paper and is signed by the Clerk. In the Senate, acts are printed on fine white paper and are signed by the Secretary.

Then the House which has passed the bill sends it to the other side of the Capitol. It once more may go through the same committee-hearing routine. In both Houses committee decisions as to the disposition of bills always is made in executive session.

In many cases the House and Senate approve measures in which there are differences. That happens almost always on major legislation. This means the measure must go to conference. The presiding officers of each Chamber appoint conferees who then try to iron out their differences. If language has been approved by both House and Senate it is not subject to change by the conferees. The conference report goes before the two Houses for action.

These reports are not subject to amendment. They must be voted either up or down, as is. If they are rejected the conferees are given instructions on the disputed points. Sometimes it takes quite a bit of doing to reach final agreement.

Let's say, now, that Congress finally has finished all of its work on a given piece of legislation by approving the conference report. What's next in the long journey?

First there is a routine for getting the bill to the White House. That responsibility rests on the House which initiated the legislation.

A new bill is printed, without numbered lines, and single large sheets are used, with printing on one side only. The President of the Senate and Speaker affix their signatures. The signed bill then is sent to the White House by messenger and is promptly popped into a safe. At the same time, duplicate but unsigned copies of the measure are distributed to the Budget Bureau, Justice Department, and other agencies for review and then are returned for or against Presidential approval.

SIGNING CEREMONY

When the President signs the official copy it becomes law. On very rare occasions a bill awaiting signature has been lost in the White House mazes, but that happens so infrequently it becomes a page 1 story when it does. Most bills are signed without fanfare. Sometimes, however, a ceremony is made of the signing and the President will give the pen to one who has been closely identified with the legislation from its inception. Often more than one pen is used—and there are cases when half a dozen and more have been distributed to persons watching the ceremony.

If the President vetoes the bill it is returned to the House which initiated it. The measure must muster a two-thirds majority in both House and Senate to become a law without the President's signature. If the President doesn't sign a bill within 10 days after it reaches him—not counting Sundays—it becomes a law anyway. But if Congress adjourns in the meantime the measure does not become law unless he signs it within the 10-day limit. This is known as a pocket veto.

But even after approval the long hard row still isn't over for the legislation. It must be sent to the State Department where it receives a number and is published as a so-called slip law, which means that it is printed individually. After each session these are consolidated and bound in a volume called the United States Statutes at Large. All permanent laws of general application currently in force are included in the Code of the Laws of the United States of America and supplements issued after each regular session of Congress.

VARIOUS RESOLUTIONS

Many persons are confused by the different types of resolutions adopted by Congress. A joint resolution is acted upon by both Houses and must have Presidential approval, and has the force of law. A concurrent resolution

does not require Presidential action. It's not a public law but deals with issues over which House and Senate have jurisdiction concurrently. A simple resolution is the action of one House on matters of special concern to it. Bills are either public or private—the former dealing with matters of general application (such as taxes, the Marshall plan, appropriations for Federal departments), the latter having to do with persons, many of them involving compensation in varying amounts.

The investigation and planning that go into a major piece of legislation is far more complex than is generally realized, and those whose duties bring them into constant contact with Congress have a genuine respect for its members, a cross-section of the 148,000,000 people of America.

The Struggle for American Air Power

EXTENSION OF REMARKS
OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit, without prejudice on my part to any one named, an article by William Bradford Huie entitled "The Struggle for American Airpower," published in the current issue of the Reader's Digest, for the month of April 1949.

Mr. Speaker, in the present unsettled world situation and in view of the discussions and great interest of the Congress and the people of this country in our Air Force, I believe that it is appropriate to place this historical narration of our air power in the RECORD.

The article follows:

THE STRUGGLE FOR AMERICAN AIR POWER

(By William Bradford Huie)

In this the fourth year after Hiroshima, the battle to make America strong in the air is still being fought in Washington. On the side of the Air Force, as always, are the men of vision, backed by the American people. Arrayed against them are the Maginot minds, the yearners for yesterday, the men who oppose any innovation which may lessen their own prestige.

No thoughtful citizen need be confused in this conflict. To understand it, one has only to leaf through the record. In each and every year since 1908 the air visionaries have been right, the obstructionists have been tragically wrong. The black-and-white record would seem to indicate that the antiair generals and admirals who have been wrong for 40 years are still wrong today; that the airmen who have been proved right by events are still right in their determination to build the world's best air force to defend our country.

The record begins in 1908 when the Army General Staff yielded to the public air craze and ordered the first military airplane from the Wright brothers. The airplane cost $30,000. One of the specifications was that it "could be easily taken apart and packed for transport in Army wagons." It was assigned to the Signal Corps, and Lts. Benjamin D. Foulois and Thomas E. Selfridge began learning to fly it.

After Lieutenant Selfridge died in our first military aerial accident, Lieutenant Foulois was for 2 years our only pilot. The Signal Corps allowed him $150 a year for repairs; when he spent an additional $300 out of his own pocket to keep the airplane flying, the corps refused to reimburse him and censured him for wastefulness.

From this experience, Lieutenant Foulois concluded that for air power to have much future in America it would have to escape the Signal Corps and be recognized as a separate service in the Army. Not as a separate corps—aviation could never hope for equality with the Infantry or Cavalry—but just as a separate service to these majestic arms.

By 1913, Lt. Hap Arnold and other enthusiasts had joined Foulois in agitating for this Army Air Service independent of the Signal Corps. Although Bleriot had flown the English Channel and C. P. Rogers had made the first United States transcontinental flight, the Signal Corps denounced the agitators as visionary. Brig. Gen. George P. Scriven, Chief Signal Officer of the Army, testified before a congressional committee:

"The future of aeronautics in the United States Army should rest with the Signal Corps. Aviation in military affairs is merely an added means of communication, observation and reconnaissance."

General Scriven, West Point '78, member of the Fourth Philippine Expeditionary Force, decorated for gallantry in action against the Boxers, was a brave and patriotic American. His opinion in 1913 was not to be disputed by a few impertinent shavetails. But we know now that General Scriven lacked vision. Lack of vision can cause a country to buy the wrong weapons, it can force men to die needlessly, it can deliver a free nation into slavery.

General Maurice Gamelin, proponent of the Maginot line, was a brave and patriotic Frenchman. But his lack of vision wasted his nation's substance on the wrong weapons, gave it an unjustified sense of security and delivered it to its enemy.

The United States Army attitude toward air power had this effect: When war came in 1917, the Nation which had invented the airplane had virtually no air service. By throwing hundreds of millions of dollars into the wind, we tried to catch up; we bought 5,000 airplanes from Britain, Italy, and France; 196 third-rate American machines were at the front when the war ended—and this type of "flaming coffin" had killed more of our own men than Germans.

Even so, our airmen, led by Brigadier General Billy Mitchell, returned from France with the vision of American air power. They knew, however, that if they were to have the chance to develop a great, long-range, striking air force they would have to be free of the General Staff of the Army and the General Board of the Navy. For these were the citadels of the infantry and the battleship, which would always oppose the development of any air means not auxiliary to them.

When Billy Mitchell was rebuffed in his efforts to see President Wilson, he launched his appeal directly to the American people. He began shouting that an airplane could sink a battleship; he badgered the Army and Navy for a demonstration.

To this, Secretary of the Navy Josephus Daniels, speaking for the Navy General Board, responded:

"The idea is so damned nonsensical and impossible that I am willing to stand on the bridge of a battleship while that nitwit tries to hit it from the air!"

Congress, over the objection of the Army and Navy, ordered a bombing experiment on the German battleship *Ostfriesland*. The ship was placed 60 miles off the Virginia capes, and on July 19, 1921, Billy Mitchell and his men made the first hits on her with the light 230- and 550-pound bombs specified by the Navy. When these bombs failed to sink the ship, General Pershing, who was on a nearby observation vessel, shook his head and said:

"I doubt if I shall waste more time on this croquet game. He can't possibly sink the ship. And even if he could, how would airplanes ever take part in a naval battle in the middle of the ocean? Where would they come from? Is anybody foolish enough to believe that boats could take squadrons of airplanes within the zone of a thundering battle between superdreadnaughts? Mitchell did a good job for us in France, but at best it was just scouting in the air on a grand scale."

General Pershing's opinion so impressed Secretary of War Weeks that the two of them left the scene and were sipping refreshments at Old Point Comfort the next afternoon when Mitchell's men, with their primitive bombsight, dropped a 2,000-pound bomb on the *Ostfriesland* and sank her in 25 minutes.

Observers shouted uncontrollably as the *Ostfriesland* went down. A few of them wept.

Back at Langley Field, carried to his quarters on the shoulders of his cheering men, Billy Mitchell declared solemnly: "Boys, in the war to come, God will be on the side of the heaviest air force. Don't forget it. Keep your eyes on the sky."

A few week later, Secretary Weeks wrote to a friend:

"I'm not going to be stampeded by a circus performer. Mitchell is putting a lot of foolish ideas in the heads of the people, and one of these days we may have to get rid of him. We'll stick to the Army on the ground and the battleships on the sea."

In April 1923, Mitchell sent his farseeing recommendations about Alaska to the War Department. In these he predicted that flights could soon be made across the top of the world. Admiral William A. Moffett, Chief of the Bureau of Naval Aeronautics, commented: "There could be no better indication than this fight of fancy that Mitchell's mind is beginning to crack."

In September 1925, the Morrow board investigated the air agitation. Maj. Gen. John L. Hines, Army Chief of Staff, testified:

"I am of the opinion that the Air Service, because of limitations imposed by natural laws on the operation of aircraft, will always be limited as to radius of action."

Maj. Gen. Hugh Drum, Deputy Chief of Staff, declared:

"I see no reason why the range of a military airplane should ever exceed 3 days' march by the infantry. An independent Air Force, if adopted and maintained, can only contribute to disaster and defeat in war."

Against this sort of blindness, Billy Mitchell the man of vision, testified:

"Why should the United States be prevented from developing this priceless attribute, the airplane, in which we are entirely capable of excelling through our initiative, inventive ability, raw materials, industrial developments, and the personal characteristics of our people? In reality, air power is our basic means of national defense. We need great long-range airplanes to strike the enemy first. In the war of the future, to sit down on one's own territory and wait for the other fellow to come is to be whipped before an operation has even commenced. The only defense against aircraft is by hitting the enemy first just as far away from home as possible."

One month after the Morrow board hearings General Mitchell was court martialed for his explosive statements. His trial was one of the most shameful episodes in American history. Col. Sherman Moreland pointed a trembling finger at Mitchell and shouted: "Expel from our midst anybody not meeting the requirements of patriotism."

Maj. Allen W. Gullion, after comparing Mitchell to Aaron Burr, threw his arms into the air and screamed: "Throw him out. We ask it in the name of the American people

whose fears he has played upon, whose hysteria he has fomented, whose confidence he has beguiled, and whose faith he has betrayed."

During this speech one of the American people got up, gritted his teeth, walked over to Mitchell, clapped him on the back, and said: "The people are with you, Billy. Keep punching. You can rope them yet." That was Will Rogers.

But General Mitchell was crucified just the same. He was crucified for being right. All he had wanted was to develop a powerful long-range air force for the protection of his nation.

It was only after his death that a grateful Congress awarded Billy Mitchell a special gold medal of honor.

For 9 years after Mitchell's martyrdom, the Air Service lay becalmed. Charles A. Lindbergh flew the Atlantic in 1927; Admiral Richard E. Byrd flew to the South Pole in 1929; by 1932 Pan American was operating 4-engine 36-passenger Sikorsky liners; in 1933 United States commercial air lines pioneered 38,200 miles in air-mail routes; but our military aviation remained bound hand and foot.

Our men of vision drew the plans for big, far-ranging bombers, but the General Staff would not include such planes in budget requests. Congress would have voted the money; Congress has always been air-minded; Congress has rarely cut an Air Force appropriation. But the General Staff would not ask for money for long-range airplanes; and the air officers being subordinate, could not.

And then the Government invalidated the air-mail contracts and ordered the Army to carry the mail. It was a 1934 version of the Berlin airlift, but with an opposite, tragic result. Col. Hugh J. Knerr, who directed procurement and maintenance for the air-mail venture, later testified:

"I knew we were going to kill good men and pile those flying junk heaps on a dozen mountaintops. For years we had had almost no money for equipment. We didn't have an airplane that had more than half of its instrument board operating. To carry tons of mail across the continent in the worst winter in years we had to rely on old Keystone trainers and pursuit planes. We had no radios and could get none from the Signal Corps.

"We had no sooner begun the flights than the crashes began to pile up. It could not have been otherwise. We were working with planes at least 7 years behind the commercial planes. Not only were the aircraft deficient but the personnel equipment was so poor that the pilots suffered frozen feet and hands and some of them got pneumonia before it was possible for us to accumulate ordinary decent clothing. Our men flew over the Allegheny Mountains through snow and ice in open cockpits without even a pair of fur-lined boots."

The air-mail fiasco, of course, shocked and angered the Nation. The immediate result was the investigation by a War Department special committee known as the Baker board. Written pleas were filed by 536 officers of the Air Corps imploring "some sort of freedom from the General Staff so that we may be able, with the help of Congress, to develop long-range striking air power for the protection of the United States."

The Baker board testimony remained secret for 15 years until it was released for this reporter.

Maj. Gen. Paul B. Malone, commander of the Third Corps Area, testified:

"In the Argonne the German Air Corps was operating against us with 5,000 planes * * * we were frequently bombed * * * but my total losses from the hostile air corps consisted of three artillery horses. * * * We cannot rely upon the Air Corps as a principal weapon; the Army must recognize that victories are won and lost largely by the bayonet. * * * I cannot conceive of placing the Air Corps in any position other than in direct subordination to the commander on the field of battle."

Apply this reasoning to the following two facts:

1. It took the German ground forces more than a year to reach and lay siege to Stalingrad, not counting the hundreds of thousands of casualties incurred on the march—330,000 men were lost on the field of battle alone—and Stalingrad survived.

2. Today one long-range bomber could take off from Labrador and, 16 hours later, destroy Stalingrad—with the risk of just 16 American lives.

Maj. Gen. V. H. Moseley, commander of the Fourth Corps Area, told the board:

"Too many of these young air officers have the idea that when war comes they are going to fly off somewhere else and leave the Army and do something more or less spectacular. They must be made to understand that they are going to stay with the Army and try to help the Army with a victory."

At Hiroshima the Air Force did fly off and do something more or less spectacular. The Army was 600 miles away.

Brig. Gen. John H. Hughes, Assistant Chief of Staff, testified:

"The War Department holds that the Air Corps cannot be developed to the detriment of ground troops; and, since the bounds of air imagination are apparently limitless, the General Staff must exercise a paternal restraint on the Air Corps."

How many Americans died in inferior planes in World War II, it might be asked, because of this paternal restraint? It was not until 1943 that we had a fighter plane which could match the German Focke-Wulf, yet the plans for both the P–47 Thunderbolt and the British Spitfire were available to us as early as 1937. The General Staff's paternal restraint prevented their development.

Admiral William H. Standley, Chief of Naval Operations, said:

"Naval aviation cannot replace any arm of the fleet or any functions of the fleet. It extends the range of scouting by cruisers; it extends the range of effective gunfire; it increases the area which can be covered by patrol work; but it does not supplant the regular Navy in any of these functions."

Such was the testimony of the men entrusted with responsibility for our future military security just 7 years before Jap planes wrecked our fleet at Pearl Harbor.

In hearings before the Baker board in 1934, Rear Adm. Ernest J. King, Chief of the Navy Bureau of Aeronautics, testified:

"It is an indisputable fact that no potential enemies can reach this country except by way of the sea * * * transoceanic air attack on the United States is not to be feared now nor in the future."

Today, of course, it is common knowledge that a transoceanic air attack is the only way an enemy could make a major assault against this country.

When the Baker board had concluded its deliberations, it issued a report which expresses the views of the General Staff down to the beginning of World War II. Here are the principal conclusions:

"1. The limitations of the airplane show that the ideas that aviation, acting alone, can control the sea lanes, or defend the coast, or produce decisive results * * * are all visionary, as is the idea that a large Air Force is necessary to defend our country."

All this, of course, is ridiculous in the light of events. In 1941, Winston Churchill announced that the Luftwaffe had "closed the sea lanes of the Mediterranean to the British Fleet." In 1942, at Coral Sea and Midway, the two pivotal naval battles of World War II, not one of our surface ships got within 50 miles of an enemy ship, while our airplanes sank five carriers and one heavy cruiser, killed 4,400 men and forced what was left of the Jap Fleet to withdraw. Only a few years before, our Chief of Naval Operations had asserted that aviation would be good for little more than an aid to cruisers in scouting.

"2. In future wars, aviation will not be a decisive factor."

The B–29's were instrumental in knocking Japan out of the war, making an invasion unnecessary, and saving untold American lives. Similarly, our bombing of Germany was certainly the decisive factor.

"3. The fear that has been cultivated in this country by various zealots that American aviation is inferior to that of the rest of the world is * * * unfounded."

Seven years later Maj. Gen. Claire Chennault said to his Flying Tigers: "Men, you've got to be good when you fight a Jap Zero with an American P–40. For when a P–40 meets a Zero, you are outnumbered 3 to 1."

"4. The board realizes the hold aviation has on the public * * * but the board feels that it would be unsound to sacrifice the fundamental principles upon which the security of a nation rests in order to take advantage of a temporary public psychology."

Here you have the obstructionists in the role of protectors of the people's purse from the people's folly. Yet, had our military decisions in the 1930's been made by house-to-house poll alone they would have been more intelligent than the decisions insisted upon by the professional military.

"5. The War and Navy Departments have opposed every proposal to unite them in a single Department, each realizing that it is far better to concentrate on normal and customary missions rather than adopt a system based upon occasional and short-lived operations."

Those two words "normal" and "customary" really sum up the 40-year opposition of the Army and Navy hierarchies to the airpower "visionaries." In a world being changed by the airplane, the Army and Navy have believed that it is "far better to concentrate on normal and customary missions." This they were doing on the morning of December 7, 1941. That they were right might be disputed by the 2,400 men who died at Pearl Harbor that day.

"6. It is the hope of this board that the present study may be accepted as the basis for the development of the Army Air Corps for the next 10 years and thus terminate the continuing agitation which has been so detrimental to harmonious development."

There you have it. The General Staff didn't like agitators; they wanted to pursue their normal and customary missions in harmony. They didn't believe in air power; they only wanted a few short-range planes; and they were going to retain veto power on plane types to make certain that the air officers didn't waste the gullible public's money on long-range airplanes.

But there was one man of vision on the board. He appended this brief minority report:

"I believe that the future security of our Nation is dependent upon an adequate Air Force. This is true at the present time and will become increasingly important as the science of aviation advances and the airplane lends itself more and more to the art of warfare. I am convinced that the required Air Force can be more rapidly organized, equipped, and trained if it is completely separated and developed as an entire separate arm. If separation is deemed undesirable at this time, I recommend an Air Force as part of the Army but with a separate budget * * * and removed from control of the Army General Staff.—James H. Doolittle."

Testifying before the Senate Military Affairs Committee in November 1945, General Doolittle declared:

"The 10 years during which the Baker board expected its rulings to endure expired on July 18, 1944. On that date, thanks to the scrapping of the Baker board's report and every idea in it, the Army Air Forces comprised some 13,000 four-motored bombers; and these bombers, which the Baker board would have outlawed, were pounding our enemies with 78,000 tons of bombs a month."

The Baker board, however, did toss one sop to the temporary public psychology. It recommended the creation of a General Headquarters Air Force; and the formation of this force in March 1935 was the first step toward building an organization for air power in the United States. Prior to this date all the airplanes we had were attached to the various corps areas, most of them in observation squadrons. The General Staff now conceded that there might be a brief aerial phase in a war while the ground armies were being mobilized. So the air officers were allowed to form this organization which was to maintain itself in readiness.

In command of the General Headquarters Air Force was Maj. Gen. Frank Maxwell Andrews (killed in Iceland in 1943). His chief of staff was Colonel—now Major General—Knerr; and on his staff was Lt. Col.—now Gen.—George C. Kenney. These three officers inherited Mitchell's mantle, and they led the fight for strategic air power during the critical years from 1935 until the outbreak of the war. They were almost completely defeated.

The first effort of the General Headquarters Air Force was to create an organization for air power; the second was to create an instrument for air power. This instrument was the B-17, the Flying Fortress, the first American four-motored bomber, and it cost the shocking sum of $230,000.

The idea of the B-17 was derided by most of the General Staff and by almost every admiral in the Navy. After the plane itself arrived at Wright Field, Ohio, in the summer of 1935, a large delegation of brass went from Washington to watch a test flight.

The size of the airplane was startling. Many officers doubted it could get into the air. The crowd milled around it as it was being made ready for flight; they shook their heads; they placed bets as to its performance.

"Colonel, what possible excuse is there for spending $230,000 on such an airplane?" an admiral asked an Air Force colonel.

"Well, sir, we need a plane with range enough to destroy the sources of enemy power," the colonel replied. "We could destroy cities and factories. We could build machines like this into a new instrument of power—air power—and we could exert our national will through air power, just as sea power has been used in the past."

The admiral shook his head and walked away. And that night as he rode back to Washington he may have felt justified, for the first B-17 had crashed on the take-off and burned to cinders in full view of the crowd. Two men lost their lives.

The explanation for the accident was simple and ironic. A small locking-pin holding the tail controls had failed to disengage; the plane could only stall, crash, and burn. All the brave plans for American air power almost crashed with it.

General Andrews and Colonel Knerr came back to Washington, hat in hand, to beg the General Staff for money to build more B-17's. Before the crash the Air Corps had requested 65; now they were given authorization for 13.

By 1937 the GHQ Air Force had tested and eliminated the "bugs" from its experimental B-17's. Now it was ready to take the next step forward in the creation of American air power. General Andrews and Colonel Knerr submitted a program to the War Department. It called for the construction of 108 B-17's; for the enlarging of Pacific fields so that the airplanes could operate to the Philippines; for the training of crews. Cost of the program: $21,000,000 a year.

The air officers knew that this program would meet fierce opposition, first in the War Department and then from the Navy. For the Navy didn't want any big, land-based bombers operating in its domain, the Pacific. So the air officers decided to seek the help of another temporary public psychology by forcing the Navy, if possible, into another sensational airplane-battleship test. The agitation was successful and President Roosevelt ordered the tests for the summer of 1937.

The tests were elaborate, progressive, and thorough. They culminated in an attack on the battleship *Utah* off the California coast. The bombing squadron found the *Utah* in the fog and attacked it with sensationally successful results—which are still kept secret to this day. The reports were submitted to the President and the air officers waited for the support which would certainly come when the President announced the results.

But the President didn't announce the results. Newsmen and Congressmen begged for them. The Air Corps did everything possible to get the results announced. The War Department did not oppose the announcement. But the admirals persuaded the President that to release the results would not be in the best interest of the Navy, and so the results were suppressed—and remain suppressed.

The B-17 program was now in extreme jeopardy. The General Staff appointed Brig. Gen. George R. Spalding to be chief of all Army supply policy. He handed down the War Department's decision on American air power. In essence, it stated that the War Department could not approve the program for developing the B-17's. Instead, the Air Corps was ordered to concentrate on a light, less expensive type of bombardment plane.

As a result of this directive only one B-17 was ordered in 1937. On the day that Hitler marched into Poland in 1939 the original 13 developmental B-17's constituted our entire strategic bombardment force. The type of thinking which produced this directive sent the United States into World War II with its hands tied.

After this decision, the GHQ Air Force was deprived of its principal reason for being. Yet, 1938 was the year of Munich. Both Germany and Russia were testing their new air weapons in Spain. Our commercial air lines were flying both the Atlantic and Pacific and logging more than 68,000,000 miles domestically with DC-3's and other improved planes. But our only existing agency for military air power was hamstrung.

Colonel Knerr was retired from the Army; General Andrews was reduced in rank to colonel; Colonel Kenney had been banished to an infantry school. The Army had learned exactly nothing since the crucifixion of Billy Mitchell.

That same year—1938—the Chief of Naval Operations, Admiral Leahy, asked Congress for $150,000,000 to build two new battleships. He told Congress that battleships were the best of modern weapons. President Roosevelt told a press conference that a battleship's antiaircraft guns were the obvious antidote to the airplane. Gen. Douglas MacArthur, in the Philippines, told a correspondent: "Japan will never attack us here as long as our main fleet is in the Pacific."

And in September 1941 Senator George Norris stood before Congress and declared:

"I think a little war with Japan might not be bad for us. The Navy could blockade the island and the war would be over in a few weeks. It would train our men for the more difficult task in Europe."

America in 1941 had the same false sense of power that France had in 1939. The admirals had assured us that as long as we had our battleships we were safe and powerful. We had no air power because the vested interests had prevented its development. Our men of vision were the prisoners of the Maginot minds who, except for our geographical advantage, would have delivered this Nation into slavery just as France was delivered.

Today in Washington we have the same old struggle. We are arming for one particular purpose; we hope that through strength we can dissuade the Russians from war. In all of our arsenal there is but one means which the Russians have cause to fear: our long-range, strategic air power and its atomic bombs. Reason, therefore, would seem to dictate the concentration of our war money on the development of our air-atomic advantage. Each year our bombers should become faster, longer ranged; our crews should become more efficient; our bombs should become deadlier.

If there is to be a world war III we must win the brief aerial phase or we may not be alive to prosecute any further phases. If we can win the brief aerial phase there will be time to prepare whatever means are necessary for other phases.

The American people want this air-atomic strategy for peace. Congress wants it, too. But the vested interests want the so-called balanced power. They want the billions to be divided approximately equally: $1 for air power, $1 for infantry divisions, $1 for warships. They want to cut our 70-group air program to 48 groups, not to save money but just so we can spend more money on the Army and Navy. To impede the development of strategic air power, the Maginot minds are working just as hard in 1949 as they worked in 1925.

The Army in 1925 had a regulation which prevented the expansion of any one arm to the detriment of the others. The air service was balanced with the cavalry. Billy Mitchell asked them then: "Suppose a department store operated on the principle that it couldn't expand its hardware department without similarly expanding its ribbon department?"

The only balance the United States needs is a balance against Russia; and we need to maintain the particular arms which can assure us that balance.

There is no reason why Americans should be unduly impressed by the opinions of generals and admirals of the last war as to what is going to happen in the next war. Most of the general and admirals of World War I spent the rest of their lives trying to discredit the military airplane. They seemed to think that the airplane would always remain an unwieldy, stick-and-wire kite suitable only for artillery spotting. They were wrong; but their influence so retarded the development of our military aviation that it was very late in World War II before our planes became really effective.

Now we have generals and admirals of World War II who are insisting again that air power has reached its maximum effectiveness. Let us always remember that, on the record, they and their predecessors have been wrong about air power for 40 years. Their short-sightedness has cost us blood, travail, and tears. Why should we be distracted from our goal by their counsel now?

Admiral King has said: "Transoceanic air attack is not to be feared now nor in the future." Well, buggy-whip makers didn't think the automobile would amount to much, either. And if the development of the automobile had been controlled by buggy-whip makers, it wouldn't have amounted to much.

Transoceanic air warfare is the warfare to be feared in the future; any citizen on the street knows this is true. We now have airplanes which can take off from this continent, fly to Moscow, drop an atomic bomb and return. In possession of our Government now is a report from a group of our ablest scientists which states, without reservation, that within 10 to 20 years we can have an atomic bomber which can fly nonstop around the earth at the speed of sound.

We shall never have this bomber, however, if we allow its development to be controlled by our Maginot minds, our exponents of balanced power. But we can have it—and we can have the hope of peace and survival for ourselves and our children—if we and our Congressmen support our men of vision.

Wages in the Lumber Industry

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed by Mr. G. A. Metzger, secretary-manager, Willamette Valley Lumber Operators Association, to Hon. Maurice J. Tobin, Secretary of Labor, relative to wages paid in the lumber industry.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WILLAMETTE VALLEY LUMBER OPERATORS ASSOCIATION,
Eugene, Oreg., March 9, 1949.

The Honorable MAURICE J. TOBIN,
Secretary of Labor, Department of Labor Building, Washington, D. C.

DEAR SIR: I have recently read portions of the transcript of the House Committee on Education and Labor hearings held in connection with the minimum-wage bill known as committee print of January 20, wherein you are quoted as saying, among other things:

"I would say if there is one line of business in America that can afford to give triple wages and still make a profit it is lumber. I will say they have one of the lowest wage rates of any industry in the country. It has gone from $70 a board foot to $200 a board foot, and I think they even get away with capital gains."

That statement, Mr. Secretary, was obviously based on fancy instead of fact—prompting me to suggest that your reply should have been in that instance as it was in others: "That is another question I would have to ask the Bureau of Labor Statistics to develop."

According to a January 18, 1949, release of the Bureau of Labor Statistics the August 1948 straight-time average hourly earnings in the Douglas-fir industry were $2.10 for loggers and $1.63 for sawmill workers. This gives an industry average of approximately $1.80 per hour, based on the prevailing employment ratio of about two sawmill employees to one logging employee. I find it difficult to believe that you advocate tripling those wages.

Next, let's consider your statement that lumber has "one of the lowest wage rates of any industry in the country." The following data, taken from the January 1949 issue of the Monthly Labor Review, shows some average hourly earnings, which include overtime, shift differentials, etc.:

October 1948:	
All manufacturing	$1.366
Durable goods	1.415
Iron and steel	1.525
Nonelectrical machinery	1.519
Transportation equipment, except autos	1.578
Autos	1.685

Your own figures show that Douglas fir wage rates are higher than any durable-goods-manufacturing industry in the country.

Another thing: The Consumers' Price Index has risen from 129.3 on August 15, 1945, to 170.9 on January 15, 1949—a total of 41.6 points. The Douglas fir wage index during the same period has risen 79.8 points—nearly double the cost of living increase.

Now as to lumber prices. Even assuming that you meant to say $200 a thousand board feet instead of $200 a board foot the implication that the average price is $200 is, again so far as the Douglas-fir segment of the lumber industry is concerned, fantastically removed from the truth. West Coast Lumbermen's Association figures, which are accepted as reliable by most governmental agencies, show that the average realization, per thousand board feet, of reporting mills was $77.21 for the year 1948 and $67.30 for December 1948. Those averages, according to the WCLA report, are gross, f. o. b. mill, before commissions, trade and cash discounts and were attained largely by manufacturers whose plant facilities include planers, sheds, kilns and similar facilities for producing a variety of the higher and more expensive grades of lumber.

Statements made by persons high in the service of our Government are generally accepted as gospel truth by the uninformed and frequently quoted with damaging results, if inaccurate or misleading, to labor, management, and the public. I strongly feel your statement does at least the Douglas-fir segment of the lumber industry a grave injustice and have given you the foregoing information in the sincere hope that you will not be of disservice to it in the future.

Respectfully yours,
G. A. METZGER,
Secretary-Manager, Willamette Valley Lumber Operators Association.

Copies to: The Honorable GUY CORDON, United States Senator; the Honorable WAYNE L. MORSE, United States Senator; the Honorable HARRIS ELLSWORTH, Member of Congress; the Honorable WALTER NORBLAD, Member of Congress; the Honorable RALPH GWINN, Member of Congress.

Excise-Tax Reductions

REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. REED of New York. Mr. Speaker, I am introducing a bill to provide some measure of relief from the heavy excise-tax burdens imposed during the war. The bill which I am introducing is identical with my bill, H. R. 2845, introduced on February 17, 1949, except that this new bill contains an amendment providing for a reduction from 20 percent to 15 percent of the excise tax on the rental of safe-deposit boxes which are rented by over 12,000,000 of our citizens throughout the country. I should like to reduce this tax back to the pre-1941 rate of 11 percent, but in order to be consistent in my approach to the problem of reducing excise taxes over as broad a base as possible without serious loss in revenue, I believe that only a 5-percent reduction in the present rate would be wise at this time.

The whole loss in revenue of my bill would be approximately $452,000,000 for the year 1950, and the loss of revenue on each item affected by my bill would be as follows:

The revenue loss from eliminating the tax on ladies' handbags, pocketbooks, billfolds, and key cases, and reducing the retail tax on the remaining articles of luggage from 20 percent to 15 percent would be $57,000,000.

By eliminating the tax on fountain pen gold points and rhinestone buttons and reducing the rate of tax on jewelry from 20 percent to 15 percent on the retail sales price, the revenue loss would be $46,000,000.

By reducing the rate of tax on furs from 20 percent to 15 percent on retail price, the loss would be $16,000,000.

The loss from eliminating the tax on baby oil, lotions, and powders, would be $3,000,000, and the loss from reducing the retail tax on other toilet articles from 20 percent to 15 percent would be $20,000,000.

The loss from eliminating the tax on toilet articles sold to barber shops and beauty parlors for the use in operation thereof would be $4,000,000.

The loss resulting from either the elimination of the excise taxes or the reduction of the tax on the other items covered in my bill is as follows:

Transportation of property	$114,000,000
Transportation of persons	63,700,000
Communication facilities	50,200,000
Photographic apparatus	37,700,000
Trailer coaches	8,000,000
Safe deposit boxes	2,500,000
Propeller fans	700,000
Tires and tubes	600,000

And an insignificant loss from the other items affected by my bill.

In my opinion, it is essential to our domestic economy to provide this minimum excise-tax relief. A reduction in our budget expenditures for fiscal 1950 of only 1 percent will meet the loss of revenue resulting from the enactment of this bill.

Van Buren County Soil Conservation District Report

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 25, 1949

Mr. TRIMBLE. Mr. Speaker, Mr. J. B. Naney, county administrative officer of Van Buren County, Ark., has sent me the 1948 report of the Van Buren County

Production and Marketing Administration. This is a very fine report and shows the interest which our people are taking in soil conservation. Under unanimous consent, I include this report in the RECORD:

1948 ANNUAL REPORT OF VAN BUREN COUNTY AAA

INTRODUCTION

We hope that with this report we will be able to give the business and professional people as well as the farmers of Van Buren County a better understanding of the need for our Production and Marketing Administration program (better known as triple-A).

The Production and Marketing Administration is a branch of the United States Department of Agriculture and several different programs are carried out through it. PMA in Van Buren County deals chiefly with the agricultural conservation programs, and we will devote most of our report to it.

American farmers have a higher standard of living today than any farmers in the history of our country have ever known, and we in the triple-A feel that we have helped them accomplish this distinction. We have helped them by offering incentive payments for carrying out good soil-conservation practices. Without these payments a majority of our farmers would not be able to carry out these practices. By helping the farmer we are indirectly helping the business people for in a community like ours, the business people are dependent upon the farmer for their source of income.

Soil conservation is the responsibility of all of us, and not just primarily the farmer who owns or operates the farm. The livelihood of everyone comes directly from the soil, and we should see that it is properly taken care of. Good soil with the proper minerals means good health, good community, good schools, whereas poor soils with no minerals means the opposite.

As county committeemen of Van Buren County we want to thank everyone who has cooperated with us in making our program a success, and solicit your cooperation and support in future programs.

ROY E. TESTER,
Chairman.
D. M. BAKER,
Vice Chairman.
CLAYTON GRADDY,
Regular Member.

ORGANIZATION

Triple-A is a farmers' program administered by locally elected farmer committeemen. Each year, in the month of November, an election is held for the purpose of electing community committeemen and delegates to the county convention. This is a democratically held election and all members of the triple-A program are entitled and encouraged to vote. In the month of December the men that were elected delegates to the county convention meet and elect a county committee to serve for the next year. No one may serve as a community or county committeeman unless he derives a major portion of his income from the farm.

The county committee is responsible for the carrying out of the program for the year they are elected to serve. They hire a county administrative officer to carry out the administrative details under their supervision.

County committeemen in Van Buren County have one regular meeting day a month and special called meetings when they are necessary. Community and county committeemen hold joint meetings to discuss better methods of conservation and any other issues pertaining to the program that may be affecting the county at the time.

A State committee composed of five farmers who derive a major portion of their income from the farm, are appointed by the secretary of agriculture to carry out the programs of the Production and Marketing Administration administered within the State. All county committees are directly responsible to this State committee for the administration of the programs being carried on in their county.

MINERALS

Superphosphate

One million three hundred and eight thousand six hundred and forty pounds of superphosphate was applied to approximately 5,234 acres of pasture and meadow.

Out of the 1,308,640 pounds of superphosphate used in 1948, farmers only bought 95,780 pounds and paid the entire cost out of their own pockets. Farmers received the balance under the purchase-order plan whereby the Government pays a part of the cost at the time the material is delivered. The purchase-order plan has proved very successful and is beneficial to the farmers as a large percent would be unable to apply the proper amount except for Government help.

Limestone and potash

A very small amount of lime and potash was used in 1948 due to the fact that it wasn't readily available to farmers in this county.

Lime and potash are two of our most needed minerals in Van Buren County and one of our aims for the next few years is to try for a plentiful supply of this material.

Nothing could be more important for the health and prosperity of our community than the use of the above-mentioned material. You may see a nice-looking meadow, pasture, or row crop, and it will be still low in nutritious value unless the proper minerals have been provided. It is the responsibility of everyone to see that these minerals are provided.

PASTURE PRACTICES

Mowing pasture

Van Buren County farmers mowed 4,299.4 acres of pasture in 1948 to control weeds. Weed control is one of the important factors in establishing a good pasture. Besides getting a better quality of grass you derive more quantity from pastures that have proper weed-control methods carried out on them.

Sodding bermuda

Two hundred sixty-nine and six-tenths acres of bermuda was sodded to new pasture in 1948. Bermuda grass makes an excellent pasture in dry summer months when most other pasture grasses are gone. In addition to being a good pasture bermuda grass is a good protection against soil erosion on hillsides or in ditches.

Pasture seedings

Fifty-five thousand eight hundred and ten pounds of different grasses and legumes were seeded for pasture in 1948. As our farmers are turning more and more to dairy and beef-cattle farming, pasture is becoming one of the main objectives for most of our farmers.

Farmers find that much better pastures are obtained when a mixture of the right grasses are combined. One base grass or legume must be included in this mixture and minerals applied where needed before payments can be made for seed. Only seed that have proven to be the best adapted to the county are included in the list for payment.

ENGINEERING PRACTICES

Stock pond

In 1948 29 stock ponds were built in Van Buren County. A stock pond accomplishes two purposes where some consideration is given to its location. First it is a storage place for a large supply of water that the farmer can depend upon it in the dry summer months. Secondly, it goes a long way in stopping floods and soil erosion. Just think how much more water would have been in our rivers during the recent floods if these ponds hadn't been there to hold it back. In most cases farmers pay from half to two-thirds the cost of building a pond.

Springs

Three springs were developed in 1948. Springs are only developed where they tend to go dry in the summer or get so low they don't afford enough stock water.

Terraces

Fifty-one thousand two hundred and eight-five feet of terraces were constructed in this county in 1948. Terraces are one of our best practices for the purpose of stopping soil erosion. Not only do they stop soil erosion but increase the yield from fields that are in cultivation or meadow.

Prior approval

Any of the above-mentioned practices must be prior approved. Reasons for this are (a) so county committee can determine if the farm needs the stock pond, terraces, or springs; (b) to be sure some qualified engineer stakes out the practices so that it will at least meet the minimum requirements set forth by the Department of Agriculture.

GREEN MANURE AND COVER CROPS

In 1948, 41,259 pounds of legumes were seeded for summer and winter cover crops, with lespedeza, hairy vetch, and Austrian winter peas being used the most.

Nothing could be more important in taking care of our soil than the protection a cover crop provides against the weather. Rain, wind, and snow, can take more topsoil and minerals from unprotected soil in the course of a year than man and nature combined can put back in several years.

Not only do cover crops provide protection for the soil, but make an excellent green manure crop to turn under. By turning under a green manure crop much-needed humus and minerals are being added to the soil.

COUNTOUR FARMING

Farmers of Van Buren County realize the full benefit of contour farming as established by the fact that 8,280.6 acres were planted on the contour in 1948. We estimate this to be at least two-thirds of the row crops planted during the year. They know that row crops planted on the contour will return a better yield, as well as conserve the soil.

CONSERVATION PAYMENTS

One thousand and twenty-eight farmers on 1,003 farms carried out soil-building practices valued at $29,810 under triple-A-payment rates with triple-A-payment rates set at one-third to one-half the cost of carrying out the practices. You can readily see the total value of all practices carried out would be in the neighborhood of $70,000.

Farmers only receive $25,861 for carrying out soil-building practices as this was the entire amount allotted to Van Buren County for conservation payments. By the above figures you can see farmers only received about one-third the cost for carrying out these practices.

ADMINISTRATIVE MONEY

Seven thousand, two hundred and seventy-nine dollars and fifty-three cents was spent as administrative money in carrying out the triple-A, price-support, and marketing-quota programs in the county.

Below is a digest of how this money was spent:

County committee	$490.80
Community committee	278.00
Office personnel	5,085.86
Engineer	716.00
Office rent	240.00
Fuel, mileage, lights, telephone, and office supplies	468.87
Total	7,279.53

PRICE SUPPORT

Price support was designed by Congress to give farmers a fair price for commodities they sell in relation to the cost of things they buy.

Contrary to some thinking we are of the opinion price support kept the prices housewives have to pay in retail stores as low as they have been for the following reasons:

1. Without the protection price support provides our farmers won't raise as large amounts therefore creating a shortage, and increase in prices.

2. Prices of farm commodities have declined, and the price the housewife has to pay still remains the same.

Price-support protection is provided for the following commodities in Van Buren County: cotton, corn, peanuts, potatoes (Irish), hogs, eggs, chickens, milk, turkeys, and wool.

MARKETING QUOTAS

Peanuts, and Irish potatoes were the only commodities in Van Buren County affected by marketing-quota regulations. Acreage allotments are worked out on the basis of cropland, and past history of the crop on the farm.

Both price-support and marketing-quota programs are administered through your local triple-A office.

COMMUNITY COMMITTEEMEN

Community committeemen who served during 1948 were elected by secret ballot by their neighbor farmers in the fall of 1947. These men are the link between the county committee and the farmer in keeping a good sound conservation program operating.

Community A, B, J: Robert Hooten, Remmel H. Harper, U. V. Huggins, Shirley, Ark.

Community C, D: Amon Wood, Jack Hice, Bee Branch, Ark.

Community E, F: J. H. Payne, Clayton Bradford, Ellis Hutto, Damascus, Ark.

Community G, H: A. A. French, Lester Crownover, Bee Branch, Ark.

Community I: Joe G. Bowling, Charlie F. Neal, Clinton, Ark.

Community K, L: George N. Graham, Ralph Miller, Dennard, Ark.

Community M: Grady McEntire, Johnnie P. Reeves, Woolum, Ark.

Community N, O: J. M. Gray, Dabney, Ark.; Millard Bruce, Copeland, Ark.

Community P, Q: Ray Stubblefield, Weldon Stroud, Scotland, Ark.

Community R, S: Reed T. Hammett, Formosa, Ark.; Lizzie Thompson, Clinton, Ark.

COUNTY COMMITTEE

Roy E. Tester, chairman; D. M. Baker, vice chairman; Clayton Graddy, regular member; J. O. Hill, ex officio member; J. B. Naney, secretary and treasurer.

Delegates to the county convention (who were elected by farmers in community committee election) met in the fall of 1947 and elected the above county committee to serve during 1948. These county committeemen were directly responsible for carrying out the triple-A and other programs administered within the county.

County and community committeemen do not draw a salary and are paid only for days actually worked.

OFFICE PERSONNEL

J. B. Naney, county administrative officer; Willie M. Story,[1] chief clerk; Vera M. Wallace, chief clerk; Danece R. Bowling, principal clerk.

The county administrative officer is hired by county committee to carry out the office work under their supervision.

One full-time, and one part-time clerk was employed to assist county administrative officer with the office work.

[1] Served as chief clerk through November of 1948.

Administration of Traffic Laws by Justices of the Peace

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Cow Pasture Justice," written by Jack Harrison Pollack, and published in the magazine This Week of January 9, 1949. The article portrays the hazards to which motorists are sometimes subjected in courts of justices of the peace.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COW PASTURE JUSTICE

(By Jack Harrison Pollack)

(Thousands of motorists each year pay ransom to the justice of the peace. Too often he's a chap who never studied law, holds roadside court and charges whatever he thinks he can get. Here's a program to modernize an outmoded judicial system.)

Are you one of the millions of big-city Americans who have been hauled before a justice of the peace for a traffic violation? If so, though your fine may have been small, His Honor's two favorite words, "and costs," probably raised your ransom as much as $28 extra.

Since his judicial income usually depends on what he extracts from you, the average justice of the peace, usually a layman holding court in a rural area with jurisdiction over petty criminal and minor civil cases, almost invariably finds you guilty—especially if you're a stranger.

Asked how he rendered such speedy verdicts, a frank Ohio J. P. once winked, "I only listen to one side of the case. Otherwise it confuses me."

This bizarre method of dispensing justice—the only contact which countless Americans have with the law—is troubling legislators, judges, and the legal profession. Chief Justice Arthur T. Vanderbilt of the Supreme Court of New Jersey—which abolished the J. P. office on January 1—warns: "Undisciplined, unsupervised, the justice of the peace is a sore problem."

THEY'RE NOT ALL INCOMPETENT

Defenders of the oldest United States court remind us, however, that there are many competent, honest backwoods Solomons who mete out civil and criminal justice quickly and fairly. Respected by their communities, the conscientious J. P.'s settle chicken squabbles between neighbors, reprimand unlicensed hunters, and dispose of numerous petty complains without the delay and expense of an ordinary court. The justice tribunal, in fact, was set up to decide local disputes that otherwise would go to a county court which might be 2 days away by carriage.

Today, a comic philosopher by reputation, the justice of the peace is chiefly known for fining out-of-State motorists and marrying eloping couples. When a hard-pressed Kentucky female recently offered $10,000 for a husband, an Arkansas J. P. offered to wed her and perform the ceremony himself.

One thing that can definitely be said about our J. P.'s: we're well stocked with them. There are 50,000 in the United States. Pennsylvania has the most—about 5,500. Almost anybody can become a J. P. No special qualifications are needed for the job under most State laws. Some justices can't read or write. Only Louisiana and Arkansas insist they be citizens and speak English. In only nine States are they required to reside in the State.

As a United States Senator told me: "Men are apprenticed for years in the trades and professions but aren't even tested for the justice-of-peace position." To make it even easier, election to the J. P. office is rarely contested. As far as most voters are concerned, elections are usually "blind." In a swank Pittsburgh suburb, a 22-year-old female domestic worker, without knowing she was a candidate, was elected a justice of the peace. She turned down the job. A western J. P. who held on to his admits, "I've had this job since 1928 when two friends put my name in as a joke while I was away." A cigar-store Indian was chosen justice of the peace in Allentown, N. J., some years ago. Even dogs and horses have been "elected."

A J. P. ON THE SIDE

The average J. P. is 58 years old. One in five is between 70 and 90. Most serve part-time as storekeepers, farmers, bakers, butchers, barbers, carpenters, real-estate agents, shoemakers, or paperhangers. Few make a living solely from justice-of-the-peacing. To earn extra money, they take time from their regular chores to sit in judgment on their fellow men.

Some don't even take off time. A Tennessee J. P. continues milking his cows while fining defendants. An Illinois jurist stands behind the plow. On warm summer days, an enterprising New Jersey justice hawked gallons of ice cream while convening court in the soda parlor he owned. Other J. P.'s hold trials in general stores, gas stations, barns, hayfields, while leaning over a back fence—anywhere they happen to be.

Usually, though, court is held in the justice's home. But when a Michigan J. P. was trying a defendant in his living room, his wife started cleaning house, and chased them both out to the front porch.

Wherever this horse-and-buggy court is held, your chances of going scot-free are slim. Lawyers wisecrack that J. P. means "judgment for plaintiff."

On motorists, rural and small-community justices really go to town, thriving on speed traps and hidden red lights. A Utah J. P. has been known to accompany a cop. He holds court on the roadside, collecting fines from itinerant suckers on the spot.

QUICK CHANGE ARTIST

Occasionally grass-roots justices do double duty. The story is told of an Eastern motorist hauled into an empty room of a Midwest whistle stop and ordered to wait a minute. A few seconds later the cop returned, wearing a shabby judicial robe and muttering, "All right, court is now in session."

At a shady Florida justice mill, a backwoods jurist brushed aside a Northern motorist's not-guilty plea: "Not guilty don't go here. Pay the fine or I gotta send you to jail." A Pennsylvania J. P. refused to accept a not-guilty plea on the ground that it was Sunday and he couldn't administer an oath. "Pay up," he said. "That'll make it easier for both of us."

You can never be certain what kind of justice you'll get in a justice court. Some whimsical gavel-pounders will soak you $100 for not having your driver's license on you and only $2 for recklessly running someone down. An impatient southwestern J. P. fines all comers $10, whatever the offense.

Usually, though, the justice carefully observes where you're from. A Wyoming J. P. fines New Yorkers—whom he doesn't like—a flat $25. Californians complain that Texas squires prey on them. The Auto Club of Michigan reports that many of its members

are held up in an Ohio town. A Dixie jurist asked a defendant where he hailed from.

"Brooklyn," the culprit informed His Honor.

"Hm. That'll be $50."

Whether much of this booty ever reaches official coffers is doubtful. Many justices don't bother issuing receipts. When demanded, they may be scribbled on the back of an old envelope, a blank check or a hunting-license application.

Supervision of America's J. P.'s is as lax as selection. The majority of our States don't even have accurate lists of their justices' names and addresses, much less receive records or accountings from them. Checking by State auditing divisions is spasmodic and inspired solely by financial motives. No regular J. P. supervisory agency exists in most States.

"JUSTICE BY THE PIECE"

Justices get paid through the fee system in most States. They are supposed to remit the fines and keep the "costs"—justice by the piece. Cooperative States offer the J. P. costs for conviction—and nothing for acquittals. But as Virginia Trial Justice Harold F. Snead remarks, "It's doubtful whether any judge can be fair and impartial when the outcome of the case involves his own pocketbook." Justice truly limps when the defendant, whether he's a motorist, unlicensed fisherman, drunk, roadside petter, or what not must pay for the justice-dispensing—and hears only nine words: "What's the charge? That'll be $20 and costs."

Some unscrupulous justices of the peace in Illinois have been known to serve as collection agencies for finance companies on a commission basis. They write to a debtor: "Before my constable issues a warrant, I am giving you this opportunity to settle up." The frightened recipient of the letter usually pays—and the justice of the peace gets his cut. Instances are on record where "defendants" who owed nothing have been harassed with such threats.

Justices receive salaries in five states. South Carolina pays the lowest, beginning at $8 a month; California, the highest, up to $8,500 a year. Most justices of the peace say they'd rather be on salary. Justices preferring fees consider it "the only practical method." Legal experts agree that higher salaries and greater supervision would attract better men and raise the office's dignity.

COVER A LOT OF GROUND

Actually, the job's demands are much greater than generally realized. In many States the justice of the peace is the only court which is used by enforcement officers. Civil cases include breach of contract, trespassing, action on notes, damages for negligence. Criminal cases take in petty larceny, ordinance violation, assault, gambling, fish-and-game offenses, disorderly conduct, indecency, intoxication, fraud, malicious mischief, public nuisance and vagrancy.

Yet only 6 percent of justices of the peace are lawyers. A Nation-wide survey conducted for the National Committee on Traffic Law Enforcement by New Jersey Barrister George Warren revealed that 20 percent don't even possess copies of the laws they enforce! An Oklahoma justice, waving aside a dusty, unopened statute book on his shelf, told an inquisitive defendant, "No use lookin' in there, son. I run this here court on the Golden Rule."

The AAA knows of a justice of the peace who believes in equal justice. This impartial worthy likes to fine both the plaintiff and defendant! But upon one occasion, when he threatened to do so, the two parties in a civil suit went into a huddle and refused to testify against each other. Since there was no witness, the justice of the peace was stumped. He finally scratched his head and dismissed the case, muttering.

"I don't want to do this," he remarked, "but you fellows got me."

Justices are appallingly ill-informed on their own jurisdictional limits. Asked what their maximum allowable fines were, justices of the peace in the same State gave answers ranging from $1 to $5,000. Many justices have no idea how far their power goes.

THEY'LL TAKE ANYTHING

Your willingness to go to jail usually reduces the fine and costs. If you're short of cash, some "bargaining justices" will take whatever you have—watch, camera, ring, spare tire, jack, groceries—and call it square. As a result, some of their homes resemble hock shops.

Accessible to everyone, the J. P. tribunal isn't usually a lawyer's court. But in one civil case before a southern justice, reports Norman Damon, vice president of the Automotive Safety Foundation, two local barristers were representing their clients. At noon they vied to see who could take the J. P. to lunch. The defense lawyer won, and he and the J. P. adjourned to the local tavern where they had five quick ones. When the after-lunch court session began, the defense lawyer waxed alcoholically eloquent. At the height of his new friend's oratory, the justice excitedly leaned over and shouted, "Give 'em hell, Ben. I think we've got 'em licked."

SCHOOLS FOR J. P.'S

Gregarious souls, J. P.'s are usually potent politically in their communities. In some places justices have banded together in State-wide associations, chiefly to preserve their office.

Sensitive to growing criticism of their "cow-pasture justice," alert J. P. State associations in New York, California, and Illinois are trying to clean house within their own ranks. Today schools for J. P.'s are being run by major law schools. Last spring, a law professor, J. Walter McKenna, conducted one at New York University, and, another is in session at the University of Illinois Law School.

Recently, the first real national J. P. conference took place in Seattle, spark-plugged by the American Bar Association's indefatigable traffic-court director, James P. Economos. A permanent organization known as the American Association of Trial Courts of Limited Jurisdiction was formed. It will cooperate with the American Bar Association and seek to instill justices of the peace with a real desire to modernize their courts.

The J. P. tribunal is a hang-over from Edward III's fourteenth-century England. It was intended to preserve the King's peace, and holders of the office were the most responsible and capable men in each community. But this qualifying requisite and another safeguard, supervision, were never transplanted to these shores.

Instead, the office has been such a haphazard no-man's land that the J. P. has become one of the major modern judicial headaches. And today authorities agree that the justice of the peace court must be improved or eliminated. Missouri, in 1945, became the first State to abolish J. P. court, and Kansas City, Kans., recently did likewise. Ten States now deprive J. P.'s of jurisdiction over traffic cases. The situation was so bad in Virginia and Maryland that salaried trial justices and magistrates assumed most of their functions. California, Iowa, Michigan, Texas, Washington, Oregon, and Tennessee are now carefully reexamining their J. P. systems. Experts believe that J. P. courts should be replaced with State-wide supervised personnel.

Defending the justice court, Alfred Morrison, New York State J. P. leader, who is now trying to organize 56 county schools for J. P.'s with the State bar association, told me: "The J. P. court isn't outmoded. It's needed in rural areas. Justice is meted out promptly so people can go about their business. Sure, it has many faults which are of recent origin. They arose out of the complexities of modern jurisprudence. But if there's any truth in the adage 'justice delayed is justice denied,' then the J. P. court has much to recommend it."

PROGRAM FOR STREAMLINING

To streamline the justice-of-the-peace system, here is a program approved by the America Bar Association house of delegates:

1. Eliminate the vicious fee system and provide adequate salaries for full-time J. P.'s.

2. Reduce the number of justices. There are now far too many J. P.'s in the United States.

3. Furnish them with proper court facilities. Take the J. P. out of the cow pasture.

4. Select qualified men, preferably legally trained ones, for the office.

5. See to it that they are supervised by or responsible to a central State agency such as a chief justice, an administrative officer or the judicial council.

6. Furnish them with clerical assistance. Require them to keep satisfactory records and to report to a county or State office at least once a month.

7. Let them retain only judicial functions. Eliminate all their other local governmental duties.

8. Provide annual judicial conferences or schools to improve J. P. practices and procedures. Keep them abreast of latest developments.

By putting this type of program in practice, we can rid ourselves once and for all of our cow-pasture justice.

Boone County Soil Conservation District Report

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 25, 1949

Mr. TRIMBLE. Mr. Speaker, Boone County is one of the great counties of my congressional district, and the report of their soil conservation district is a tribute to the efforts of our people who are in charge of the program in that county. Under unanimous consent, I include their report in the RECORD:

ANNUAL REPORT OF THE BOONE COUNTY AGRICULTURAL CONSERVATION ASSOCIATION, 1948

INTRODUCTION

This 1948 annual report of the Boone County Production and Marketing Administration has been prepared to give you a better understanding of the aims, objectives, and accomplishments of the program.

PMA embraces several programs of the Department of Agriculture, such as price support, marketing quota, crop insurance, production and marketing, and the agricultural-conservation program. Since the agricultural-conservation program is the major program in the county, more space has been devoted to the activities of this program.

It is realized that the accomplishments of the agricultural-conservation program was made easier through the cooperative efforts of all agricultural groups within the county as well as all civic groups, the churches, the banks, the chamber of commerce, the pasture development contest, the livestock program, and the editors of our local papers.

Civilization begins and ends with the plow and all life comes from the soil.

Cooperation of all agricultural agencies, civic organizations, business and farm leaders in disseminating information on this program is continually solicited.

ANNUAL REPORT

The Boone County agricultural conservation program is a part of the national conservation program that was designed to help improve the health and strength of all the people of the Nation. The farmer in the eyes of the program planners is only a temporary custodian of the soil. It is therefore a public responsibility to assist the farmer in maintaining and rebuilding the fertility of the soil.

All we have and all we are depend on the productivity of our soil. No one questions the public responsibility to share in the schools and highways. No less is it a public responsibility to share in the cost of carrying out conservation practices which improve fertility and conserve soil and water. Soil and water conservation is so important to the well being of all that it should not and cannot be done by any one segment of our population, but is a vital responsibility of all our people.

The Boone County agricultural conservation program is under the general supervision of three democratically elected farmer committeemen who are assisted by 28 community committeemen. These men are all farmers who are living on their farms and are deriving a major part of their income from actual farming operations. The committeemen are elected annually by the members of the association. Each farmer who participated in the program is a member and entitled to vote. Any farmer in the county can become a member by carrying out one or more conservation practice outlined in the triple-A program.

This program is under the direction of the farmer elected committee. These local farmer committees, being acquainted with local needs, recommended conservation practices needed in the county. Congress appropriates money annually to pay a part of the cost of carrying out these practices, with the farmers paying from 50 to 75 percent of the cost. Local farmer committees see that money appropriated for payments is spent on practices adapted to their individual needs.

The national conservation program, of which Boone County conservation program is a part, is concerned with the needs of all the people of the Nation. As the fertility of our farms is restored and maintained, the entire Nation is assured of a more plentiful supply of a better quality of food.

There are 2,273 farms in Boone County, as constituted under the Triple-A Program. One thousand and seventy-four farms participated in the program or a total of 47 percent of the farms. However, there was 124,915 acres of cropland in the county in 1948 with 91,250 acres or 73 percent of the cropland participation in the program.

Total program assistance used in the county in 1948 was $49,414.36. Farmers contribute from 50 percent to 75 percent of the cost of all practices; therefore, an estimated $101,299.42 spent in 1948 to improve the quality of food produced in Boone County.

OBJECTIVES OF AAA CONSERVATION PRACTICES

(a) To conserve soil and water by adapting better land use.

(b) To improve national health and nutritional standards by conserving and rebuilding our soil and water resources.

(c) To promote a more stable income.

(d) To assure the Nation of a more plentiful supply of food and fiber.

BOONE COUNTY PRACTICES, 1948

The most important practice in Boone County is the restoration of depleted minerals, phosphate, limestone, and potash.

In 1948 farmers of Boone County participating in the triple-A program applied 2,081,429 pounds of phosphate and 3,408 tons of limestone, 32,658 pounds of potash on pastures and meadows. There is an annual need in the county for 3,000,000 pounds of phosphate, 10,000 tons of limestone, and 800,000 pounds of potash.

Pasture development is one of the most important practices in Boone County since this county is primarily a livestock county.

In 1948 there were 12,821 acres of pasture developed or improved by sodding 223 acres of bermuda and seeding 125,985 pounds of other pasture grasses. In addition 12,432 acres of pasture were mowed to control weeds and bushes.

Stock ponds and springs: No pasture is complete without adequate stock-watering facilities. The triple-A pays a part of the cost of construction of stock ponds and springs for stock-watering purposes. In 1948 there were 69 stock ponds and 5 springs developed in Boone County. Thirty-nine of these ponds and four springs were planned and staked by the triple-A personnel.

Other practices that were carried out less extensively in Boone County:

1. Seeding annual lespedeza.
2. Summer legumes.
3. Winter legumes.
4. Establishing vegetative waterways.
5. Terracing.
6. Contour farming intertilled row crops.

PRODUCTION GOALS

Each year the Secretary of Agriculture gives to each State the national needs for farm commodities, and asks each State to set a State goal in line with what the State can produce to help satisfy the national needs. The State committee refers the needs to each county committee. The county committee calls the community committeemen together. The county and community committeemen work out a county goal, setting out the amount of each commodity that they feel would be reasonable for the county to produce. From the county goals the State committee is able to arrive at a State goal. The county and community committeemen then advise with the farmer as to the commodities that are in short supply so the individual farmer can fit his farming operations to the national needs.

PRICE-SUPPORT PROGRAM

The price-support program is administered on the county level by farmer committeemen. Price support provides that the prices of farm products be supported at rates fair both to the farmers and consumers because of the importance of good farm prices in maintaining national prosperity.

Commodities produced in Boone County that are under price-support protection include: Corn, wheat, hogs, eggs, chickens, milk, butterfat, turkeys, potatoes (Irish), wool, cotton, tobacco, and other commodities.

The new price-support program, passed the last few minutes of the Eightieth Congress, has a considerable downward trend, and, if not corrected, will go in effect January 1, 1950.

MARKETING QUOTAS

Cotton, wheat, and tobacco are the only commodities in Boone County affected. Allotments are worked out on the basis of cropland and past history of the crop on the farm. The program is administered by the AAA committeemen.

FINANCIAL REPORT

The total estimated conservation carried out in the county in 1948 was $150,713.78.

The amount allocated to the county by the Government, $33,148.

Total operating expenses of the program within the county was $7,400.

Miscellaneous

Number of farms in the county	2,273
Cropland ---------- acres	124,915
Noncrop pasture ---------- do	68,511
Commercial orchard ---------- do	1,005
Number of farms reporting in 1948	1,074

PERSONNEL

The county is divided into 17 communities. Each year the community committees are elected by the farmers in each community to serve as their representatives for the coming year. At the same time one delegate from each community is elected to help elect a county committee of three farmers and two alternates. The county committee, with the approval of the State committee, hires the county administrative officer to administer the program under their supervision. The county administrative officer, with the approval of the State committee, hires his assistants.

THE COUNTY COMMITTEE FOR 1948

J. W. Parrish, Lowry, chairman; Bert Askew, route 2, Harrison, vice chairman; Lawson H. Crawford, route 5, Harrison, member; Witt Bryan, route 1, first alternate; Austin W. Carlton, route 1, second alternate; Roy Keeling, Harrison, ex-official member.

DUTIES OF COUNTY COMMITTEE

The committee met regularly on the second Tuesday of each month, and at any other time there was a need to transact any important business of the administration. Some of the duties of the county committee are listed below:

1. Approve a method of budgetary control.
2. To hire an administrative officer and set his salary.
3. With the assistance of the community committee and other agricultural leaders, recommend conservation practices for the county and recommend practice-payment rates.
4. To set the policy to be followed by the county association personnel.
5. To certify the pay roll and approve the budget.
6. To assist in obtaining an adequate supply of conservation materials and services.
7. To keep the State committee informed on the progress of the work in the county and on other farm problems affecting the county.
8. Reviewing performance reports and applications for engineering practices.
9. Supplying equipment for testing soil, laying out pond sites, terrace lines, spring projects and arranging for spot checking performance.
10. To make arrangements for holding the annual committee elections.
11. To approve applications for payment.
12. To see that office expenditures are not excessive, in line with good administration.
13. To assist all farmers of the county in every possible way to achieve the maximum conservation on their farms.
14. To set production goals in the county.
15. To administer the price support programs and keep the Secretary of Agriculture informed on farm commodity production in the county.
16. To hold market quota elections.
17. To administer the crop-insurance program.
18. To keep the public informed as to the functioning of all programs in the county under committee supervision.
19. Check with bankers, feed and seed dealers to see that the farmers have an adequate supply of feed and seed.
20. To assist in establishing markets for farm commodities such as (a) livestock sales barns; (b) milk plants; (c) cheese plants; (d) milk and cream routes; (e) seed and fertilizer outlets.

COUNTY OFFICE PERSONNEL

Hood G. Lough, county administrative officer, secretary and treasurer of association; Ruth H. Kolb, principal clerk; William Thomas Johnson, veteran field officer trainee; J. Dale Crawford, senior field officer.

The agricultural conservation program assistance made available through the triple-A program is available to every farmer of the

county. It is the duty of the county committee to see that each farmer gets his fair share of program assistance. An individual farm plan is signed each year by every farmer in the county. The farm plan is to help the farmer and the committeemen in making available necessary technical services, equipment and supplies, to carry out necessary practices.

The aims of the triple-A program are to encourage and assist farmers in carrying out the necessary soil and water conservation measures.

We, the Boone County Agricultural Conservation Committee have tried to give in a brief way, the aims, objectives and accomplishments of the 1948 triple-A program.

J. W. PARRISH, *Chairman.*
BERT ASKEW, *Vice Chairman.*
LAWSON H. CRAWFORD, *Member.*

P. S.—Marguerite Carter was employed by this office as principal clerk until September 1, 1948. J. B. Naney was employed as veteran officer trainee until October 1, 1948. Marguerite is now at Monticello where her husband is attending college. J. B. is county administrative officer of Van Buren County, with headquarters at Clinton.

TESTIMONIALS

The use of limestone and phosphate on pastures and meadows was practically unknown in this section before it was introduced through the triple-A conservation program, according to Mr. Ralph Hudson, a livestock farmer of the Harrison community.

Mr. Hudson is a producer of registered Hereford cattle, president of the Arkansas Farm Bureau Cooperative Association and has served on the triple-A nominating committee for the past 2 years. He gives the triple-A conservation program much of the credit for the development of 270 acres of good pasture and meadow on his farm. While Mr. Hudson cooperates with all agricultural agencies, he especially likes the minerals and seeding practices of the triple-A program. The feature he likes best is the farmer-administered and farmer-control of the program.

In 1948 Mr. Hudson won second place in the Boone County pasture improvement contest. On this pasture he used 11,900 pounds of phosphate, 16 tons of limestone and grass seed that was furnished or partially paid for through the triple-A conservation program.

Many farmers through this section, according to Mr. Hudson, would not now have or would not continue to develop good pastures and meadows were it not for the assistance available through the triple-A conservation program. We are definitely in an agricultural area, continued Mr. Hudson, and the success of businesses in Harrison is directly dependent on the success of our farmers.

Bert Askew, route 2, Harrison, vice chairman of the AAA county committee, member of the board of directors of the local farm bureau, also a member of the Valley Springs School Board and prominent livestock man, says AAA has done its part in helping him make his 200-acre farm what it is today. "I try to use my minimum farm allowance each year to build up my soil. Through the use of phosphate and limestone this is being accomplished. Since I am primarily interested in livestock, I'm developing my pasture to better take care of my needs. Through the conservation of water, brought about by a AAA pond, my livestock do not have to walk as far to water. Through establishing and improving permanent pasture by seeding pasture grasses and through weed and bush control, promoted by the AAA mowing practice, my pastures have improved not only in quality but also in the number of livestock taken care of per acre."

"More farmers need to come to the full realization of what their soils need, and having found out, use every advantage possible in building these soils to fullest productivity. "That," Mr. Askew concluded, "is what AAA is for, to help share the out-of-pocket cost of conserving water and soils."

An example of wise planning in the use of triple-A conservation practices is portrayed on the 443-acre farm of Heber Tate, 2 miles north of Alpena Pass. Mr. Tate has 200 acres of good pasture stretched over these rolling Ozark hills. Most of the stock farm can be seen from the beautiful ridge on which Mr. Tate's house is located.

The brush on the fields are first killed with goats after which bermuda is sodded in strips. Between these strips is seeded to bluegrass, orchard grass, and lespedeza. Some of the pastures are set aside for winter grazing, thereby saving hay. All pastures are well watered with good live springs in the hollows and good triple-A ponds on the top of the ridges.

Mr. Tate has been a triple-A community committeeman for years and has each year matched all triple-A payments with his own money to develop more and better pastures, the triple-A conservation way.

Mr. Tate states, "I have followed the triple-A practices for years, matching all triple-A payments, whether $100 or $500, with my own money to build more and better pastures."

In 1947 Mr. Tate won the Boone County pasture contest on one of these pastures.

It is a thrilling sight to see the 200 head of Hereford cattle grazing over the fine pastures that are a monument to the farmer-administered conservation program.

Coy Holmes, a farmer living 5 miles south of Harrison on Highway 7, gives the following report on the accomplishments gained on his 119-acre farm through triple-A assistance.

"Before the triple-A program came into existence," Mr. Holmes said, "I was growing corn, wheat, and oats. Everything was going out of my soil and nothing being replaced. As the years rolled along my yield grew less. After 12 years of triple-A soil-conservation practices used on my farm, I find farm life to be more pleasant than I used to think was possible. Through the use of lime, phosphate, and legumes, I have built the productiveness of my soils up. I have healed the washes on my fields, built two stock ponds, developed more and better pasture. I now use a system of diversified farming and livestock. I now find life on the farm to be more pleasant for me and my family."

There are hundreds of living testimonials over Boone County as evidence of benefits obtained through triple-A conservation practices such as Noah Dearing, chairman of the Krooked Kreek Soil Conservation District. Mr. Dearing has been a good triple-A cooperator since the beginning of the program and has developed many acres of good pasture and good stock ponds with triple-A assistance. In 1948 Mr. Dearing won first prize in the Boone County pasture contest. On this pasture Mr. Dearing received the following triple-A assistance: $6 per acre for 30 acres of bermuda sodding, $180; 50 cents per acre for controlling weeds on the pasture by mowing, $15; a payment per pound for seeding bluegrass, red top, white dutch clover, lespedeza, and alsike clover, in addition to 34 tons of lime; 15,180 pounds of phosphate; and 8 cents per cubic yard of dirt moved in constructing a 1,963 cubic yard stock pond.

The triple-A office in Harrison is a service office through which conservation practices are reported, purchase orders for materials are issued, and requests are filed for engineering services such as stock ponds, terrace lines, and spring development projects. In 1948, 69 stock ponds were constructed in the county, 39 of which were staked out by triple-A personnel and the other 30 were staked by personnel from the Harrison and Berryville offices of the Soil Conservation Service.

San Francisco-Oakland Bay Bridge

EXTENSION OF REMARKS
OF

HON. JOHN J. ALLEN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. ALLEN of California. Mr. Speaker, on March 24, 1949, at the request of Gov. Earl Warren, of the State of California, I introduced H. R. 3800, a bill to authorize the conveyance to the State of California of easements for the construction, operation, and maintenance of a second San Francisco-Oakland Bay bridge and approaches thereto, in order to authorize the Secretary of Defense to convey to the State the necessary easements over lands belonging to the United States of America under his jurisdiction and control.

On March 23 the California Toll Bridge Authority by resolution determined that the public interest and necessity required the construction of this additional toll bridge, commonly known as the parallel bridge, across the Bay of San Francisco at the earliest possible moment and prior to the construction of what is commonly known as the southern crossing. It further determined that the State department of public works should proceed immediately to complete the final detailed plans and to do all other things necessary for the construction of the parallel bridge at the earliest possible moment and directed it to suspend work on a southern crossing until a method of financing such a southern crossing could be recommended by the department of public works to the toll bridge authority.

Prior to the passage of the resolution Governor Warren made a statement concerning the matter to the toll bridge authority, of which he is the chairman. Governor Warren said:

The time has arrived for the California Toll Bridge Authority to make its final decision on the location of a second San Francisco-East Bay crossing of San Francisco Bay and to proceed with its construction as soon as possible. The need for such a crossing is apparent to everyone who uses the present bridge or who has studied the problem. The phenomenal growth of the five counties surrounding the Bay during war years, must convince any thoughtful person that the area is destined to be one of the most densely populated areas of America. This area already has a population of 2,000,000 people. It has grown 39 percent since the 1940 census. Its possibilities for growth are almost unlimited provided, among other things, its traffic problems are solved. Like the New York City area, its parts are separated by water, which must be crossed at various places if the traffic is to be facilitated.

A start has been made with the San Francisco-Oakland and the Golden Gate Bridges, but as experience has already demonstrated, additional crossings will be needed in the comparatively near future, one of which should be constructed immediately to relieve present congestion. The Toll Bridge Authority through the State department of public works has studied the problem for a period of 3 years in accordance with legislative authorization. It has spent $657,000 in this work. It has employed the most eminent

tube, bridge and traffic engineers, in the country as consultants. It has cooperated with the Army-Navy Board which in the early stages of the matter, made a study based upon then available data. It has given serious consideration to the findings of that board and this may be measured by the fact that approximately 64 percent of the State funds spent during the past year were on the Army-Navy Board proposed southern crossing.

Although the Army-Navy Board recommended a southern crossing and the department of public works a parallel bridge, the two reports were not at such variance as that fact might imply. Each of them found that both such crossings are feasible and will be required for the future. The Army-Navy Board concluded that the parallel crossing would have more tangible advantages at the present time but that the southern crossing would have greater advantages in the future development of the bay area and should be built first. Our department, recognizing the growth possibilities of the southern part of the bay, concluded that a southern crossing was desirable for that section and should be constructed in the orderly course of events, but that present traffic conditions, present population densities, and present needs call for another northern crossing immediately.

This is not a question of conflict between the two agencies. It is a question of the emphasis to be placed on the complicated needs of one of the fastest growing areas in America.

I personally believe that both crossings are needed and should be constructed as early as possible. I believe our plans should be projected on that premise. If it were financially possible to do so I would vote for their construction simultaneously. But it cannot be done. Any new crossing must be financed by revenue bonds and the experts who pass upon such matters advise that we could not sell the bonds of two crossings at one time. We must, therefore, select that site which in our opinion will best serve the present needs of the district; in other words, that which will do the greatest good for the greatest number—now.

I have concluded after long study that the parallel bridge will accomplish that purpose. I know there are those who will honestly disagree. But there is no conclusion upon which all would agree. All we can do is to try and balance the equities. My main reasons for deciding in favor of a parallel crossing are as follows:

1. The parallel bridge will better serve 82 percent of the traffic that will use it. The southern crossing only 18 percent.

2. With conditions as they are today it will be possible to maintain a 25-cent toll on the existing bridge and a new parallel crossing. It would be necessary to increase the toll to 35 cents on the existing as well as the southern crossings.

3. The parallel bridge will relieve the congestion immediately upon its completion. The southern crossing will not relieve the congestion at any time.

4. The parallel bridge, including approaches, can be completed two and a half years sooner than a southern crossing.

5. The parallel crossing can be constructed more cheaply.

6. Safety to traffic will be greatly favored by a parallel bridge.

7. The cost of maintenance and operation of two parallel bridges will be cheaper by more than $400,000 per year than the cost of maintenance and operation of a combination of the present bridge and a southern crossing.

Because it is a matter of such importance, I have been particularly concerned with the effect of another crossing to national defense and the possibility of serious bomb damage. This has been discussed at length with military experts and I am convinced that in this instance the problems of national defense are by no means controlling—the Army-Navy Board did not find them so.

I have also been concerned with the problem of street congestion at the bridgehead areas on both sides of the bay. Our traffic studies and plans for ramps and freeway connections have explored this in great detail and I find it makes no difference where the next crossing is located. The ramps will effectively distribute bridge traffic and even improve present conditions.

The Army has issued a permit for the construction of either or both crossings. All that is needed from the Federal Government is to acquire the necessary rights of way across certain Government-owned land—in the case of the parallel bridge across Yerba Buena Island, and on both sides of the bay—and to repeal the provision of the 1931 Federal act that tolls on the San Francisco-Oakland Bay Bridge must be discontinued or at least restricted, when that bridge has paid for itself.

These rights-of-way should be requested immediately in order not to delay the project.

I therefore am prepared to vote for the new parallel crossing of San Francisco Bay which has been recommended by Mr. Charles H. Purcell, our Director of Public Works, and his staff, in whom I have implicit confidence.

I am fortified in this conclusion by the findings of various public bodies and civic organizations that have studied the problem and reported thereon. Among them are:

1. The bay area council consisting of representatives of the nine bay counties.
2. The Chamber of Commerce of San Francisco.
3. The Real Estate Board of San Francisco.
4. The North Central Improvement Association of San Francisco.
5. The Building Owners and Managers Association of San Francisco.
6. The Chamber of Commerce of San Mateo.
7. The Chamber of Commerce of Eden Township of south Alameda County.
8. The Oakland Chamber of Commerce.
9. The Richmond Chamber of Commerce.
10. The Vallejo Chamber of Commerce.
11. The Alameda Chamber of Commerce.
12. The Board of Port Commissioners, Oakland.
13. The Uptown Development Association, Oakland.
14. The Downtown Merchants Association, Oakland.
15. The Downtown Property Owners Association, Oakland.
16. Building and Construction Trades Council of Alameda County.
17. Building and Construction Trades Council of Contra Costa County.
18. County Board of Supervisors of Alameda County.
19. County Board of Supervisors of Solano County.
20. City of Berkeley, Alameda County.
21. City of Oakland, Alameda County.
22. City of Alameda, Alameda County.
23. City of Richmond, Contra Costa County.
24. City of Vallejo, Solano County.
25. Emeryville Industries Association, Alameda County.

Mr. Speaker, following the passage of the resolution referred to, the toll bridge authority passed a second resolution petitioning the Congress of the United States to enact legislation authorizing the conveyance of easements required for this second bay crossing. The resolution reads as follows:

Whereas the California Toll Bridge Authority, as the public agency of the State of California duly authorized by law to make determinations respecting the location of toll highway crossings over the waters of the State, when such crossings are to be constructed pursuant to provisions of the California Toll Bridge Authority Act, has determined that the public interest and necessity require the construction at the earliest possible date of an additional toll bridge over the waters of the bay of San Francisco, to be built on a line between Rincon Hill, in the city and county of San Francisco, and the city of Oakland, county of Alameda, via Yerba Buena Island, approximately parallel to and northerly of the existing San Francisco-Oakland Bay Bridge, together with appurtenances and approaches at the termini thereof, and a tube under the Oakland estuary with connections to the East Bayshore Freeway and the city of Alameda; and

Whereas the State of California will meet all construction and other costs of said additional toll bridge by means of an issue of revenue bonds, under the provisions of the California Toll Bridge Authority Act; and

Whereas said authority has further determined that Federal legislation is necessary before construction of said additional toll bridge is commenced, in the following particulars:

(a) Authorizing a perpetual easement for such bridge over Federal lands to be occupied thereby in and about the Bay of San Francisco; and

(b) Repealing section 2 of the act of February 20, 1931, Public Law 695, Seventy-first Congress (46 Stat. 1192), which said section 2 relates to toll-free operation of the existing San Francisco-Oakland Bay Bridge on the retirement of the bonded indebtedness originally incurred for its construction: Now, therefore, be it

Resolved by the California Toll Bridge Authority, That said authority does hereby respectfully petition and memorialize the Congress of the United States to enact legislation—

(1) Authorizing the proper officers of the United States to convey to the State of California a perpetual easement for such additional toll bridge over and across Yerba Buena Island (former Goat Island) and over and across such other Federal lands in and about the Bay of San Francisco as may be required as a right-of-way for said bridge; and

(2) Repealing section 2 of the act of February 20, 1931, Public Law 695, Seventy-first Congress (46 Stat. 1192).

This resolution is hereby adopted by the California Toll Bridge Authority at Sacramento, Calif., this 23d day of March 1949.

EARL WARREN,
Governor of the State of California and Chairman of California Toll Bridge Authority.

GOODWIN J. KNIGHT,
Lieutenant Governor of the State of California and Member of California Toll Bridge Authority.

C. H. PURCELL,
Director of Department of Public Works of the State of California, and Secretary and Member of California Toll Bridge Authority.

JAMES S. DEAN,
Director of the Department of Finance of the State of California, and Member of California Toll Bridge Authority.

ERNEST L. ADAMS,
Member of California Toll Bridge Authority.

Mr. Speaker, pursuant to the proceedings which I have recited and the request of Governor Warren, H. R. 3800 was introduced. I hope for and request early and favorable action on the bill by the Committee on Armed Services, to which it has been referred, and by the House of Representatives.

Nation's Income

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., March 27, 1949:

EXPOSE TRUTH IN FILIBUSTER—LONG DEBATE PROVES THAT NINE STATES WITH 68,000,000 PEOPLE PAY HALF OF TAXATION BILL

(By Lester Allen)

The Senate fight on the cloture rule brought out all the information needed to refute the arguments of the States-righters, not only on the score of civil rights, but on which section of the Nation foots the bill for the majority of the expense of running the Nation.

It is no coincidence that the States which contribute most to the Nation's income, and, by the same token are targets for the ungrateful and often punitive action of the southern and "wild jackass" Senators, have the most progressive laws on civil rights.

One-half of the population of the United States lives in nine States, New York, Pennsylvania, Illinois, Ohio, California, Texas, Michigan, Massachusetts, and New Jersey. These States contribute a rough half of the Federal revenue in taxation with 68,000,000 people, heavily industrialized, made up of many races, many creeds, and many viewpoints, working and living together under law with a minimum of friction.

LIBERAL LAWS

The explanation of their success in attaining this condition is that their populations were attracted by the liberality of their laws, by the strict guaranty of their civil rights, and by their high standards of public education. These things are a matter of record and cannot be denied.

Yet, bearing the burden of the expense of running the Nation, the taxpayers of the nine States inhabited by one-half of the population of the United States, have never yet yowled for States' rights in the matter of apportionment of Federal expenditures. They built TVA in Tennessee, Boulder Dam in Colorado, Grand Coulee, and many other majestic and mighty installations to raise the economic level of States incapable of supporting or financing public works of such enormous cost.

PAY FOR MOOCHING

Getting right down to cases, the nine States mentioned have been paying for the mooching done by the less fortunate States, but have never and will probably never complain because, under the democratic system, the inhabitants of those States believe and practice to the best of their ability the one for all and all for one concept of Americanism.

Senator ELLENDER, of Louisiana, with his little Sir Echo, Senator LONG, the son of the Kingfish, spent more than 12 hours not long ago advancing all the arguments for States' rights in the matter of granting the franchise to voters. Mr. Long asked the loaded questions for his senior and Senator ELLENDER gave the pat answers. Mr. LONG asks if the fair employment practices commissions established in some of the Northern States have been effectively enforced. Senator ELLENDER answers that in the State of New York which, like Massachusetts, has an FEPC law there have been very few offenders punished. "They simply got the parties together to compromise their differences," said Senator ELLENDER.

ODD BEDFELLOWS

This is a fair sample of the arguments used to prevent the effective use of majority rule in the Senate. Apparently it is dead wrong to compromise differences and prevent discriminations. There should be prosecutions and punishments and, perhaps, lynchings.

In all the history of the United States Senate there has never been such a strange assortment of political bedfellows as there was during the filibuster. One day there were 89 Senators present, the day that Senator ELLENDER spoke for over 12 hours.

During that day the voices of only 19 Senators were heard in the Senate Chamber, and then only to interpose brief questions to punctuate the drone of the voice of the gentleman from Louisiana reading the history of American civil rights according to Senator ELLENDER. The Senators who did interrupt had only the right to ask a question. None could propose a compromise, a refutation of Senator ELLENDER's arguments or indulge in an oratorical demolition of the barricade of words damming the legislative processes.

ALL ABOUT PAST

Regardless of which of the Southern Senators was carrying on the filibuster, the argument circled around one point, that, in the past, the loathed northern tier of States, which pay most of the freight, had restricted the right to vote, and that, in the past under State stature, Catholics, Jews and other minorities of the day had been denied the right to vote. It was all about the past, nothing about the present, nothing about progress.

If that isn't a paradox strange enough, consider that two of the stalwarts of the filibuster, Senator TOM CONNALLY of Texas, and Senator GEORGE of Georgia, are leaders in the Senate for approval of the European recovery program, the reciprocal trade treaties and the North Atlantic Pact. In sum, they are all for propagating democracy abroad, but unalterably opposed to the progress of democracy at home.

While the filibuster may expose all that is mean and unworthy in man's nature, few people would have such an epic struggle carried on anywhere else but in the open, for all the people to hear or read. The possibility that the nine richest and most heavily populated States would have tried to bludgeon the poorer States into conformance with their more enlightened way of thinking is remote.

COULD PREVAIL

Given a fair chance with no holds barred, it is fair to assume that the 18 Senators from the richer States could outmaneuver the 18 southern Senators who have shaken the American legislative process to its foundations.

The compromise procedure finally adopted is a backward step, not progress. The civil-rights program is beaten to earth, bleeding and dying like a victim of a lynching, and in the white supremacy areas of the South they are capering and dancing around the corpse.

OTHER FISH TO FRY

Was there any real effort to wear the 18 southerners down? The answer is that there was not. The Senate is made up of too many men who have other fish to fry, who, in the days to come, need the votes of southern Senators to put across some piece of legislation.

Any move now to bring up a civil-rights bill, perhaps the antilynching bill, would bring on a struggle with deadly attrition, a frontal assault. It seems likely that there have been cloakroom agreements not to do this during the regular session, in the hope that a special session will not be called during the summer months when a filibuster would have less chance of succeeding in humid Washington.

IMPORTANT BILLS

There is always the specter of public opinion leering over the shoulders of the Senators as well. The rent-control legislation was long overdue, and this would hit the people right in their pocketbooks. A new tax bill must be written, and that, too, is of first importance. The shadow of labor, which fell athwart the generous shadow cast by the senatorial togas, is also a looming threat and come what may, a labor bill has to be enacted.

Indeed, there is concern in the Senate over the unions, as insouciant and defiant as the Senators may appear, particularly the southern Senators. The serious suggestion the other day that northern industrialists contribute to an organizing campaign of the unions in the South from Chester Bowles, Governor of Connecticut, caused a shudder of dismay even though the northern industrialists did not take it seriously.

CHEAP LABOR BAIT

* * * to organize the South, coupled with the passage of a minimum-wage law that would elevate the living standards of hundreds of thousands of underprivileged workers in the South, might succeed and cheap labor has been the South's main argument in wooing away northern industries.

While there have been many grumpy analyses of what kind of a mandate the people gave President Truman last November, and many forthright assertions that the President has misinterpreted his mandate from the people, many Senators still believe they are trying to whistle themselves past the graveyard. They escaped from the upheaval that rocked the House and changed its political complexion only because of the fact that there were not enough seats at stake to make the kind of radical realinement in the Senate.

Only the southern Senators are on safe ground on that score. The Thurmond Democrats gave the southern Senators a mandate and, quite rightfully, they are sticking to it. If they did not there would be no hope for the democratic process.

In their hearts the southern Senators know that eventually civil-rights legislation will come, if not this year and this session, then at some future session. The Senators who in the past opposed social security, the Wagner Labor Act, and all the other social-progress laws, saw them enacted at last, saw the reinterpretation of the free-enterprise system and saw the national income soar to new heights beyond the peak of their wildest imaginings; saw the Nation's industrial and military power advance into world leadership.

MAY BLOCK FUNDS

But there is danger. The danger lies in those nine States which have one-half of the Nation's total population and about one-half of the income and the tax expense. There is vast room in the country for expansion of population, for relocation of industry, for further development of the economy. Holding the horn of plenty, the nine States might conceivably turn off the flow of gold, divert it into other channels and use it as a punitive weapon.

There has already been talk of this, of blocking agricultural price supports, of shutting off appropriations for public works, of withholding approval of Federal funds for countless things which the more richly endowed States have. Perhaps Senator Ellender's complaint that while the oil wells of Louisiana pour out riches they are owned by northern corporations is a reflection of those fears.

However, these are merely imaginings in the heat of battle in the Senate. The stark

reality is that the Nation is indissolubly welded together, that it will act for the greatest good of the greatest number. It may be a long, noisy, wordy process but in the end, democracy finds a way to flow along its traditional channels.

Sense Instead of Dollars

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. SHAFER. Mr. Speaker, the Congress will soon consider legislation to provide additional funds for the so-called Marshall plan. In view of this I recommend Members to read an article appearing in this week's issue of Newsweek, Sense Instead of Dollars, by Henry Hazlitt. The article follows:

SENSE INSTEAD OF DOLLARS

(By Henry Hazlitt)

The Marshall plan has now become sacrosanct and apparently impervious to argument or facts. Even when a high official of the British Government blurts out in an official speech that Britain has now achieved complete recovery, he raises only a few eyebrows in Congress, and these are promptly lowered by the hasty assurance of other officials that the first one spoke out of turn. Yet Under Secretary Mayhew's statement is confirmed by the official indexes of Great Britain, and for that matter of Ireland, the Netherlands, Norway, Sweden, and Denmark, which show that industrial production in all these countries is now above the prewar level.

When this is pointed out, the reply is: "True, but our country still has an unfavorable balance of trade; and of course it is the American taxpayer's duty to pay for it. And he may as well know that we intend to go on buying more than we sell even beyond 1952."

In brief, in spite of the fact that these countries are now producing more than they produced before the war, they announce that they will continue to live beyond their means. They will continue to consume more than they produce. They will continue to buy more than they expect to pay for. They present figures showing what their foreign-trade deficit is going to be in future years. They talk as if a foreign-trade deficit were something foreordained, some malign fate, instead of something that they bring about by their own policies.

It is not merely the former European belligerents but our Latin-American neighbors, and in fact nearly all the former neutrals, who now complain of a dollar shortage. The primary cause of these chronic foreign-trade deficits and dollar shortages is not mysterious. It is exchange control. Every government that imposes exchange control contends that it is forced to do so by the dollar shortage. The truth is the reverse. It is the exchange control itself that causes and perpetuates the dollar shortage.

It is needless to spell out here all over again just how and why it does this. I have explained the reasons in my book, Will Dollars Save the World? in 1947 and in numerous Newsweek columns since. They have been pointed out in the last few years by such economists as John Jewkes in England, Wilhelm Röpke in Switzerland, Trygve Hoff in Norway, and Gottfried Haberler and Walter Sulzbach here, to mention only a few. But so far as the ECA is concerned, they might just as well never have written.

Perhaps an analogy would help. The 1947 per capita income of Mississippi was lower than that of Great Britain, Denmark, Sweden, or France. Yet Washington did not start rushing millions of dollars into Mississippi either to halt communism there or to enable Mississippians to buy more goods from New York. But if Mississippi's State government suddenly decreed that 50 cents in Mississippi was worth $1 in New York; if it ordered its exporters to turn over all their dollars from sales to New York to the State government and accept only 50 cents apiece for them; and if Mississippi's government then allotted the proceeds to its importers to enable them to buy every dollar's worth of goods from New York at a cost to the importer of only 50 cents—then everybody in Mississippi would want to import from New York and nobody in Mississippi would be crazy enough to export to New York. Mississippi would immediately have an unfavorable balance of trade and an appalling shortage of New York dollars.

If Congress is determined to go ahead with the ECA—as apparently it is—then it ought at least to insist on one minimum condition. This is the abolition of exchange control. Such a condition would not only save American taxpayers billions of dollars; it would do more than any other single measure to restore free enterprise in Europe and bring real world recovery. Exchange control is not only a totalitarian device in itself (inspired by Hitler's Schacht); it is the keystone of present European controlism, nationalism, and socialism.

Destruction Caused by Western and Midwestern Blizzards

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. O'SULLIVAN. Mr. Speaker, under leave granted to me to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I call attention to the fact that fairly accurate figures are now being compiled to show what havoc was wrought by the many blizzards during the winter of 1948 and 1949.

There appeared in a local newspaper the following item which gives people a pretty good idea of the extent of the livestock loss and money damage caused by these unprecedented storms:

BLIZZARDS KILLED $33,000,000 WORTH OF CATTLE, SHEEP

CHICAGO, March 17.—The great western blizzards of 1949 killed more than half a million cattle and sheep worth $33,000,000, stockmen and State agriculture officials estimated today in a United Press survey.

The stock losses, heaviest in history, were not expected to create a meat shortage.

The total cattle loss was estimated at 165,000 head, compared with a Nation-wide cattle population of almost 50,000,000, not including dairy cattle.

The sheep loss was put at 422,000, compared with a total sheep and lamb population of almost 32,000,000.

The cattle loss amounted to $25,000,000 and the sheep destruction cost more than $8,000,000.

Commemorating the Founding of Seattle

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. MITCHELL. Mr. Speaker, the city of Seattle will hold a centennial celebration beginning in 1941. To express our pride in the faith and the enterprise of the pioneers who founded and built Seattle, we are proposing a centennial stamp to commemorate the landing of the pioneers at Alki Point in 1851. The Alki Women's Improvement Club of Seattle sponsored House Joint Memorial No. 24 in the State legislature and has submitted a sketch of the proposed stamp, depicting in the center the landing at Alki of the schooner *Exact*, with the Olympics shown in the background, Seattle buildings on the right, and Indians on the left. It is a privilege for me to introduce legislation in the House which calls for the centennial stamp.

Alki Point is a historic place in the great city of Seattle. Here the first settlers of the city landed in 1851. The vanguard of the first settlement arrived at Alki Point on September 28, 1851. It is recorded that the majority of the settlers at Alki Point and Seattle, upon leaving their homes in the East, had intended to locate in the Willamette Valley, but, when they crossed the mountains, the wonderful stories they heard about the Puget Sound country inspired them to investigate it.

The expedition crossing the plains from Illinois stopped at Portland while two members, John N. Low and David T. Denny, set out for Puget Sound. At Olympia they were joined by Lee Terry and Capt. Robert C. Fay. The party, aided by Indians from Chief Seattle's band, made a prospecting tour in the vicinity of the Duwamish River, finally moving their camp to Alki Point to make a permanent settlement. This was a natural townsite, with land free of timber, a beach of sand and gravel, and the uplands within easy reach. To the north and south, the sound was in clear view, the Olympic Mountains rising in the distance. Sailing craft going to the upper sound passed near the point; small boats and canoes made it a port of call.

The settlers called their townsite New York, which caused visitors to smile and say "Yes, by-and-by." Translated into Chinook, this expression became "Alki," and the name remained.

The main party left Portland on November 5, 1851, taking passage on the schooner *Exact*, which was carrying gold prospectors on a voyage to Queen Charlotte Island, intending to touch at the sound with emigrants. The *Exact* dropped anchor off Alki Point on November 13, there disembarking the party that founded Seattle. In the party were 12 adults and 12 children; A. A. Denny and family, John N. Low and family, C. D. Boren and family, W. N. Bell and family, and Charles C. Terry, who, with Lee

Terry and David T. Denny, brought the number of adults to 12.

From the original settlement at Alki Point grew the great metropolis which bears the name of the famed Indian chief, Seattle. Today, its alert and enterprising citizens, busily engaged in commerce and industry, enjoying in their leisure time its natural scenic beauty, show the same pioneer spirit of the settlers almost a hundred years ago.

Resolutions Concerning H. R. 526

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. TRIMBLE. Mr. Speaker, a few days ago I received the following resolutions adopted by a group of farmers as a meeting held at Harrison, Boone County, Ark., on March 9, 1949. Under unanimous consent, I include these resolutions in the RECORD for the consideration of the membership:

The following resolutions were unanimously adopted by the county committees of the Third Congressional District at an information meeting on March 9, 1949, at Harrison, Ark.

This information committee is composed of 39 farmer representatives elected by all the farmers of the 10 counties of the Third Congressional District of Arkansas.

The meeting was held in Harrison, Ark., at 9:30 a. m., March 9, 1949, at which time motions were duly made and unanimously approved favoring the following resolutions:

"1. That this group go on record as favoring the following changes mentioned in the Pace amendment, H. R. 526:

"H. R. 526, EIGHTY-FIRST CONGRESS, TO AMEND THE AGRICULTURAL ACT OF 1948

"The above bill, introduced by Representative PACE, of Georgia, if passed would amend the Agricultural Act of 1948. (See reports, memorandum 122.) In effect this bill would provide price supports indefinitely at 90 percent of parity or comparable price to cooperators for the basic crops of cotton, wheat, corn, tobacco, rice, and peanuts; and for the four Steagall commodities, milk, and its products, hogs, chickens, and eggs. The bill also would provide price supports on the other Steagall commodities at from 60 percent of parity or comparable price to not more than the 1948 price-support level. In addition, the present wool price support would continue indefinitely, as well as authority for the Secretary to carry out purchasing and lending operations with respect to commodities not included above. This bill would eliminate the entire title II of the act, thus doing away with the revised parity formula, the sliding scale for determining price support percentage minimums with respect to basic crops and marketing-quota provisions which otherwise becomes effective January 1, 1950. Title III of the 1948 act would remain as written.

"2. That this group of farmers go on record in favor of the Hays bill, H. R. 402.

"3. That this group go on record as opposed to the Jensen bill, H. R. 2368, the Hope bill, or any other bill that leaves out farmer control. In our opinion any and all farm programs should be under the control of democratically elected farmer committees.

"4. That this group go on record as favoring the Beckworth bill, H. R. 820. This bill gives the county-office employees a measure of security, paid for out of their own salaries, that will go far in acquiring and holding better trained personnel.

"5. That this group of farmers recommend the following budget changes:

	President's 1950 budget	Recommended changes
ACP program funds (1949 calendar year)	$232,197,000	$265,500,000
ACP administrative funds (July 1, 1949-June 30, 1950):		
National and State	4,992,439	4,992,439
County	19,854,000	29,854,000
Total ACP	257,043,439	300,346,439
Tobacco marketing quota	2,599,026	2,599,026
Peanut marketing quota (July 1, 1949-June 30, 1950)	2,551,748	2,551,748
Cotton, corn, wheat, and rice marketing quota funds (July 1, 1949-June 30, 1950)	27,805,787	27,805,787
Total marketing quota	32,956,561	32,956,561

"RESTRICTIONS

"1. No part of the funds can be used to pay salaries or expenses of regional, State, or county information employees—Out.

"2. No participant shall receive more than $750 of soil- and water-conserving practices—$10,000 limit.

"3. No part of the funds shall be paid to any person convicted of violating the act to prevent pernicious political activity (Aug. 2, 1939) or the act of July 11, 1919, which prohibits the use of Federal funds for personal services designed to influence any Member of Congress except upon request of any Member of Congress—Out.

* * * * *

"6. That Ralph Hudspeth, farmer of Searcy County, Ark., be elected by this group as the farmer representative to testify before the Agricultural or any other committee in Washington, considering the above-mentioned bills, if and when our Congressmen, Senators, and this group feel it is necessary. Dan Blair, of Benton County, was elected first alternate and J. W. Parrish, Boone County, second alternate to serve in the absence of Mr. Hudspeth.

"7. That we express our sincere appreciation to our Congressmen and Senators for their faithful efforts on behalf of the triple-A conservation program."

RALPH HUDSPETH,
Chairman.
HOOD G. LOUGH,
Secretary.

Nevada Endorses Statehood for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. BARTLETT. Mr. Speaker, the people of Alaska are grateful to the Nevada Legislature for having adopted a joint resolution memorializing Congress to pass legislation which would admit the Territory of Alaska to the Union as a State. The resolution was signed by Governor Vail on March 15 of this year.

The legislature pointed out the compelling reasons why it believed Congress should take steps to admit Alaska, the most cogent of which I quote now:

It is inconceivable that a region as large as Alaska and possessing its great multiplicity and richness of mining and general resources and its strategic military position should remain indefinitely under the American flag in a condition of political servitude.

The Nevada Legislature has correctly stressed other reasons, almost any one of which is cause enough for changing immediately the status of Alaska from that of a Territory to that of a State. It recognizes that Alaska has more population now than several of our States had at the time they were admitted into the Union; Alaska has a Delegate in Congress with no vote; the Territory of Alaska has been a part of our great Nation for many years and has played a vital part in the economic structure of the entire country; during all times and during all crises of the United States, Alaska has contributed its share, and Alaska could better operate as a State of the Union.

Incidentally, Mr. Speaker, I am happy to report that Hon. WALTER S. BARING, Representative at Large from Nevada, and a member of the Public Lands Committee, voted to report the Alaska statehood bill to the House.

Organized Labor's Contribution to Our American Way of Life

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. CROOK. Mr. Speaker, as we advance labor legislation in this Congress, it is well that we refresh our minds with inventory of the many fine accomplishments of organized labor during the last quarter century. In so doing we draw out the wisdom of the past to help us understand the trials of the present and the problems that lie ahead for a great majority of our people.

We today are assembled here under the greatest freedom that prevails in any country of the world. This freedom and American way of life is not to be considered as a gift; it is the fruition of labor which has cropped from courageous and militant efforts ever since the first white man set foot on American soil, and I would gladly have every Member of Congress know that America is a divine gift in which we are blessed with the privilege of exercising this freedom.

Indeed, labor has played an inestimable part in the evolution of our cherished democracy. As I said on a previous occasion, all the wealth of our country comes from soil and toil, and most of it from toil. Who and where is the person that would deny man or woman a fair share of the wealth he or she produces? Ever since our founding fathers started for a new lease on life, and the inception of the ark of the people's covenant, the ranks of labor have unflinchingly blazed

the trails in our struggle for higher and better living. With a continuation of such determination and accomplishments, freedom and liberty will never perish from the earth.

The evolution of industry from decade to decade presented new problems, and the individual laborer gradually became a victim of some type of exploitation. His salvation was discovered in a system of fraternity known as the union, and today unions of workers for collective action are to be found throughout the world wherever the modern system of industry has been established. Appearing first in England, the birthplace of the factory system, these organizations have spread to all industrial countries and have flourished in rough correlation to the extent of industrialization. Not only is there this close correspondence between the extent of union membership and the type of industrial organization dominant in a country, but within the most highly industrialized countries, where the movement is strong, unionism flourishes only among those classes of workers who are directly affected by modern methods of production.

The facts most assuredly indicate that the labor movement has been, and is, an attempt on the part of a great number of working men and women to adjust themselves to certain conditions of life created by the capitalistic system of industry. Such a system of industry has separated the worker from ownership in the capital instruments with which he works, and it destroys the position of the laborer as an independent enterpriser. It reduces the mass of men and women in society to something like a uniform economic status, welding them gradually into a distinct social class. Workers have been concentrated in close contact within a limited geographical area, thus leading to a system of regimentation conducive to group action and conduct. Injurious economic forces pressed in on the workers. They brought long hours, low wages, unemployment, monotonous and hazardous kinds of work, unsanitary conditions, untimely declining years of life without security, exploitation of women and children, and demoralizing impressions on mankind. The existence of these common problems supplied the motive for collective and remedial action, and unions were born of necessity by public-spirited men and women that sensed their obligations to humanity and its civic, social, and economic welfare.

Fraternalization was the only alternative for the protection of the integrity of the human soul and the preserving of man's inalienable rights embodied in our American Constitution. It was the avenue on which a guiding ray of light lead the worker to a fuller and happier life.

Labor organizations of our country have accomplished inestimable results. They have elevated the standards of the workingman to a position of dignity. In their concern for the brotherhood of man, reasonable working hours have been established, increased wages have been secured to, at least, partially meet the ever upward spiraling of the cost of the necessities of life. Sanitary working conditions have been made a reality; unemployment compensation prevails; the right to bargain on wage, hours, and working conditions has become a rightful practice; health and safety provisions have been provided, and compensation for occupational diseases is assured and women and children have been afforded protection.

These benefits have been far reaching. They have played no small part in helping to build prosperous cities and communities. Every family of our unions, yes, every family in the communities of which a union is a part, has had democracy brought a bit closer to its fireside. As a result of organized union efforts free labor and free thought have been reinforced. Modern homes have multiplied, family life has been enhanced and the workingman has grown more contented in knowing he has some security against the twilight years of life. Again, I frankly say that when the laborer is receiving a fair share of the wealth he creates, every line of business and our entire country is prosperous.

Records reveal that organized labor has always been a stanch supporter of public improvements, high standards for education, patriotic endeavors of all kinds, of the elimination of slum districts and unhealthful conditions that have prevailed to cause crime and disease. It has always liberally supported all our drives and organizations given inception and dedicated to the good of humanity. It has always been interested in more than its own economic life; it has also been profoundly concerned in the economic life of our cities, communities, and the Nation, notwithstanding frequent false accusations designed to curb its noble purpose.

Now, in conclusion, I wish to salute organized labor on the progressive gains it has made and fought to sustain, and may the march of time find all members of every labor union obsessed with the desire to promote greater achievements dedicated to the welfare of humanity, economic security of our Nation, and a just and lasting peace for the world. Democracy will be safe just as long as we are willing to provide those conditions which assure free labor, health, happiness, education, contented home life, social and civic pride, economic security, integrity of the human soul, and the spirit of the true brotherhood of mankind.

Postal Rate Increases Seen as Device To Censor Publications

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include a thought-provoking article regarding proposed increases in postal rates by David Lawrence, who suggests that need for revenue is merely a pretext under which the administration may censor certain publications. The article, which appeared in a recent issue of the Washington Star, follows:

POSTAL INCREASE SEEN AS TRUMAN DEVICE TO CENSOR PUBLICATIONS

(By David Lawrence)

Every now and then the Russians accuse America of government control of thought and of the press. Most Americans laugh off the charges. But every now and then there is a modicum of truth in what the Soviet spokesmen say. In all fairness—if conscience is still to be our guide even in international debate—it must be conceded that the press and radio as well as the movies in the United States are subjected to forms of actual and potential censorship. These are by no means limited to such worthy restraints as the prevention of libelous statements or curbs on the use of obscene language.

Thus the Truman administration, under the pretext of a need for increased revenue, proposes an increase in postal rates which, it has been brought out in testimony before congressional committees this month, would put out of business many publications and impose such heavy financial burdens on others as to place the entire publishing industry at the mercy of the Government's licensing power.

The fact that a far less drastic schedule of rates may be finally adopted than the 400-percent increase now recommended by the Truman administration does not remove from the situation the capacity of the Government overnight to ruin the publishing industry.

LICENSE POWER ABUSED

The licenses to use the mails are, of course, within the power of the Government to grant, but when a licensing power is abused the motives behind such a penalty need to be explored. The excuse or pretext now is that the Post Office Department has a deficit. No other Government department that serves the people is obligated to collect for services performed for the taxpayers sums equal to the expenses of that department. Isn't this a service to the American people to be paid for out of general taxation?

The deficit of the Post Office Department for all clases of mail, amounting to $550,000,000 a year, is only a small fraction of the $5,000,000,000 spent annually by the United States to promote democracy in other countries. Nobody has arisen to suggest that this kind of aid should pay its own way any more than it is suggested that the Department of Justice ought to collect enough money out of its law-enforcement work to pay the expenses of the Department. It costs the Government about $8,500,000 a year to maintain the Library of Congress but nobody has suggested that an admission fee be charged sufficient to pay all the expenses of that institution.

For many decades the postal rates have been low because the Government wished to follow out the letter of the Constitution and promote the distribution of educational material. Now, when weekly and monthly magazines reach 35,000,000 buyers and daily newspapers reach over 52,000,000 buyers, the Government introduces a special tax to be borne by the distributors of knowledge. If the rates were nominal or in keeping with past schedules, there would be no finger of suspicion pointed at an administration which has more than once shown its hostility to the press because the latter does not act toward the administration in a subservient manner.

THREAT TO BUSINESS

If the object is to intimidate the press, no more clumsy way could have been selected though from now on the press will

have to realize that overnight an unfriendly administration, putting pressure on a rubber-stamp Congress, can threaten the entire structure of the periodical-publishing business. It is the reading public which would have to pay the higher costs. No better way to weaken democracy can be devised than for a tyrannical majority to place a higher and higher tax on the dissemination of knowledge.

Another power which is already subject to abuse is that which permits the Government to issue or revoke licenses for radio stations. Here intimidation by Government is not a potential theory but a fact.

Finally there is the case of the $74,000,000 a year which a House subcommittee revealed recently was being spent by the Government to influence opinion through Government bulletins and through propaganda devices operated under Government agencies and officials.

If American observers really want to be fair about it, they will admit that, while the bulk of the communications of the country—the press and the radio—are able to say what they please, they could be subjected to severe economic pressure at any time by an arbitrary and capricious administration and its rubber-stamp majority in Congress. At the same time the administration can perpetuate itself in power by spending public funds for propaganda which, in the influencing of public opinion, is far more skillfully and effectively utilized than propaganda devices to maintain a one-party system in power inside Russia.

Progress in Civil Rights

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian of March 22, 1949:

PROGRESS IN CIVIL RIGHTS

Passage by the house and senate, by the overwhelming votes of 53 to 4 and 27 to 2, of an Oregon fair employment practices act has been described by Edwin C. Berry, secretary of the Portland Urban League—principal sponsor of the legislation on behalf of Negroes—as "the greatest weapon against communism we could have in this State."

We don't know about that. But we do think the FEP law is minimum recognition of the right of all racial and religious minorities to earn their living and improve their economic status, and reaffirmation of that equality of citizenship which has been promised but not delivered under the American system. It restores a measure of our faith in the essential tolerance and open-minded progress of Oregon as a State.

It is particularly satisfying, and a tribute both to Democrats and Republicans of the Oregon Assembly, that the Oregon Legislature saw the desirability of moving toward improvement of this State's own civil-rights problems while the National Congress is involved in a bitter and confusing struggle over the same issues. Oregon has joined five other States in the enactment of FEP legislation—New York, New Jersey, Connecticut, Massachusetts, and Washington,

The efficacy of an FEP law will be almost wholly dependent upon intelligent administration of its provisions, among which educational activities perhaps outweigh legal responsibilities. We should have preferred the establishment of a separate fair employment practices commission, rather than use of the State labor commissioner as the administrator. Yet the main provisions of the law were saved, and we are hopeful of its success. It remains for the ways and means committee to provide funds to prevent FEPA from becoming just another empty statute.

Greater Federal Aid to States in Employment Security Programs Needed

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. O'HARA of Illinois. Mr. Speaker, under the privilege granted me to extend my remarks in the RECORD, I wish to bring to the attention of my colleagues a letter received by me from Mr. Frank Annunzio, the very able director of the Department of Labor of the State of Illinois. Mr. Annunzio so forcibly presents the picture obtaining in the State of Illinois, where lack of adequate Federal aid is seriously interfering with the efficient administration of the State employment security program, that I am sure his letter will prove of general interest to the membership of the House. The letter follows:

FEBRUARY 21, 1949.

The Honorable BARRATT O'HARA,
House of Representatives,
Washington, D. C.

DEAR SIR: I am seriously concerned over the inadequacy of the 1949–50 appropriation for State employment security administration now pending in the House Appropriations Committee.

As you know, the States rely upon Federal funds granted pursuant to title III of the Social Security Act for the administration of the unemployment compensation and the State employment-service programs. The States also administer the payment of readjustment allowances to unemployed veterans. The costs of administration of this program are allocated by the Veterans' Administration from funds appropriated by Congress for such purpose.

Under the Federal Unemployment Tax Act, a 3-percent pay-roll tax is levied on employers of eight or more workers. Against this tax, these employers are given a maximum 90-percent credit, based upon their contributions paid and experience-rating credits earned under State unemployment-compensation laws. Thus the Federal Government collects from employers who take full credit under the State laws, approximately three-tenths of 1 percent of their pay rolls. At the time of enactment of the Social Security Act, it was intended that this three-tenths of 1 percent be used for the administration of the State unemployment-compensation programs. In actual practice, however, the proceeds of this tax are treated as general revenue. The Federal Government has returned to the States less than half of the amounts it collected.

The 1949 appropriation of $135,000,000 was grossly inadequate. A deficiency bill allowing an addition ten millions has been passed by the House. The States consider this amount insufficient to meet the increased work load for the balance of this fiscal year.

In Illinois inadequate Federal appropriations in the past have resulted in—(1) use of State funds to restore deficits in Federal allotments; (2) curtailment of essential State operations.

It now appears that for the fiscal year ending June 30, 1949, Illinois will have used approximately $300,000 in State funds, made available by the general assembly, because the Federal Government failed to make available sufficient moneys to operate this State's program. It is obviously unjust to compel a State to use its funds for purposes for which the Federal Government is obligated to make moneys available, at the same time that the Federal Government is collecting from the citizens of that State for that purpose more than twice as much as it is returning to the State.

Even after the use of the State funds it was necessary to curtail operations in Illinois. This tends to result in an inadequate examination of benefit claims to determine whether or not the claimant meets the requirements of the law; a delay in payment to claimants entitled to benefits; failure to collect tax delinquencies; and deprivation of veterans and other unemployed of services they are entitled to expect. Thus the lack of Federal funds results in a double loss to the State's unemployment trust fund account, first, by expenditure of State moneys, which would otherwise go into such account; and secondly, by loss of moneys to the account by reason of inadequate facilities for checking the propriety of benefit payments and collection of delinquent contributions.

It is, therefore, my concern that for the next fiscal year the Federal appropriation provides sufficient moneys to the States for proper and efficient administration of their employment-security programs.

I believe that at least $170,000,000 is necessary for that purpose. I arrive at this conclusion on the following basis: For the present year $130,000,000 was appropriated. In addition, at least $10,000,000 will be allowed as a deficiency. To this should be added $20,000,000 allotted to the States for administration of the readjustment-allowances program by the States. This totals at least $160,000,000 to be expended by the States for the fiscal period ending January 30, 1949.

Title V of the Servicemen's Readjustment Act of 1944 will expire for most veterans on July 25, 1949, and any amount granted to the States for administration of this program will be substantially reduced. Nevertheless it is anticipated that after that date the veterans, who were covered by the Readjustment Allowance Act, will come under the State unemployment compensation acts. Therefore the Federal title III appropriation should make adequate allowances for the handling of the claims of these veterans.

The Bureau of Employment Security, based upon estimates of work loads made some time ago and now obsolete, recommended an appropriation under title III of approximately $160,000,000 for the next fiscal year.

We believe that the claims load in the next fiscal period will be greater than it was in the last. Costs of operations such as rents, salaries, etc., will, no doubt, be higher. It thus appears that the appropriation for the 1950 fiscal period should be substantially greater than that for the current fiscal period and that there is absolutely no basis for the Bureau of the Budget's request for $135,000,000 for costs of administration of the State programs for the next fiscal year.

To recapitulate: During the fiscal year ending June 30, 1949, the States will expend for administration of their employment-security

programs, including readjustment allowances, as follows:

Original title III appropriation	$130,000,000
Veterans' readjustment allowances	20,000,000
Deficiency passed by House	10,000,000
Total	160,000,000
For the next fiscal year they should have:	
Amount equivalent to that allowed for current fiscal year for administration of unemployment compensation, employment service and readjustment allowances	$160,000,000
Additional amount necessary to meet definitely increased work loads and cost of operations	5,000,000
Contingency for possibility of substantially increased work loads	10,000,000
Total	175,000,000
Less amount which will probably be appropriated for administration of readjustment-allowances program	$5,000,000
Total title III appropriation	170,000,000

I shall greatly appreciate your consideration of these matters.

Very truly yours,

FRANK ANNUNZIO,
Director of Labor.

Spain Says Future Is Linked With United States

EXTENSION OF REMARKS
OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article appearing in the New York Times of Sunday, March 27, 1949, entitled "Spain Says Future Is Linked With United States," by Ely Culbertson:

SPAIN SAYS FUTURE IS LINKED WITH UNITED STATES—FOREIGN MINISTER STATES NATION WOULD JOIN ATLANTIC PACT IF PROPERLY RECEIVED—ASKS IMPROVEMENT IN UN—URGES CHARTER CHANGE SO THAT NO PEACEFUL COUNTRY SUCH AS HIS COULD BE BARRED

(By Ely Culbertson)

The first question put to Spanish Foreign Minister Alberto Martin Artajo was: "What is the economic situation of Spain today?"

Foreign Minister: "Our economic situation leaves much to be desired. We have a bright future because Spain is rich in natural resources, especially metals, and there is order and peace in our country. Our strength is not sapped by the malignant fever that periodically comes in communistic waves of strikes and disorders, as in most other countries of Europe.

"But we have been much weakened economically by the urgent necessity of maintaining large armed forces and armaments against the vast threat of the Communist Moscow state battering at the very doors of Paris and Nanking. It must be remembered that since 1945 Spain was virtually the only nation in western Europe that maintained its full armed strength in readiness for defense against the possible advance into Latin Europe of the Moscow imperialists—and imposed upon us through Molotov's machinations at the San Francisco Conference.

"In addition, the entire Spanish gold reserve was shipped to Moscow during the civil war by Moscow agents, and it is still there. That is why we seek cooperation and mutual help with South and North America, who are our natural friends."

Here Señor Martin Artajo, a big, hearty, bluff man, looking typically like a prosperous American rancher, stopped and with a typically Spanish shrug of the shoulders added: "And, as you Americans know by now, to be prepared against aggressors costs money, and plenty of money."

Mr. Culbertson: "Is there still much bitterness among the Spanish people on the exclusion of Spain from participation in the United Nations?"

Foreign Minister: "Bitterness, no. Profound disappointment, yes. It is only natural. We Spaniards are a proud people, and we feel that we are being treated unjustly, and at the most critical period in world history. No nation needs and seeks world peace more ardently than the Spanish nation. Spain (and again Señor Martin Artajo smiled subtly) has had no war with any nation during the last 200 years. The only exception was our war with the United States in 1898, which was not of our making. Why then classify the one nation with the best peace record in the world as a threat to peace, as was done at the San Francisco Conference?"

Mr. Culbertson: "Does that mean that you are satisfied with the present United Nations Charter?"

SAYS NONCOMMUNISTS OBJECT

Foreign Minister: "No; it does not mean that. But in our atomic age the hope of the world lies in an effective world authority against aggressors anywhere, and the United Nations Charter was a splendid beginning. But of course it must be improved so that no aggressor may veto peace, or veto from membership a peaceful nation like Spain. We would have wanted to join with other peaceful nations to improve the United Nations, to make it work, and thus avert the catastrophe of the third world war, which this time will be an atomic war. We expect full well that when the Politburo, in the next 2 or 3 years, completes the building of its atomic plants, Madrid will be one of the first on its list."

Mr. Culbertson: "But, Mr. Foreign Minister, there is opposition to the recognition of Spain, not only by Communists, but by other voices who are listened to in the United States."

Foreign Minister: "I hear those voices too. But frankly (and the Foreign Minister shrugged his shoulders and raised his eyebrows to show utter bewilderment) I cannot understand them. On my street there are many things I don't like and don't approve about my neighbors, but to live in peace with them I must respect the sanctity of their homes.

"How are we going to get peace in the world if each nation elects itself the judge of the internal affairs of other sovereign nations? The Communists have their own reasons for doing so. Let the Spanish people settle their own internal affairs in their own manner. And let each nation find its own level of government best suited to its vital needs and traditions."

Mr. Culbertson: "Does this mean that Spain is satisfied with her present structure of Government?"

Foreign Minister: "No one claims that the present Spanish Government is either perfect or unchangeable. In fact, much of what we do at present is but a temporary phase comparable to the period of reconstruction after your own Civil War.

"We are forced to choose between the Communist-fostered anarchy and temporarily severe order."

WILL SURRENDER ONE RIGHT ONLY

"But whatever the nature of their own national government, no self-respecting people is going to accept the dictates of foreign states or international authority on matters of their own internal structure. Like the great American Nation, the one sovereign right we are willing and required to surrender to an international authority is the right to wage wars of aggression, and nothing else!"

"From the standpoint of America's own national interest there are only two questions that they should ask of the Spanish Government: First, is Spain likely to be a friend or an enemy of the United States now or in time of need? And, second, does Spain plan or prepare for aggression upon its neighbors, now or in the future? I leave it to any fair American to answer these two questions."

Mr. Culbertson: "I have heard some Spaniards talk who are not so friendly to the United States."

Foreign Minister: "We have our hotheads and you have yours. But the future of Spain and the United States is inextricably bound together by history and common interests. Whether we like it or not—and we Spaniards do like it—both nations must march together in friendship, for both belong to the Western Hemisphere. Our historical task is to help carry on the torch of Spanish-American civilization that we lighted four centuries ago. Your historical task is to bring in the benefits of American economy and technology to help blend in a higher synthesis the two great civilizations, the Anglo-Saxon and the Latin. There could be no conflict between us. The frontiers of the Western Hemisphere lie in the Pyrenees."

Mr. Culbertson: "Since the Russian veto bars Spain from the United Nations, what hope is there in your opinion for a more direct participation by Spain in the common concern of the Atlantic community?"

Foreign Minister: "Spain could be of great, immediate, and perhaps decisive help as a member of the North Atlantic security alliance. But the Spanish nation is asking for no favors. We can be of help only if we are received in the same spirit of serene and equal friendship which we offer to all peaceful and God-fearing nations. Spain is one of the principal powers of the Christian West, and it would make little sense to deny her her rightful place in the common struggle against the future aggressor, when she bled herself white in fighting the civil war against the same aggressor."

Mr. Culbertson: "What would be the contribution of Spain to the Atlantic alliance, Mr. Foreign Minister?"

Foreign Minister: "We can contribute with our good will in Central and South America; our natural resources that so far have been only partly developed, and which range from semitropical fruits to critical metals; our highly trained army of veterans, immediately available, if need be, to help hold the fortress of western Europe; our strategic bases in Spain, for sea and air forces, which will definitely insure the control of the Mediterranean for the Atlantic community."

Mr. Culbertson: "What is your reaction to the official invitation to Portugal to become a member of the North Atlantic security alliance?"

Foreign Minister: "I think it is excellent and wise. We maintain the friendliest of relations with Portugal, whose government and whose economic and political problems are very similar to our own. Portugal's participation will be of great help to the Atlantic alliance. Between Portugal and Spain there are friendly treaties generally known as the Iberian Pact, founded in well-known historical reasons and especially in the mutual conviction that only the related actions of both countries may give all its real strategical value to the Iberian Peninsula."

Mr. Culbertson: "Assuming you join the North Atlantic alliance, what would be your economic and military requirements?"

Foreign Minister: "American private capital will have a fruitful and secure field in Spain. From the American Government we expect no bounties, but we need help in the form of secure, self-liquidating loans to improve our fertilizer, mining, and textile industries for export into Marshall-plan countries. It is important for all that we also improve our transportation. As for military requirements, that would naturally be up to the joint staff of the North Atlantic security alliance. Even if nothing is offered to us economically or militarily, we are still most anxious to take our rightful place in the family of peace-loving nations. For what we want above all is what the American Nation seeks—a world free from aggressors anywhere."

The Woes of the Little-Business Man Set to Rhyme

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert a poem which graphically presents the effort of a rugged, honest-to-goodness American little-business man who is doing his best to keep on his feet and get ahead in the face of multiplying, entangling Federal interferences, exactions, restrictions, rules, regulations, and interpretations which make his confusion worse confounded.

RHYMES AND REMNANTS

(By D. A.)

LITTLE-BUSINESS MAN

This is the story, I must confess,
Of life in the Valley of Unsuccess,
The tale of a little-business man
Who steered by the Benjamin Franklin plan.

The follies of other young men he spurned,
For "a penny saved is a penny earned";
And "early to bed and early to rise
Makes a man healthy, wealthy, and wise."

He studied Poor Richard's Almanac,
And held to his course, and turned not back;
And nobody ever saw him drift
Away from the blessings of toil and thrift.

Up in the morning to greet the sun,
He worked all day till his task was done;
And penny by penny his savings grew,
And presently dollar by dollar, too.

In time he was known as a man of means
With silver and gold in his jingling jeans.
But he didn't keep all in pockets or pots;
Instead he invested in building lots.

He erected houses, with signs: "For rent,"
Till the last of his capital had been spent;
And that, I am quite distressed to say,
Was the time that his planning went astray.

For his costs went up while his rents stood still,
And he had obligations he couldn't fulfill;
And he found himself floundering in the shoals
Of ruinous permanent rent controls.

And now in the Valley of Unsuccess
He'll spend the rest of his life, I guess,
Explaining the cause of his cruel fate:
Capital sunk in unreal estate.

—*Tubless Diogenes.*

Canadian Tax Reductions

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. REED of New York. Mr. Speaker, I am sure it will be of interest to the taxpayers of the United States to know that a preliminary report on the proposed tax reductions contained in the Canadian budget message of March 22, 1949, has just been received.

I wish to point out that this is the fourth reduction in Canadian taxes since the cessation of hostilities in World War II.

President Truman, however, still insists on a $4,000,000,000 tax bill in addition to our present tax collections amounting to $45,000,000,000 during the fiscal year ending June 1949. Our Federal excise taxes alone yield over $8,500,000,000, with another $2,500,000,00 derived from customs and miscellaneous receipts.

There will be no countries in the world contributing to our tax reduction, but instead they will continue to enjoy and profit from the corporate, individual, and excise taxes extracted from the pockets of our people to reduce their taxes.

I am inserting, under unanimous consent heretofore granted, the preliminary report on the proposed tax reductions contained in the Canadian budget message of March 22, 1949:

PRELIMINARY REPORT ON THE PROPOSED TAX REDUCTIONS CONTAINED IN THE CANADIAN BUDGET MESSAGE OF MARCH 22, 1949

I. INDIVIDUAL INCOME TAX

(a) Reduction in personal exemptions: The exemption of a single person is raised from $750 to $1,000. In 1945 single persons had an exemption of $660. (In the United States a single person now has an exemption of $600. His exemption in 1945 was $500.)

The exemption for married persons is raised from $1,500 to $2,000. In 1945 married persons had an exemption of $660 under the surtax, and $1,200 under the normal tax. (In the United States a married person without dependents now has an exemption of $1,200; in 1945 his exemption was $1,000.)

The dependency exemption is raised from $300 to $400. The $300 exemption was instituted in 1946 and replaced a system of tax credits. (The dependency credit in the United States is now $600; in 1945 and 1946 it was $500.)

The exemption for children eligible for family allowances is to be raised from $100 to $150. The $100 exemption was set up in 1946 and was announced at the time to be the equivalent of the $300 exemption then allowed for other dependents, when the family allowances are taken into account.

It is reported that the proposed increases in exemptions will bring Canada back to the prewar level and relieve about 750,000 taxpayers of all tax liability. The prewar level of exemptions in the United States was $1,000 for a single person, $2,500 for a head of a family, and $400 for each dependent.

(b) Rates: Rate reductions are provided at percentages which decrease as the size of the income grows larger.

It is reported that a married couple without children having an income of $2,500 would receive a tax reduction of 56 percent. This appears to produce a tax of about $95 as compared with $170 under existing law. In 1945 this couple would have paid a tax of $385. Thus, the proposed tax burden is about 25 percent of the wartime burden.

Under existing law in the United States a married couple without children with an income of $2,500 pays a tax of $215.80. Prior to the first postwar tax reduction made in the Revenue Act of 1945, this couple would have paid a tax of $360. Thus, the present burden in the United States is about 60 percent of the wartime level.

Under the proposed Canadian legislation a married couple without children having an income of $10,000 will receive a tax reduction of about 17 percent. This produces a tax of about $1,652. Under existing law the tax is $1,990. Under the rates in effect in 1945 the tax would have been $3,612. Thus, the proposed tax burden is about 46 percent of the wartime level.

Under existing law in the United States a married couple without children with an income of $10,000 would pay a tax of $1,621.44. Under the rates in effect prior to the Revenue Act of 1945 this couple would have paid a tax of $2,585. Thus, the existing tax burden is about 63 percent of the wartime level.

The proposed changes in the Canadian tax on individual net income are to take effect January 1, 1949.

II. SURTAX ON INVESTMENT INCOME

The Canadian individual income tax includes a special levy of 4 percent on investment income. Under existing law the first $1,800 of investment income is exempt. Under the proposed bill the first $2,400 will be exempt. In 1945 the exemption was $1,500.

III. CORPORATE INCOME TAX RATES

(a) The present Canadian law imposes a flat 30-percent tax on corporate net income. The rate on the first $10,000 of profits is to be reduced to 10 percent, while the rate on the profit over $10,000 is raised to 33 percent. This is intended as relief for small business.

(b) As a first step in dealing with the double taxation of dividend income, individuals are to be allowed a credit against their personal income tax equal to 10 percent of the dividends which they received from common shares of Canadian taxpaying corporations.

IV. EXCISES

The following excises are repealed: travel tickets, sleeping-car berths, parlor-car chairs, telegrams, cables, long-distance telephone calls and extension telephones, soft drinks, carbolic acid, gas, candy, chewing gum, and transportation busses.

The rate of the tax on jewelry is reduced from 25 percent to 10 percent and the tax is to be levied on the manufacturer instead of the retailer.

The rate of the tax on cosmetics, toilet articles, and preparations is reduced from 25 percent to 10 percent.

The 35 percent on luggage, purses, fountain pens, pencils, and desk sets and smokers' accessories is reduced to 10 percent.

The 25-percent tax on cigarette lighters is reduced to 10 percent.

The present tax on matches is repealed and replaced by a straight 10-percent ad valorem tax.

The rate of the tax on coin-operated games and vending machines is reduced from 25 percent to 10 percent.

V. EFFECT ON THE BUDGET

The revenue loss in a full year's operation is estimated at $369,000,000. The loss in the fiscal year 1950, at $322,000,000.

After the proposed reduction a surplus of $87,000,000 is forecast for the fiscal year 1950. The total expenditures for that fiscal year are estimated at $2,390,000,000.

The estimated surplus for the fiscal year 1949 is $575,000,000. Total expenditures for that year are estimated at $2,200,000,000.

Student Communists

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. VELDE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a very timely editorial appearing in the Peoria Star under date of March 24, entitled "Student Communists":

STUDENT COMMUNISTS

State Senator Paul W. Broyles recently received a telegram from the student president of the Communist Club of the University of Chicago. We think it warrants publication in toto in this column:

"In a Communist Club meeting of over 40 students of University of Chicago a unanimous vote was taken to protest both the Broyles bills and the 'investigation' of our university.

"The members of the Communist Club, along with hundreds of students on our campus, cannot accept the idiotic definition of communism stated in the bill.

"We wish to emphatically state that no 'commission' will ever wipe the Communist Club off the campus of our university.

"We will continue to fight for students' rights as laid down in the NSA bill of rights and continue to bring Marxism-Leninism to the campus. Your intended smear campaign will only make us fight harder and more consistently toward the fulfillment of our goal.

"We further realize that you are not coming to our campus merely to destroy the Communist Club, but also to destroy all other progressive elements on our campus. This fact is fully realized by most of Chicago's students, who have formed a campus-wide coalition at a meeting of over 1,500 students to protest the Broyles bills and the activities of your commission."

One is inclined to excuse the insolence of this amazing document partly on the ground that most persons in late adolescence and early maturity suffer from half-baked ideas which they take very, very seriously. We do not doubt that members of the Communist club of the University of Chicago have discovered that they are the intelligentsia of the student body and are puffed up with the importance of their discovery. For this we cannot much blame the young people. We blame the administrators of a school which permits its students to come under the influence of subversive teachings. And we blame the education profession for tolerating within its ranks persons who unscrupulously poison the thinking of immature and impressionable youth.

Note the sly way in which the president of the Communist club claims for his group the status of a progressive element. Note the candid way in which he declares his faith in Marxism-Leninism. And observe that the Communist club is fighting for a goal.

What is the nature of the progressivism which the University of Chicago Communists belligerently claim for themselves? It was recently defined by Foster and Dennis, leaders of the Communist Party of America, when they declared themselves against the United States in the event of war with the Soviet Union.

What do university authorities have to say about this organization bringing Marxism-Leninism to the campus? The University of Chicago is a Baptist institution. Lenin said, "Down with religion. Long live atheism. The spread of atheist views is our chief task." And Karl Marx said, "Atheism is an integral part of Marxism. Consequently, a class-conscious Communist party must carry on propaganda in favor of atheism."

The goal of these misguided young political prodigies, therefore, is the spread of atheism on the campus and the teaching of doctrines of revolution aimed at overthrowing the Government of the United States. No wonder they are alarmed by the prospect of an investigation.

If the Communist club is proud of bringing Marxism-Leninism to the University of Chicago campus, why do they resent an inquiry by the general assembly?

One thing the University of Chicago Communists seem not to realize. The General Assembly of the State of Illinois is not, like the Politburo of Russia, an autonomous body. It is a representative body. It speaks for the people of Illinois. When these young people, feverish with adolescent political excitement, challenge the general assembly, they challenge the people of Illinois. We are a tolerant people, but there are limits to our tolerance.

The Peoria Star believes that the general assembly will have the whole-hearted support of the people of this State in any effort to disclose subversive influences in our educational institutions. We believe also that the Broyles antisedition bills are a necessary weapon for fighting traitors in our State and should be passed by the general assembly.

Peace or War Via the Atlantic Pact

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. RICH. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Rev. Alexander Stewart, a member of the New England Conference of the Methodist Church, which is to be printed in the forthcoming issue of Zions Herald. In this interesting article Dr. Stewart makes a vigorous and thought-provoking appeal to the American people for study and discussion of the provisions and implications of the North Atlantic treaty as one of the most drastic changes that has been made in our American policy since the signing of the Monroe Doctrine.

PEACE OR WAR VIA THE ATLANTIC PACT
(By Rev. Alexander Stewart)

Among the many pronouncements of the National Study Conference on the Churches and World Order, recently held in Cleveland, one statement concerning the North Atlantic treaty needs to be reemphasized at this time. "We call upon the Senate of the United States to postpone final action on this pact until the Nation has had opportunity for full discussion of all its provisions and implications." There is scarcely anyone today who does not agree that the North Atlantic Pact, if ratified, will constitute one of the most drastic changes that has been made in our American policy since the signing of the Monroe Doctrine. We have never before in American history entered into a collective security or military alliance in peacetime with countries outside the Western Hemisphere.

The text of the alliance was made public on March 18 and the document is to be signed on April 4 by representatives of the nations participating. The Senate ratification is scheduled to follow. It is concerning this third step that the Cleveland conference is urging careful restraint. There must be time for full discussion of all the provisions and implications of the pact by the people before the Senate acts upon it. This is exceedingly important. Up to March 18 there was a tendency on the part of our Government to discourage discussion of the Atlantic Pact proposals and to veil the negotiations in what resembled a wartime secrecy. The very opposite method must now be used. Discussion of the pact must be encouraged. Our people must know the implications of the pact, which may mean peace or war for the world. There are many questions that will need to be discussed and answered.

1. What is the purpose of the pact? The preamble of the pact states that the parties of the treaty are resolved to unite their efforts for collective defense and for the preservation of peace and security." This is to be accomplished, according to article 5, by the agreement "that an armed attack against one or more of the parties to the agreement shall be considered an attack against them all." It is generally understood that in the preliminary conversations with the representatives of the European countries involved, a guarantee of actual military assistance was asked. Our representatives in the conversations, knowing that according to our Constitution Congress reserves the right to declare war, phrased the pact to read, "Each of them * * * will assist the party or parties so attacked by taking forthwith, individually and in concert with the other parties, such action as it deems necessary, including the use of armed force."

I was in attendance at the State Department meeting in Washington at the time of the television and radio broadcast of Secretary of State Dean Acheson on the night the text of the pact was released to the public. He clearly implied that resistance to attack by armed force is meant. Many other State Department officials have made it clear in one way or another that this is a military alliance. It is doubtful that the European countries would have been interested in the treaty if it were not a military alliance. If a two-thirds majority of our Senate approves the pact, there is little question but that our country is committed in advance to go to war if any of the other parties to the pact are attacked. This is in spite of the fact that there is much evidence from history showing that defense treaties have not prevented wars or insured victory once a war began.

Many supporters of the pact hope that it will deter the aggressive tendencies of Soviet Russia. It is possible, however, that it may have the directly opposite effect of forcing the other side to make its own treaties and to further divide the world into armed camps. It is well to remember the words of the Cleveland conference, "No defensive alliance should be entered into which might validly appear as aggressive to Russia as a Russian alliance with Latin America would undoubtedly appear to us. * * * History indicates that the most that can be achieved by military alliances is a temporary balance of power, while they easily give rise to menacing armament races ending in war." High Government officials have now admitted that our sending arms to China at the end of World War II actually stimulated the Chinese Communists to attack.

2. Will the United States have to back up the pact by sending arms to the member nations of the pact? Article 9 provides for the immediate establishment of a council that will consider matters concerning the implementation of the treaty. This council shall also set up a defense committee. Publication 3462, called the White Paper, released the day after the pact by the State Department, says that "A military assistance program is now being considered by the executive branch of the Government." Congressmen are very much concerned over the

military assistance involved in the pact. It has been variously estimated that the cost of this will run from fifteen to twenty-five billion in the next 5 years.

According to the Washington News for March 18, the United Press reports that "the administration plans to ask Congress to authorize a military lend-lease program to cost between $1,000,000,000 and $2,000,000,000 in the first year."

Constantine Brown, writing in the Washington Sunday Star for March 27, says: "The organization of the desired force will require, under the best possible conditions, between 3 and 5 years, and a rough guess is that we will have to put up for this rearmament program of our new allies somewhere between $12,000,000,000 and $15,000,000,000.

"Added to an estimated $15,000,000,000 for the balance of the European recovery program, this sum brings to nearly $30,000,000,000 the expenditure to be required of American taxpayers for western Europe's recovery and security during the next 4 years.

"The first question which arises in the mind of every Member of Congress is whether the taxpayer will be able to stand the burden which the administration may feel compelled to impose—without our economic and social structure breaking down."

Compare these figures for a multibillion dollar European rearmament program with the small investments the United States makes in agencies of the UN—$18,000,000 for the UN itself, $1,250,000 toward the solution of world hunger through the Food and Agriculture Organization, $3,750,000 for "creating in the minds of men the defenses of peace" through UNESCO.

Not only is there a great danger in the cost of a gigantic military lend-lease program to our own economy, but to divert men, money, and strategic materials necessary for economic recovery in Europe to military purposes will delay, if not prevent entirely, the coming of the day when Europe might be back on its feet. A rearmament program would impose such a burden upon European economy as to lead to the lowering of standards of living, already inadequate in so many countries. This would undoubtedly help to insure the spread of communism, which thrives on the unrest and misery brought about when people lack sufficient food, decent homes, adequate schools, and proper health programs. Genuine reconstruction and rearmament cannot coexist. Judging by past experience, when the choice has to be made between allocating strategic materials to the necessities of daily life or to the needs of a military alliance, the latter stands to gain at the expense of the former.

After World War I, Viscount Grey wrote, "Armaments were intended to produce a sense of security in each nation—that was the justification put forward in defense of them. What they really did was to produce fear in everybody. Fear causes suspicion and hatred; it is hardly too much to say that, between nations, it stimulates all that is bad and depresses all that is good."

3. How will the pact affect the United Nations? In June 1948, when the Senate Foreign Relations Committee reported out the Vandenberg resolution, the committee spoke of the "present inability of the United Nations to assure international peace and security." Their report virtually called for a military alliance because there seemed to be no hope for peace or security in the United Nations. In large measure, the pact is based on this premise that the United Nations has failed. It is my contention that the pact increases the possibility of the failure of the UN.

In an article written at Lake Success and printed in the Chicago Daily News of March 7 under the caption, "Atlantic pact viewed at UN as fatal blow," the correspondent after extensive talks with UN officials says: "The United States is throwing so much emphasis behind the proposed Atlantic pact that if continued it could be a kiss of death for the UN, some fear. The United States may be giving lip service to the UN and its possibilities, but in reality it is selling the UN straight down the river."

The pact sets up a North Atlantic Council. This council would cease its work following an attack only when the United Nations would take steps to restore peace. The interesting fact here is that only the Atlantic Council would have power to decide when the United Nations had taken these steps. In other words, the Atlantic Council would sit in judgment upon the United Nations and the United Nations would be subservient to it. At present the United Nations is the one bridge across the iron curtain. If the United Nations is destroyed or rendered ineffective, there will no longer be one world, but two. Our task now is to strengthen the United Nations, not to wreck it.

On February 11 Trygve Lie, Secretary General of the United Nations, said, "If people generally began to accept alliance as a substitute for genuine world-wide collective security, then the hope of a lasting peace would be gravely endangered."

The pact will increase the pressures between the nations within the United Nations. On February 26, 1,500 persons demonstrated outside the Parliament in Oslo against the alleged American pressure on Norway to join the Atlantic Pact. The demonstrators shouted, "We want peace, not east, not west." Trygve Lie, speaking at the University of Maine on March 16, said that the present east-west conflict was "too dangerous to last." If the present game of hostilities continued indefinitely, it would result in a "war that will end civilization as we know it."

4. Will the pact assure military success? Mr. James P. Warburg, a retired banker, who has become well known as author and publicist in the field of international affairs, believes that the proposed treaty will "fail to provide an adequate defense, or—in attempting to provide it—will provoke the very attack it is designed to deter." He does not believe that even with our military help western European countries could withstand a Russian attack. If in an attempt to guarantee effective military help to western Europe we send our troops there, Mr. Warburg believes that this act in itself might provoke a Russian attack before a sufficient number of our troops landed, and would thus defeat at once the purpose of the pact. Many believe that in the initial stages of world war III Russia would overrun all of Europe. What is to stop her, in that event, from capturing all the equipment we had shipped to western Europe, thus strengthening her own power? We already have the example of what happened in China, where the Communists now have over 90 percent of all the equipment we sent to Nationalist China since the end of World War II.

France heavily subsidized her military ally, Czechoslovakia, between the wars. Tanks, artillery, and planes, which France paid for and which were manufactured by Skoda, were seized intact by Hitler and were used by the invading German army to overpower the French in 1940. The United States shipped 21,000,000 tons of scrap iron to Japan in the 1930's. Much of this was returned in shrapnel at Tarawa, Guadalcanal, and Okinawa. Someone has said, "When you put arms in the hands of another man, there is no absolute guarantee that, if and when the arms are used, they will be pointed the other way. They may be pointed toward you."

It may be well to ask whether anyone can guarantee, on the basis of the current situation, that if there is not great progress in economic health and stability, Italy or France, for example, will not go Communist within the next 20 years and cease to be an ally. What happens then to the arms and equipment that have been shipped to them? It is generally understood that about one-fourth of France is now Communist. What is to stop mass desertions in the French and other armies in case of war with Russia? We have only to turn to China where whole Nationalist armies deserted to the Communists, for an illustration of this point.

5. Are there constructive alternative means of opposing communism? Yes, there are many things we can do and must do if we are to stop communism or save the world from a war of suicide. First, we must give more time and effort to the building of democracy in our own country, through adequate housing, educational facilities, health programs, and safeguards for civil rights and human liberties.

Second, we must continue to act on the belief that the best way to stop the spread of communism is to help countries rehabilitate themselves. The major problem of Europe is not military; it is economic and psychological. The economic program of aid to Europe that we have begun must not now be deflected into military preparations if we mean to stop communism. Hungry, unclothed, impoverished people are always easy converts to communism. Last summer in Europe I found two major fears—the fear of Russia and a greater fear, i. e., of the day when manpower, money, and resources would be diverted from economic rehabilitation to military aid and rearmament. People cannot eat guns or raise their families in tanks and obsolete airplanes.

Third, we must use and strengthen the United Nations and its specialized agencies to their fullest capacities for cooperative policies to meet the economic and cultural needs of the world's peoples. The United States is now spending $1,000 on its own armaments for every dollar it spends on the United Nations. A former chief United States delegate to the United Nations said recently, "The United Nations could be trusted much more than has been the case."

An example of the successful use of the UN is the Palestine situation. A war in Palestine has recently been ended by negotiation. No one has suggested that it would have been better to have other nations enter the war and thus extend the area of conflict. Yet, under the proposed North Atlantic Pact, an attack on any signatory nation would be considered an attack on all of them and might involve them in war.

The Cleveland conference reaffirmed its faith in the United Nations by saying, "We pledge ourselves anew to support this hopeful venture, trusting that the very trials through which the nations have passed in these years when open hostilities have ceased but when peace has proven elusive, may strengthen the growing organization and confirm the wisdom of its founders."

Fourth. We should support the United Nations Assembly's proposal for world disarmament under international law. This means multilateral action to eliminate all weapons of mass destruction and big national armies and navies, providing instead an international police force and equipment suitable for genuine police duty. The charter of the United Nations calls for a disarmament effort, as does the Vandenberg resolution, which passed the Senate with almost an unanimous vote. The people of the United States will now have to decide whether they want a semiglobal arms pact and suicidal arms race or whether their first allegiance and expenditures shall be for the United Nations and a world system of law and government. Their decision will be between the broadening of the Truman doctrine of military intervention and world rearmament or a halt to the world arms race, and world disarmament. One of the important pronouncements of the Cleveland conference said that "the goal of multilateral and balanced reduction of armaments, subject to

adequate international inspection and control, should be kept at the forefront of our national policy."

Fifth. Every effort should be made to keep diplomatic and nongovernmental channels open between the United States and Russia. The Cleveland conference urged that "the avenues of formal negotiation between the Governments of the United States of America and Soviet Russia must be kept open, and a way should be cleared for informal conferences between unofficial religious, educational, business, labor, and cultural groups of both nations. The American people covet conference as a basis for understanding. We believe that the method of tolerance that is basic to conference will enable each to learn from the other, and give opportunity for the extension of this method upon which peace in a world of contradictory ideologies depends."

Sixth. We should work toward, rather than avoid, an over-all settlement of Germany. We should continue to strive for completion of the treaties of peace between the contestants of the last war.

Seventh. Senator BRIEN MCMAHON has proposed an alternative in a Big Four conference. The President's seeming unwillingness to talk to Stalin or suggest some counterproposal to modify the cold war has caused apprehension among numerous Americans. It would be helpful for many to write their Senators and Chairman TOM CONNALLY, of the Senate Foreign Relations Committee, urging them to examine this and all other possibilities of peace before taking steps such as the North Atlantic military alliance that may make world war III inevitable.

WE HAVE A RESPONSIBILITY

Ministers and laymen should take a personal responsibility to study the pros and cons of the Atlantic Pact and see that this question is brought before peace committees, men's, women's, and youth organizations within the church; farm, labor, education, and community groups. Write to your Representatives as well as Senators. Though your Representative does not vote on the pact, since it comes before Congress as a treaty, and thus only to the Senate, he will have to vote on the world arms bill which is to accompany the pact, and the funds to carry it out. More rearmament means more taxes, more conscription, more likelihood of universal military training, and more diversion of the world's energy into nonproductive uses.

We may well ponder the words of Viscount Grey: "The lesson of European history is so plain. It is that no enduring security can be found in competing armaments and in separate alliances; there is no security for any power unless it be a security in which its neighbors have an equal share."

British Health Plan

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. MULTER. Mr. Speaker, on March 24 I placed in the RECORD the third of a series of articles appearing in the Brooklyn Eagle describing the British health plan. The following, which appeared in the Eagle on March 21, is the fourth of the series:

BRITAIN'S HOSPITALS STRUGGLE TO MEET HEAVY DEMANDS—MANY APPLY UNDER NEW FREE SERVICE LAW

(By E. J. Delaney)

(Fourth in a series special to the Brooklyn Eagle)

LONDON, March 21.—British hospitals now nearly all are owned by the national government and are struggling, with every ingenuity, to meet the avalanche of requests for admittance that has come upon them through the inception of a free national health service.

A person must be seriously ill or in need of an operation at once to gain speedy entrance. Otherwise one must wait and hope to receive a favorable reply within a month or two. When pain is present, or an ailment is of a type that could become acute and hazardous, a way is opened quickly.

The hospitals serving under the plan all carry on in a similar manner because they are parts of a big system covering the entire nation. The Health Ministry decided last year that efficiency could be secured only by merging all hospitals into a cooperative enterprise and legislation authorizing it to acquire all hospitals was adopted.

DIVIDED REACTION

Many are pleased with the arrangement, having become weary of the constant struggle to earn or to beg sufficient money to keep their establishments going. They had little hope of finding means of expanding their buildings and having remodeling tasks performed. These have surrendered their title to their premises and their funds cheerfully.

Others regret the action that has ended their labors as individual charities. This is true chiefly among some of the smaller and more remote institutions that are not connected with universities and are not classed as teaching hospitals. They find themselves mere little units of a big plan required only to proceed according to directives handed down to them by a regional hospital management committee.

Even some of the big teaching hospitals are not entirely pleased with the course of events, but they have decided the action is necessary and are cooperating completely and willingly. They are not under the thumb of any regional board and enjoy a direct liaison with the Health Ministry itself. They receive virtually no orders from on high and rather have the duty to propose policies to some of the smaller hospitals in their areas.

ENDOWMENTS RETAINED

The teaching hospitals have been allowed to retain control of their endowment funds, which now are used by them to promote medical research in their laboratories and to provide a few comforts and amenities to patients without means.

The nonteaching hospitals are not permitted to keep their endowments. They have been taken from them and deposited in a regional pool that is administered by a group of trustees for encouragement of research and hospital advancement. Some of these hospitals were deeply in debt when they were taken over and the government paid off their obligations.

Every hospital employee now is paid by the Government, not directly, but still from the National Treasury. Their wages are a bit lower than those in comparable work, but they are agitating for more money and are considered to have a good chance of getting it. Their hours of work have been reduced and they have been entered in a retirement plan largely financed by the Government. They make a small contribution themselves.

NO LOSS OF JOBS

No hospital employee has lost his job in the shuffle and no pay cut has been made. A few receive more money than the Government believes right for their duties, but they continue to draw it. Their successors will not be paid as much.

The hospital staffs are compelled by the great public demand to be more diligent and admission offices have larger responsibilities. The latter must be sure that urgent cases receive priorities, and that means constant surveying of the waiting list, conferences with attending physicians, and even personal communications with the patients themselves.

To ease up the pressure a little the policy is to have as fast a turn-over of patients as can be arranged. Cases that may be served by the out-patient departments are refused hospital admission. When a surgeon or physician can handle a situation in his own office, the out-patient bureau asks him to do so and to refrain from sending the case to them. As soon as a bed patient is recuperated sufficiently he is requested to go home and domestic help is provided there if required.

WAITING ROOMS ENLARGED

The out-patient divisions are so flooded with callers that enlargements of waiting rooms has been essential. Greater comfort for the waiting people is desired by the ministry, and out-patient officials have been requested to add some comforts and to set up canteens where tea and snacks can be served.

Under a new plan being contemplated, mammoth out-patient centers may be opened in the midst of three hospitals but having no direct connection with any. This may accelerate the care being given.

The waiting period in the out-patient offices is being reduced steadily and now is less than an hour. Use of appointments is helping somewhat, but even with this arrangement the patient cannot be seen within a half-hour.

EIGHTY-FIVE PERCENT OF CAPACITY

The need to keep some beds available for emergency cases prevents full use of facilities, and few hospitals are operating at 90 percent of their capacities. Most of them are 85 percent filled. One way of improvement is the arrangement of daily contacts between hospitals to learn if one can accept a few patients another cannot take at the moment. Often there are vacancies in a ward other than the one to which a patient is scheduled to go for certain types of illness. The patient is put in a ward where the bed is available and then shifted over where he belongs.

The hospitals agree that they cannot provide all the service that is wanted and do not expect to be able to do so. Enlargement of plants would be required, and building materials and construction labor are in great shortage, even though the Government might find the needed money. Some could do a little more if they could secure more nurses, but that means a slow training period. The hospital world in England is knocking itself out trying to make good and is not discouraged because an impatient public doesn't seem to appreciate it.

Our World Information Program

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by

the Assistant Secretary of State for Public Affairs, George V. Allen, before the second session of the New York Herald Tribune Forum for High Schools at the Waldorf-Astoria Hotel, New York City, on March 5, 1949:

OUR WORLD INFORMATION PROGRAM

It is always a gratifying experience for me to speak to students from foreign countries. I am especially glad to meet with you who have come from the countries associated with us in the greatest experience in voluntary material cooperation the world has ever known.

Before coming to the United States, each of you had naturally formed a preconception of what the United States would be like. You have now had an opportunity to supplement these pictures of the imagination by photographs taken by your own eyes and developed in your own minds.

Nothing can erase the impressions which have now been fixed in your memories by the things which you yourself have seen, the people to whom you have talked, the experiences which you have had there.

You will be asked, when you return to your homes, whether America was as you had expected to find it—whether it was, on the whole, less interesting than you had thought, or more so, whether the buildings were less tall, the houses more hot, or the traffic less jammed than you had imagined.

Some of you may be asked whether you saw any gangsters, or cowboys, or Indians, or Hollywood stars, or perhaps any atomic bombs. Others will be asked about economic conditions—about the great strikes which, according to radio Moscow, are crippling American industry, or the unemployed who are reportedly in evidence on every hand. You may be asked whether a business depression has started, or is likely to start, whether the Tennessee Valley development is a success, and a host of other difficult subjects on which you may or may not have had an opportunity to inform yourselves.

Perhaps some of you may be asked whether you consider it true, as the Communists both inside the United States and outside allege, that the United States is preparing for an aggressive war and is determined to subject the world to its domination.

But most frequently you will be asked about the American people, what they are like in their homes, how they act, whether they have any interest other than in making and spending money, how Negroes are treated, whether the young people are well-mannered, whether you saw any people who were ill-fed and ill-clothed, etc.

I am by no means certain what your answers will be. Probably no two of you will answer entirely alike. It is quite certain that all of your answers will not be favorable to the American scene. You will have found some aspects of our life which did not please you. Perhaps even some of you may leave the United States with a less favorable impression than you had when you arrived. I hope this will not be true, but some visitors to the United States, in all genuineness, would have thought better of the United States if they had never actually visited our shores and had retained the image which they had gained from fancy rather than fact.

This is a risk that is always run by any exchange of visits. There are a few people not only in the United States but elsewhere, who consider visits to foreign countries a liability rather than an asset on the ground that such visits are likely to create more ill-will and misunderstanding than otherwise.

There is no denying that misunderstandings do arise from foreign visits. This is a calculated risk that has to be taken. But we have found by experience, particularly among those whose desire is to learn, that the best means of creating real understanding and sympathy among human beings is for them to learn to know and to talk to each other. Medicine men discovered long before the psychologists did that people are likely to fear the unknown and that their fears can be played upon by leaders who wish to keep them enslaved.

You, I am confident, are among the group which came here with an intense desire to learn as much as you could about the United States. You are students who have been selected for your outstanding qualifications. I know that you have been penetrating observers of the American scene, and we welcome your visit for that very reason.

I hope you have not felt that you have been shielded from any segments of American life which you may have desired to investigate.

We do not pretend that we are proud of every detail of our society. We make no claim of having achieved a perfect existence. But we have no desire to seclude them from view or to prevent investigation. And we are willing to present ourselves to the world as we are. We are constantly striving to improve our society, and it is this sense of striving and of accomplishment which, above all else, you will take away with you.

The cry of the revolutionist arises when there is no way to achieve improvement except by armed revolt. Any society which becomes static invites resort to forceful measures by its populace. Means for peaceful change, through open public debate without censorship, through honest and free elections, are necessary to enable changes to take place by peaceful means.

Likewise, the strata of society must remain flexible. Where there are no longer incidents in American life in which the office boy becomes president of a great corporation, you should begin to worry about the United States. But as long as immigrant boys such as David Sarnoff and David Dubinsky from Russia and Spyros Skouras from Greece, can arrive in this country without any knowledge of English and rise to the highest position in management and labor, when Bill O'Dwyer can come to this country at the age of 20 and rise to be mayor of this great city, we do not need to be alarmed that our society has become static or that the principles of our American democracy are running out.

I hope you have been able to obtain some understanding of this important fact in American life through your investigations.

A delegate from eastern Europe recently demanded in the Security Council that conditions of labor be investigated inside the United States. He neglected to say that the great free trade-unions in the United States are already constantly alert to prevent any exploitation of labor in the United States. He neglected to mention that there are today more foreign journalists in the United States than in any country in the world, that they are entirely free to travel about the country wherever they wish without police permit or even identity card, that they are free to investigate labor conditions as much as they wish and are doing so every day.

But even more important, they are entirely free to write any articles they wish and to send them out without any censorship or official restriction. Labor and all other conditions in this country are an open book. This is the one circumstance of which we are most proud, and I hope you have become convinced of this fact.

Some of you or your parents may not agree with the free-enterprise or capitalistic economic system which is chiefly employed in the United States for the production of wealth. You may feel that Government ownership of coal or steel mills, of banks or transportation facilities, is preferable in your own economy.

We shall not quarrel with you over that point or even try to convert you. Our system has served us well and has enabled us to support the Marshall plan for the economic recovery of your own countries. But we shall not try to force our economic system on anyone else. We are not concerned with your system of land tenure, or any other economic experiment which you may freely elect to try. We are naturally pleased with what our own system has accomplished, and many Americans are inclined to think that Europe would be less dependent on outside help if it followed our system somewhat more closely.

But if you can find a way, under your various systems of economics, to make a better mouse trap, we shall beat a path to your door.

While your choice of an economic system is your own affair, there is one field in which neither you nor we can afford to engage in any experiments. Every individual citizen must be allowed to think for himself and to express himself freely. Opposition parties must be tolerated and no economic or any other system must be imposed by force. We must be solidly united on these principles and must unite all free peoples in a determination to retain our liberties.

The police state, which breeds aggression, must be outlawed. People must be freed from the fear of invasion in their private lives and nations must be freed from the fear of outside armies. These two goals go hand in hand.

International joint action can rid the world of aggression. But the citizens of a state must be the first line of defense of their own liberties. If through your visit to the United States you have gained a little firmer conviction of the necessity for each individual to insist upon respect for his own personality and to resist the encroachments of a totalitarian system, you will have been amply rewarded for your trouble, and I am certain that the New York Herald Tribune, which made possible this excellent exchange, will feel amply repaid."

Labor Legislation

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. BREHM. Mr. Speaker, I submit herewith a statement which I made on March 21, 1949, and trust that if it is quoted, it will be quoted in full:

My position regarding labor legislation dealing with the Taft-Hartley law is as follows:

I will vote for a one-package bill which repeals Taft-Hartley and reenacts the Wagner Act with certain amendments.

I am not in favor of the so-called Lesinski-Thomas bill as presented unless certain corrective amendments are adopted. However, if necessary I will vote to report this bill from our committee in order that we may get it before the House for amendment. I do not intend to waste days and perhaps weeks trying to write amendments in the committee, only to have the administration's supporters on the committee vote to table all our efforts and substitute the Lesinski bill in the final analysis. We went through this experience with the wage-and-hour bill, and I see no sense in asking for a similar experience regarding this legislation.

In the final analysis I am convinced that we will be able to write a law which will not only deal fairly with both labor and management, but which will also prove equitable to the general public who after all outnumber many times the combined labor and management personnel.

WALTER E. BREHM.

Monument to Hoover

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. McCULLOCH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of March 4, 1949:

MONUMENT TO HOOVER

Nineteen months ago former President Herbert Hoover undertook what he said would be his last public service, which was the chairmanship of the Commission on the Organization of the Executive Branch of the Federal Government.

The task is now completed and the Commission has virtually disbanded. Eighteen exhaustive reports on conditions prevailing in the Federal establishment and recommendations for improvements have been prepared and will have been turned over to Congress by March 13. Of the 12 members of the Commission, none worked harder and longer on the job than the only living former President of the United States.

If all the recommendations of the Hoover Commission were put into effect, it has been estimated there would be an annual saving in Federal expenditures of $3,000,000,000 a year.

But pointing the way to substantial economies is not the greatest service the Commission has performed, although the projected savings are highly important when the Government is draining from the Nation's resources a volume of wealth unprecedented in peacetime in order to support itself.

Even more important is the attempt the Commission has made to show Congress how the Federal Government can be reorganized to serve the people effectively and efficiently without becoming bogged down under mountains of red tape and the inertia of a crushing bureaucracy.

The proposal to undertake this monumental study of the Federal Government was originated in the Republican-controlled Eightieth Congress by Representative CLARENCE J. BROWN, of Ohio, and Senator HENRY CABOT LODGE, of Massachusetts. But there was no tinge of partisanship in the proposal itself nor in the manner in which it was carried out. The Commission was composed of equal numbers of Republicans and Democrats and it never divided along party lines. Moreover, it had the support of both parties in Congress, and its efforts received the approval and encouragement of President Truman both before and after the election.

Now it devolves upon a Democratic Congress and a Democratic administration to begin the appraisal of the Commission's studies and to start carrying out its recommendations. This will not be the task alone of the Eighty-first Congress nor of the present occupant of the White House. Even the most optimistic among observers of the Washington scene estimate it will be 10 years before 60 percent of the Hoover Commission's recommendations can be put into effect.

There is always strong resistance to proposed changes in the Government. All the influence that pressure groups and an entrenched bureaucracy can bring to bear will be made to retain bureaus and to continue activities which are overlapping or duplicating in nature. Congress, we hope, will examine the recommendations in the same spirit in which they were made, namely, how to improve the Government so that it will function as effectively and as economically as possible and so that it will always be the servant of the people, not their master.

Smear Tactics

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. MULTER. Mr. Speaker, the following column, which appeared in the New York Post of March 25, 1949, exposes again the dangers of organized attempts to mold public opinion:

SMEAR TACTICS

(By Albert Deutsch)

The average citizen who knows his family doctor as a kindly friend and comforter to whom he trustfully turns in sickness and sorrow is quite bewildered when he witnesses his physician's medical society acting up like an implacable enemy of the people.

The discrepancy between the attitudes of the individual doctor, on the one hand, and the American Medical Association and its local affiliates (known corporately as organized medicine), on the other, arises largely from the fact that the average doctor takes no part in the political activities of organized medicine and, often enough, doesn't even know what's going on.

"Organized medicine" likes to be considered synonymous with the "medical profession."

Its local leaders became so sensitized to the phrase "organized medicine" (coined by the societies themselves) that, in an uproariously flighty moment several years ago they had a resolution passed prohibiting the word "organized" ever to be printed in the official society journal side by side with the sacred name of "medicine."

The New York County Medical Society provided a forum recently for one of the most outrageous violations of democracy and decency in the annals of local medicine. Dr. Dr. William B. Rawls, incoming president, seized the occasion of his inaugural address to unleash an unrestrained personal smear on his unsuccessful rival for the presidency, Dr. Ernst P. Boas.

Dr. Rawls cited the discredited Dies-Rankin-Thomas committee reports as basis for a charge that Dr. Boas had been affiliated with eight Communist-front organizations. (Mrs. Franklin D. Roosevelt is listed with 58 such affiliations in the same reports.)

Dr. Boas, son of the famous anthrolopogist, Franz Boas, and a respected physician of recognized professional attainment in his own right, was given no opportunity to defend himself.

Thereupon, three distinguished New York doctors—all members of the county medical society—sent a letter to the society protesting Dr. Rawls' attack. They demanded, very properly, that their letter be read at the next society meeting and printed in its journal (as had the Rawls speech).

The letter, in spite of its distinguished signatories, was never read at a society meeting. it was not published. When Dr. John A. P. Millet asked for the floor at a stated meeting, in order to read the letter, President Rawls failed to recognize him. The letter was thus effectively suppressed.

In the same presidential address, Dr. Rawls sought to implicate the liberal-minded Physicians Forum, which Dr. Boas heads, in a communistic plot to foist compulsory health insurance on this country.

In the course of this smear, Dr. Rawls quoted with approval from a thoroughly discredited report by ex-Congressman Forest A. Harness of Indiana, charging a mission of experts sent to Japan by the Social Security Board in 1947 had tried to socialize Japanese medicine as part of a fantastic international Red plot.

The allegation was a contemptible falsehood. Gen. Douglas MacArthur on two occasions, in cables to the War Department in Washington, protested against the vilification.

These facts have been brought to the attention of Dr. Rawls. He has not seen fit to retract his repetition of a despicable untruth cloaked in propagandistic gossip.

Rent Control for Chicago

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of March 25, 1949:

RENT CONTROL FOR CHICAGO

The version of rent control passed by the Senate places Congress in the position of legislating solely for the city of Chicago. This is done by the subterfuge of recontrolling rents of residential hotels in cities of over 2,500,000. Of the two such cities, New York now controls these rents by local law.

The only justification for this singular distinction was that Chicago has more apartment-hotel dwellers than smaller cities and that the action pleased Senator PAUL DOUGLAS, who is being very "regular" with the administration.

The State of Illinois passed legislation permitting cities to impose local rent control. It specifically exempted hotels and apartment hotels. The Senate rent-control bill accepted the local option on decontrol voted by the House. By the clause affecting Chicago alone it clashes with its own decision that local desires should rule.

Actually, the effect of the Chicago provision would be negligible. Apartment hotels were decontrolled in the 1947 Rent Control Act. Most of the rent increases were effective prior to October 31, 1948, the date to which it is now proposed to roll back rents.

The theory behind decontrol of these units was that the maid, laundry, and other services provided in hotels has increased in cost sufficiently to justify rent increases greater than permitted on other types of housing.

Spokesmen for the apartment-hotel owners assert that the over-all average rent increase has been 30 percent. Since most of them now have vacancies, the prospect of further rent increases is slight.

Adding it all up, the only advantages from the Senate bill seem likely to be the thanks of a democratic community for the gesture and the realization that Congress now feels entitled to regulate business in the city of Chicago.

The World We Want

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Miss Rosemary Bristow, a student at the Forest Hills High School, at the second session of the New York Herald Tribune Forum for High Schools held at the Waldorf-Astoria Hotel, New York City, on Saturday, March 5:

THE WORLD WE WANT

(By Rosemary Bristow, Forest Hills High School)

Ours is a weary world. A world torn limb from limb by almost ceaseless strife since the beginning of time. Too many peoples are homeless. Too many are cold and hungry.

Only three short years ago there was brotherhood among the victorious peoples; there was a firm belief in the United Nations; a steadfast trust in the peace to come.

And today? We need only recall the names of Masaryk and Benes to understand the meaning of failure. Surely this is not the world of which we dreamed. There is suffering in this world. There is the cold war. War in a world at peace. We still find men with a brutal lust for power, willing to use any device to gain and maintain supremacy.

What should be the answer of the peace-loving peoples of the world? Must we place a blind and unreasoning faith in American supremacy in battle through our possession of atomic knowledge? Inevitably, the atomic bomb? No, such is not the world of which we dreamed—a world that has failed to achieve the common beliefs on which one world might be founded. Can we, as a nation, as a world, find the way before it is too late? Peace lies in the mind of the individual. Our first problem is to educate all youth to understanding, sympathy and knowledge of each other. We must be sure there are no potential supermen to build Buchenwalds and practice genocide.

The United Nations has organized an educational, scientific, and cultural body to encourage exchange among nations. But this is only a beginning. We must break down the barriers of fear and prejudice which rise because of ignorance. We must have a complete intellectual understanding with the peoples of other nations; plan for the maintenance of schools in those places where education would otherwise be lacking; arrange a broader system of student and teacher exchange; and distribute intellectual information of all kinds to all nations. And we must start this program with the children. Each nation's future lies in her youth, and that future will be only as sound as they are sound. If we can give these children the understanding of others through common interests and common experiences with their brothers and sisters throughout the world; if we can teach them the principles of international cooperation, they will be prepared as no other generation before them has been prepared; they will be educated for peace. This is the foundation for the world I want. But the foundation is only the beginning, and we must build.

I believe it is America's duty to assist in the rehabilitation of the devastated areas of the earth. It is not enough to win a war. Men have been winning wars for thousands of years, but no nation, great or small, has ever been able to win a democratic peace. Today, we have within our knowledge and our material assets the power to make such a peace. We must be sure that the youth of no nation inherit a blank or barren soil. Only a land secure in itself can be secure from those external forces which would have it crumble and fall.

We can help them to gain the homes and farms and factories to make them economically stable; the schools and hospitals to make them socially secure. We can give them the fruits of our democracy, esthetic as well as material. We can give them life. And what is more, we can give them that which makes life worth while—freedom. Freedom to think, to act, to work, to play. Freedom to live. And in return, we shall have peace.

This world may be a dream, but I am not ashamed of it, for it was the dream of a great President and 300,000 American boys, whose dreams lie buried with them from Bataan to Berlin, and I am not ashamed of the ideals for which they died.

Let us make our battleground a laboratory, a classroom, and a hospital, places where we can work together, where we can win together.

This is the world I want, for it is a world in which I can believe.

Mr. Truman Insults 8,000,000 Voters

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of March 25, 1949:

MR. TRUMAN INSULTS 8,000,000 VOTERS

In his speech before the United States conference of mayors Mr. Truman managed to insult six or eight million American voters and taxpayers. That is the estimated number of owners of rental property in this country who have been trying to put an end to the legalized robbery called rent control. It was of them that Mr. Truman said:

"They don't want us to build new low rent houses and they don't want us to hold down the rents of the houses that are available. If we had let them have their way, they not only would have pushed the whole cost of living up another 10 to 20 percent but they would have broken up the homes of thousands of low income families. It is a terrible and shocking thing that the real estate lobby—which pretends to speak for those whose business is providing houses—has become the real enemy of the American home."

Into that paragraph Mr. Truman managed to pack most of the falsehoods that the Socialists and Communists have managed to grind out in support of continued rent control.

There has been a property owners lobby in Washington recently, and a most effective one. Its success is measured by congressional rejection of the more extreme injustices of Mr. Truman's rent control program.

This lobby is effective for the very reason that it isn't composed of millionaires buying champagne and caviar for Senators. As described in the weekly, Human Events, the lobby is composed of little people. A lot of them have been showing up on Capitol hill in recent weeks to ask their Representatives when the Government is going to stop picking their pockets.

Most of these lobbyists got to Washington by bus. Many of them wear cracked shoes and trousers with frayed cuffs. Many of them are retired or elderly people, with incomes far less than their tenants. The average investment in rental housing in this country is only $5,000. It has been a favorite form of retirement investment for millions of people, particularly the owners of two flat and three flat buildings, who hoped when they bought that their savings would purchase them a place to live and rents enough to maintain it when they stopped working.

Mr. Truman says that these are the people who are trying to stop the Government from building low-rent houses. Real estate owners aren't against public housing because it charges low rents. They are against it because they have to pay income taxes and local taxes to provide the low rents for tenants, many of whom earn more than the people who are taxed to support them.

Mr. Truman asserts that if rent controls are abolished the cost of living would rise 10 to 20 percent. The average tenant today pays about an eighth of his income as rent. A few years ago he paid a fifth. To raise his cost of living 10 percent, all rents would have to be doubled; to raise it 20 percent, they would have to be almost tripled. An average increase of as much as 50 percent is held unlikely by building and rental experts.

Before rents go that high, investors would be encouraged to provide new rental housing, which, by increasing the supply, would lower all rents. That is, this would come about if investors were assured of two things: (1) that Mr. Truman and his socialistic advisers would be unable to confiscate their property, once it was built, through new rent control laws; and (2) that an extravagant public-housing program wouldn't preempt all the building mechanics and materials, and boost construction costs, which now are beginning to fall.

The end of rent control won't break up any homes, as Mr. Truman asserts. Instead, it will make available more rental units out of the existing supply. Figures gathered at the request of Mr. Truman's own rent controllers prove that controls caused the present shortage. People who used to be content with a single room are now occupying apartments because they can rent them at about 50 cents on the dollar of their true shelter value. And hundreds of thousands of new dwellings are withheld from the rental market because the owners know that once they get a tenant in, they will have difficulty getting him out if they find a buyer for the house.

When rent controls end, the housing shortage will disappear, and not before.

Rankin Pension Bill

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include an article appearing in the New York Times of Saturday, March 26, 1949, entitled "How They Voted":

HOW THEY VOTED

Before this week's long battle in the House of Representatives over the Rankin pension bill is forgotten—and it will not be forgotten

long, for Mr. RANKIN announced yesterday that he is coming right back with a modified version of his original bill—we should like to file for future reference the statistics of the vote by which this matter was at least temporarily disposed of.

The question was whether to send this multi-billion-dollar spending bill back to committee, which would be equivalent to killing it for the present moment, or whether to save it and to keep it before the House for immediate action.

On that question the House Democrats voted:

To kill, 151; to save, 100.

On the same question the House Republicans voted:

To kill, 57; to save, 106.

The House Democrats thus voted about 3 to 2 to close the Treasury doors to this proposed pension raid. The House Republicans voted about 2 to 1 to open the doors of the Treasury. We suggest that the incident provides further evidence that the Republican Party needs to reexamine its campaign pledges in such matters as promising Federal economy, and needs to chart more clearly the policies it intends to pursue in future.

The Only Workable Plan for Peace

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. MULTER. Mr. Speaker, the thoughts of all are constantly turning to methods of establishing permanent peace. Many of us believe that one certain way is through world federation. Some think it will come by way of the United Nations, others believe it must be done outside of the United Nations.

The more thought that is stimulated about the problem the more likely are we to arrive at a solution.

The following article will do much to clarify our thinking on the subject. It appeared in the New York Tribune of March 27, 1949. The author, Hon. Owen J. Roberts, is a former Justice of the United States Supreme Court, who has rendered much valuable service upon the international scene.

THE ONLY WORKABLE PLAN FOR PEACE

(By Owen J. Roberts)

The world is afire with nationalism. Less than 4 years after World War II was allegedly won, the victors themselves are recklessly scattering the sparks of national selfishness and aggression. Unless they are smothered at once, these sparks are going to consume us in a fire far greater than the one we thought we had just put out.

Where is the fire department? We hoped we had one in the United Nations. But what kind of a department is it where the firemen sit around and deal themselves another hand of pinochle after the alarm has sounded?

Over at Lake Success the 11 fire chiefs—5 great nations and 6 small ones on the Security Council—after 3 years of palavering, have not bought a single length of hose or hired a solitary hook-and-ladder man. Indeed, every now and then one of them sneaks out and tosses gasoline onto the flames.

We have oversold ourselves on our fire department. The UN can and will keep the peace, we are told, and we want to believe it. A glance at the morning's headlines proves that is not true—a plane shot down in the western air corridor to Berlin, a soldiers' brawl in the Ringstrasse of Vienna, a brush with a submarine patrol in the Bering Sea. Any such incident, variations of which have already happened, could become the critical bonfire.

No fire department with 11—or 58—separate chiefs, each responsible finally to nobody but himself, could ever operate. But that is how we have organized the UN, and we wonder why it does not work.

The thing to do, I am convinced, is not to junk the fire department, but to organize a higher authority and force the chiefs to submit to it. I am for world government, but it is a goal we won't reach tomorrow or the day after. As things now stand, Russia won't cooperate, and many other nations, not only inside but outside the Soviet sphere, are simply not capable of participating yet in any workable world organization.

But this is no reason to abandon the goal. It is time for the democracies, the real democracies, to become politically aggressive. But, you say, we have the European recovery program and are working on a North Atlantic Pact, a fledgling western union is shaping up in Europe and the Communist lost the Italian elections. What more do we need? ERP is not enough. A united states of western Europe is not enough. A military alliance between America and our European friends is not even enough. I propose, now, a working federation of the United States, Scandinavia, the Low Countries, Switzerland, France, Italy, the Philippines, and the British Commonwealth, excluding India. Spain, Greece, Turkey, Egypt, or even the republics of Latin America are not yet eligible.

At first, membership must be limited to those nations—aggregating a population of some 500,000,000—where representative government is already a going concern. Such a federation offers the only real hope of an alternative to a third world war.

The real anarchists in the world today are sovereign nations themselves. They are answerable to no law but their own, or to the force of a stronger foe. All over the world, there exist laws to govern people, towns, counties, provinces. The so-called community of nations is the last important community without a police force.

If we cannot harness all the sovereign states at once, the next best step is to harness those that we can. That means us and our friends. And we cannot sit back and wait for our friends to act. They have already committed themselves, in general, to such a move.

Within the past 2 years, nearly every leading statesman of the British Commonwealth of nations has expressed an eagerness to discuss formation of a parliamentary union of nations. These overtures have stirred favorable responses in western Europe. No such union can work without the United States. Our prestige, our successful operation of democratic processes, our colossal wealth and resources are all vital to make it run. But if our friends begged us to join them, they would run the risk of implying that they loved us only for our worldly goods.

WE MUST ACT FIRST

If some statesman—says Senator ARTHUR VANDENBERG—introduced into the Congress tomorrow a resolution asking for a conference of the democracies in Washington to study federation and recommend a constitution, we should be on our way. What we need is a modernized, internationalized version of our Constitutional Convention of 1787.

This new constitutional convention, therefore, would have to do something more fundamental than issue high-sounding statements. Suppose the delegates decided to call the organization the United Nations Federation—UNF. They must provide for an executive, a legislature, and a court. Then, I think the constitution should empower the UNF to formulate and adopt a:

1. Common defense system.
2. Common foreign policy.
3. Common medium of exchange.
4. Common postal and communications system.
5. Control of commerce among member nations.
6. Schedule of taxation for support of UNF functions.
7. Regulation of immigration among member nations.
8. Process of admitting other nations as they qualify for membership.

SO MUCH TO GAIN

Skeptics will charge this is an impossible program. It is not impossible. It will be difficult. Nobody contends that such a step toward world government can be painless. But if it shows real promise of solving a world crisis—and I think it does—then it is worth real sacrifice. Some concrete immediate advantages are apparent.

A common defense means UNF will have one army, navy, and air force under a single command. Admittedly, differences in techniques and military philosophy will be difficult to reconcile, but remember that after great struggle, the western Allies came up with a single command in World War II. Such a common military arm would save participating nations billions of dollars they now spend on separate defense systems.

With a common foreign policy, the federation's members could vastly simplify their diplomatic services. There would be one "master ambassador" where there were a score before. Again the consolidation would reduce expense.

In a common money system, we could get away from this business of dollars blocked against pounds and pounds blocked against dollars. A man in Wellington, New Zealand, could buy an automobile in Detroit, and a druggist in Dubuque could stock up on French perfumes without a lot of the fantastically complicated nonsense which snarl international transactions today. The common currency will be backed and stabilized by the combined resources of all member nations.

The International Postal Union is already tangible proof of how much can be accomplished toward a single postal system.

LOOK IN OUR MIRROR

UNF must have the power to regulate commerce among the constituent nations. Our own experience is the best evidence for this. If the constitution had not given Congress power over interstate commerce, the States would have passed discriminatory laws and tariffs making it impossible, say, to send a crate of oranges from Riverside, Calif., to Dallas, or a bolt of cotton cloth from Birmingham, Ala., to Boston. What has made our Nation great has been a citizen's right to trade freely with a citizen of any other State. The common welfare of all the people in a federation requires the same freedom of exchange.

Watchmakers who say they cannot compete with Swiss watchmakers and woolgrowers who maintain they cannot live without tariffs will shout their opposition. Which do they prefer, international cooperation involving sacrifices, or war? Free trade in the federation won't come overnight, but it must be aimed at from the start. The ultimate goal is to lift the scale of living in all the federated nations.

HOW TO RAISE MONEY

UNF will of course need funds to operate. Largely, the money could come from funds which the separate nations new spend for the same purposes. But, as experience under our articles of confederation proved, UNF must not be dependent on voluntary action of

members for its money. When Washington's army needed shoes and clothes, you remember, some of the States refused to pay their quotas and left his soldiers ragged and barefoot at Valley Forge. The federation must have the power, as the United States does, to raise funds by taxation. Perhaps a tax on all international shipments would suffice for its needs.

No American will ever submit to taxation by a "foreign power," people will say. The UNF would be no "foreign power." We would be citizens of it as much as we are citizens of our own States—and we would save on taxes ultimately by pooling defense systems and other services.

There is a danger that when UNF is organized, vast hordes of suffering Europeans will stampede steamship and airline offices for passage to our land of hope and plenty. It is somewhat contradictory of common citizenship to restrict a citizen's movements within the confines of UNF. However, temporary measures are needed to prevent mass migration which would dislocate local economies. I suggest that for, say, the first 50 years, the constituent nations should retain the power to regulate immigration as they now do. After that, assuming economies have stabilized and living levels generally have risen, the power of regulating all immigration should be handed over to the UNF legislature.

Are we making our club too exclusive by barring pseudo democracies, as well as Russia and her satellites, at the start? I think not. The United States, in my view, cannot, should not, and will not join any union unless its legislature is elected by the free popular vote of the people of the member nations.

Argentina, China, India don't measure up yet. We cannot hitch democracies like France, Britain, and the United States to autocracies or woefully backward lands in a federated legislature and expect it to work.

However, UNF should actively encourage all nations to try to qualify for membership. As fast as their respective internal regimes are remolded to meet the federation's requirements of a representative government where civil liberties are guaranteed, they should be admitted.

OBJECTIONS OVERRULED

There are two objections most frequently heard to our joining a federation of democracies. The first is that we cannot form a union with a Socialist government like England's, and the second, that we should not mix up further in European affairs. Both are utterly without substance.

Imagine for a moment that California should adopt tomorrow a system of State socialism and elect Upton Sinclair, Governor. Could Congress exclude California from the Union? Obviously not. As long as California's elections were free and fair, as long as guaranties in the Bill of Rights were upheld, she could not be barred from the Union, whatever her technical system of government.

As for our further involvement in Europe, we are already in up to our ears. The question now is not to withdraw, but to convert that involvement into a lasting, workable contact and not leave it—as it is now—at the peril of inefficient and expensive strain and emergency. A military alliance to back up ERP is not enough. Experience has taught Europeans that alliances are made to be broken. The strongest support to their hopes is not another treaty but an American membership card in a democratic federation.

People who argue that this thing called sovereignty is something inviolate, sacred, and virginal are still thinking in terms of the Middle Ages when a king's word was law and he changed it every day if he felt like it. Citizens of the world are waking up to the fact that human life is more sovereign than kings or dictators. As somebody else has said, the only right that the people of the nations sacrifice in submitting themselves and their nations to international authority is the right to exterminate each other.

What are the alternatives to UNF? The first is to fumble along with the United Nations and what seems to me the certain prospect of war in the visible future. The second is to try to organize a full-fledged world government immediately. This is a pretty but, under the circumstances, an utterly fantastic dream.

MAKE THEM LISTEN

A plan to federate the democracies now is the only realistic, workable plan. Many people say I criticize the United Nations only to destroy it. I do criticize it, but I by no means advocate its destruction. The members of UNF should retain membership in the United Nations. Through that forum we can still keep our contact with the East. We still keep Russia at least in the posture of discussing and listening.

In the meanwhile, we can confederate ourselves and show there is a better and more efficient way of cooperating. Shall we not then, by natural evolution, alter the United Nations into a world government at last?

What can you and I as individual citizens and voters do about it? In this country what we usually do when we become really concerned over a big issue is to telegraph our Congressman. We demand to know where he stands.

The people must realize that the question of war versus peace is a local issue in which they have a stake and in which they have a say.

Victory for Oleo

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include an editorial recently taken from the Shreveport Times of Shreveport, La., entitled "Victory for Oleo":

VICTORY FOR OLEO

Housewives in Michigan won a victory the other day when the legislature of that State repealed a 48-year-old law prohibiting the sale of yellow-colored oleomargarine.

In Ohio, nearly 200,000 housewives are driving toward a similar triumph. They have signed a petition asking that a like law in that State be repealed, and the repealer bill has been recommended for passage by a senate committee.

Thus, the outlook for larger margarine sales in two populous northern States, close to or in major dairy regions, brightens.

The Congress which is now in session should regard the news from Michigan and Ohio as serving notice that the removal of all Federal taxes on margarine, and discriminations against it, should be effected this year.

Last session, it will be remembered, the House approved by a margin of 260 to 106 a bill repealing the special taxes and licenses levied on margarine by the Federal Government. But there was a last-minute legislative jam, and the bill did not come up for a vote in the Senate.

The friends of repeal, found in abundance in both parties and both Houses, should press for action before the end of the current session approaches. The butter interests, which have shown their craftiness in keeping these discriminatory levies on the statute books all these years, can be counted upon to prevent repeal, if they can, by any means available to them.

Complete removal of Federal and State discrimination against margarine would mean lower living costs for the American people. It would mean ending a rank injustice inflicted upon a major American industry.

The Want of the World

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Reverend Robert I. Gannon, S. J., former president of Fordham University, on Saturday, March 5, 1949, before the second session of the New York Herald Tribune forum for high schools at the Waldorf-Astoria, New York City:

It is often remarked that a man in Denmark can understand a man in Java more readily than he can a woman in his own household and something similar can be said for men themselves in different age groups. As American boys and girls, it is easy for you to understand the general sense of values that prevails at your age in any part of the world together with the hatreds and loyalties that are based on it. Only an exceptional man however can remember why some things seemed so vital to him 30 years ago. That is the reason why fathers and sons are often so far apart; why one generation underestimates another. The underestimation of course is usually mutual. To the youngsters the elders are hopelessly stupid and to the elders, the youngsters are crazy (and much can be said for both points of view). But old and young should remember that the passage of years has two inevitable effects on mortal man.

It dulls his perception and deepens his understanding. So that in planning for the future you fresh recruits can help us by showing us your visions—visions that for some of us have faded into the light of common day—and we can help you by telling you how veterans interpret them.

Now, in every discussion preliminary to the blueprint of your brave new world, there is always the assumption that your fathers were to blame for getting us involved in World War II and your grandfathers in World War I. In this you are playing favorites. You are sparing the real culprits, your grandfathers' grandfathers and maybe their grandfathers before them. For all this horror which we old orange pulps have lived through twice and which is entirely too familiar to these visiting students sitting on the stage today, did not result even principally from the wilfulness of tyrants or the stupidity of messianic democrats. Our plight is much more the result of the philosophy that made it possible for our supermen to arrive at their fatal decisions. So it is not going to do you or the world any good to talk about freedom from this, that, or the other thing, as long as we are enslaved by this stultifying philosophy.

It is called naturalism—an innocent name for an appalling affliction. Through it we have inherited the intellectual arrogance of

the nineteenth century and with it a spirit of despair. William James was right when he wrote, "Sadness lies at the heart of every natural philosophy." For naturalism teaches that there is nothing supernatural, nothing spiritual, nothing to hope for. It has a kind of catechism all its own for it is in the last analysis a kind of perverted religion. Its first question reads, "Who made man?" and the answer, "Nobody. He just happened." To the second question, "What then is his purpose in life?" there are two answers, one for each side of the iron curtain, but both of them leading to the same sad conclusion. On one side, the eastern side, the answer reads, "Man lives to promote the interests of the state." On the other side, our side, "Man lives to promote his own health, culture, and comfort."

To us it is clear enough without proof and clearer still to the poor wretches who live in the Soviet and its dependencies, that life lived for the state is not worth living. Now it is beginning to dawn on us here in the free part of the world, that the same is true of a life that is lived for our own health, culture, and comfort. For if that is all we have to aim at, few can hope for even a shadow of happiness. For most of the human race, health is precarious, culture is on the wane and comfort has vanished. Even the favored few cannot enjoy all three for long. Besides, how can we expect the happiness of fulfillment when we are living for something that is dead—something that has been dead from its beginning; something that was still-born? I mean the world. Not the world of the good green earth; the world of the fjords, of the Côte d'Or, of the Delectable Duchy and the Rocky Mountains. Not the world of human souls which is the world you are planning for today. I mean the world that Christ refused to pray for; the world which symbolizes self. I mean human society insofar as it ignores God's claims, treats God's creatures as its playthings and makes health, culture, and comfort the rule of life. That world is dead. As Martha said of her brother Lazarus when he had been in the tomb 4 days "Jam foetet." By this time, it stinketh. You may call in the smart young moderns to strew the house with lillies and gardenias but you cannot hide the odor of inner death. The stench of a dead soul has gone all through society; a stench more pungent than the stench of last week's battlefield. It began by poisoning the air which a spiritual people must breathe to live. It ended by conditioning the people through despair for the absolute state.

So as you sit here today in the ballroom of this great hotel planning the world you want, be sure you begin with the want of the world, the world of human souls. What that world wants most of all is hope and the will to live; not merely to endure but to live a full and healthy intellectual and spiritual life, a life that will help it to come finally to grips with the spirit of naturalism, the spirit of despair.

It is easy, of course, to exaggerate in a time of crisis. After all, we are not the first generation to have smelt decadence in the air. If we think we are, it is reassuring to read the Old Testament occasionally and sermons that run back to the time of Saint Augustine. In them we shall find that the prophets and preachers have always liked to begin with the words "There never was a time when * * *" before describing a condition that existed a dozen times before they were born. Fortunately or rather providentially there is always an element in society too young for discouragement. Some of us knew Europe before the First World War. I paid my first visit 42 years ago. The conditions we found were not perfect, of course. They never are. There were social injustices, discrimination, and poverty more in some countries than in others. But to the casual observer, that is, to the average man, there was culture and beauty and charm, and above all there was order, an order largely entrusted to the keeping of an empire which hardly realized that Victoria was dead. There was a tranquillity of order known as peace which had not been disturbed, except locally, since the Congress of Vienna. Here in America the prospect was so comfortable and dull that we who were in college at the time used to lament our fate that we lived too late to see history in the making. With such a background it requires a conscious effort on our part to realize that something can be salvaged from the wreck of civilization. Your generation has a different point of view. You were born into chaos. It is part of the providence of God that you, our sons and daughters who have to pick up the pieces of the modern age, should look on disorder and uncertainty as a normal condition to be faced without surprise or fear.

Your elders perhaps have seen more disaster than you have, but if you can free yourselves from the philosophy that paralyzed their resistance, if you can realize your own absolute and relative value, that is, if you can understand the reason for your dignity as persons, if you can see clearly how you fit into the pattern of creation and why you are here, you will know more about disaster than your grandfathers did, for you will be able to see through disaster. You will be able to hope.

For you there will be no delusion that "All's right with the world" but merely the conviction that "God's in His heaven" which is a very different thing. You will expect the times to be frequently out of joint. You will expect as much regress as progress in the affairs of men. You will be prepared to find that there are some clouds that have no silver lining except what comes to them from the white light of eternity; that there are some roads that have no turning this side of the grave. You will not have the heart to tell every poor man you meet that his ship will surely come in some day, because it probably will not. Most ships never do. And yet you will keep your souls alive and keep society alive with hope. You will look life squarely in the eye and say "Life is bitter." Of course it is, stupid. What did you expect? Life is a warfare. But who ever said that this little round of weeks and months and years, with its monotony, its disillusionments and its heartbreaks, who ever said this was the whole story? Only the fool who hath said in his heart, "There is no God."

When you go to the university, you may run into a Spengler, for some historians can be very gloomy indeed but you will find that history itself is full of hope; full of dawning and of turning tides; full of recurring springtime and of youth. You are the dawn of the world and the turning of the tide. We need you not for what you know but for what you are. You can supply the want of the world. It is the only way you will ever get the world you want.

Readers Called To Fight Against Soft Socialism

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of March 10, 1949:

READERS CALLED TO FIGHT AGAINST SOFT SOCIALISM

Last Thursday, a Miami newspaper headline read: "Truman expected to lash Congress."

Remember, this is 1949; not the election year of 1948 when variations of the same headline appeared almost daily in newspapers from coast to coast.

Can you blame the Republicans for chuckling over the President's dilemma?

Most of his 1948 campaign blasts were directed against the Eightieth Congress, which he termed the "second worst in history." It was a "do-nothing Congress," he said.

Now his own Congress, the Eighty-first, is making the Republican Eightieth Congress look good by comparison. To date, it has not passed a single important piece of legislation favored by the President.

It has balked at his appointments, defied his leadership. All of the pressure groups which supported Truman in return for special privilege are biting their fingernails over his inability to deliver.

So the President, dismayed over the failure of his party leaders to hold even the Democrats in line, is going to lay the lash on Congress.

That will be something to watch.

WHAT'S BEHIND THE OPPOSITION

What is behind the opposition of Congress to the President's program?

In my judgment, two things:

1. Before Franklin D. Roosevelt, the Congress originated all important legislation. In the days of depression and the ever-constant threat of war, Roosevelt was able to draft his own legislative program and get most of it rubber-stamped by spineless hangers-on who owed their seats in Congress to F. D. R.'s vote-getting ability.

Moreover, Roosevelt was a leader of men and a consummate politician.

To defy Roosevelt in the days of his greatest glory was to invite defeat. To our disgrace, only a few men in public life have shown the courage to stand for principle at the risk of losing an election.

On the few occasions when Congress revolted against Roosevelt's dictatorial methods, it later crawled back on its belly to lick the great man's hand.

Senator ALBEN W. BARKLEY, now Vice President of the United States, sickened by Roosevelt's repeated orders to the Congress, once rose in all his glory to challenge the President's authority.

He was cheered to the echo; but in a few days, BARKLEY reverted to type and once again became the servile tool of the White House.

President Truman inspires no man as did President Roosevelt. His former colleagues in the Senate remember him as a better than average legislator. They respect him for his inherent honesty, his political loyalties, and the vote-getting power of his down-to-earth folksy Americanism.

None of them, including President Truman himself, is under the delusion that he is a great statesman. Unlike Roosevelt, when Truman cracks the whip, nobody jumps to his command.

SOCIALISM'S FORERUNNER

2. The second reason why Congress is refusing to roll over and play nice doggie is that a majority of Republicans, and southern and independent Democrats are experiencing sharp qualms over the direction in which the country is headed.

Truman's welfare state, whether he understands it or not, is the forerunner to state socialism. At the moment, it can be described as creeping socialism, a political disease which is insidiously undermining the foundations of our Republic.

It is all very well in the heat of a campaign to emote about civil rights, free medicine, larger pensions, and security for all. But when the cost of this paternalistic legislation is added to veterans' care, a $15,000,000,000 military budget, the Marshall plan, and the staggering figure needed to rearm Europe under the North Atlantic Pact, anyone but a blind, blathering demagog can recognize the danger signals ahead.

Because Truman is not Roosevelt, even the members of his own party are appalled by his insistence upon pushing for early enactment of all his campaign promises.

Because Truman is not Roosevelt, they balk at such a legislative monstrosity as the Spence bill, which would give the President authority to impose a centrally planned economy on the United States.

The Spence bill, about which little has been written, gives to the President emergency powers over the national economy paralleling those of Stalin in Russia.

He may, under this act, issue any "such rules, regulations, and orders he may deem necessary to carry out its provisions."

Among the provisions are powers to control materials, make loans without regard to existing law, construct new plant facilities, acquire property, inspect books and records at his discretion, fix commodity prices and determine that higher wages "may not be considered as an increase in the cost of production for the purpose of adjustment in price ceiling * * * until 6 months after the effective date of the wage increase."

The Spence bill, better known as the Economic Stability Act of 1949, is but a forerunner of things to come if Congress were to follow the President blindly on his program of reform.

LET'S FACE THE ISSUE

It is not my intention to condemn everything for which President Truman stands. Some of his recommendations are sound and should be enacted into law.

But let's face it. This country must ultimately make a choice between an enlightened capitalism which thus far has given us an economy sufficiently strong and virile to meet most of our own requirements and prop up the rest of the world both economically and militarily and a system of soft socialism in which big government will forever regulate our mode of daily living in exchange for the illusion of perpetual security.

Every citizen of the United States must make that choice; every newspaper, every candidate for public office.

For one, I much prefer the competitive system which has made this country great; the system where every man can progress in proportion to his diligence and ability; the system under which individual freedom and liberty have been maintained since the birth of the Republic.

All other systems have failed miserably in their attempts to match our accomplishments. We stand virtually alone in the world today as an exemplar of progress, threatened only by the ruthless totalitarianism of Russia.

Yet, the Mr. Fixits in this country would have us cast all this aside for the imported isms of the Old World, a decadent, crumbling Old World which is existing today only through our charitable, humanitarian impulses.

DEDICATED TO STRONG AMERICA

This newspaper is dedicated to keeping America strong, both from the viewpoint of our own domestic economy and in the armed might which is our best guaranty of peace. We believe in the preservation of individual liberty and freedom of opportunity as set forth in the Constitution of the United States.

We shall resist with all of the vigor at our command each and every attempt to shackle the United States with any system of socialism, communism, or totalitarianism.

Ours is a great country which is not fully appreciated by the people who live in it. It can be made an even greater Nation if we have the courage, integrity, and moral resolve to keep it a land of free men, untainted by moral decay and the wet nursing of pandering politicians.

It is up to you, dear reader, to choose the system you prefer.

Will you join us in the fight against selling out the United States to the soft Socialists, today the Nation's greatest menace?

JOHN S. KNIGHT.

Requisites of a Good Politician

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. MURRAY of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Salamanca (N. Y.) Republican-Press of February 23, 1949:

MR. FARLEY ON REQUISITES OF GOOD POLITICIAN

What makes a good politician? "Big Jim" Farley, former Postmaster General and Democratic national chairman, has been giving his ideas on that subject to the Civil Service Leader, publication of civil-service workers.

Ten requirements are enumerated by Mr. Farley—some of them obvious, such as personality, native ability, and the faculty of recognizing ability in others, being aggressive without being offensive, being able to sense a situation, ability to make decisions, understanding of the word "compromise"—not compromise of principles, but on occasion accepting less than one had tried to get, then moving forward from there.

Over and above these are certain other requisites to which Mr. Farley attaches great importance. One of these is "character," or being "a substantial human being." "Only a man who can impress his constituents with his character can continue to build up confidence. And he can sometimes do this even when certain other qualities are lacking. Senator ROBERT A. TAFT is an example."

High among the qualities needed for success in politics, Mr. Farley places truthfulness. "The politician who says one thing to one man, and an opposite thing to another, the office-holder whose word cannot be relied on, the political leader who tries to gain h's ends by other than honest means—these types create resentments which fester long and rarely heal."

Ability to secure "team work" is another prime qualification—ability to get other people to work for one and with him. "The best politicians build up corps of aides who will go through hell for them. Governor Dewey's team has stuck with him since he first entered government, and so strong is its loyalty that not even successive defeats have alienated its members from him. Politicians who haven't this particular quality may go a certain distance, but rarely very far."

In giving his ideas as to what makes a good politician, Mr. Farley also gave a definition of politics which he says was written more than 150 years ago by Andrew Oliver in Boston: "Politics is the most hazardous of all professions. There is not another in which a man can hope to do so much good to his fellow creatures—neither is there any in which by a mere loss of nerve he may do widespread harm—nor is there another in which he may so easily lose his own soul—nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all the temptations and degredations that beset it, politics is still the noblest career any man can choose."

Readers Favor Campaign Against Drift to Statism

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of March 26, 1949:

READERS FAVOR CAMPAIGN AGAINST DRIFT TO STATISM

Our editorial of last Saturday which urged readers of the Daily News to take a strong stand against the soft Socialists who are hellbent upon turning America into a handout state, provoked both praise and censure.

Of the many letters received, a goodly majority agreed with our conclusions. Many of them expressed a desire to organize politically against the trend toward statism and have asked us to formulate a plan of action.

To these good readers, we have replied that an editor's job is to stimulate thought; not to lead the great crusade.

We shall leave that field to the ambitious editors and publishers with a big-shot complex who like to see their names on the letterheads of various causes which they have never troubled to investigate.

DISSENTERS REVEAL IDEALISM, PERPLEXITY

The letters written in opposition to our editorial reveal a strange admixture of idealism, frank disbelief in the capitalistic system, and an honest perplexity about things in general.

Mr. Sam Goldfus, 5229 South Woodlawn, Chicago, writes that the editorial on soft socialism should have been titled "Soft Soap."

He objects to the talkfests in Congress which delay legislation favored by the people in the last election and apparently believes that the filibuster is a deep-dyed plot of the Republican Party.

Mr. Goldfus should note that 23 Republicans lined up with 23 Democrats in opposing Vice President BARKLEY's unprecedented ruling that cloture could be invoked.

Sixteen Republicans joined the twenty-five Democrats who upheld BARKLEY's decision, making it evident that party lines were ignored in this particular instance.

Mr. Golfus says also that "civil rights were enacted by the founding fathers of this Republic and were further delineated in the amendments to the Constitution after the Civil War. Fulfillment of these promises, long delayed, is not socialism but sound democracy."

Exactly, but why have they been delayed and why do we need new civil-rights legislation to buttress what has already been so clearly stated in the Constitution?

Why didn't President Roosevelt insist that these constitutional guaranties be given effect when he dominated both Houses of Congress by sweeping majorities?

The facts are that while F. D. R. talked glibly of the humanities, he always ducked the civil-rights question when it come to action.

CITES WARTIME SELF-REGIMENTATION

Paul C. Tris, 834 Clinton, Oak Park, says that "my experience in procurement for two wars is that as a nation we cannot and have not depended upon enlightened capitalism to meet most of our requirements and prop up the rest of the world both economically and militarily.

"We the people, decided in both instances on self-regimentation, and soft socialism is a small reward for our voluntary submission to hard discipline and almost superhuman effort."

To Mr. Tris, we reply that in time of war, Government regulation and procurement are essential. No expense is spared to make the victory more certain. Nor is any account taken of the appalling waste in wartime production.

Still, Mr. Tris must concede that the industrial plants of America, built under the capitalistic system in the hope of profit, were the instruments of power that made victory possible.

No other nation, or combination of nations, could match the quality and production of weapons turned out in our so-called arsenals of democracy.

We cannot believe that Mr. Tris really thinks that we the people had any choice about self-regimentation and voluntary submission to hard discipline.

Uncle Sam made the rules and we obeyed them in an all-out war effort.

But, who, Mr. Tris, wants to live that way forever? We fought two world wars to defend democracy, not to lose it by following the pattern of Old World socialism in the United States.

FLAWS IN CAPITALISM DISQUIETING TO SOME

Another reader who prefers to be known as "Mrs. D. Q.," of Ashland, Ohio, refers to the many flaws in the capitalistic system such as the fear of unemployment, failure to give adequate recognition to the man who works with his hands, and the economic cycles of boom and bust.

Capitalism is far from perfect, "Mrs. D. Q.," but it has never had a more enlightened outlook in America than it has today.

One has only to compare hours and working conditions, wages, the growth of pension and profit-sharing arrangements with those of a few years ago to realize that tremendous strides have been taken. The point is that American capitalism, with its admitted imperfections, has given us much higher standards of living than are possible anywhere else in the world.

More Americans should visit Great Britain, France, Italy, and the other countries of western Europe to see for themselves. This is particularly true of those who are flirting with the idea that perhaps socialism is the answer to all our ills.

Have you ever asked yourself, "Mrs. D. Q.," why most Europeans who work with their hands are so anxious to live in the United States?

There must be a reason.

TWO SYSTEMS ALREADY INSEPARABLY MIXED

Other readers want to know if there isn't some other choice lying between "creeping socialism" and the type of capitalism that dominates America today.

Charles P. Taft, brother of Senator ROBERT A. TAFT and a challenging thinker in his own right, believes there is.

My answer would be that the two systems are already irretrievably interlocked. In a mild way, municipal operation of sewers, schools, water supply, housing, and public utilities can be termed "socialistic."

Experience has shown that the public welfare is frequently best served when these agencies are a part of local government.

Nor is free enterprise the rugged, dominant, self-serving force that it was at the turn of the century.

What so many people forget is that private business in this country is now regulated by hundreds of Government agencies, many of which have overlapping functions.

Very often, it is difficult to define where capitalism ends and socialism begins.

Yet, as Fred E. Ayer, former dean of engineering at the University of Akron, says, the implication that we cannot have any Government regulation without going the whole way to complete state socialism is not true.

The danger lies in accepting the philosophy that because schools and sewers are municipally operated, the National Government should be able to run United States Steel or General Motors.

Actually further dilution of the capitalistic system simply means that we will be exchanging the opportunities and high standards of living which it provides for the drab mediocrity and security of the hand-out state.

JOHN S. KNIGHT.

Farmers Home Administration Should Be Given Ample Funds

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. O'KONSKI. Mr. Speaker, of all the agencies of our Government, in my judgment the one that has contributed more toward the stability and economy of our country as far as my district is concerned is the Farmers Home Administration. There are in northern Wisconsin thousands of farmers who are operating their farms only because of the intelligent supervision, encouragement, and financial assistance by the Farmers Home Administration.

The only difficulty that I have found in the administration of this agency is their lack of funds. If the Farmers Home Administration were given ample funds, in my judgment they could contribute more than any other agency of our Government to the general welfare and security and production of American agriculture.

Mr. Speaker, I am enclosing a résumé of the amounts of money allocated and the amounts of money needed in just three Midwestern States, namely, Wisconsin, Minnesota, and Michigan. It is seen from this report that the Farmers Home Administration has a back-log of 4,806 applications and needs $8,458,000 to do the job right.

I am hopeful that the Appropriations Committee will view the good work of this agency and up the appropriation to $100,000,000 instead of the proposed $75,000,000.

Following is the report of money needed in just three States and I am sure that the other parts of the country are faced with a situation very similar:

WISCONSIN REPORT

In submitting a report on operating-loan activities in Wisconsin Congressional Districts 7, 8, 9, and 10, T. C. Schmidt, State director, said:

Even though they are good hard-working, substantial citizens, many operators of family-type farms in northern Wisconsin cannot meet the collateral requirements needed to get credit through the regular channels. They are dependent on the Farmers Home Administration for financial aid and assistance.

We recognize our responsibility and a large percentage of our limited operating-loan funds have been made available to families in the northern part of the State. Even though funds for initial operating loans were exhausted before the first of the year, we did make 900 loans in the four congressional districts serving northern Wisconsin. These loans involved $1,245,365. Wisconsin's total allocation of operating-loan funds was only $1,850,000. More than half of the operating loans in the four districts have gone to veterans.

Unfortunately, in the north and cut-over area of Wisconsin and other Lake States, farming operations, due to weather, do not get started until late in the spring. Most of the operating-loan applications are received at that time, but for several years past no funds were available when the farm work started and the demand for assistance was heaviest. It will be the same this spring. The supervisors in these congressional districts are familiar with the situation that exists each year and their estimates, based on past experience, indicate that approximately $2,900,000 additional funds would be needed if all requests were met.

The $500,000 of corporation funds recently received for Wisconsin is not reflected in the reports submitted. Probably 400 additional loans can be made in the State, but all of these corporation funds are earmarked for veterans.

We are entirely in sympathy with the policy of giving preference to veterans; however, we are being severely criticized in the northern part of the State, especially in the drought section, because funds were not available for nonveterans. Farm families and others who were not eligible for military service feel strongly that Federal funds should be made available to them, too. The additional $60,000 received March 1 for the drought section will be helpful to some of those most seriously hurt by the drought. We will make it go as far as possible.

I have endeavored to review the situation in the area as I see it now. No thought has been given to possible unemployment in the ore mines, woods, and paper mills. You covered much of the north country last summer and recognize that it is the problem area of Wisconsin.

The demand in the lake area is created both from these special problems and problems that affect small farmers everywhere. Throughout the State many young families need credit and supervision to get established on farms. Other farmers need to make adjustments in their farming operations. Still others find their working capital cut, as net farm income decreases. They simply lack the collateral to get credit elsewhere. For many of them, the only source of credit is through the Farmers Home Administration.

Production and subsistence loans made and estimated demand for balance of this fiscal year, Congressional District 10, Wisconsin

County	Loans made July 1, 1948, to Feb. 1, 1949				Estimated need Jan. 1 to June 30, 1949	
	Total		Veterans			
	Number	Amount	Number	Amount	Number	Amount
Ashland, Iron, Bayfield, and Douglas	39	$75,900	17	$40,940	50	$95,500
Burnett, Washburn	54	59,750	24	26,200	85	125,000
Lincoln, Oneida	39	39,455	13	18,205	35	72,500
Price, Vilas	82	33,865	36	19,825	55	35,000
Taylor	68	64,525	23	30,210	55	85,000
Rusk	47	50,000	24	29,640	95	90,450
Sawyer	47	47,250	20	22,480	54	39,600
Polk	36	42,160	19	20,215	70	100,000
Total	412	412,905	176	207,535	499	643,050

Wisconsin's allocation of the $75,000,000 appropriated for operating loans this fiscal year was $1,800,000.

Additional allotment February 4, 1948, from corporation funds for veterans only, $500,000.

Additional allocation March 1, 1948, for drought loans in affected areas of State, $60,000.

In district 10, over 50 percent of all operating loans made and funds expended went to veterans.

County supervisors' estimate of funds needed, in the respective congressional districts, to meet the demand up to June 30, 1949:

District 7, $553,830.
District 8, $348,000.
District 9, $1,331,400.
District 10, $643,050.
Total, $2,876,280.

MINNESOTA REPORTS

Economic conditions have changed rapidly in the three congressional districts of northern Minnesota in the last 60 days, according to State Director Leo Brown. Many of the farmers are small operators. The high-price era did not benefit these families as it did farm operators in some of the other parts of the State. Few have accumulated savings as a cushion for emergencies. Any drop in prices immediately affects the purchasing power of the farmers in the area. As a rule, they operate on a small margin.

State Director Brown reports:

Much of the area in these three congressional districts is in the cut-over section of the State. Pulpwood is an important factor in the income of many farm families. Recently the big paper mills stopped buying pulp. They have tremendous stock piles. In addition, they have acquired tracts of lands from which they will cut their own pulp. Many small farmers in the area have bank loans. Some banks are calling these loans. The reduction in this income from pulpwood makes it difficult to meet these payments. In some instances it has been necessary to sell income-producing property to meet the obligation. The tightening of bank credit is reflected in the demand on our county offices for assistance.

Bankers no longer seem interested in making GI loans. This means but one thing—veterans wishing to establish their families on farms have no source of credit other than the Farmers Home Administration. It is reasonable to expect that veterans will make even a heavier demand on our operating-loan funds in the future.

Some small-farm operators have supplemented their farm income by working in the ore mines, docks, etc., in northern Minnesota. Many have been laid off. Now they must have more livestock and equipment to operate their farms to offset the reduction in off-the-farm income. This creates a further demand on our agency.

In some of the northern counties there was a very noticeable exodus of farm families during the war. They were tempted by high wages, left the farms, and went to the Pacific coast to work in industry. Now they are returning to their farms. Their savings are gone and they, too, are making demands upon our county offices. They must have credit to get reestablished on their farms. The only source of credit available to them is the Farmers Home Administration.

Another factor that must be considered is the effect of the drought in some of the counties of the area. It is now being seriously felt. Farmers are required to buy feed and this in turn affects some bank loans. Money that would have been available to meet pressing obligations now must be used to buy needed feeds.

It appears then that in an addition to the usual demand for operating loans, which we have been unable to fill the past few years due to insufficient funds, there will be a very substantial increase for reasons given above. Not only will this situation prevail in northern Minnesota but also in other sections of the State. Lack of available credit, restrictions, and liquidations of bank loans places further emphasis on the need for sufficient operating-loan funds.

Production and subsistence loan activities in the three northern Minnesota congressional districts:

Loans made this fiscal year from July 1 to Dec. 31, 1948

Congressional district	Number	Amount
6. Mr. MARSHALL	230	$463,290
8. Mr. BLATNIK	87	124,815
9. Mr. HAGEN	152	285,765
Total	469	873,870

Estimated applications and operating-loan funds needed between Jan. 1 and June 30, 1949

Congressional district	Number	Amount
6. Mr. MARSHALL	480	$960,000
8. Mr. BLATNIK	256	384,000
9. Mr. HAGEN	423	930,600
Total	1,159	2,274,600

Minnesota's allotment out of the $75,000,000 appropriated for production and subsistence loans, $2,050,000.

November 10, 1948, additional allotment for operating loans—veteran preference, $140,000.

July 1, 1948, allotment from corporation funds restricted for corporation borrowers, $120,000.

February 4, 1949, allotment from corporation funds, earmarked for veterans, $500,000.

Funds for all initial operating loans were exhausted early in November 1948. Limited funds have been made available since but none for initial loans to nonveterans.

MICHIGAN REPORT

The following shows the number of operating loans made and the amounts advanced by the Farmers Home Administration in Congressional District 9 since July 1, 1948, and through February 28, 1949. The report also gives the supervisor's estimate of the potential need up to June 30, 1949.

In submitting his report, Mr. Carr, the State director, says:

December 1, 1948, I asked the county supervisors to submit a report indicating the number of operating loans that could be made and the funds needed, up to June 30, 1949, if money was available. The estimates attached are based on those reports, after deducting the loans that have been made in the respective counties since that time. We believe these estimates are reasonably accurate. Banks and other lending agencies advise that they have had, in the past few months, an unusual demand for agricultural loans from farmers who do not have sufficient collateral to offer. Inquiries, they say, come from good, hard-working, honest people who are worthy of the type of assistance we are able to give them. We are also noticing an increased demand from farm boys returning from industry. We anticipate that the veteran demand will continue to run about 50 percent.

We recognize the need for our services in the northern part of the State. About 50 percent of all the operating-loan funds allocated to the State have been used in the four northern congressional districts. However, the fact is that for several years, in all parts of the State, we have not had enough funds to fill the eligible applications, and each year this backlog of applications has increased. As a result we had enough approved and qualified applications on hand July 1, 1948, to have used in 30 days all of the operating funds allocated to Michigan.

This continuing and growing demand for operating loans is due to several reasons, including:

1. Veterans and other young farmers need operating-loan assistance to become soundly established on farms.

2. Adjustment credit adapted to the needs of many farmers and veterans is not available from other sources.

3. The demand for operating credit has increased because of the rising operating costs and the lower net farm incomes.

4. The fact that small farmers have not profited greatly from the relative farm prosperity of recent years.

5. Operators of family-type farms must increase the efficiency of their operations if they are to be established on a sound economic basis.

Production and subsistence loans made and estimated demand for balance of this fiscal year, Congressional District 12, Michigan

County	Loans made, July 1, 1948, to Feb. 28, 1949				Estimated need	
	Total		Veteran			
	Number	Amount	Number	Amount	Number	Amount
Baraga	4	$8,500	4	$8,500	39	$77,500
Dickinson	14	18,725	6	7,375	38	63,300

Houghton	17	27,280	1	3,000	78	166,700
Iron	5	10,435	1	1,600	20	21,000
Keweenaw					13	26,000
Marquette	21	27,650	2	3,000	32	74,000
Ontonagon	12	16,105	3	3,000	20	23,300
Total	74	109,715	17	26,475	258	472,500

Michigan's allocation of the $75,000,000 appropriated for operating loans this

fiscal year was made February 4, 1948, $1,800,000.

Additional allocation from corporation funds for veterans only, $150,000.

Appropriated funds for initial loans to qualified applicants were exhausted prior to January 1, 1949.

In District 12, 24.1 percent of available funds, has been loaned to veterans.

County supervisors estimate of funds needed to meet the demand up to June 30, 1949:

District 9: $735,750.
District 10: $987,510.
District 11: $1,111,370.
District 12: $472,500.
Total: $3,307,130.

Summary of the production and subsistence loans that have been made, this fiscal year, in the northern part of the Lake States—Minnesota, Wisconsin, and Michigan—and an estimate of the need and the number of loans that could be made, if funds were available, the remainder of the fiscal year:

	Made		Need	
	Number	Amount	Number	Amount
Minnesota	469	$873,870	1,159	$2,274,600
Wisconsin	900	1,245,365	1,710	2,876,280
Michigan	637	898,280	1,937	3,307,130
Total	2,006	3,017,515	4,806	8,458,010

Veterans' Pension Bill

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, my vote in favor of having H. R. 2681 sent back to the Veterans' Affairs Committee was not an indication that I am opposed to a pension program for veterans of World War I and World War II. Actually, I am most eager to see legislation enacted in this session of Congress which will be beneficial to all exservicemen, particularly in their later years. However, after 3 days of making amendments and amending amendments to the proposed veterans' pension bill, H. R. 2681 was riddled beyond recognition so that it was difficult to determine just what the bill would do.

The fact that this bill is going back to the Veterans' Affairs Committee does not kill the prospects of a pension program for veterans. In reality, this action provides an opportunity for a better, less controversial bill which will be more equitable and acceptable to everyone. To further emphasize that sending H. R. 2681 back to the committee is not an indication of disinterest in the future welfare of veterans, I would like to point out that the motion to recommit was made by a decorated Purple Heart veteran of World War II and a member of the Veterans' Affairs Committee—Representative OLIN E. TEAGUE, Democrat of Texas. As H. R. 2681 stood at the time the motion was presented for recommittal, millions of the 4,000,000 World War I and 14,000,000 World War II servicemen would be excluded from its benefits. If this bill had remained on the floor of the House for further emasculation, there was the threat of its being amended to the point where it would have been even less beneficial to those for whom it was originally intended.

The following letter is typical of the many thousands of communications I have received from my constituents and veterans and their families throughout the country in grateful acknowledgment of my vote in favor of having H. R. 2681 recommitted to the Veterans Affairs Committee:

DEAR MR. BARRETT: I have just written your colleague, Mr. GRANAHAN, to tell him how proud I am that you and he turned the tide against the infamous Rankin bill. You should be receiving a flood of congratulatory letters from constituents and from Americans at large. You have demonstrated in a notable fashion that some Members of the House have the grit to stand up and be counted in support of what is for the welfare of this country, even when such action is supposed pretty generally to be unpopular and to endanger your prospects in the next election. Personally, I feel that you do not stand to lose by what you have done, though I have no doubt that you did not weigh the chances of personal advantage or disadvantage before casting your vote.

No one would wish to defraud the veteran of such help as he may require, no matter what the cost, but the Rankin bill plainly threatened the welfare of our country, and you showed high patriotism, as well as intelligence, in causing its defeat. The veterans themselves are the ones who would be called upon to shoulder the heaviest load of taxation to support any such raid upon the Treasury. I hope, too, that they realize that their war service was not merely a duty but also a privilege, that they were defending their own welfare and that of their loved ones. I feel sure that spirit moved my two sons to volunteer in the first months after Pearl Harbor. One saw active duty in the Navy, both in the North Atlantic and later in the Pacific; the other was in the Fifteenth Air Corps, and finally was shot down in flames over north Italy while returning from a mission over Germany. Many months in his base hospital, I am glad to say, brought about a complete recovery, but his hands still bear the scars.

Please accept the grateful appreciation of my wife and our two boys for what you have done.

Sincerely yours,

H. LAMAR CROSBY,
4312 Osage Avenue, Philadelphia, Pa.

Address of Hon. Albert Rains

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. JONES of Alabama. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include an address delivered by my colleague, the Honorable ALBERT RAINS, to the United States conference of mayors in Washington, D. C., on March 23, 1949, and also to include a resolution which was unanimously adopted with respect to this address by the conference of mayors in convention:

Mr. Chairman, ladies, and gentlemen of the United States conference of mayors, I am deeply pleased to have the opportunity of a brief part on this very outstanding program of the conference of mayors.

Here on the platform this morning, I feel quite at home with my long-time friend and neighbor, the Honorable Cooper Green, mayor of the great city of Birmingham, and my former colleague, and good friend, Mayor Tommy D'Alesandro, of Baltimore.

It seems to me altogether fitting and proper that the conference of mayors should hold its meeting this year in the city of Washington. Perhaps never before have there been problems under consideration on Capitol Hill, in both Houses of the Congress, more vital to the interest and well-being of the cities of America. In the whole category of legislation before the Congress, there is, in my judgment, no issue of more paramount concern to you, as the mayors of the cities of America, than the proposed Federal aid for the school facilities construction program. As you know, I have introduced in the House of Representatives a bill which would provide for Federal assistance to meet this great need. Similar legislation has also been introduced in the Senate.

The urgent need for Federal assistance for constructing school-plant facilities arises from the large backlog caused by deferred school-plant construction during the depression and war periods and the greatly increased birth rate during and since the war. The United States Department of Commerce reports that, from 1925 to 1929, which was a normal period of construction following the First World War, $1,900,000,000 was spent for school-plant facilities, or an average of $380,000,000 a year. During the 12-year period 1930 to 1941, the financial condition of State and local governments and the economy of the country generally, prevented the construction of sufficient school-plant facilities for the normal needs of the population. During that period a total of $3,000,000 was spent for construction of new public-school facilities; or an average of $250,000,000 a year and a substantial volume of the construction of new public-school facilities; or an average of $250,000,000 a year and a substantial volume of the construction during this period was stimulated by the Federal works and work-relief program. Approximately $1,000,000,000 of Federal funds was spent during the depression period for construction and repair of educational facilities on the work-relief program.

During the 5-year period from 1942 to 1946, when all available manpower and material was directed toward production for prosecution of the war, the Government restricted sharply the amount and type of construction that could be undertaken. Construction of public-school plant facilities was authorized only when such facilities were an aid in prosecution of the war. During this 5-year period, $379,000,000, or an average of less than $76,000,000 per year was spent for new construction of public educational plant facilities. This was approximately one-fifth of the yearly average for the normal period from 1925 through 1929. As a result of these conditions there has been built up since 1930 a backlog of need for new school-plant construction that State and local governments are not meeting.

Before the war the annual birth rate in the United States varied from 2,200,000 to 2,500,000. During and since the war it rose to 3,500,000 a year and last year it reached almost 3,900,000. This means that each year for the next decade at least, elementary- and secondary-school enrollment will increase. In 1947 there were roughly 24,550,000 children enrolled in elementary and secondary grades. It is estimated by the United States Census

Bureau that that number will increase by almost half a million in 1948. It is expected to increase from three-fourths of a million to one and a quarter million each year for the next 5 years. By 1954 enrollment is expected to be over 31,000,000, or 6,500,000 more than the current year, and in 1958, or in 10 years, it is estimated that there will be over 34,000,000 children enrolled in the elementary and secondary schools. This is an increase in 10 years of 38.9 percent, or roughly 9,500,000 more children than attended schools in 1947.

The increased birth rate is general throughout the Nation. But the problem is more severe for some States than others and for some communities in some States because of extensive migration. Communities all over the Nation are not only faced with the urgent need for modernizing existing schools, completing the repair and renovating of school buildings neglected during the war years and constructing new schools deferred during the depression and war period, but also they have the tremendous problem of building new schools for the extra millions of children born during and since the war.

Complete information is not available showing the extent of the need in each State or in the Nation, but considerable data has recently been reported in various places giving some information on the over-all needs. Educational authorities in Maryland recently reported a need for a $139,000,000 5-year school-building program, in addition to the present authorized school-construction program of over $50,000,000. Virginia localities recently reported to the State department of education that they needed $396,000,000 for school buildings in the next 10 years. The Ohio Education Association recently reported the need in that State for $264,000,000 for 7,000 classrooms in the next 2 years. The Commission on Education in New York State reports a need for more than $1,000,000,000 for school buildings in the next 5 or 6 years. The State of Oregon reports a need for a $120,000,000 program over a 10-year period to meet emergency problems. Pennsylvania reports a need of over $300,000,000; Michigan for over $400,000,000; and the State of Washington for over $500,000,000 for a 10-year period. Similar estimates are available for some other States and still others are making studies at the present time to determine the extent of need. Members of the staff of the United States Office of Education recently estimated that a total of $6,600,000,000 is needed during the next 6 years for new construction, repair, and modernization for public elementary and secondary school-plant facilities.

In our home State of Alabama, Mr. Chairman, there is a current need of $178,000,000 for school-plant facilities. The need for this sum is immediate and urgent.

The need for additional school-plant facilities is immediate and will extend over a period of years. With school buildings already crowded to capacity in many communities in the Nation, and with an increase of over 750,000 children expected each year until 1953, a start must be made at once if facilities are to be available in time for this increased enrollment. The State and local governments are exerting every effort to meet this problem with their own resources. They have increased property assessments, many are bonded to the legal limit and many others are seeking legislative changes that would authorize additional bonding power. In addition, more of the States are providing State funds to assist local districts to construct school facilities, but even these efforts will fall far short of meeting the need. There is not sufficient taxable wealth in many of the communities and States to finance this needed construction, and unless Federal assistance is made available, thousands of American children will be deprived of minimum educational opportunities. In view of the fact that this urgent need is the result of the economic condition of the country during the depression period, Government restrictions on construction activities during the war period, and the increased birth rate during and since the war, it is believed that Federal assistance is essential to help meet this problem.

Do you realize, Mr. Chairman, that out of each dollar of taxes paid by the taxpayer in this Nation, the municipality is allowed to retain only 11 cents, to meet all the myriad demands for services from the people who live in the cities. Out of this meager revenue, the city is required to furnish police and fire protection, sanitary services, streets and schools, and countless other services.

We have arrived at the point where either the Federal Government should withdraw sufficiently from some of the fields of taxation so that the States and cities may meet the demands for schools and other services which their people require, or the Federal Government should return to the cities and the States a sufficient portion of the taxes collected to meet these demands. I would prefer, as would you, for all of these services to be financed and paid for by the States and the municipalities. I think it is time that the Federal Government cease to monopolize completely the fields of taxation, to the almost total exclusion of reasonable tax incomes for States and municipalities. Until such action is taken by the Federal Government, the municipalities of the Nation have a right to expect and demand help from the Federal Government to meet the emergency needs of our people.

RESOLUTION

Resolved by the 1949 Annual Conference of the United States Conference of Mayors, That—

(1) Since the lack of adequate school buildings is severely hampering the education of our children; and

(2) Since the so-called Federal aid to education program neglects the very important matter of school facilities, this conference petitions the Congress to enact legislation providing for direct low-interest-bearing loans and grants to public agencies for school construction—without any intermediary State agencies involved.

Life's Work Well Done

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial tribute from the Daily Oklahoman on a great Oklahoma statesman, the late Thomas P. Gore:

LIFE'S WORK WELL DONE

When a Mississippi Legislature instructed that State's congressional delegation to vote for free silver, Senator Lamar refused to be bound by legislative orders. It was his conviction that a Senator should represent his people's interests regardless of the people's wishes. He believed that it was the people's duty to elect a Senator who was qualified to serve their interests and that having elected such a man they should leave it to his superior judgment to decide what course he should pursue.

Because of that deep conviction Lamar fought free silver and voted against it and then submitted his cause to the voters of Mississippi. In the campaign that followed the only issue was the right of instruction. And having heard Lamar's explanation of his principle of independence the people reelected him overwhelmingly.

The story of Lamar's battle for senatorial independence is of present interest to the people of Oklahoma, for Lamar's conduct had much to do with molding the political character of Thomas Pryor Gore. When Lamar was campaigning Mississippi on his issue of senatorial independence Gore was a very young boy in Webster County. He heard and remembered the arguments that were rife in his State in the days of his childhood. Later on he accepted Lamar as one of his heroes. It became his boyish ambition to become the equal of Lamar both as an orator and as a statesman. And he accepted fully Lamar's theory that a qualified and competent Senator should follow his moral conviction and serve his people's true interest regardless of the political consequences to himself.

Twice in his political career Gore's loyalty to conscience cost him his seat in the Senate, and finally it cost him his political life. He opposed policies that for the time being were extremely popular in Oklahoma and he supported policies that a majority of the people disapproved. He refused to temporize and he stubbornly refused to compromise. By trimming his sails to the changing winds of popular sentiment he might have been able to retain his Senate seat unto the end. But he "refused to crook the hinges of the knee that thrift might follow fawning," and largely because of that refusal, he died a martyr to his moral conviction of official obligation.

Senator Gore will be remembered for his uncanny memory, for his wealth of information, for his remarkable eloquence, for his unfailing wit, and for his power in debate. He will be remembered also for his inspiring conquest of a pronounced physical infirmity. He refused to be crushed by a handicap that would have kept a less resolute soul in life-long obscurity. He never tried to use his blindness as a political asset and he was never known to plead his blindness as any kind of excuse or alibi. The story of his long struggle upward from obscurity to eminence should be an inspiration to the aspiring youth of his country.

In one respect the early years of statehood were glorious years for Oklahoma. For at the every beginning Oklahoma chose as her Senators two men who proved to be the equals of any of the rest. During the years that followed, Oklahomans could always look with pride toward their two Senators. They knew that they had honored themselves by sending Thomas P. Gore and Robert L. Owen to represent them in the world's greatest deliberative body. Now both of those Senators are gone. And of all the 92 men who served in the Senate in 1907, Senator Gore was the last to die. In the realm of the departed, the Senate roll of 1907 is at last unbroken, for on Wednesday morning's roll call Gore, of Oklahoma, answered "Here."

Veterans' Hospital Facilities in Kentucky

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following newspaper article from the Louisville Courier-Journal:

FOUR HUNDRED AWAIT BEDS AT VA HOSPITALS—ESTIMATE IS MADE BY OFFICIALS OF THREE INSTITUTIONS IN KENTUCKY

Almost 400 veterans are waiting hospitalization in Kentucky because of lack of Veterans' Administration hospital beds.

This estimate was made by VA officials at Louisville, Lexington, and Outwood after a report made by the Disabled American Veterans in Chicago. The report said 250 DAV's were awaiting hospitalization in the State.

Quintus Camp, acting national director for claims of DAV, said the Kentucky cases included 100 general, medical, and surgical cases, 60 tuberculosis cases, and 90 neuropsychiatric cases, the Associated Press reported.

At Nichols Hospitals here, VA officials said the hospital is operating 1,000-bed capacity with a waiting list of 300.

Dr. J. B. McHugh, acting manager at Outwood, said the institution there is filled to capacity and has a waiting list of 80.

NURSE LACK CLOSES WARDS

He said 318 patients are under treatment, and "We're crowded all the time." The hospital treats tuberculosis cases exclusively.

The hospital attempts to take service-connected cases before accepting patients with non-service-connected cases of tuberculosis. All those on the waiting list are in the latter classification, he said.

Two wards of the hospital were closed last summer, however, for lack of adequately trained nurses, Dr. McHugh said. He estimated the two closed wards could accommodate an additional 60 patients.

At Lexington Dr. Frederick M. Cook, manager, said only about 8 or 10 applicants for admission are on the present waiting list.

GOOD SHAPE IN LEXINGTON

"Fortunately we are in good shape in Lexington," he said. "We have had plenty of beds until recently, until we started accepting patients from distant points, such as Ohio and Michigan. We are practically full now. All beds are taken except some reserved for emergency cases."

He explained that the Lexington Hospital, with a 1,230-bed capacity, is supposed to take only neuropsychiatric cases, but that general medical cases are taken on an emergency basis.

TWO HUNDRED OF 272 BEDS FULL

The Veterans' Administration hospital at Fort Thomas, Ky., is not set up to handle medical, tuberculosis, or neuropsychiatric cases and apparently was not considered by the DAV in preparing its report.

The Fort Thomas hospital is primarily a medical rehabilitation center. It has 34 beds for medical treatment, and they are full. It has 272 beds for medical rehabilitation, and 200 of them are full, W. G. Stevens, the hospital's manager said.

Cumberland University, Famed Tennessee Law School and Historic Christian Educational Institution, Enters Second Century of Progress

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. EVINS. Mr. Speaker, Cumberland University, located at Lebanon, Wilson County, within the Fifth District of Tennessee, recently rounded out its first hundred years of service as a great southern educational institution.

On the occasion of this great and famed old university entering upon its second century of progress, I desire to commend the record of service and achievement of this historic school in Tennessee and to include excerpts of other comments and congratulations. A rich tradition of accomplishment has characterized the long existence of Cumberland University both as an academic and literary institution and as a school of law.

The tributes and felicitations to Cumberland University have been many and deserved. Some of the tributes have taken a material form and constitute an expression of confidence in the future of the institution. Other tributes have been in words of appreciation for the great work and great contributions of this Tennessee institution. These expressions emphasize the role of importance in southern education that has ever been the part of Cumberland University.

In this body, Mr. Speaker, where so many sons of Cumberland have served with distinction, I should like to add my own tribute to a great university as it enters another era of progress.

Cumberland has produced many outstanding leaders for our country. From its halls have passed young men and women who have taken their places in the fields of Christian education, the legal profession, and other phases of public service, and in that highest calling—good citizenship.

Cumberland University counts among its distinguished alumni, a Secretary of State; 2 Justices of the United States Supreme Court; 16 United States Senators, one, the distinguished Senator from Idaho, the Honorable BERT H. MILLER, being now a Member of the United States Senate.

I am pleased also to note, Mr. Speaker, that more than a hundred Members of the House of Representatives of the United States have been educated at Cumberland University. Of that number, 12 may be counted today as Members of this body.

These distinguished alumni include our colleagues the Honorable THOMAS G. ABERNETHY, Mississippi Fourth District; Hon. ANTONIO M. FERNANDEZ, New Mexico, at large; Hon. OREN HARRIS, Arkansas Seventh District; Hon. WRIGHT PATMAN, Texas First District; Hon. OMAR BURLESON, Texas Seventeenth District; Hon. FRANK L. CHELF, Kentucky Fourth District; Hon. MORGAN M. MOULDER, Missouri Second District; Hon. ANTHONY F. TAURIELLO, New York Forty-third District; and five members of the delegation from the State of Tennessee, including the dean of the Tennessee delegation and national president of Cumberland University Alumni Association, Hon. JERE COOPER, Ninth District; also Representatives ALBERT GORE, of the Fourth; PAT SUTTON, of the Seventh; and TOM MURRAY, of the Eighth District of Tennessee. As the Representative of the Fifth District, in which Cumberland University is situated at Lebanon, it was also my own great privilege to have attended this great school in Tennessee.

The continuing progress in education at Cumberland University has been noteworthy in every respect and its citations for advancement and continuing excellence have been numerous. It was of interest to the alumni as well as the countless friends of Cumberland when the American Bar Association added its own accolade of deserved praise with official scholastic recognition of the excellent attainments of Cumberland's School of Law. This recognition was richly merited.

As a tribute to this institution, I should like to quote briefly from G. Frank Burns, writing in the Lebanon (Tenn.) Democrat:

> The real gift of the Cumberland University School of Law, looking back over the century * * * is not its graduates who have won fame and renown but rather the spirit of faith in the lasting tenets of democracy, passed on, like an unfailing torch * * * to five generations of young men and women.

The worth of this fine old school lies in its achievement of fine men and women, humble and great. Its external growth from a one-room institution of learning a century ago to its present plant of fine buildings is but the material evidence of its surging and progressive spirit.

Recently, the president of Cumberland University, Dr. Edwin S. Preston, visited Washington and called upon President Truman and invited him to visit Cumberland University in Tennessee. There was also a meeting of Cumberland University alumni in the Washington area on the occasion of Dr. Preston's visit in the Capital at which some 70 alumni of the university gathered to hear an address by Dr. Preston and a report on plans for the second century program at Cumberland University.

In this connection I desire to include in the RECORD a portion of a transcription which was presented at this meeting and entitled "The Romance of Cumberland University"—a great and inspiring story written by Col. Dixon Merritt, of Tennessee. Also an editorial from a recent issue of the Nashville Tennessean entitled "Cumberland Laurels," commending the Cumberland University School of Law.

I request that these be included in the RECORD because of the general interest in the progress of this famed law school in the heart of Tennessee and because of the best wishes which countless friends extend to Cumberland as it begins its second century of progress.

The story and editorial follow:

THE ROMANCE OF CUMBERLAND—THE STORY OF A CHRISTIAN INSTITUTION

That May morning of 1842 was a great day for a university to be born and the name by which it was christened—Cumberland—was already a great name not alone in history and geography but even then in education. The place, too, was great. Lebanon, the city of cedars, the city of settled and seasoned culture, the city where Sam Houston had practiced law—Sam Houston, Governor of Tennessee, the "Raven" of the Cherokees of Oklahoma, the hero of Texas independence. Three of Lebanon's citizens—a governor, a Congressman, and a Supreme Court justice, were members of Cumberland University's first board of trustees appointed in that good national year of 1842.

Eighteen forty-two—how long ago was that? The gulf is hardly to be spanned by a mere measure of years. Stephen Collins

Foster was publishing his first song and furnishing a musical setting for the Old South. Missouri and Arkansas were America's farthest west. John Tyler in the Presidency was muddling the Whig Party's greatest opportunity and Clay and Webster were maneuvering, each striving to be the one to supplant him and Hayes and others were maneuvering to lead the Democratic Party back to mastery.

But best-laid plans of mice and men—no one of the four were to succeed though Clay won the Whig nomination. In the cool of the shade of the Hermitage, 18 miles west of Lebanon, sat Andrew Jackson, worn out with 8 years in the Presidency, with a long life of unparalleled turmoil—sat and planned—planned deeper and better than the recognized leaders of either party. It was his protégé, James K. Polk, who was to lead the Democrats back to power, to crush the mighty Clay in his final bid for the Presidency, to win for the United States Texas and the all but illimitable lands beyond, the new Southwest which was to furnish from that day to this so large a part of the patronage of the new university. In that decade, Tennessee, heart of the old Southwest, was in a position almost of dominance in varied fields. For 1842 was the middle year in that remarkable stretch of 44 years during which Tennessee placed one of its sons on a national ticket in 8 of the 11 national campaigns.

Into that kind of Tennessee, Cumberland University was born. Its early years were lush, green years. The civilization of the Old South was at its high tide and plenty rode on a springing harvest.

The general assembly of the Cumberland Presbyterian Church and the people of Lebanon thought it hard to find the funds to get the university going. When did people anywhere not think it hard to raise money for any cause. They thought it hard then but a quarter of a century later in the great war's bitter aftermath they looked back with longing on those early days and knew that the first great task was an easy one. From 1842 to 1860—only a little while, the space from babyhood to a high-school diploma—in that 18 years the alumni of Cumberland University had come to fill in large measure the places of importance in the wide land. Some of them were already in the Congress of the United States, where from eight decades down to the present, Cumberland University graduates were to outnumber those of any other university in the United States.

Other and more numerous sons of Cumberland were in the branches of State and Federal courts of both original and appellate jurisdiction. They were filling chairs in colleges all over the United States and were administering the affairs of colleges and seminaries and other educational institutions. Still numerous others were in administrative positions in the church bodies, were in the pulpits of important churches, and were carrying Christian civilization to far places on the mission fields of the world.

Cumberland was powerful—a young giant in a young land and its prospects opened out fair and full to a glorious future.

The great red flower of war sprang up and shadowed the land. Prejudice and passion and hatred raged. Brother's hand was at brother's throat and all the splendid fabric wrought through the prosperous years was ready to split into tatters. Lebanon was not on the whole secessionist and Cumberland was not. A majority of its trustees, mostly citizens of Lebanon, opposed secession and a number of them remained stanch Unionists through all that followed. The faculties were divided and students, of course, were divided also. Cumberland's magnificent building stood deserted, not destined to withstand the shock of war—that building lay in ashes before the end, but there remained wrecked amid the ashes a lone Corinthian column, the building pitiable, but it was a valuable asset, for there was found written upon it, when friends of the university returned, the single Latin word "Resurgam," in translation "I will arise." The word was marked up there with a piece of charred wood by Dr. W. E. Ward, an alumnus, who stood sorrowfully among the ashes of his alma mater. That word scrawled in charcoal became the voice of faith crying among the desolation and Cumberland did arise, not bigger, but stronger, than in the booming years before the war. Friends who in the old days had given of their wealth now gave of their poverty and the institution struggled into motion.

The new day had fully dawned and the board of trustees recognized it by conferring upon Judge Nathan Green, Jr., the title of chancellor rather than that of president. For more than 30 years Chancelor Green directed the affairs of the university. For 63 years he occupied one of its chairs of law. Yet, his position cannot be called unique because he had a faculty hardly less notable than himself for length of service. His great colleague in the law school, Dr. Andrew B. Martin, taught for 40 years; Andrew Hayes Buchanan taught mathematics in Cumberland 45 years and made his living through working during vacations with the United States Geodetic Survey; William Duncan McLaughlin taught Latin and Greek 45 years and made his living milking cows; and John Iradelle Dillard Hinds taught chemistry for 31 years and supported himself by filling prescriptions in the drug store. Walter Verrell Vester taught for 44 years; Winsted Paine Bone, 47.

Against such a record of devotion, brick and mortar and money and bonds do not count. Out of a century of that tradition of special training and Christian service, what has Cumberland produced?

It is easy to see and measure the fruit of this as of other trees—they are on the topmost branches. Of the thousands of Cumberland University alumni who have done the world's work in common ways, no record stands out, but among the lot have been almost 450 ministers of the Gospel. There have been some 50 college and university presidents, some hundred college professors, 116 Congressmen, 11 Governors of States, some score of Federal judges, two United States ambassadors, two Justices of the Supreme Court of the United States, and one Secretary of State of the United States. In all, more than 12,000 public servants have been numbered among Cumberland alumni.

Judged by its fruit, it is a goodly tree which early in 1946 the Tennessee Baptist convention received from the friendly hands of the trustees who had conducted the affairs of the University under Presbyterian auspices. At that time, Tennessee College for Women, a Baptist institution located in Murfreesboro, was incorporated into the university. Since then the convention board of trustees and administration of Cumberland University have diligently labored and constantly toward developing a strong and practical second century program. There has been no pruning of the tree—there will be none. There has been some strengthening of the branches. The school of law, lustiest, shall it be said, of the branches, has been strengthened and enlarged in its program in accordance with recommendations of leading educators and representatives of the legal profession.

On the other main branch, the college of arts and sciences, Cumberland stands stanchly by the liberal arts' ideals. One of the immediate goals is attainment of approval by accrediting agencies and these goals if not definitely in reach are clearly in sight of attainment. Drawing closer to attainment is a larger and better faculty and adequate buildings for administration. Close to the heart of the sponsors is the goal of a large residence for women where special facilities and opportunities will be provided.

The second century program does not contemplate a different Cumberland—it does contemplate a stronger edifice on its existing foundation. It is not expected now or ever that Cumberland will become large. It will remain a small Christian institution. As such it will continue to afford opportunity for broad basic education and specialized training in a few selected fields to a limited number of young men and young women without regard to Christian affiliation. Thus Cumberland University faces the future. May the promise of the future ahead measure up to the performance of the century that is passed.

[From the Nashville Tennessean of February 15, 1949]

CUMBERLAND LAURELS

Recognition of Cumberland University Law School by the American Bar Association is a welcome and deserved honor which is at once a measure of the institution's great tradition and its promising future.

When the roll of distinguished alumni is called Cumberland need not bow in humility before any law school in the State or country. During the institution's first century her sons went forth to win laurels on the bench, at the bar, and as leaders in political and legislative affairs.

Until the Civil War the university required a 2-year law course, but after that conflict the course was compressed into 1 year. In 1934 it was expanded again, but it was not until 1946 that the present standard 3-year course was instituted.

Despite the fine record of Cumberland students, the American Bar Association never approved the school because of the shortness of the course. It was not a matter of too great moment, since most of the graduates began their practice in Tennessee.

In present times, however, the intricacies of the law have become more complex. Higher standards and lengthier courses are a necessity. There is also a greater geographical spread of students.

This approval by the American Bar Association means that Cumberland graduates may now take bar examinations in every State in the Union instead of just a few. The approval is only provisional, which is customary for schools just admitted to approval.

Those who know Cumberland, however, have no doubts as to the school's ability to maintain the higher standards set. There is every indication that the institution's second century will be even more important than its first.

The American Legion—A Constructive Force

REMARKS

OF

HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 28, 1949

Mr. DOLLIVER. Mr. Speaker, during the course of the debate on the pension bill, the gentleman from Massachusetts [Mr. KENNEDY] made the statement:

The leadership of the American Legion has not had a constructive thought for the

benefit of this country since 1918. (CONGRESSIONAL RECORD, Tuesday, March 22, 1949, p. 2950.)

I feel reasonably certain that this statement was made in the heat of the debate and does not represent a considered judgment of the gentleman from Massachusetts. I am well aware that he comes from a distinguished family, and has a splendid war record in World War II. I do not believe that he would wish to traduce a leadership of 4,500,000 present members of the American Legion, and the 1,500,000 who were members of the Legion before World War II.

As a matter of fact, the American Legion is one of the great constructive forces in America today. That is true not only in my own State of Iowa, but likewise in the State of Massachusetts, and every other State in the Union. I had the honor of serving as department commander of Iowa during the year that Dan Doherty, of Woburn, Mass., was the national commander of the Legion. I am sure that the American Legion is as constructive a force in the community life of the Bay State as it has been in the life of the Hawkeye State.

We ought to remind ourselves of the accomplishments of the American Legion, completely aside from the emotional tension of the debate on the pension legislation. For example, the American Legion for 30 years has had a program of rehabilitation and assistance to disabled veterans, their widows, and orphans. Literally thousands and thousands of men who have suffered from the ravages of war and their dependents have benefited from the ministration of the American Legion and the women of the American Legion Auxiliary. Thousands of legionnaires, leaders in the American Legion, have given of their time, energy, and money to help their comrades who were in need. Surely, here is a constructive accomplishment which merits the praise and admiration of all Americans, whether members of the Legion or not.

Is the gentleman from Massachusetts acquainted with the youth program of the American Legion? For many years the Legion has carried on the program of junior baseball. Annually, over a million teen-age boys participate in the games leading up to the little world series. In the Legion program they learn the meaning of fair play and good sportsmanship, which is part of the American national game. Scores of these boys who have participated in American Legion baseball have gone on to become leaders in organized sport.

Have the American people forgotten the work that has been done by the Legion in its support of Boy Scouts? Hundreds of posts of the American Legion have taken the leadership of scouting in their communities. Thousands of boys have been given the benefit of the scouting program through the leadership of the American Legion.

Then there is Boys' State. Nearly every department of the American Legion has organized and carried out a Boys' State program to teach the youth of our country the responsibilities of citizenship. For a week or more during the summer months boys are brought together to learn about local, State, and National Government. They have an intensive course in training and citizenship by actually carrying out the duties of citizenship in Boys' State. The climax is at a national meeting of Boys' States here in the city of Washington every summer.

In addition, there are oratorical contests for our youth; health centers for war orphans; national commander scholarships for deserving youths; and hundreds of posts across the country have given aid and assistance in the educational enterprise. The American Legion was the leader in setting up and developing American Education Week, the period including Armistice Day every year.

Surely, most of the American people, including the gentleman from Massachusetts, have heard of the community-serving program of the Legion. I am rather proud to say that this idea originated in my State and was designated the Iowa idea. Its purpose is to encourage every local post of the Legion to do something constructive for its own community. All over this country, the community-service idea has been carried out and fulfilled by literally thousands of Legion posts. Because of the community service of the American Legion there have been hundreds of enterprises completed, such as community buildings, swimming pools, parks, and every conceivable improvement made in thousands and thousands of American towns and cities. This has been done as a voluntary effort on the part of the members of the Legion to improve the communities in which they live and to make America a better place to live in for all of us. Surely, this is a constructive work under the leadership of the American Legion.

I readily realize that some Members of the House have been in disagreement with some parts of the legislative program of the Legion, as shown in the vote of last week on the pension program. I myself have not always agreed with every part and facet of the national program of the American Legion. Such conformity is not asked or required.

I have mentioned only a part of the constructive actions of the American Legion. Its accomplishments are written in every community in this Nation. Its record is the proud accomplishment of millions of patriotic Americans, every one of whom served under the Stars and Stripes in the two world wars. Its service to our common country is its lasting memorial.

Surely the accomplishments of the American Legion in its sponsorship of better American life since it originated in March 1919 have amply justified its existence. Its leadership and membership has been a constructive force for good in our beloved country. I wish that every Member of this House and every American might know more completely the program of the Legion. I hope that its motto "For God and Country" is graven upon the heart of every legislator and every American citizen.

Summing up, I can do no better than quote the preamble to the constitution of the American Legion:

For God and country, we associate ourselves together for the following purposes: To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a one hundred percent Americanism; to preserve the memories and incidents of our associations in the great wars; to inculcate a sense of individual obligation to the community, State, and Nation; to combat the autocracy of both the classes and masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom and democracy; to consecrate and sanctify our comradship by our devotion to mutual helpfulness.

Ripened Idealism

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, March 28 (legislative day of Friday, March 18), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Ripened Idealism," delivered by Hon. James T. Brand, of Salem, Oreg., associate justice, Supreme Court of Oregon, and chairman of the board of regents of Reed College.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The gathering of the alumni of any college is a matter of great moment. Especially is this true at Reed. You come not merely to see the blue flame burning on a plum pudding. You come also to warm your spirits at the vestal fire that burns in these halls, the fire of scholarship and inspiration. You return to recall the dreams of schools days and to catch once more, if but for a moment, the fervor and faith of the young St. George that you used to be as you sallied forth armed with a sheepskin and a fountain pen to slay your morning dragon who dwelt in the sinister caves of capitalism, or in the unknowable depths of philosophy, or in the unknown and mysterious realms of science.

There is a sadness as well as a joy in such reunions as this. When we graduated we wore our ideals like a sword, but as the years go by they more nearly resemble a walking stick to be used when convenient or necessary, or to be worn with spats on the Sabbath Day.

One of your great teachers here speaks with regret of the "erosion of ideals" worn down by the chilling rains of disillusionment and the harshness of the competitive life. Wordsworth understood the sadness of it when he wrote:

"Heaven lies about us in our infancy.
Shades of the prison house begin to close
upon the growing boy,
But he beholds the light and whence it flows,
He sees it in his joy.
The youth who daily farther from the east
Must travel, still is nature's priest,
And by the vision splendid
Is on his way attended.
At length the man perceives it die away
And fade into the common light of day."

The real tragedy of maturity is not the hardening that privation brings nor the softening that follows wealth. The tragedy of the mature years, whatever its cause, is the dimming eye which no longer looks out and beyond the privations or the luxuries of the hour and searches the dim east for the signs of a new day. And so, because we remember the vision splendid, we gather here to renew old friendships and to make new ones, and each to tend his vestal fire, for if it dies the eternal city, John Bunyan's "City of Mansoul," will fall.

After all, despite the fading of some hopes and the cooling of some ardor, things are not so bad as they might be. I suppose a thousand solemn-faced high-school valedictorians have, with proper assistance, composed an epic essay entitled "Out of School Life and Into Life's School"; and there is a point to it. The rough and tumble struggle for that medium of exchange without which body and soul would wend their separate ways—that struggle is also an educational process. It subjects theories to pragmatic tests. It teaches that no man and no school has a monopoly on truth. Erosion may wear away the rubble, but it may also disclose rich veins of ore. The fact that mature life raises doubts about our early certitudes is good. That it paralyzes the will to resolve those doubts is very bad.

Our college days were in truth golden days and the product in memories and associations and ideals is our richest heritage. But life goes on, and, with it, the testing of old formulas and old beliefs. Perhaps our generation became intoxicated with relativity and lost the belief in standards of right and justice, or standards in art and literature. True, they are not to be found by us—these ultimate truths—but to be sought for so that we may say with Maxwell Anderson:

"In all these turning lights I find no clue,
Only a masterless night
And in my blood no certain answer.
Yet is my mind my own.
Yet is my heart a cry toward something
dim in distance
That is higher than I am
And that makes me emperor of the endless
dark
Even in seeking."

Youth has a clear mind. It knows the answers. It is only in maturity that we become confused by the eternal paradox—the need for change, the necessity for stability. Social institutions must grow or they die, yet when growth goes wild and cells too quickly multiply, growth becomes cancerous. Men who would steer a straight course soon learn that if there is a Scylla on the right there is also a Charybdis on the left.

Again the postcollegiate years emphasize the distinction between the quality of a theory and the quality, moral or intellectual, of the protagonists of that theory. In this connection the problems of communism come readily to mind. I must first state for the record that my personal attitude toward communism is like that of President Coolidge's preacher toward sin. You remember the dialogue in the White House?

"Grace: What was the topic of the sermon?

"Calvin: Sin.

"Grace: What did he say about it?

"Calvin: He is against it."

I think, however, that the prevailing American attitude toward communism is both unwise and harmful. In the bitterness of our criticism, we have failed to distinguish between end and means—between a theory and the avowed representatives of that theory, between an ideal, however mistaken, and a criminal conspiracy. A mistaken ideal must be analyzed in a cold light. A criminal conspiracy against the dignity and freedom of man led by a dictator may justify heat as well as light.

The earnest student who believes that government derives its just powers from the consent of the governed, sees two antagonistic theories competing for popular favor. In this he sees the processes of democracy at work, and he resents the unreasoned vituperation which damns as communism everything without distinction, from Marxian theory to Stalinist dictatorship. He thinks that if communism in a fair competitive field can win the loyalty of a majority of the people, then the principles underlying our own democratic system demand that it be given a try. And he is right. I believe that communism cannot win in a fair field of competition and should not; but if it does, we must either renounce our faith in popular rule or else give it a trial.

Political, economic, and social theory must be met with calm reason. Crime must be met with repression. To join both in a common condemnation breeds only confusion. Our earnest student then fails to distinguish between a debatable end and the undebatable wickedness of means employed. I do not fear the competition of communism in a fair field, but let us demand a fair field. The sovereign right of choice cannot exist where the weapons of our opponent are those of falsehood, where power is vested in a dictator whose temporary strength lies in the enforced ignorance of his people; whose methods are the purge, the secret police, the judicial murder, the concentration camp, and the ruthless domination by force of weaker states.

These distinctions between legitimate ideas and illegitimate methods, these discernments which come with the experience of postcollegiate years need not and must not dim the fine idealism which you absorbed in college days. The great triumvirate of rights, free inquiry, free thought, and free teaching, must remain regnant. If the goal of truth and human freedom and brotherhood stands clear before our eyes, the path to that goal, beset as it is by danger and complexity, will be a way of courage and inspiration. I am trying to show that early ideals may be enriched, not lost, by later thoughts and observations.

What has all this to do with you as alumni of Reed College? In this world of distracting activity, all but the few who are blessed with the genius of leadership learn that as individuals we can accomplish nothing. If justice is to become a reality, then courts must embody and exemplify justice. If religion is to prevail over doubt, a cathedral must rise as the symbol of faith. If the mind is to be free to seek, to doubt, or to believe; if academic freedom is to be preserved with the right to seek truth wherever it may be found and to teach the truth as it is believed, then those rights must become incarnate in an institution in which the search for truth and the right to teach it are free from the domination of church or state, of party or sect, or race or creed.

I know of but one institution through which men can combine their individual wills for the accomplishment of these supreme objectives. It is that institution of which Reed College is a preeminent and shining example. It is the privately endowed nonpartisan, nonsectarian college. It is born of benevolence and dedicated to scholarship and service.

Today the fate of the independent college throughout America hangs in the balance. It is the chief victim of inflation, the aftermath of war. This college and every college must fight a battle for existence. But through this college, you, her sons and daughters, can realize the ideals which you took from these halls and which in isolation no man can achieve. The very confidence that we have in the destiny of America and in the worth of our institution bids us have faith that the far-seeing people of this country, led by yourselves, will never let the clouds of financial depression dim the light of the independent college. To this task we must dedicate our efforts anew.

I should like to close with a note from the life of Charles A. Beard. He was asked what major lessons he had learned from history. His answer was fourfold:

"Whom the gods would destroy they first make mad with power."

"The mills of the gods grind slowly yet they grind exceeding small."

"The bee fertilizes the flower it robs."

"When it is dark enough, you can see the stars."

Lawrence Vinton Peterson, a Lover and Benefactor of Mankind

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 24, 1949

Mr. JOHNSON. Mr. Speaker, on March 11, L. V. Peterson, one of my dearest friends, died. I did not hear of his death till some days later and in the intervening time I have been so busy that I have not had time to write a short statement regarding him. Lawrence Vinton Peterson was a most unique character. He was an interesting and constructive man. It happens that his birthday and my birthday are on the same day, although we are not the same age and for a number of years we together celebrated our birthdays and also the birthday of the Stockton Record, the paper with which he was connected for over half a century.

It was my pleasure to serve on the Stockton Planning Commission with Mr. Peterson. He was a man of penetrating intellect and practical common sense. He had a keen sense of humor and a tremendous love for the great outdoors, as well as for his fellow men. His outlook on life was a broad and a tolerant outlook.

A very curious thing happened during his last illness. His son and daughter-in-law were perusing the CONGRESSIONAL RECORD, especially a speech by Senator LANGER, of North Dakota, which was a filibustering speech against the Selective Service Act. In the RECORD they noted a reference by Senator LANGER to a Dr. Koch, who claimed to have a serum that could cure cancer. The son of Mr. Peterson got the doctor who was treating his father to obtain this serum. At the time it was obtained Mr. Peterson had gotten down to a weight of 78 pounds and was so weak that he was unable to dress himself. The serum was used and miraculously his health began to improve. His color became better. He developed an appetite. All his functions became normal and he began to get well, at least so it was believed. I, for one, was hoping and praying that he would completely recover which would be very convincing proof that perhaps a cure for cancer had finally been discovered. However, the article concerning his death, which I am making a part of these

remarks, by leave granted to me, indicates that Mr. Peterson died of a heart attack. Consequently we have no very convincing proof that the cure which he was trying to bring about by the use of Dr. Koch's serum is, in fact, a cure for this devastating disease.

The lives of many people have been enriched and made more cheerful by their acquaintance and contacts with "Vint" Peterson. He was sort of a philosopher, as well as a wit. After his operation he told me that it would be several years before he knew whether he was really cured, but, as he said, "I have lived a very happy life, and even if cancer gets me I still will have lived the Biblical threescore and 10 years, and what more can a man expect than that?"

By leave granted me, I include a news article on Mr. Peterson by William J. Rogers, an intimate associate of Mr. Peterson for several decades and an excellent writer in his own right. Also, an interesting guest editorial by Ross Williams, the general manager of the Stockton Record, in which he makes a splendid appraisal of our departed friend under the caption "Pete and his pipe," which topped Mr. Peterson's column. Then, also an editorial on the editorial page of the paper with which Mr. Peterson spent so many years.

It is tragic that such an excellent man should pass on, but it is a great comfort to know that the world produces and continues to produce men like L. V. Peterson. The older one gets the more he learns that the world is filled with interesting, constructive, and capable individuals. There is a peculiar pleasure in knowing men who are distinctive and the world is filled with them. In the same profession we find men attaining the top brackets of success, each in his own method and by the expression of his own personality coming into leadership and yet each one different than the others. Here is a good sample of what the American system of free enterprise and individual opportunity does in the way of producing men. Our departed friend was a true example of what can and does, in millions of cases, happen in the America that Mr. Peterson loved so much and for which he did a great deal.

The articles referred to follow:

PETE AND HIS PIPE

(EDITOR'S NOTE.—The following tribute to the memory of L. V. Peterson, whose column occupied this space for many years, was written by Ross Williams, general manager of the Record.)

A great and wonderful light left this community at 10 a. m. March 11, 1949—a light that cannot be brought back by science, electrical engineering, or modern inventions—a light engendered by a human soul—a commonplace man who reflected the best in human relations; a man whose stature, not in inches and weight, stood heads above the commonplace crowd in human understanding; who needed no fetishes or dress or declamations to be recognized for what he was; a human in tune with his fellow man and in deep sympathy for frailities without criticism or rancor for weakness.

It is seldom that the average man is privileged to witness in a fellow man a feeling of understanding and sympathy in all problems, without self-motivation. This man did not pose as an orator or a saint; his strength of character was a light from within which always showed through any artificialities that he encountered. His was not a preconceived attitude; it sprang from a happy, straightforward soul, nurtured by a kindly wit and an honest, down-to-earth viewpoint of his fellow man. He always admitted his frailties and was compassionate with the other fellow's weak points. But, above all, he believed that there was good in this world and that it was an enjoyable place if we would give it a chance.

This is not a eulogy; that is the last thing "Pete" would want. It is merely the expressions of a fellow newspaperman who was granted the privilege of working desk to desk with him over a period of 20 years, a privilege for which I shall ever be grateful.

I have known him; that spirit of inner light and soul was an inspiration. My apologies to "Pete," for he was insistent in his attitude that bouquets be thrown at the living, but I know he will forgive me for this last-minute "30."

LAWRENCE VINTON PETERSON

(By William J. Rogers)

Lawrence Vinton Peterson, the "little man with the big pipe," will write no more columns for the Record. "Pete," the Record's oldest staff member in length of service, died this morning at 10 o'clock as a result of a heart attack last night.

In failing health for several months, he had shown slight improvement recently and his death was not expected. He made a marvelous recovery from a cancer operation in August 1944, in which his stomach was removed.

WIDELY KNOWN

One of the best-known newspapermen in California, Peterson was born in Minosha, Wis., on April 8, 1876, and resided at various times in Colorado, Visalia, Middletown, and Lodi.

Graduating from Stockton High School in 1898, he joined the Record organization on July 1 of the same year. For more than a half century the Record was not just a living to him—it was his life.

For a number of years Mr. Peterson was a reporter for the Record. So familiar did he become to news sources it was frequently said of him that newcomers often asked, "What is his last name? I just know him as Pete."

Coworkers for a quarter of a century frequently did not know what his initials stood for, although some of the very old old-timers knew him as "Vint."

When the Record opened a branch office in Lodi, Peterson was placed in charge. From this beginning he went into the business end of the paper and on his return to Stockton from his Lodi assignment was, successively, circulation manager, business manager, and assistant to the publisher.

Son of a pioneer father, although not a native of California, he had a deep interest in the history of the State and of its early days.

His father as a boy of 14 drove an ox team across the Plains, ending in Downieville. He then returned to Wisconsin, where he married and where Peterson was born.

ADVENTUROUS FATHER

The elder Peterson was an adventurous person, was a miner and teamster, an engineer on Lake steamers, miner in Colorado, and engineer on various boats running out of Stockton. In 1910 he bought a ranch in Lake County and lived there until his death in 1913.

A great lover of the out-of-doors, "Vint" Peterson made many trips for the Record with noted automobile drivers and wrote stories which went far to popularize the natural wonders of California and the West. In recognition of his love for the out-of-doors his associates on the paper built him a cabin at Big Meadows about 14 miles above Camp Connell, in 1931.

UNDERGOES SURGERY

Members of the medical profession were particularly interested in the surgery performed on him in 1945. Operations to remove part of the stomach are fairly common, but the entire stomach removal is comparatively rare, and his progress after the operation was watched closely. He spent 4 months at his cabin in the summer of 1945 recuperating from the operation.

Equipped with an elfin sense of humor and a firm determination to "stand up and be counted" when he had an opinion, Mr. Peterson discussed a wide range of subjects in the column he conducted under the heading "Pete and his pipe," for many years on the Record's editorial page. Not a lover of controversy but never a man to "back away from a fight," his opinions on various matters were stated clearly and firmly. That they aroused opposition, on some occasions, was a source of satisfaction and sometimes of amusement to him. "Shows people are thinking for themselves," he used to say. "It'd be a heck of a world if a thing was believed without check just because someone printed it."

Peterson never joined a church. Efforts to attach or attract him to any particular religion were met with a quiet remark that he "wasn't much of a joiner." He had one affiliation, Charity Lodge of Odd Fellows. Aside from this, his interests were in the paper, his home and family, and the "wide open spaces."

CALLED CLASSICS

Some of his writings, turned out while he was resting at his cabin during his illness, have been declared classics. His description of a long-standing feud he had with a porcupine, which he insisted on calling a quilled pig as an insult, aroused so much interest he had finally to give an almost blow-by-blow description of his campaign. His stories of the simple little people of the hills—the chipmunks, the squirrels, and the birds—of the cattle passing along the road near him, of the play of lightning over the hills and the mantle of snow on the highest peaks rippled like laughing water over a stony brook bed.

In his final illness, Peterson amazed friends and family with the will to live he had packed into his small frame. Never weighing more than 110 pounds, "soaking wet," as he described it himself, he declined at one time to a few over 80 pounds. Despite this, he stayed on his feet.

Besides his wife, Georgia Eletha Peterson, he is survived by one son, Robert Henry Peterson, also of the Record organization. He also is survived by a sister, Mrs. Joseph (Idamae) Johnson, and a granddaughter, Barbara Louise Peterson, as well as his daughter-in-law, Blanche Dale Peterson, and a brother, L. S. "Ren" Peterson, of Middletown, Lake County.

After showing a steady gain for many months, Mr. Peterson suffered a decline last summer and grew steadily worse.

In mid-December of last year, when doctors had decided no hope existed for him, the Peterson family decided to administer the antitoxin-serum treatment of Dr. William Frederick Koch, of Detroit. The serum was flown here and administered on December 22 of last year. Improvement was noted at once and his condition bettered steadily until last Tuesday when he went to his usual polling place and cast his vote.

MEDICOS WATCH CASE

With the Koch treatment a matter of some controversy among medical men, Peterson's

condition was watched closely by members of the medical profession.

Late yesterday the heart condition developed. He did not regain consciousness and died at 10 o'clock this morning.

Thoughtful toward the end as he was through life, Peterson asked that flowers be omitted at his funeral. He asked members of his family to notify anyone who might wish to spend money on such things to contribute the sum instead to a cancer fund.

FOR THE LOVE OF PETE

When a man devotes half a century to a single profession and to a single business enterprise, his character and personality are influenced inevitably by the kind of work he has done. And conversely, he is likely to make lasting impressions on his associates and on the business which was his career.

So it was with L. V. "Pete and His Pipe" Peterson and with the Stockton Record.

"Pete" and the Record were "boys" together. They shared immaturity and experience, tough times and the good. His first years on this newspaper were spent in reporting, but like all newspapers and newspapermen of that era, there was little departmentalizing. The hand that penciled the news also wrote the heads, collected subscriptions and stuffed papers in the mailing room.

As a reporter "Pete" acquired the spirit of kindly, friendly tolerance that goes with a genuine affection for people, the people whose sorrows, follies, foibles and achievements are a newspaperman's peculiar field. Later as a circulation manager he dealt with the boys who deliver the paper, and with the people who buy and the people who complain.

His job developed Pete's inherent affability into a life-long spirit of congeniality and hospitality. And what his job did for Pete, he returned in full measure. For many years the top representative of management, he set a keynote of informality and approachability which has always characterized relationships between departments and among the Record's personnel. There is no high brass in the usual sense of the term.

Another of Pete's influences was to transmit to the personality of this newspaper his deep regard for the out-of-doors, his interest in the people and in the furred and feathered creatures of the Sierra.

It was in the role of woodsman that his readers knew and loved Pete best, as in his homely and philosophic style he recorded the goings on, small and large, along the Ebbetts Pass Highway beneath his mountainside cottage.

"For the Love of Pete" reads the inscription on the plaque in the cabin built by his newspaper associates. And out of love of Pete do his professional associates and his fellow townspeople mourn his passing.

Representative Potter's Eloquent Canes

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. POULSON. Mr. Speaker, it is a pleasure to ask permission to insert in the RECORD this article, which appeared in the Washington Daily News of March 24, 1949, written by Mr. Fred Othman who in this unique fashion pays just tribute to the exceptional record of our colleague, Representative CHARLES EDWARD POTTER, of Michigan.

REPRESENTATIVE POTTER'S ELOQUENT CANES
(By Fred Othman)

When Representative CHARLES EDWARD POTTER, a black-haired young fellow from Cheboygan, Mich., hobbled to the floor of the House to make a speech about pensions for veterans and placed his two plastic canes on the table, he said nothing about his own war record. He didn't have to.

He lost both his legs in battle at Colmar, France, and if ever a disabled war veteran had a right to talk about Honest JOHN RANKIN'S $125,000,000,000 pension scheme, the gentleman from Michigan was the one.

When he joined the Army in 1942, said Mr. POTTER, he wasn't thinking about collecting any cash rewards. Neither, said he, were any of the other youngsters who shed their civvies at about the same time.

"You can't make mercenaries out of the veterans by paying them a few dollars each," he told his fellow lawgivers. He came then to his big idea.

Our fighting men have done their duty, pensions or no pensions, ever since our history began, he said. They've won every war they ever fought. And this has been all to the good, except for one thing:

"We always seem to lose the peace," Representative POTTER said. "And I am wondering if it might not be a good idea to provide pensions for the peacemakers in the hope that they would be inspired to do a better job. Yes; I believe I could vote in good conscience for a bill giving pensions to diplomats. But for this bill I cannot."

Representative POTTER then grasped his translucent canes with the electric batteries in their handles and with less effort than you'd imagine propelled his mechanical legs toward his seat. The applause was what the Official Reporters might call thunderous.

And before we worry about the somewhat incredible pension debate, let us consider briefly Representative POTTER'S canes. They have electric light in 'em, which he switches on at night for crossing streets. Not only do they illuminate the gutter, but they make it possible for passing motorists to see him. They're comforting for a fellow who still hasn't quite got the hang of navigating on aluminum legs.

His speech, I'm afraid, had little effect on Mississippi's Representative RANKIN, or upon the timid gentlemen who are against the whole idea of multibillion pensions for veterans—but who are afraid to vote that way. In public, that is.

The lawgivers demonstrated they were delighted to kill the Rankin bill when they could do so anonymously. But when the motion came to revive it, they had to sign their John Henry's for the record. So they changed their minds. They were taking no chances on the veterans back home voting against 'em 2 years hence.

There were exceptions, of course, like Representative POTTER. Such a one was Representative JOHN A. CARROLL, of Colorado, who fought in both world wars. He, too, was bitterly opposed to pensions. He called the scheme of writing the bill on the floor a shameful thing and he managed to get a couple of propensioners into a weird argument.

Representative WALTER B. HUBER, of Ohio, said Veterans of Foreign Wars favored his amendment cutting out the World War II survivors. Representative JAMES E. VAN ZANDT, of Pennsylvania, said they were not, either.

"See," said Representative CARROLL. "Confusion. This bill ought to be sent back to committee."

Representative POTTER said nothing. Just sat there with his legs stiff in front of him, while he fiddled with his trick walking stick.

Limitation of the Presidential Term

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of the Honorable Archie L. Cross, State assemblyman of Sparks, Nev., in the Nevada Assembly, March 1949:

Mr. Speaker, this is a solemn occasion. We are about to exercise one of the greatest privileges of a legislature; to determine whether or not the Constitution of the United States shall be amended. Our Constitution is a sacred document, a beacon light of freedom in the world. The founding fathers were blessed with foresight and wisdom; they did not set a limitation upon the number of terms a President might serve.

The first question arises then, why should we now set a limit upon the Presidential terms? Why should we curb our democratic right of choice? Why should we limit ourselves and reduce our voting privileges as much as is suggested in this proposed amendment? "Oh, it is said, that the office is so great that two terms should be enough for any man." Washington, in his farewell address set an example, and limited himself to two terms. His address is couched in stately language and will be forever honored. But it advises against alliances with other nations, and especially decries against favored nations.

Mr. Speaker, two great wars have demonstrated that we cannot avoid having alliances and relations with other nations of the world. Our position is so eminent, our commerce so great and world-wide, that no matter in what high esteem we hold our first President, we must assert our world leadership and seek friends among the nations. We are no longer isolationists. We must take sides. The name of our President in a world war immediately becomes a symbol of freedom to the victims of oppression.

If everything is in balance, and the President is conducting the war in good manner, then we cannot change his leadership; we cannot change Presidents, be he a Democrat or Republican. We cannot let the people of the world, who believe in us, down.

We saw this in World War II. We saw a great English-speaking nation prostrate at Dunkerque. We saw 50 gunboats and all of the old Springfield rifles we could muster furnished to the nation in exchange for air bases, and that was all that she had to depend upon, because her munitions of war had been abandoned in France.

We saw the Atlantic Charter.

We heard a most eloquent voice in Chicago plead for a quarantine against aggressor nations and demand and order for our own defense 50,000 airplanes.

We were amazed at the magnitude of the order. We know that he had his finger upon the pulse of the world. We inaugurated lend-lease. We armed our ships against the

submarines. The Hun was on the march, nations were ravished and raped, we knew that Hitler was determined to rule the world, and that soon we would be marching also, but only goose-stepping under German orders. In our own melting pot, nationalities began to pull and tug, the isolationists seemed to have the better of it, until the great Senator VANDENBERG, of Michigan, arose at his desk, and made a historical speech in the Senate, that shook the Nation, and isolationism was thrown out the window, and the two-party foreign policy was inaugurated that endures today. So we took stock of the man at the helm.

We recalled his inauguration speech in the midst of the depression, when he declared that the Nation "had nothing to fear, but fear itself"; we saw the dramatic closing of the weak banks, and only solvent banks permitted to reopen. We saw bank deposits insured and safeguarded; we saw all of our gold recovered. We saw social security given to the people. We remembered the fire-side chats where the most-loved voice in the world told us of the problems he faced in the White House, and he told of his mistakes too, but that he was trying. We saw how he restored confidence, and helped to stop the forced sales of 650,000 mortgaged farms, and we saw how he brought dignity to labor. All precedents were broken, and he was elected to a third term as President. He all but prostrated himself in begging for world peace, but the Axis nations ignored him, and insulted him for his pains.

Then the sneak attack on Pearl Harbor and the joint declaration of war by Japan and Germany before our Congress could assemble. Oh, the tragedy of it all, with a Japanese peace party conferring with our Secretary of State at the very moment.

We recall Iwoland, Iwo Jima, Suribachi, Namur, Guam, Saipan, and Tarawa. We recall the crossing at Normandy under Eisenhower. We recall Generals Marshall, MacArthur, and Wainwright; Admirals Nimitz and Bull Halsey; Doolittle, Hap Arnold, Spaatz, all selected and appointed through him. We recall that he summoned the scientists, set aside $2,000,000,000 for atomic research, and that it is our stock pile of atomic bombs that keeps back the slavic hordes behind their iron curtain with 14,000,000 slave laborers itching to engulf the world. He closed the 1944 election campaign with a prayer for our America. He asked Almighty God to grant to the people of this Nation the vision which was necessary to profit from the victory which was sure to come in the war. Again shattering all precedents, he was elected for a fourth term in the ides of November; and then in the following April, like the soldiers on the field who died for us, he, too, died for us.

His sacred remains lie sleeping at Hyde Park and thousands go there daily to pray for peace. A monument has been unveiled for him in London, and the English have reserved for him a niche and plaque in Windsor Castle, where they bury their Kings. Ah, he is immortal. Just recently the Idaho State Senate did as we are about to do, rejected this amendment.

Mr. Speaker, let us realize our full stature as Americans. I verily believe that had not the pistol shot of an assassin leveled our beloved Lincoln he would have been a third-term President, and what a blessing it would have been to the South in the reconstruction period. Let us say here today that we reserve the right if we are beset with war or the rumors of war to reelect any President, be he Democrat or Republican, to a third term; and if any Congress declares war, and if any President indicates the path, we will follow our flag and say, as Ruth to Naomi, "Entreat us not to leave Thee; whither thou goest we will go; thy people shall be our people, thy God our God."

Pope of Peace

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. ROONEY. Mr. Speaker, under the permission granted to me by the House, I include with these remarks the following splendid editorial entitled "Pope of Peace," by Harry H. Schlacht, which was published in the Detroit Times of March 2, 1949, the New York Journal-American, and many other newspapers from coast to coast:

POPE OF PEACE

(By Harry H. Schlacht)

Today America salutes Pope Pius XII on the anniversary of his seventy-third birthday. Today America congratulates Pope Pius XII on the tenth anniversary of his elevation to the papacy. He is the Pope of peace. We greet with glad acclaim a true benefactor of humanity, a noble leader of the century. Many, many happy returns of his blessed day.

The Holy Father was born Eugenio Pacelli on March 2, 1876, in Rome. He was always a true priest according to the heart of God. He had always nourished an ardent desire to the apostolate and the exercise of priestly ministry. The charity of Christ ever filled his heart. The needy and sick were always the object of his tenderest care and solicitude. The Catholics rejoice in their chief shepherd. He is the vicar of Christ on earth. He is the apostle of peace.

When His Holiness mounted the throne of St. Peter, the world was tottering on the brink of the bloodiest conflict in history. He chose the name of Pius XII in loving tribute to his predecessor. He chose to continue the policy of Pope Pius XI in the battle for world peace, in the defense of church rights, in the championship of persecuted people everywhere. In his first public utterance, he invited all mankind to turn their thoughts to peace—peace of conscience, peace of family, peace among nations. He is a living symbol of peace. He is dedicated to the goal that men shall be free of hate and of strife. He is a simple man of God.

He is tall and very slender. He has brown eyes, ever sparkling behind glasses. He has long, thin fingers which when folded in prayer seem like a decade of Gothic spires aspiring heavenward in supplication for the prayer of man. His career in the service of the church is long and brilliant. He is recognized as one of the great statesmen and diplomats of our time. He is the best-equipped personage in the world today to lead in the blessed cause of peace. He is a man of his time.

He was the first future Pope to fly a plane. He was the first future Pope ever to visit the United States. He was the first secretary of state ever to be elected Pope. He was the first Roman to be elected to the papacy since Pope Benedictus XIII. He was the first cardinal of the curia to become Pope in more than a century. He was the first Pope to be crowned outside of St. Peter's Basilica since 1870. He is the two hundred and sixty-first successor to St. Peter.

His reign is marked by a vigorous crusade against the curse of communism; against the agitators who make the negation of God the cornerstone of their work. He has boldly challenged the modern pagan world on religious liberty, on the policy of slavery, on atheistic communism, and on the state of totalitarianism. He is a world leader—one whose leadership every lover of liberty can proudly cherish in this hour when tyrants draw allegiance of subservient nations.

Slave states can compel obedience to their man-made decrees, but no power on earth can control the movement of God in the minds of men. No power can equal the force of God's truths. No dictator can control men's thoughts. God's truths have their roots in the policy of the humble folks whose minds no Stalin decree can reach and whose hearts no bond of servitude can fetter.

Humanity will survive amid the decay of dictatorial dynasties. Despair and defeat may threaten them, but the noblest thoughts of the centuries belong to them, and not to tyrants. The citadel of God will ever prevail. Its base is adamant. It is cemented with the richest blood. The ransomed of the Lord crowd its portals. Against this citadel tempests beat, the storms rage but spend their force in vain. Immortal in its nature, it stands firm. It will endure forever.

Before the power of God the forces of present-day tyrants must tremble. Their mortal coils will be shaken off. Their governments will collapse. Their empires will dissolve. Their despotism will sink into dust. For they will give way before the shining truths of the Almighty as the blackness of midnight yields to the approach of the rising sun. May the Holy Father ever stand forth as a strong protector of the good and godly in mankind. May He ever persevere for many more years in the faith of goodness, in the faith of justice, in the faith of charity, in the faith of peace. God, grant us this prayer.

Repeal of Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution regarding immediate repeal of the Taft-Hartley law

Whereas there has been enacted by the Eightieth Congress of the United States a labor bill known as the Taft-Hartley law; and

Whereas since the passage of this law, labor organizations have been oppressed and collective bargaining has been made more difficult to promote the advancement of the American labor movement; and

Whereas the Taft-Hartley law creates an inferior class of citizens, and inferior category and a debased position politically for the men and women who toil by hand or brain for their daily subsistence; and

Whereas the Taft-Hartley Act, in its entirety, is an insult to the working people of the United States, a brand upon their integrity and decency, a handicap to all fair-minded employers; and

Whereas the Taft-Hartley Act invades the constitutional guaranties of free speech, free press, and freedom of contract; and

Whereas one of the main issues in the last Presidential campaign was the repeal of the Taft-Hartley law and such issue was supported by an overwhelming majority vote for candidates to political office who were on record for the immediate repeal of this vicious and obnoxious law; and

Whereas the Eighty-first Congress has conducted hearings on a substitute labor bill known as the Thomas bill and such hearings have resulted in needless repetitious testimony, consequently delaying action on the repeal of this law; and

Whereas thousands of collective-bargaining contracts presently expiring and will expire in the very near future, and labor organizations and employers cannot negotiate with any degree of confidence as to the provisions that may be contained in a new labor bill, thus creating an air of uncertainty and endangering harmonious labor relations between labor and management which may result in unavoidable work stoppages; and

Whereas the citizens of the United States of America have, by their vote last November, delivered a mandate to the new Congress for immediate repeal of the Taft-Hartley law: Therefore be it

Resolved, That the town council of the town of Cheektowaga assert its disapproval of the Taft-Hartley law; and be it further

Resolved, That the town council of the town of Cheektowaga go on record for the immediate and unqualified repeal of the Taft-Hartley law and that the President of the United States, Harry S. Truman, the majority leaders of the House and the Senate, the Members of Congress from the western New York area, and the United States Senators from New York State, be so notified as soon as possible after the passage of this resolution so that they may act accordingly.

State Department Fiction

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. REED of New York. Mr. Speaker, It is obvious that the Truman administration has given the Communists and the fellow travelers the green light. Why have the investigations of the Red saboteurs stopped? There is hardly a community, large or small, in the United States to which the slimey trail of Communists does not lead. This underground subversive group are sapping at the foundation of our Government, yet instead of the administration restricting their activities it has granted visas to enable them to spread their doctrine here.

The specious argument for the issuance of visas to Reds to enter the United States is the administration's unswerving devotion to freedom of information and free speech on any issue. In this connection, under unanimous consent heretofore granted, I am inserting the following editorial entitled "State Department Fiction":

STATE DEPARTMENT FICTION

When the State Department granted visas to a score of Russians and eastern Europeans to attend the Cultural and Scientific Conference starting in New York tomorrow, it justified the action as follows:

"The Government of the United States has approved the issuance of these visas because of its unswerving devotion to freedom of information and free speech on any issue, however, controversial it may be. As such this Government does not feel that the visa authority should be used to prevent any arrangements, however, dubious they may appear, for open public debate of outstanding issues."

Almost as soon as it had emitted this high-minded policy, the Department canceled visas it had already issued to four non-Communist Britishers and refused visas to other individuals in France and Italy—all of whom had applied for the purpose of attending the same conference.

The justification for this reversal of the principle that the visa authority should not be invoked to prevent public debate savors mightily of an afterthought. It is that the iron-curtain delegates are official whereas western Europeans are unofficial.

The Department also felt that the Communist case would be adequately presented by the Soviet and satellite group without the assistance of supposed sympathizers from non-Communist countries. It therefore invoked its visa authority to prevent an open public debate from being too one-sided.

In other words, any connection between State Department action and State Department policy is purely coincidental.

Comments by the Veterans' Administration on Article Entitled "Are You Happy, Son?" by Delbert Willis, Appearing in Collier's for March 26, 1949

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 28, 1949

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Veterans' Administration:

COMMENTS BY THE VETERANS' ADMINISTRATION ON ARTICLE ENTITLED "ARE YOU HAPPY, SON?" BY DELBERT WILLIS, APPEARING IN COLLIER'S FOR MARCH 26, 1949

GENERAL

The writer is known to the Veterans' Administration as Charles D. Willis. He is a veteran of the Pacific theater. As stated in his article, he was severely wounded in island warfare. His wounds resulted in the loss of his left leg at the hip and serious injuries to his right leg. He is identified in the VA by the number C4114838.

The article readily breaks down into three component parts:

1. Finances.
2. Education.
3. Prosthesis.

A summary of the case indicates that the veteran has a legitimate complaint about the handling of his education, but that his dealings with VA in connection with securing compensation and an artificial leg have been properly handled.

In his opening sentence, Mr. Willis quotes a surgeon in the VA prosthetics clinic in Boston as saying, "Frankly, I'm a taxpayer. A new artificial leg for this young fellow will cost $500. We don't know. But I'm willing to take a chance." At several other points he quotes statements made at this prosthetics clinic. On page 60 of the magazine, he quotes a long conversation with a doctor asking about the type of crutches he was using, the type of leg he wanted, and several other matters which sound completely inane when taken out of their setting.

To understand these questions, it is necessary to know the character of one of these clinics. The general tone of the clinic is not unlike that of an operating room when a doctor is performing an operation and keeping up a running commentary for the benefit of students.

Those in regular attendance at the clinics are: The Chief, Physical Medicine Rehabilitation Unit; Chief Physical Therapist; and Chief of the Prosthetics and Sensory Aids Unit. In addition, there usually are visiting doctors. These are not surgeons but are psychiatrists who attend the clinic on their own time, both to help the amputee by giving advice and to gain for themselves further knowledge of the results of surgery and the use of prosthetic appliances. A representative of the Orthopedic Appliance and Limb Manufacturers Association gives his time to the clinic to advise on technical and mechanical problems that may arise.

Further, senior students from Boston schools of physical therapy are assigned to the clinic to round out their training. Many of these students plan a life work with the disabled and are keenly interested in the problems of amputees. From discussion at these clinics they gain first-hand knowledge of the use of prosthetics. Many of the questions and much of the conversation quoted by Mr. Willis was for the benefit of these visitors and not because the members of the clinic are utterly stupid.

Now, let us consider the three chief questions raised by Mr. Willis:

FINANCES

Mr. Willis says in his fifth paragraph, "You could count it a blissful moment when I received my first pension check, several months after my medical discharge from the Army." Twice later in the article, the writer refers to having to borrow money from fellow students who were more fortunate and were receiving checks while he had none.

Since Mr. Willis' application for education was mishandled, he did not get a check for subsistence for three and one-half months. He, however, was getting money from the VA regularly.

He was discharged from the Army at Walter Reed Hospital on September 16, 1948. His first check was mailed by the Veterans' Administration on October 25, 1948. From that date, up to and including the present (March 1949), there has not been a month that at least one check was not mailed to Mr. Willis by the VA. Up to this time, these checks have totaled $2,003.13.

The first three checks mailed Mr. Willis were payments as a captain on the Army Retired list and were for three-quarters the amount he was paid as a captain in active service.

On November 3, 1948, Mr. Willis wrote acknowledging receipt of the first check, stating he wanted to be paid compensation for injuries rather than retired pay, as he believed he would receive greater benefit in this way.

In compliance with this request, Mr. Willis was rerated and allowed compensation at the rate of $240 per month. This action was reflected in the check of November 30, and was made retroactive to the date of discharge, September 17.

Again on January 24, payments were raised to $315 a month and made retroactive to September 27, that being the date the veteran entered school. This increase was $75 a month subsistence allowance under Public Law 16.

On March 4, his pay was again increased in accordance with Public Law 877, bringing his monthly payments up to $371. This was made retroactive to the date of his entrance into school, September 27.

On March 11, the veteran was rerated and because of changes in his condition was granted increased compensation, raising his monthly pay check to $413.

Mr. Willis did not mention in his article the names of the friends from whom he borrowed money. If they were veterans it is doubtful that any of them were being paid at a higher rate than Mr. Willis himself.

EDUCATION

Mr. Willis' educational dealings with the Veterans' Administration were mishandled. Fortunately, his mishandling did not result in the loss of any educational opportunities to Mr. Willis.

On June 17, Mr. Willis, while still an officer in the Army, was examined by the VA Advisement and Guidance Center at Walter Reed Hospital, exactly as he states in his article. The documents, in connection with this advisement, were forwarded from Walter Reed to the Washington Regional Office to be sent to Boston. The record shows they were forwarded on June 23. The Boston Regional Office has no record of their receipt.

As a result of this advisement, the veteran was recommended for training with the objective of becoming a political columnist. The veteran sought, and was granted a Nieman fellowship. He enrolled and began school on September 27; so that the loss of the records did not delay the veteran's education. By securing the Nieman fellowship, he had the advantage of the cash award which goes with this fellowship.

On September 21, 1948, Mr. Willis visited the veterans' counsel office at Harvard University for the first time. This is not a Veterans' Administration office, but is operated, under contract with the Veterans' Administration, with employees assigned to the office from Harvard, Tufts, and Boston College. The contract for its operation is with Tufts College although it is located on Harvard University property.

Since no stenographic records are kept of conversations in the center, no comment can be made on the statements in Mr. Willis' article. He did, however, visit the guidance center on the date stated and undoubtedly told them he had been set up for training under Public Law 16 at the guidance center at Walter Reed Hospital as the Harvard center immediately started a search for his papers.

This search continued without avail until November 9, 1948, when Mr. Allen Gleason, Chief of the Special Rehabilitation Board, received a letter from the chief adviser at Walter Reed Hospital stating that Mr. Willis had received advisement there on June 17 and had been set up in the objective of political columnist. This letter further verified that the records had been forwarded on June 23 for transfer to the Boston Regional Office. A copy of the advisement test given on June 17 was also attached to this letter.

The originals of these advisement records were not in the case folder of the veteran at the Boston office.

On December 17, the Boston office advised Mr. Willis to file a duplicate application for advisement for the purpose of scheduling another test. The record contains no explanation of why the duplicate advisement records which were sent to Boston by Walter Reed on November 9 could not be used in qualifying the veteran. However, he was ordered for new advisement.

The day after this instruction was sent to Mr. Willis, Harvard University closed and remained closed until January 4, during which time, Mr. Willis returned to his home in Dallas, Tex., where he spent the holidays.

He did not return to Boston until some time in January 1949. On January 13, 1949, he reported to the advisement center at Harvard and was set up for training under Public Law 16. At this time subsistence payments retroactive to the day he entered school, September 27, were authorized.

While Mr. Willis was not deprived of his education and was receiving monthly disability compensation checks, he was, during this period, deprived of subsistence allowance.

PROSTHESIS

Mr. Willis' statements about his difficulties in securing an artificial leg appear to be somewhat colored. He says in connection with the artificial leg, "The first entry is dated October 6, 1948, when I approached the VA seeking a substitute for "Junior," my affectionate title for the bulky artificial leg the Army presented to me at going-away ceremonies last September at Walter Reed General Hospital, Washington, D. C."

After describing his impression of the leg, he says: " 'Junior' performed admirably for a few weeks. But one day while climbing the steps to my room I heard a sharp ping! 'Junior' had gone to hell in a flash—exploded like a hand grenade. Springs, nuts and bolts showered the hallway. A desperate grab at a railing saved me from crashing down the steps."

After getting to his room, he says: "Seated safely on the bed, I performed an autopsy on the Army's gift leg. The spring which locks the hip had jumped out of place. The wire which holds the bucket in line was missing. So was an assortment of nuts and bolts."

Mr. Willis says he patched up the leg with rubber bands and called at the VA office to apply for a new leg. (He doesn't give a date.)

He says that the VA chief suggested that I make the rounds of the artificial-limb makers in Boston and select a leg which, in my opinion, would be the most functionable, the most comfortable, and offer the greatest all-around utility.

Mr. Willis continues: "After a survey of the companies, I decided on a prosthesis which would weigh one-third less than my Army leg. Weight was the important factor, I believed, because of the weakened condition of my partially paralyzed right leg. When I made my report to the VA man, he wasn't convinced that it would be the best leg for me. So he dispatched me on another chase—this time to Dorchester, Mass., to see a vet with a disarticulation like mine and who was wearing a leg of the type I wanted. He showed me how the new type worked and recommended it very highly.

"This clinches the argument in my opinion and I made another favorable report to the prosthetic chief. He gave the project tentative approval and said I would hear from him in a few days. I did, by letter, ordering me to appear before a board of orthopedic experts, the last word in prosthetic knowledge, who would sit at a special clinic to review my case and determine the if, when, why, and what of my case.

"I circled another month on the calendar. It had been 90 days since I first made application for a successor to 'Junior.' "

Records of the Prosthetic and Sensory Aids Unit show that Mr. Willis visited that office on October 14, 1948. At that time, he requested that repairs be made to the artificial limb he had been furnished by the Army. There is no evidence of any request for a new leg.

The leg he was wearing was not a standard GI leg issued at service hospitals, but was a commercial leg manufactured by the J. E. Hanger Co., Washington, D. C. It is exactly the same leg which is supplied Veterans' Administration under one of its contracts.

The veteran was sent to the Hanger Co.'s Boston office with authority to have the leg repaired. Mr. William J. Ferris, Jr., of the Hanger Co., who is president of the New England Regional Council of Orthopedic Appliance and Limb Manufacturers Association, says that Mr. Willis came to the office with a broken hip lock held in place by the substitution of elastic bands for a broken spring.

Mr. Ferris saw the veteran personally and told him he did not have in stock the particular parts to repair the leg, but they could be secured in a few days. He quotes the veteran as saying that he was in no hurry; the elastic bands were working all right and that he would drop in at his convenience to have the parts replaced.

In a letter written to the Veterans' Administration, as the President of the New England Regional Council of Orthopedic Appliance and Limb Manufacturers Association, Mr. Ferris states: The type of prosthesis the veteran was wearing at the clinic, although it was furnished by the Army Medical Service and is classified as a temporary limb, is in fact probably the highest type civilian manufactured prosthesis of this nature, and undoubtedly, if it had not been for the condition of his right anatomical member, it would have been the request of the veteran his permanent appliance furnished by the Veterans' Administration be a duplication of that furnished by the Army Medical Service, which he was wearing and had become accustomed to. This has been the experience with similar amputee veterans and we are at present doing such duplication work.

There is one glaring bombastic statement which to anyone familiar with the industry and its appliance would leave them in doubt as to the veracity of knowledge of the writer inasmuch as a limb of the type worn by the amputee cannot explode springs, nuts, bolts and screws all over the place inasmuch as a breakage in the area indicated could only result in the loss of one small spring and possibly one metal button.

The evidence of the above would be borne out by the fact that the use of a rubber band in replacing the spring apparently adequately restored the functional efficiency of the appliance.

After Mr. Willis' visit on October 14, the Veterans' Administration received no request from him in connection with his artificial limb until December 10, 1948, at which time he requested a new limb.

Mr. Willis was informed that he was eligible for a new limb and for a spare one if he felt he needed it. The Prosthetic Unit discussed with him the relative desirability of various types of limbs which were available. This discussion included a very limited number of limbs as, because of his hip disarticulation, the veteran could use only one or two standard limbs.

He was given a list of manufacturers under contract to the VA with the suggestion that he investigate and select the limb which he found to be best suited to his needs.

Among other companies, the veteran visited the Boston Artificial Limb Co., which described to him a limb used in some disarticulation cases. This limb completely eliminates the half-saddle affair which the veteran mentions in his dossier of his artificial leg. The limb company did not have a leg of this type available so Mr. Willis had never seen the leg when he decided it was the desirable one.

He notified the VA that this was the leg he wanted because he believed that the light weight and the elimination of the thigh socket would improve his walking.

The prosthetic chief discussed this decision with the acting chief medical officer in the Boston office. They agreed that because of the serious condition of Mr. Willis' other leg the desirability of this type of limb was in question and certainly it should be measured and fitted under medical supervision.

On December 10, Mr. Willis left a telephone number with the VA and several attempts were made to contact him to suggest that the leg be fitted under medical supervision. VA was unable to get him on the telephone, so on December 21, he was written the following letter:

"In reply to your recent request, this is to advise that your artificial-limb problem has been discussed with the chief medical officer.

It is suggested that you report to this office at your convenience, in order to have medical concurrence with the type of appliance which you have selected.
